5. **Voacanga psilocalyx** Pierre ex Stapf in F.T.A. 4, 1: 159 (1902). *APD acc*

Similar to the last species; peduncle usually very long.

S. Nig.: Oban Talbot s.n.! 302!

Also in [Cameroun](#) and [Gabon](#).

6. **Voacanga caudiflora** Stapf in F.T.A. 4, 1: 603 (1906). *APD acc*

Shrub or small tree 5-20 ft. high; flowers cream or greenish.

S. L.: Blama (Dec.) Deighton 315! **Lib.:** Kakatown Whyte! Mecca, Boporo Dist. (Nov.) Baldwin 10403! Jabroke, Webo Dist. (July) Baldwin 6452!

21. ALSTONIA

R. Br.-F.T.A. 4, 1: 120; Monachino in Pacif. Sci. 3, 2: 139 (1949). Nom. cons. *APD acc*

- 1 Petiole 1(-2) cm. long; leaves in whorls of 4-8, obovate to elongate-oblongate, rounded to acuminate at apex, 7-25 cm. long, 3-11 cm. broad, with about 30-55 pairs of lateral nerves; calyx outside densely villous; corolla-tube usually 6-12 mm. long, lobes 3-6 mm. long, the lobes about as long as broad; fruits with 2 linear follicles up to 50 cm. long and 5 mm. broad, villous [L. boonei](#)

Petiole 0-5 mm. long; leaves as above; calyx slightly pubescent or glabrous outside; corolla-tube usually 4-6 mm., lobes 5-9 mm. long, the lobes much longer than broad; fruits glabrous [L. congensis](#)

1. **Alstonia boonei** De Wild. in Fedde Rep. 13: 382 (1814). *APD acc*

Alstonia congensis of F.W.T.A., ed. 1, 2: 42 (1931); Chev. Bot. 414; Aubrév. Fl. For. C. Iv., ed. 2, 194, t. 320, not of Engl.

Tree 30-120 ft. high with whorled leaves and branches; many-flowered terminal inflorescences and paired, narrowly-cylindric fruiting follicles 12-20 in. long.

22. PYCNOBOTRYA

Benth.-F.T.A. 4, 1: 202; Pichon in Mém. Mus. Hist. Nat. Paris, n. sér., B, 1: 155 (1951).

- 1 Leaves and branches glabrous; leaves verticillate or opposed, elliptic-oblong to oblong-lanceolate, 6-14 cm. long, 1.5-4.5 cm. broad, with very numerous lateral nerves; corolla-tube 1.5-2 mm. long, the lobes 3-5 mm. long; anthers about 1 mm. long [nitida](#)

Pycnobotrya nitida *Benth.* in Hook. Ic. Pl. 12: 72, t. 1183 (1876); F.T.A. 4, 1: 202. *APD acc*

Pycnobotrya multiflora *K. Schum. ex Stapf* in F.T.A. 4, 1: 203 (1902).

Woody climber up to 50 ft. high with numerous small flowers in ample, terminal cymes.

S. Nig.: Sapoba Kennedy 1951! 2085!

Extends to Cameroun, Gabon and Congo.

23. CATHARANTHUS

G. Don (1838)-Pichon in Mém. Mus. Hist. Nat. Paris 27: 237 (1948).

Lochnera Reichenb. f. (1828), name only-F.T.A. 4, 1: 118.

- 1 Stem erect, puberulous, herbaceous or more or less woody, especially towards the base; leaves opposite, obovate to oblanceolate, 3-8 cm. long, 1-4 cm. broad; flowers terminal or axillary, the corolla-tube 1.5-3 cm. long, the lobes broadly obovate, 1-3 cm. long; fruits paired narrow-fusiform follicles 2-4 cm. long [roseus](#)

Catharanthus roseus (*Linn.*) *G. Don* Gen. Syst. 4: 95 (1838).

Vinca rosea *Linn.* (1759).

Lochnera rosea *Reichenb. f.* (1828) name only-F.T.A. 4, 1: 118; F.W.T.A., ed. 1, 2: 37 (1931).

A perennial (or occasionally annual) erect herb to small shrub with pink or white flowers. "Madagascar Periwinkle", a native of tropical America, often planted for ornament and now more or less naturalised in the tropics.

24. HOLARRHENA

R. Br.-F.T.A. 4, 1: 161; Pichon in Mém. Mus. Hist. Nat. Paris, n. sér., B, 1: 157 (1951).

- 1 Leaves mostly ovate-acuminate, or ovate-lanceolate, 5-18 cm. long, 2-8 cm. broad, with 6-12 pairs of lateral nerves; inflorescence a many-flowered, globose or flattened cyme; corolla-tube 5-9 mm. long, lobes 3.5-8 mm. long: **2**
- 2 Leaves glabrous or almost glabrous even when young [1. floribunda var. floribunda](#)
Leaves densely pubescent beneath at least when young [1a. floribunda var. tomentella](#)

Holarrhena floribunda (*G. Don*) *Dur. & Schinz* *APD acc*

1. Holarrhena floribunda var. floribunda -Etud. Fl. Congo 1: 190 (1896). *APD acc*

Rondeletia floribunda *G. Don* (1834).

Holarrhena africana *A. DC.* (1844)-F.T.A. 4, 1: 164; Aubrév. Fl. For. C. Iv., ed. 2, 3: 204, t. 324; Chev. Bot. 417.

Holarrhena wulfsbergii *Stapf* in F.T.A. 4, 1: 164 (1902); Aubrév. Fl. For C. Iv., ed. 2, 3: 204; Chev. Bot. 418.

Shrub to medium-sized tree 5-50 ft. high; flowers white in almost umbel-like inflorescences and paired narrowly cylindrical fruiting follicles 1-2 ft. long; **in deciduous forest.**

25. RAUVOLFIA

Linn. -F.T.A. 4, 1: 108, as *Rauwolfia*

- 1 Branches of inflorescences distinctly puberulous; leaves elliptic-acuminate to broadly lanceolate, 8-24 cm. long, 3-10 cm. broad, with 8-16 pairs of lateral nerves, with a narrowly triangular acute acumens; corolla 8-10 mm. long; carpels (if both developed) quite free in fruit *L. vomitoria*
- Branches of inflorescences glabrous: 2
- 2 Leaves with 5-12 pairs of lateral nerves; pedicels 1-4 mm. long; flowers usually 6-10 mm. long: 3
- Leaves with 16 to about 30 pairs of lateral nerves; flowers sessile or very shortly pedicellate; pedicels not exceeding 1 mm. in length; flowers 4-6 mm. long: 4
- 3 Petiole short, about 5(-10) mm. long; leaves elliptic-acuminate to lanceolate, pointed with a triangular acumens; blade 8-20 cm. long, 2-5-6 cm. broad; carpels (if both developed) quite free in fruit *2. cumminsii*
- Petiole about 10(-20) mm. long; leaves elliptic to broadly lanceolate, pointed with a narrowly linear acumens, 10-26 cm. long, 3-9 cm. broad; fruiting carpels (if both developed) connate to about half of their length *3. mannii*
- 4 Petiole about 2-4 cm. long; leaves oblanceolate-oblong, 7-22 cm. long, 3-6 cm. broad, short-cuneate or almost rounded at base, not or scarcely decurrent on the petiole, pointed with a triangular acumens; branches 4-angled; flowers about 6 mm. long *4. caffra*
- Leaves subsessile or with a petiole up to about 2 cm. long, obovate to obovate-oblong, 10-20 cm. long, 4-9 cm. broad, long-cuneate at base and gradually passing into the petiole, not or scarcely acuminate at apex; branches almost 4-winged; flowers about 4 mm. long *5. macrophylla*

1. **Rauvolfia vomitoria** *Afzel.* Stirp. Med. Sp. Nov. 1 (1818); F.T.A. 4, 1: 115; Chev. Bot. 412; Aubrév. Fl. For. C. Iv., ed. 2, 3: 196, t. 321. *APD acc*

Hylacium owariense, *P. Beauv.* (1819)-Hepper in Kew Bull. 16: 338 (1962).

Rauvolfia senegambiae *A. DC.* (1844).

Small shrub or tree up to 50 ft. high with whorled leaves and small white to greenish flowers in many-flowered, terminal, ample, verticillate cymes.

Sen.: Rio Nunez Heudelot 910. **Mali:** Folo (May) Chev. 832! **Port. G.:** Pussubé, Bissau (Oct.) Esp. Santo 984! Acóco, Formosa (Apr.) Esp. Santo 1960! Catió (Aug.) Esp. 27. STROPHANTHUS

A. DC. -F.T.A. 4, 1: 167; Gil in Engl. Monogr. Afr. Apocynac. 7 (1903).

- 1 Corolla-lobes not produced in tails, not more than 3 times as long as broad at base, not longer than the corolla-tube; bracts scarious; leaves glabrous, smooth; tertiary venation indistinct:2
Corolla-lobes produced into long, linear tails, markedly longer than the tube; bracts herbaceous:
- 2 Corolla-tube 3-4.5 cm. long, lobes broadly ovate or orbicular, obtuse at apex, 1.5-3 cm. long and about as broad at their base; inflorescence with several flowers; calyx 10-15 mm. long; leaves elliptic, elliptic-lanceolate or ovate, 7-19 cm. long, 3-9 cm. broad, with 5-9 pairs of lateral nerves 1. gratus.....3 **STROPHANTHUS_3**
...Corolla-tube 2.5-3 cm. long, lobes narrowly triangular, acute at apex, 2-3 cm. long, 1.5-3 times longer than broad at their base; inflorescence 1-few-flowered; calyx 13-15 mm. long; leaves elliptic to lanceolate, 8-14 cm. long, 2-5 cm. broad with (4-) 6 pairs of lateral nerves [2. thollonii](#)
Leaves smooth and glabrous on both surfaces; branches glabrous:
Corolla-tube 2-3.5 cm. long, lobes 4-16 cm. long, produced into linear tails 2-4 times longer than the oblong-deltoid base; calyx 10-15 mm. long, lobes lanceolate, very acute; leaves elliptic or ovate, acuminate, 4-11 cm. long, 2-7 cm. broad, with 4-7 pairs of lateral nerves and frequently with distinct tertiary venation beneath 3. sarmentosus **4STROPHANTHUS_4**
...Corolla-tube up to 2 cm. long; lobes produced into subfiliform tails many times longer than the deltoid base; calyx 8-17 mm. long; leaves usually with indistinct tertiary venation:5
Leaves scabrid or hairy, at least beneath:6
- 5 Sepals ovate-lanceolate, broadest below the middle, very acute; corolla-tube 1.5-2 cm. long, lobes 12-32 cm. long; leaves elliptic or elliptic-oblong, 3.5-13 cm. long and 2.5-8 cm. broad, with 5-8 pairs of lateral nerves [4. preussii](#)
Sepals oblanceolate, broadest towards the apex, subobtuse; corolla-tube 1.2-1.8 cm. long, lobes 3-8 cm. long; leaves elliptic to ovate, acuminate, 3-10 cm. long, 2-5 cm. broad, with 4-6 pairs of lateral nerves [5. barteri](#)
- 6 Leaves scabrid or minutely puberulous, especially beneath, elliptic or ovate, 4-12 cm. long and 1.5-4 cm. broad, with 4-6 pairs of lateral nerves; calyx 10-14 mm. long; corolla-tube 1-1.5 cm. long, lobes 8-18 cm. long [6. gracilis](#)
Leaves hairy beneath, with long patent hairs on midrib and branches:7
- 7 Corolla-lobes 8-18 cm. long, 5-12 times longer than the tube; tube 8-15 mm. long; calyx 14-24 mm. long; leaves elliptic or ovate, 5-15 cm. long, 2-9 cm. broad, with 5-9 pairs of lateral nerves; tertiary venation very distinct, deeply impressed above, prominent beneath [7. hispidus](#)
Corolla-lobes up to 2 cm. long, about 1.5-2 times longer than the tube; tube 10-14 mm. long; calyx 7-12 mm. long; leaves elliptic, acuminate, 7-12 cm. long, 2.5-5 cm. broad, with 6-12 pairs of lateral nerves; tertiary venation very indistinct [8. bullenianus](#)

1. *Strophanthus gratus* (Hook.) Franch. in Journ. de Bot. 7: 321 (1893); F.T.A. 4, 1: 170. *APD acc*

Roupellia grata Hook. in Bot. Mag. 75: t. 4466 (1849).

Glabrous, climbing or erect shrub or small tree with large, campanulate, white to purple flowers.

28. MASCARENHASIA

A. DC. (1844)-F.T.A. 4, 1: 193 (1902). *APD acc*

Lanugia N. E. Br. (1927).

- 1 Leaves elliptic, obovate or lanceolate, 6-15 cm. long and 3-6 cm. broad, with up to 12 pairs of lateral nerves; corolla-tube 8-12 mm. long, constricted at about the middle, wider above; lobes ovate-acuminate, 6-8 mm. long, in bud lengthwise folded together; disk with 5 distinct segments *arborescens*

Mascarenhasia arborescens A. DC. in DC. Prod. 8: 488 (1844): Pichon in Mém. Inst. Sci. Madag., sér. B, 2: 81 (1949).

Mascarenhasia variegata Britten & Rendle (1894)-F.T.A. 4, 1: 193; Brenan in N.Y. Bot. Jard. 8: 503 (1954).

Mascarenhasia elastica K. Schum. in Notizbl. Bot. Gart. Berl. 2: 270, with fig. (1899); F.T.A. 4, 1: 194.

Lanugia variegata (Britten & Rendle) N. E. Br. (1927).

A large shrub or small tree with creamy-white flowers in axillary and terminal, several to many-flowered fascicles.

Togo Rep.: Lomé Warnecke 481 bis. (vide Pichon l.e.).

Also in **Congo**, **Kenya**, **Tanganyika**, **Pemba**, **Zanzibar**, **Mozambique** and **Madagascar**.

Possibly cultivated or subspontaneous. Savory & Keay FHI 25205 from E. Nigeria belongs to a genus unrepresented in this Flora, but the key to the genera may lead to the above genus. It differs from *Mascarenhasia* by having oblong corolla-lobes, flat in bud, the absence of the disk and the inflorescence being 1-few-flowered. Fruits and further flowering material are required.-Huber.

29. ALAFIA

Thouars. (1806)-F.T.A. 4, 1: 195; Pichon in Mém. Inst. Sci. Madag., sér. B, 2: 45 (1949). *APD acc*

Holalafia *Stapf* in Kew Bull. 1894: 123; F.T.A. 4, 1: 201.

- 1 Carpels and mericarps connate; corolla-tube 12-15 mm. long, lobes broadly ovate, 10-12 mm. long; leaves glabrous, broadly elliptic to elliptic-oblong, 7-18 cm. long, 4-10 cm. broad, with 6-10 pairs of lateral nerves, rounded or truncate at base [1. multiflora](#)
Carpels and mericarps free; corolla-tube up to 12 mm. long: **2**
- 2 Leaves glabrous above, densely tomentellous beneath, broadly elliptic to elliptic-oblong, large, 18-26 cm. long and 9-14 cm. broad, with about 10-12 pairs of lateral nerves; corolla-tube 6-7 mm. long, pilose within immediately above the insertion of the anthers; corolla-lobes broadly ovate, 5-7 mm. long [2. grandis](#)
Leaves glabrous on both sides, usually small or medium-sized; corolla-tube glabrous within immediately above the insertion of the anthers: **3**
- 3 Corolla-lobes forming in bud a broadly ovoid-conical head not more than 1 1/2 times longer than broad; the lobes rarely exceeding 5 mm. in length and always distinctly shorter than the tube: **4**
Corolla-lobes forming in bud a conical or mostly oblong head 2-5 times as long as broad (if rather short the corolla-lobes as long or longer than the tube); lobes usually more than 5 mm. long when fully developed: **6**
- 4 Leaves obovate-elliptic, 12-20 cm. long and 6-8 cm. broad, with 4-6 pairs of lateral nerves, cuneate at base; corolla-tube 9-11 mm. long [3. whytei](#)
Leaves usually 4-13 cm. long and 2-6.5 cm. broad, lateral nerves usually 6-11 pairs; corolla-tube 3.5-7.5 mm. long: **5**
- 5 Corolla-tube 3.5-5.5 mm. long; leaves elliptic, elliptic-oblong or obovate, often rounded at base; corolla-tubes almost orbicular, ciliate [4. barteri](#)
Corolla-tube 6-7.5 mm. long; leaves oblong or obovate, acuminate, shortly cuneate at base; corolla-lobes 4.5-7 mm. long [4a. klaineana](#)
- 6 Inflorescences many-flowered and mostly dense; corolla-lobes ovate or elliptic, about 3 mm. broad, or broader: **7**
Inflorescences few-flowered (1-10, rarely up to 15 flowers); corolla-lobes oblong, less than 3 mm. broad: **9**
- 7 Corolla-tube 3.5-5.5 mm. long, the lobes usually longer than the tube: **8**
Corolla-tube 6-10 mm. long, the lobes shorter than the tube, forming an oblong structure in bud; flowers white or white with a greenish tube; leaves as above but with 4-8 pairs of lateral nerves only [7. schumannii](#)
- 8 Corolla-lobes forming in bud a conical head; flowers pale yellow with red centre; leaves elliptic to obovate, 4-12 cm. long, 2.5-6 cm. broad, with 4-6(-7) pairs of lateral nerves [5. lucida](#)
Corolla-lobes forming in bud an oblong or ovate-oblong structure; flowers white, with throat and tube purple; leaves elliptic or elliptic-oblong, 7-13 cm. long, 2.5-5.5 cm. broad, with 8-12 pairs of lateral nerves [6. scandens](#)
- 9 Leaves elliptic to obovate or obovate-lanceolate, 3.5-9 cm. long, 1-4 cm. broad; lateral nerves 6-10 pairs, very oblique, set at an angle of 30°-40°; pedicels 4-10 mm. long; corolla-tube 3-4 mm. long [8. benthamii](#)
Leaves elliptic-oblong, 5-10 cm. long, 1.7-4.5 cm. broad; lateral nerves 5-7 pairs, spreading, set at an angle of 60°-70°; pedicels 0.5-3 mm. long; corolla-tube 8-10 mm. long [9. parciflora](#)

1. **Alafia multiflora** (*Stapf*) *Stapf* in Kew Bull. 1908: 303; Pichon in Mém. Inst. Sci. Madag., sér. B, 2: 60, t. 3, fig. 12, 29; t. 4, fig. 7. *APD acc*

Holalafia multiflora *Stapf* (1894)-F.T.A. 4, 1: 201.

A stout woody glabrous climber with many-flowered, terminal, corymbose inflorescences; corolla white, follicles in fruit up to 2 1/2 ft. long.

Ghana: Kunumoasi, Kumasi Dist. Andoh FH 5583! Mampong to Koforidua (Oct.) Katz & Schmutz 48! **S. Nig.:** Osayolu (Nov.) Farquhar 9! Ibadan F.R. (Nov.) Punch 49! 51! [**Br.**] **Cam.:** Rio del Rey Johnston 44! Victoria (Nov.) Maitland 754! 791! Kumba Sale! **F. Po:** Mann 1184!

Also in **Gabon**, **Ubangi-Shari**, **Congo**, **Egypt** and **Sudan**.

2. **Alafia grandis** *Stapf* in F.T.A. 4, 1: 196 (1902); Pichon l.c. 60, t. 3, fig. 11, 28; t. 4, fig. 6.

APD: *Synonym of Alafia erythrophthalma* (*K. Schum.*) *Leeuwenb.*

Stout scrambling shrub over 20 ft. high with dense, many-flowered corymbose inflorescences; fruiting follicles over 18 in. long.

S. Nig.: Ilaro F.R., Egbado Dist. Onochie FHI 31890!

Also in **Cameroun**, **Congo** and **Uganda**.

3. **Alafia whytei** *Stapf* in F.T.A. 4,1: 610 (1904); Pichon l.c. 60. *APD acc*

Climbing glabrous shrub with rather large leaves and subsessile corymbose inflorescences.

Lib.: Sinoe Basin Whyte!

4. **Alafia barteri** *Oliv.* in Hook Ic. Pl. 20: t. 1992 (1890); F.T.A. 4, 1: 197; Pichon l.c. 55, t. 3, fig. 7; t. 4, fig. 5. *APD acc*

Alafia giraudii *Dubard* (1912).

High-climbing glabrous shrub with small, pure white or pink flowers in mostly fairly lax corymbose inflorescences; fruiting follicles over 1 ft. long, slender, paired.

S. L.: Mayoso (Aug.) Thomas 1423! Mayombo, near Roruks (July) Deighton 4675! **Lib.:** Jaurazon, Sinoe (Mar.) Baldwin 11460! Sanokwele (ft. Feb.) Baldwin 14184! Gletown, Tchien Dist. 9. **Alafia parciflora** *Stapf* in F.T.A. 4, 1: 610 (1904); Pichon l.c. 60. *APD acc*

Glabrous climbing shrub with yellow flowers with a red centre, in about 2-3-flowered inflorescences.

Lib.: Greenville, Sinoe Sim 25!

Vilbouchevitchia atro-purpurea *A. Chev.* in Boissiera 7: 254, t. 20 (1943).

A monotypic genus recorded from Aboisso, Ivory Coast, but no type specimen cited. Pichon was unable to find the specimen and considered (in Mém. Inst. Sci. Madag., sér. B, 2: 46 (1949) that Vilbouchevitchia should be treated as part of Alafia.

30. FARQUHARIA

Stapf in Kew Bull. 1912: 279.

Aladenia *Pichon* in Mém. Inst. Sci. Madag., sér. B, 2: 61 (1949).

- 1 Leaves and branches glabrous; leaves elliptic, elliptic-oblong or ovate-acuminate, 6-12 cm. long, 2.5-6 cm. broad, with 5-9 pairs of lateral nerves; corolla-tube 10-18 mm. long, lobes ovate, 8-13 mm. long; follicles about 30 cm. long when ripe, paired, covered with a rusty felt *elliptica*

Farquharia elliptica *Stapf* in Kew Bull. 1912: 279; F.W.T.A., ed. 1, 2: 607; Brenan in Kew Bull. 7: 453. *APD acc*

Alafia jasminiflora *A. Chev.* Bot. 423, name only.

A. mirabilis *A. Chev.* Bot. 423, name only.

Holalafia jasminiflora *Hutch. & Dalz.* F.W.T.A. 2: 43 (1931), and in Kew Bull. 1937: 388.

Aladenia jasminiflora (*Hutch. & Dalz.*) *Pichon* in Mém. Inst. Sci. Madag., sér. B, 2: 61 (1949).

A stout woody climber with dense terminal corymbose inflorescences of white fleshy flowers.

iv. C.: Mbasso (Mar.) Chev. 17606! Morénou, near Akabilékrou (Dec.) Chev. 22507! Bingerville Chev. 16583. Bouroukrou (Dec., Jan) Chev. 16644. Also indicated from Congo, but identification doubtful.

34. ADENIUM

Roem. & Schult. -F.T.A. 4, 1: 226. *APD acc*

- 1** Branches succulent, leaves spirally arranged, glabrous (in our area), obovate-oblong to oblanceolate (in our area), cuneate at base, sessile, up to 10 cm. long (but oftensmaller) and 2-3 cm. broad with 6-12 pairs of lateral nerves; pedicels and calyx puberulous; corolla-tube 3.5-4 cm. long, constricted in the lower 1/4-1/3, campanulate above, puberulous outside; lobes ovate or orbiculate, 15-25 mm. long; anthers provided with long appendages, which are shortly exserted from the tube; follicles spindle-shaped, minutely puberulous; seed with an apical tuft [obesum](#)

Adenium obesum (*Forsk.*) *Roem. & Schult.* Syst. 4: 411 (1819); Aubrév. Fl. For. Soud-Guin. 445, t. 97, 7-10; M. Pichon in Mém. Mus. Hist. Nat. Paris, n. sér. B, 1: 78 (1950). *APD acc*

Nerium obesum *Forsk.* Fl. Aegypt. Arab. 205 (1775).

Adenium honghel *A. DC* (1844)-F.T.A. 4, 1: 229 (1902); F.W.T.A., ed. 1, 2: 29.

An erect shrub 4-6 ft, high, with a stout almost conical trunk and smooth, fleshy branches; flowers rather large, pink to purple, campanulate, 1 1/2-2 1/2 in. long in short, subsessile, terminal cymes, appearing before or with the leaves; **in drier parts of our area and often grown for ornament.**

Sen.: Dagana Leprieur! Roqer! Oualo Roger 133! Baké Vuillet 264. **Mali:** Birgo, Kaarta Dubois 133. **Port. G.:** Madina de Boé, Gabu (Feb.) d'Orey 310! Boé, Jangada to Madina (Jan.) Esp. Santo 2364! **Guin.:** Kouroussa Pobéguin 603; 809. **Iv. C.:** Banfora (Mar.) Chev. 530! **N. Nig.:** Onisaja, Ilorin (fl. & fr. Feb.) Ejiofor FHI 19828! Borgu Barter 711! Zaria (cult. May) Lamb 46! Jos Plateau (Mar.) Lely P188! Kano (Dec.) Hagerup 669! Katagum Dist. Dalz. 430! Yola (cult.) Datz. 97! **[Br.] Cam.:** R. Senchu, Alantika Mts., Adamawa (Dec.) Hepper 1609! Gwoza, Dikwa Div, (Jan.) McClintock 141!

Also in **Egypt, Sudan, Somaliland, Arabia, Ethiopia, Kenya, Uganda**, and (?) **Tanganyika**.

Adenium is doubtfully native in our area; the W. African plant usually known as *A. honghel* is possibly merely an introduced form of the widespread and variable E. African and Arabian species which can all be called *A. obesum*.

35. BAISSSEA

A. DC. (1844)-F.T.A. 4, 1: 203. *APD acc*

Zygodia Benth. (1876)-F.T.A. 4, 1: 217.

Codonura K. Schum. (1896).

- 1 Petioles 5-15 mm. long (when only about 5 mm. long, then with 7 or more pairs of lateral nerves); leaves cuneate at base, glabrous beneath or with a tuft of hairs in the nerve-axils; branches glabrous or minutely puberulous; lateral nerves 4-15 pairs: **2**
- Petioles 1-5 mm. long; leaves rounded, subcordate or shortly cuneate at base, frequently pilose on the midrib beneath; branches frequently puberulous to tomentellous; lateral nerves in 2-8 pairs:..... **7**
- 2 Corolla-lobes 7-16 mm. long, mostly linear: **3**
- Corolla-lobes 3-6 mm. long, mostly ovate or deltoid-oblong; pedicels not exceeding 5 mm. in length:..... **6**
- 3 Calyx 2.5-4 mm. long, glabrous as well as the pedicels; corolla-lobes 12-16 mm. long, tube about 6 mm. long; leaves obovate-oblong to ovate-acuminate, 8-20 cm. long, 4-7.5 cm. broad, with 9-15 pairs of lateral nerves [4. calophylla](#)
- Calyx 1-1.5 cm. long, minutely puberulous as well as the pedicels; leaves 4-12 cm. long, 2-5.5 cm. broad:..... **4**
- 4 Leaves elliptic- or ovate-acuminate, with 5-8 pairs of lateral nerves; pedicels 1-4 mm. long; corolla dark violet; corolla-lobes 7-14 mm. long, narrowed in their apical half into an almost threadlike beak; tube much shorter than the lobes [2. tenuiloba](#)
- Leaves with 7-15 pairs of lateral nerves; corolla white, corolla-lobes linear-oblong or linear-lanceolate, not threadlike:..... **5**
- 5 Pedicels 5-10 mm. long; corolla-lobes 8-16 mm. long, much longer than the tube; leaves ovate- or elliptic-acuminate [3. odorata](#)
- Pedicels 1-5 mm. long; corolla-lobes (exceptionally) up to 8 mm. long [4. leonensis](#)
- 6 Leaves elliptic, elliptic-acuminate or sometimes obovate, 4-10 cm. long, 2-5.5 cm. broad, with 8-10 pairs of lateral nerves; pedicels thin, about 0.2-0.3 mm. diam. [4. leonensis](#)
- Leaves elliptic-obovate, with 4-6 pairs of lateral nerves; pedicels mostly stout, 0.3-0.7 mm. diam. [5. lane-poolei](#)
- 7 Corolla-lobes 6-20 mm. long, deltoid-linear to broadly linear: **8**
- Corolla-lobes sharply triangular, 2-4 mm. long; leaves subcordate or truncate at base, up to 7 cm. long: **11**
- 8 Sepals about 1 mm. long; pedicels 5-20 mm. long, slender, 0.2-0.3 mm. in diam.; corolla-lobes 6-10 mm. long; leaves elliptic, elliptic-lanceolate or oblanceolate, 4-8 cm. long, 1.8-3 cm. broad, with 2-5 pairs of main lateral nerves, cuneate or rarely rounded at base, glabrous beneath except for tuft of hairs in nerve-axils ... [6. laxiflora](#)
- Sepals 2-6 mm. long; pedicels 5-10 mm. long, 0.5-0.7 mm. diam.; leaves with 4-8 pairs of lateral nerves: **9**
- 9 Leaves rounded or truncate, rarely slightly cuneate at base; corolla-lobes 6-20 mm. long: **10**
- Leaves slightly cordate at base, rounded or deltoid at apex, oblong or obovate-oblong, 3-9 cm. long, 1.5-3.5 cm. broad; corolla-lobes 6-9 mm. long [9. subsessilis](#)
- 10 Leaves acuminate at apex; elliptic, ovate or broadly lanceolate, 5-13 cm. long, 2-5.5 cm. broad, midrib

puberulous beneath when young, later frequently glabrous except in the nerve-axils; corolla-lobes 12-20 mm. long [7. multiflora](#)

Leaves not acuminate, rounded or shortly deltoid at apex; usually oblong, sometimes ovate- or obovate-oblong, 2.5-6 cm. long, 1.2-4 cm. broad, midrib mostly pubescent beneath; corolla-lobes 6-10 mm. long [8. zygodoides](#)

- 11** Leaves gradually acuminate at apex, oblong, ovate or obovate, 2.5-7 cm. long, 1.2-3 cm. broad; inflorescence 1-5 cm. long; peduncle 8-20 mm. long [10. breviloba](#)

Leaves rounded or mostly deltoid at apex, not acuminate-oblong, 2.5-5 cm. long, 1.2-2.7 cm. broad; inflorescence very short, 0.5-1.5 cm. long; peduncle about 2-5 mm. long [11. axillaris](#)

APD: Synonym of Baissea campanulata (K. Schum.) de Kruif

Zygodia subsessilis Benth. in Hook. Ic. Pl. 12: 73 sub. t. 1184.

Oncinotis subsessilis (Benth.) K. Schum. in Schlechter Westafr. Kautsch.-Exp. 307 (1900); F.T.A. 4, 1: 224.

Climbing, reddish-brown puberulous shrub up to 20 ft. high with pale yellow flowers in axillary and terminal cymes.

S. Nig.: Ishagama (Mar.) Schlechter 12310! Osun F.R., Ijebu Igbo (Apr.) Ejiofor FHI 26114! Gambari to Ibadan (Mar.) Onochie FHI 21801!

10. **Baissea breviloba** Stapf in Kew Bull. 1912: 278.

APD: Synonym of Baissea baillonii Hua

Baissea ivorensis A. Chev. Bot. 424, name only.

Climbing shrub up to 10 ft. high very similar to the above.

Guin.: Nzérékoré (June) Collenette 34! **Iv. C.:** Makougnié, Agniéby valley Chev. 17191! **Ghana:** Ateiku (May) Vigne FH 1949! Abura Dunkwa (Apr.) Scholes 275! Manso (Apr.) Scholes 265! **S. 11. Baissea axillaris (Benth.) Hua in Compt. Rend. Acad. Paris 134: 857 (1902); F.T.A. 4, 1: 210. *APD acc*

Zygodia axillaris Benth. in Hook. Ic. Pl. 12: t. 1184 (1876).

A climbing shrub similar to the last.

S. Nig.: Lagos Punch 77! Sapoba, Benin Prov. (June) Ejiofor FHI 32010! Abeokuta (fr. Oct.) Baldwin 13648! Ijaiye F.R., Ibadan (fr. Feb.) Onochie FHI 20691! Calabar (Feb.) Mann 2301! **[Br.] Cam.:** Johann-Albrechtshöhe Staudt 518!

Also in **Cameroun**, **Congo** and **Angola**.

36. MOTANDRA

A. DC.-F.T.A. 4, 1: 224.

- 1** Leaves elliptic- or obovate-oblong, acuminate, 6-13 cm. long and 2-5 cm. broad, with 5-8 pairs of lateral nerves, thickly pubescent in the nerve-axils; flowers in oblong, terminal panicles; corolla-tube 2.5-4 mm. long, the lobes about 5 mm. long [guineensis](#)

Motandra guineensis (Thonning) A. DC. in DC. Prod. 8: 423 (1844); F.T.A. 4,1: 224. *APD acc*

Echites guineensis Thonning (1827).

Motandra rostrata K. Schum. (1903).

A climbing or sometimes suberect shrub, more or less yellowish- or fulvo-tomentose, with small white flowers in tomentose inflorescences; fruiting carpels spindle-shaped, about 5 in. long and 3/4 in. across, densely brown-scaly.

Guin.: Dalaba (Jan.) Jac.-Fél. 754! **S. L.:** Smythe 266! Konnoh Country Burbridge 481! Bendu to Mamaima (Apr.) Deighton 3942! **Lib.:** Cess R., near Bahtown (fr. Aug.) Also in **Cameroun**, **Congo**, **Uganda** and **Angola**.

37. ONCINOTIS

Benth.-F.T.A. 4, 1: 220.

- 1** Branches and undersurface of leaves rusty-pubescent; leaves obovate-elliptic, broadest mostly above the middle, 5-12 cm. long, 2.5-5.5 cm. broad; lateral nerves 4-7 pairs; corolla-tube about 3 mm. long, lobes 4-5 mm. long; ripe follicles 12-20 cm. long, narrowly spindle-shaped to almost cylindrical, up to about 1 cm. diam. [1. gracilis](#)
- Branches and leaves glabrous; leaves with 6-16 pairs of lateral nerves; ripe follicles 1-2 cm. diam.:.....**2**
- 2** Leaves obovate, broadest above the middle, usually rather long-cuneate at base, 4-9 cm. long, 2.5-6 cm. broad, main lateral nerves mostly 6 mm. apart from each other or less; corolla-tube about 4 mm. long, lobes about the same; ripe follicles cylindrical, 20-25 cm. long, 1-1.5 cm. broad[2. nitida](#)
- Leaves elliptic or ovate-elliptic, broadest at or below the middle, short-cuneate or rounded at base, 8-12 cm. long, 3-5 cm. broad; main lateral nerves more than 5 mm. apart from each other; fruiting follicles spindle-shaped, 10-20 cm. long, 1.5-2 cm. broad[3. glabrata](#)

1. Oncinotis gracilis Stapf in Kew Bull. 1894: 124; F.T.A. 4, 1: 223. *APD acc*

Oncinotis chlorogena K. Schum. in Schlechter Westafr. Kautschuk-Exp. 307 (1900), name only.

A rusty-pubescent climbing shrub up to 40 ft. high; flowers greenish or yellowish in terminal and axillary cymes.

Guin.: Pela, Nzérékoré (fr. Sept.) Baldwin 13312! **S. L.:** Yonibana (fr. Oct.) Thomas 4128! **Lib.:** Javajai, Boporo Dist. (fr. Nov.) Baldwin 10269a! Nikabuzu (Mar.) Bequaert 119! Zigida (Mar.) Also in **Cameroun**, **Gabon**, **Congo**, **Angola** and (?) **Tanganyika**.

PERIPLOCACEAE

Climbing, twining or erect, softly woody or occasionally with wiry stems, or herbaceous perennials with a tuberous rootstock; leaves opposite, entire, linear to very broad, pinnately nerved; stipules absent, but sometimes with a stipular frill around the stem at the nodes which may become woody; inflorescence a terminal cyme often lateral by sympodial growth of the axis, sometimes racemiform or umbelliform; bracts very small; flowers bisexual, sometimes functionally unisexual and then dioecious; calyx-tube very short or obsolescent, segments 5, valvate or imbricate but opening very early; corolla gamopetalous, 5-lobed, tube short or sometimes as long as or longer than the lobes, lobes contorted or very rarely valvate; corona of 5 lobes arising from the base of the stamen filaments, of varied form, or rarely absent or reduced to tubercles; stamens 5, inserted in the corolla-tube or at its throat, free from each other, but with the anthers pressed together and to the expanded apex of the style; anthers basifixed, introrse, usually with a scarious apical appendage inflexed over the style; pollen granular, in tetrads discharged on to 5 spathulate pollen carriers derived from the expanded part of the style and with a glandular base; pollen carriers concealing the 5 stigmatic surfaces; carpels two, joined only by their styles, which unite to form a flat or variously elongated head; ovules numerous, multiseriate on a single adaxial placenta; fruit of two (or one by abortion or pollination failure) divergent or reflexed sessile follicles; follicles more or less fusiform and often greatly elongated, or sometimes broadly ovoid, smooth, glabrous or hairy, sometimes warted or winged, finally dehiscing lengthwise adaxially; seeds flat, often winged, and crowned with a coma of soft silky hairs; endosperm present; embryo straight, almost as long as the seed, cotyledons flat.

Confined to the tropics and warm temperate regions of the Old World and reaching its greatest diversity in genera and species in tropical and S. Africa.

Distinguished from Asclepiadaceae, in which the genera were formerly placed, by the granular pollen carried on spathulate glandular carriers.

-
- 1 Corolla-tube a mere ring, or saucer-shaped:2
 Corolla-tube well developed; anthers glabrous:6
- 2 Anthers more or less villous [1. Parquetina](#)
 Anthers glabrous:3
- 3 Corona very small, of 5 indistinct emarginate lobules adnate to the bases of the filaments; pollen carrier rhombic, deeply cleft, attached to its gland by a short slender stalk [2. Batesanthus](#)
 Corona-lobes relatively large; pollen-carriers spatulate:4
- 4 Corona-lobes broadly obcordate, with a linear dorsal appendage; stems with conspicuous stipular frills at the nodes [3. Mondia](#)
 Corona-lobes linear, simple or divided:5
- 5 Leaves with numerous straight horizontal parallel lateral veins looped near the margin; flowers in congested lateral cymes; pedicels long and filiform [4. Zacateza](#)
 Leaves with fewer, curved, ascending lateral nerves; flowers in lax paniculate cymes; pedicels relatively short. [5. Tacazea](#)
- 6 Climbing shrubs:7
 Erect herbs or subshrubs with fleshy or woody tubers:8
- 7 Corolla-tube cylindrico-campanulate, less than half as long as the lobes; leaves not glaucous beneath [6. Cryptolepis](#)
 Corolla-tube narrowly urceolate, much longer than the lobes; leaves glaucous beneath [7. Mangenotia](#)
- 8 Corolla-tube cylindric or cylindrico-campanulate, not saccate at the base, corolla-lobes lanceolate or ovate-lanceolate, white, cream or purplish-pink:9
 Corolla-tube broadly campanulate, as broad as long, 5-angled and 5-saccate at the base; flowers blue, in 2-5-flowered terminal cymes; stamens with a horny callus at the base of the anthers [10. Pentagonanthus](#)
- 9 Subshrubs with wiry, erect stems and linear to narrowly oblong leaves; rootstock woody; flowers greenish-cream [8. Ectadiopsis](#)
 Herbs with erect simple stems from a tuberous rootstock; flowers pale violet-purple to deep crimson; corona of erect filiform lobes; follicles elongate-linear, erect [9. Raphionacme](#)

Cryptostegia grandiflora (Roxb.) R. Br. ex Lindley

Frequently cultivated and may have escaped in various places; it is a climbing or erect glabrous shrub with oblong-elliptic to almost rotund leathery leaves 5-10 cm. long, and terminal or lateral cymes of large funnel-shaped pink or lilac flowers 8-12 cm. across.

It is a native of Madagascar.

1. PARQUETINA

Baill. in Bull. Soc. Linn. Paris 2: 806 (1889); Bullock in Kew Bull. 15: 204 (1960).

Periploca of F.W.T.A., ed. 1, 2: 52, not of Linn.

Omphalogonus *Baill.* l.c. (1889).

- 1 Scrambling woody climber, glabrous; leaves coriaceous, oblong, elliptic, ovate, obovate or subrotund, abruptly acuminate, rounded to cordate at base, up to 15 cm. long and 8 cm. broad, dark shining green above, glaucous beneath; petioles 1.5-8 cm. long; flowers in lateral cymes; pedicels rarely exceeding 10 mm. long; sepals broadly ovate, 3 mm. long; corolla rotate, the lobes broadly ovate, about 10 mm. long; follicles widely spreading, woody, up to 45 cm. long but often much shorter [nigrescens](#)

Parquetina nigrescens (Afzel.) Bullock in Kew Bull. 15: 205 (1961).

APD: *Synonym of Omphalogonus calophyllus Baill.*

APD: *Synonym of Periploca nigrescens Afzel.*

Periploca nigrescens Afzel. (1817)-F.T.A. 4, 1: 256; F.W.T.A., ed. 1, 2: 52.

Parquetina gabonica *Baill.* l.c. (1889).

Omphalogonus nigritanus N. E. Br. in Kew Bull. 1912: 279; F.W.T.A., ed. 1, 2: 53.

2. BATESANTHUS

N. E. Br.-F.T.A. 4, 1: 253; Bullock in Kew Bull. 15: 203 (1961). *APD acc*

- 1 Woody climber; leaves glabrous, elliptic to oblong-obovate or subrotund, apex abruptly acuminate, base cordate, usually 7-16 cm. long, 4-10 cm. broad, or sometimes larger; petioles more or less 2 cm. long; stipular fringes interpetiolar, reflexed, leathery, subsistent; flowers in lax lateral panicles; calyx small; corolla rotate, lobes elliptic-ovate up to 18 mm. long and 11 mm. broad, rounded at apex; corona annular, shortly 5-lobed, lobes emarginate, adnate to the base of the stamen-filaments; follicles more or less woody, about 12 cm. long and 2 cm. diam., suberect, shortly beaked [purpureus](#)

Batesanthus purpureus *N. E. Br.* in Hook. Ic. Pl. 25: t. 2500 (1896); F.T.A. 4, 1: 254; Bullock l.c. 204. *APD acc*

Batesanthus talbotii *S. Moore* in Cat. Talb. 63 (1913); F.W.T.A., ed. 1, 2: 52.

A twiner in [forest](#) with rather thick leaves; flowers greenish outside and (?) red inside.

S. Nig.: Oban Talbot 63! 20211 Eket (Apr.) Talbot! **[Br.] Cam.:** Buea (May) Maitland 666! Bamenda (June) Maitland 1565! Bafut-Ngemba F.R., Bamenda (Feb.) Hepper 2173!

3. MONDIA

Skeels in Bull. U.S. Dep.Agric. Bur. Pl. Ind. No. 223: 45 (1911).

Chlorocodon *Hook. f.* (1871), not of Fourreau (1869)-F.T.A. 4, 1: 254.

- 1 Softly woody climber with a large tuberous rootstock; stems puberulous, glabrescent, with persistent lignescent stipular frills at the nodes and prominent lenticels; leaves petiolate, broadly oblong, ovate, obovate or almost rotund, shortly acuminate, rounded to deeply cordate at base, up to about 17 cm. long and 15 cm. broad, but often smaller, glabrescent; petiole up to 7 cm. long but usually shorter; flowers in lax lateral pedunculate panicles up to 15 cm. long and 10 cm. across; pedicels slender, 0.5-2 cm. long; corolla subrotate, 5-lobed almost to the base, lobes 10-12 mm. long and about 6 mm. broad, ovate-oblong, 1 glabrous on both sides but minutely ciliate along one (the outside in bud) margin; follicles somewhat woody, lanciform, horizontally divaricate, about 9 cm. long and 1.5-2 cm. diam. [whitei](#)

Mondia whitei (*Hook. f.*) *Skeels* l.c. (1911); Bullock in Kew Bull. 15: 203 (1961). *APD acc*

Chlorocodon whitei *Hook. f.* in Bot. Mag. 97: t. 5898 (1871); F.T.A. 4, 1: 255.

Tacazzea viridis *A. Chev. ex Hutch. & Dalz.* in Kew Bull. 1937: 339; F.W.T.A., ed. 1, 2: 52.

A woody climber of [drier forest country](#), with pale greenish-white or cream flowers.

Port. G.: Bissau Esp. Santo 1760! Fulacunda (Aug.) Esp. Santo 2161! Bolola to Buba (Aug.) Esp. Santo 2155! Bafatá (Nov.) Esp. Santo 2977! **Guin.:** Bafing R., Man to Touba road (July) Collenette 55! Widely distributed in tropical Africa.

Replaced in eastern coastal districts by the very closely allied *M. ecornuta* (N. E. Br.) Bullock.

4. ZACATEZA

Bullock in Kew Bull. 9: 361 (1954).

- 1 Slender twining shrub, internodes 3-15 cm. long, completely glabrous; leaves shortly petiolate, oblong, abruptly and shortly acuminate, broadly rounded to truncate at base, up to 20 cm. long and 5.5 cm. broad, but usually about 10 cm. long and 3 cm. broad, with numerous slender, parallel, horizontal lateral veins looped near the margin and with fine reticulation between them; cymes lateral, with very short peduncle and main branches, but with slender pedicels 3-4 cm. long; flowers buds oblong, rounded at apex, 6 mm. long just before anthesis, tube very short, lobes oblong, spreading, rounded at apex; follicles falcate, reflexed, about 5.5 cm. long, 6-7 cm. diam. near the base, with two ventro-lateral longitudinal ridges *pedicellata*

Zacateza pedicellata (K. Schum.) Bullock l.c. (1954). *APD acc*

Tacazzea pedicellata K. Schum. in Engl. Bot. Jahrb. 17: 115 (1893); F.T.A. 4, 1: 262, incl. var. *occidentalis* N.E. Br. l.c. 263 (1902).

Climber up to 50 ft.; flowers cream.

S. Nig.: Lagos (Jan.) Dalz. 1348! Eglessa (Jan.) Millen 130! Eket Dist. Talbot 3265!

Also recorded from **N.E. Congo** and **Angola**.

5. TACAZZEA

Decne.-F.T.A. 4, 1: 253; Bullock in Kew Bull. 9: 350 (1954).

- 1 Woody climber; leaves oblong, ovate or subrotund, obtuse to acuminate at apex, rounded to cordate at base, 4-10 cm. long or more, 1.5-6 cm. broad, more or less glabrous, or pubescent, or tomentose beneath, glabrous or pubescent above; flowers in terminal or lateral diffuse panicles; calyx-lobes ovate, 1.5 mm. long; corolla-lobes 6-7 mm. long; follicles divaricate, narrowly or broadly ovoid, acuminate to the apex, glabrous or densely hirsute *apiculata*

Tacazzea apiculata Oliv. in Trans. Linn. Soc. 29: 108 (1875); F.T.A. 4, 1: 267; Bullock l.c. 354; Berhaut Fl. Sén. 60. *APD acc*

7. MANGENOTIA

Pichon in Bull. Soc. Bot. Fr. 101: 246 (1954).

- 1 Scrambling and twining thin-stemmed shrub, internodes uniformly 2-3 cm. long; leaves oblong, acutely and abruptly acuminate, rounded or subacute at base, very uniform in size, about 3-5 cm. long, 1-2 cm. broad, glabrous, strongly discolorous, dark green above, glaucous beneath; cymes laxly few-flowered, lateral; peduncles 1-1.5 cm. long; pedicels 3-6 mm. long; corolla-tube urceolate, 6-8 mm. long, 1.5 mm. diam. in the lower part, narrower above, lobes spreading, lanceolate, acute, 5 mm. long; follicles straight, horizontally spreading, about 13 cm. long, 8 mm. diam., tapering to an acute tip [eburnea](#)

Mangenotia eburnea Pichon l.c. (1954); Bullock in Kew Bull. 9: 587 (1955).

APD: *Synonym of Cryptolepis eburnea* (Pichon) Venter

A shrub, erect at first, later climbing and twining; flowers creamy white.

8. ECTADIOPSIS

Benth. in Benth. & Hook. f. Gen. Pl. 2: 741 (1876); Bullock in Kew Bull. 10: 267 (1955).

- 1 Erect subshrub with annual or perennial simple or sparingly branched stems 30-60 cm. high, glabrous; leaves linear, linear-lanceolate or oblanceolate, or more rarely oblong or ovate, apex subacutely narrowed and more or less mucronulate, cuneate at base, very variable in size, up to 10 cm. long; cymes lateral, few to many-flowered, lax or somewhat congested, branched from the base; pedicels 1-4 mm. long; corolla-tube 2-4 mm. long, lobes 3-4 mm. long; follicles erecto-patent, straight, tapering to a blunt apex, up to 14 cm. long, 1 cm. diam. but frequently smaller; seeds oblong-elliptic, about 1 cm. long and 2.5-3 mm. broad, crowned with a dense coma of long silky hairs [oblongifolia](#)

Ectadiopsis oblongifolia (Meisn.) Schltr. in Engl. Bot. Jahrb. 18, Beibl. 45: 14 (1894); Bullock l.c. 268.

APD: *Synonym of Cryptolepis oblongifolia* (Meisn.) Schltr.

Ectadium ? oblongifolium Meisn. (1843).

Ectadiopsis nigritana Benth. in Hook. Ic. Pl. 12: 75, t. 1187 (1876).

Cryptolepis nigritana (Benth.) N. E. Br. in F.T.A. 4, 1: 251 (1902); F.W.T.A., ed. 1, 2: 53.

An erect shrub to about 2 ft. high with cream flowers; in savanna woodland.

Widely distributed in tropical and S. Africa.

9. RAPHIONACME

Harvey-F.T.A. 4, 1: 268.

- 1 Leaves linear, up to 20 times as long as broad; inflorescence a lax terminal or lateral cyme with pedicels 8-14 mm. long; flowers frequently precocious, corolla-tube 3 mm. long, lobes 5-7 mm. long, oblong, spreading or reflexed, pink; corona-lobes erect, filiform 5-6 mm. long; follicles erect, often arcuate, linear-terete, 10-30 cm. long; dwarf 10-30 cm. high, with a fleshy tuberous rootstock [1. brownii](#)
- Leaves lanceolate, elliptic, or more or less rotund-obovate: **2**
- 2 Inflorescence lateral from upper leafy nodes: **3**
- Inflorescence a branched, congested, terminal cyme, more or less cylindrical in outline, with a bibracteate peduncle 2-3 cm. long; the congested lateral cymules racemously arranged along the erect rhachis; bracts and bracteoles minute, pedicels 1-2 mm. long; corolla-lobes ovate-lanceolate, about 3-5 mm. long, the tube cylindrico-campanulate, 2 mm. long; corona-lobes filiform, erect, 5 mm. long; stems simple, erect, about 6-16 cm. high, puberulous; leaves obovate-oblancheolate, the uppermost largest, 4-10 cm. long, 1-3 cm. broad, glabrescent above, scabrid-puberulous beneath, apex rounded, cuneate at base and shortly petiolate [4. vignei](#)
- 3 Inflorescence 2-3-flowered, peduncles very short, pedicels 1-2 cm. long; flowers sometimes precocious; corolla-tube more or less 3 mm. long, lobes oblong, about 13 mm. long, pink inside, green outside, spreading or somewhat reflexed; leaves shortly petiolate, lanceolate to broadly elliptic or obovate, apex rounded, apiculate, base cuneate to rounded, up to 12 cm. long and 4 cm. broad, the lower relatively broader and smaller; follicles "linear, erect 8-10 cm. long" (Berhaut); herb 10-30 cm. high, with a tuberous rootstock [2. daronii](#)
- Inflorescence cymose, multiflorous; pedicels 4-6 mm. long; corolla-tube 2 mm. long, lobes triangular, 5-6 mm. long, spreading or at length reflexed, green with a deep red zone at the base, minutely papillate inside; corona-lobes rectangular at the base, with a flexuose whip-like apical appendage intertwined and connivant over the style and stamens; stems simple, numerous, erect from a woody tuber, up to 1 m. high; leaves shortly or obsoletely petiolate, oblong-lanceolate, up to 12 cm. long and 2 cm. broad, apex and base acute, glaucous below and crispate-pubescent on both surfaces [3. keayii](#)

1. *Raphionacme brownii* Sc. Elliot in J. Linn. Soc. 30: 91 (1894); F.T.A. 4, 1: 273; Bullock in Kew Bull. 8: 60 (1953). *APD acc*

10. PENTAGONANTHUS

Bullock in Hook. Ic. Pl. 36: sub. t. 3583 (1961).

- 1 Erect herb 1-2 ft. high with simple steins from a large woody tuber, more or less hirsute but soon glabrescent; leaves subsessile, reduced to scales in the lower part of the stem, increasing in size upwards, linear, up to about 12 cm. long and about 5 mm. broad, with recurved edges and a prominent midrib, apex acute, narrowed to the base; flowers blue, in sessile fascicles 2-5 cm. apart of 2-4 flowers racemously arranged along the upper leafless part of the stem; pedicels 6-10 mm. long, elongating to about 2 cm. long as the flower ages; corolla-tube 5-angled, shallowly 5-saccate at the base, 4 mm. long and 4 mm. diam., lobes oblong-lanceolate, acute or subacute, nearly 2 cm. long and about 7 mm. broad; follicles not known *caeruleus*

Pentagonanthus caeruleus (E. A. Bruce) Bullock l.c. (1961).

APD: *Synonym of Raphionacme caerulea* E. A. Bruce

Raphionacme caerulea E. A. Bruce in Kew Bull. 1935: 279. (?)

(?) *R. sudanica* A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 2: 54 (1931); Chev. Bot. 430, name only.

A blue-flowered herb, unique in the family.

Guin.: Kindia (July) Jac.-Fél. 1793! Jaeger! **S. L.:** Bumban (Aug.) Deighton 1246!

ASCLEPIADACEAE

Twining or erect shrubs or perennial herbs; leaves opposite, linear to orbicular-obovate, entire, or rarely lobed or toothed. Inflorescence cymose, most frequently umbelliform but sometimes with flowers more or less racemously fasciculate along a simple or branched rhachis. Flowers regular, pentamerous; calyx-tube very short or obsolete; corolla contorted, imbricate or valvate, gamopetalous, the lobes sometimes connivent at the apex; filaments united into a tube, anthers connivent throughout their length and united with the expanded style apex, introrse, bilocular and provided with lateral horny wings. Corona arising from the staminal column, very variable in form or rarely absent or reduced to five small fleshy tubercles. Pollen in waxy masses (pollinia) attached in pairs by caudicles of various form to 5 corpuscular usually horny sutured pollen carriers arising from the style apex and concealing the stigmatic surfaces. Ovary of two separate carpels; styles free to the apex where they are united in a peltate disk which is convex, conical or beaked; ovules multiseriate, on a single adaxial placenta in each carpel. Fruit of two (by abortion often one) erect or divergent follicles which may be linear to ovoid or ellipsoidal, membranous to woody, smooth or winged or variously armed with soft or indurated prickles, always dehiscent lengthwise adaxially. Seeds compressed, often with a membranous or thickened margin and nearly always crowned with a coma of silky hairs.

A mainly tropical family of some 130 genera, most of its members occupying savanna, monsoon or semi-arid country, more rarely found in rain forest.

The tribe Ceropegieae is confined to the Old World. The gamopetalous corolla, staminal column and corona and peltate style-apex, together with follicular fruits, flattened seeds with silky coma and opposite exstipulate leaves, are characteristic. Except in the Secamonoideae, woody plants are rare, and the wood itself is very soft; milky latex is universally present, but sometimes small in quantity.

KEY TO THE SUBFAMILIES

- 1 Pollen-contents of each anther-loculus consisting of two minute waxy masses; pollen carrier pale-coloured, not of horny consistency, caudicles subobsolete; style often produced beyond the anthers . [1. SECAMONOIDEAE](#)
- Pollen-contents of each anther-loculus consisting of a single waxy mass, often hyaline along one edge; pollen carrier dark in colour, horny, caudicles well-developed, filiform or variously flattened; style usually not produced beyond the anthers [2. ASCLEPIADOIDEAE](#)

KEY TO THE TRIBES AND GENERA

Subfamily-SECAMONOIDEAE

- 1 A single tribe [1. SECAMONEAE](#)

Tribe 1. -SECAMONEAE

- 1 Style apex truncate or bilobed, scarcely exceeding the anthers; corona-lobes laterally flattened or subulate; inflorescence a diffuse dichotomous cyme [1. Secamone](#)
- Style apex subulate-conical to clavate, much exceeding the anthers; corona-lobes dorsally flattened: [2](#)
- 2 Inflorescence racemiform, much longer than the leaves; corona much exceeding the anthers; corolla-lobes about as long as the tube or a little longer [2. Rhynchosigma](#)
- Inflorescence cymose, shorter than the leaves; corona scarcely exceeding the anthers; corolla-lobes several times as long as the tube [3. Toxocarpus](#)

Subfamily-ASCLEPIADOIDEAE

- 1 Pollen masses pendulous in the anther-loculi, suspended by caudicles from horny reddish-brown to black corpuscular carriers, the latter with a dorsal suture [2. ASCLEPIADEAE](#)
- Pollen masses horizontal, ascending or erect in the anther loculi, attached by caudicles to horny dark or light-coloured sutured carriers: [2](#)
- 2 Corolla-lobes imbricate or contorted, never valvate [3. MARSDENIEAE](#)
- Corolla-lobes valvate, sometimes adherent to each other at their tips [4. CEROPEGIEAE](#)

Tribe 2. -ASCLEPIADEAE

- 1 Leafy twiners, scramblers or erect herbs or shrubs; leaves sometimes caducous: [2](#)
- Leafless scrambling shrubs with flowers in lateral umbelliform inflorescences at the nodes; corolla rotate or rotate-campanulate; corona-double, the outer annular, the inner of 5 erect fleshy laterally compressed lobes [19. Sarcostemma](#)
- 2 Corona of 5 free lobes arising from the junction between the corolla and staminal column; herbs of semi-arid areas [4. Glossonema](#)
- Corona simple or double, arising from the staminal column, sometimes at its extreme base: [3](#)
- 3 Corona tubular, membranous, variously toothed or lacinate; inflorescence subumbelliform or flowers in fascicles racemously arranged along an elongating axis; leaves usually cordate at the base [5. Cynanchum](#)
- Corona never tubular, but the lobes sometimes united near the base to form an annulus or shallow cup: [4](#)
- 4 Twining climbers: [5](#)
- Erect herbs, or shrubs, occasionally tree-like: [8](#)
- 5 Flowers about 3 cm. diam., saucer-shaped; corona simple, of 5 erect lanceolate lobes with a wrinkled gibbosity at the base [6. Oxystelma](#)
- Flowers not exceeding 1.5 cm. diam., usually much smaller: [6](#)
- 6 Corona double, the outer membranous, annular with very short subquadrate, often denticulate lobes; inner corona of 5 fleshy erect lobes adnate to the staminal column, free above with subulate horns incurved over the staminal column and produced below into spreading or deflexed spurs; corolla-tube cylindric, the lobes spreading [7. Pergularia](#)
- Corona simple; corolla lobed almost to the base: [7](#)
- 7 Corona-lobes fleshy, apex rounded or truncate, slipper-shaped, margins infolded, with an apical reflexed horn on the inner face; follicles usually softly echinate, ovoid [8. Pentarrhinum](#)
- Corona-lobes laterally compressed, adnate to the staminal column, with a free triangular apex; follicles narrowly lanceolate in outline, smooth [9. Pentatropis](#)
- 8 Corona-lobes laterally flattened, with a conspicuous curved basal spur; large, softly woody tree-like shrub ... [10. Calotropis](#)

- Corona-lobes without a spur at the base:9
- 9 Corona-lobes petaloid, complicate and claw-like at the base, expanded above into a broad limb, variously toothed or fimbriate, or almost entire[11. Margaretta](#)
- Corona-lobes not petaloid and without a claw-like basal part: 10
- 10 Flowers densely spirally arranged along the thickened apical part of the peduncle which elongates as the flowers develop; leaves narrowly lanceolate, with minute bristles in their axils [12. Kanahia](#)
- Flowers in a false umbel; leaves without axillary bristles: 11
- 11 Corona-lobes dorsally flattened, without an expanded free part; erect herbs with linear or linear-lanceolate leaves and flowers not exceeding 5 mm. diam. [13. Aspidoglossum](#)
- Corona-lobes laterally flattened or not at all compressed, sometimes with a strap-shaped free part: 12
- 12 Corona-lobes cucullate (i.e. hooded), the inner face densely beset with erect papillae [14. Trachycalymma](#)
- Corona-lobes not cucullate and not internally papillate: 13
- 13 The corona-lobes complicate:..... 14
- The corona-lobes not complicate, fleshy and solid:..... 15
- 14 Corona-lobes with a conspicuous horn arising from the base of the inner face [15. Asclepias](#)
- Corona-lobes quadrate in outline, but without an inner basally affixed horn [16. Gomphocarpus](#)
- 15 Corona-lobes arising from the staminal column on short horizontal stipes, with a fleshy apical ovoid-conical apical part tapering to a subulate point; follicles erect, long-fusiform [17. Xysmalobium](#)
- Corona-lobes dorsally flattened, sometimes with slightly infolded margins, with or without a strap-shaped apical appendage, and with or without wing-like keels on the inner face [18. Pachycarpus](#)
- Tribe 3. -MARSDENIEAE
- 1 Corona with three series of lobes; inflorescence racemiform, with a long naked peduncle and long filiform pedicels [20. Neoschumannia](#)
- Corona simple or double; inflorescence not as above:2
- 2 Corona simple, often reduced to minute tubercles:3
- Corona double, the inner arising from the staminal column, the outer from the sinus between the corolla and staminal column; high-climbing glabrous shrub with umbelliform inflorescences and very long widely divergent follicles [28. Anisopus](#)
- 3 Corolla-lobes with reflexed and more or less lacinate flaps arising from their bases, projecting into the tube and closing its throat; corona-lobes arising high on the staminal column, ovate, acuminate, coherent at their tips over the truncate style-apex and much swollen dorsally; flowers densely spirally arranged along the swollen apex of the peduncle [21. Dalzielia](#)
- Corolla not as above, at most hairy in the throat:4
- 4 Corona arising from the sinus between the corolla and staminal column and partly adnate to the corolla, consisting of 5 fleshy lobes channelled down the face and with free incurved tips; a climbing or sub-erect shrub with rusty indumentum [22. Gymnema](#)
- Corona arising from the staminal column, not at all adnate to the corolla:.....5
- 5 Corolla subrotate; corona of 5 minute tubercles; climbing herbaceous or softly woody lianes, or erect herbs from a woody rootstock; inflorescence usually a zigzag cyme [23. Tylophora](#)
- Corolla globose, campanulate or tubular:6
- 6 The corolla globose or globose campanulate, the lobes shorter than the tube; erect or semi-twining herbs from a woody rootstock [24. Sphaerocodon](#)
- The corolla tubular-campanulate or with a short tube:7
- 7 Corolla tubular-campanulate, inflated at the base, densely hairy in the throat; corona-lobes with the free part expanded and with a linear appendage arising from its inner face; a twining shrub [25. Telosma](#)
- Corolla with a short cylindric tube; corona-lobes without an appendage on the inner face; corolla-lobes spreading, reflexed, or suberect:.....8
- 8 Flowers 1 cm. or more diam., the lobes spreading or reflexed; follicles woody, ovoid, often winged . [26. Dregea](#)
- Flowers not more than 5 mm. diam., the lobes suberect; follicles membranous, lanceolate in outline, never winged [27. Gongronema](#)

Tribe 4. -CEROPEGIEAE

- 1 Leafy erect or twining shrubs or herbs, or if leafless, not at all succulent:2
- Succulent plants, the leaves reduced to minute triangular caducous scales:4
- 2 Corolla-tube short, scarcely longer than broad, or almost none:3

- Corolla-tube much longer than broad, the limb spreading or with the lobes variously connate at their tips[31. *Ceropegia*](#)
- 3 Twining leafy climbers or leafless shrubs; flowers small, campanulate[29. *Leptadenia*](#)
- Erect herbs with a tuberous rootstock; flowers more or less rotate, the limb with a broad disk, the lobes often long-caudate[30. *Brachystelma*](#)
- 4 Corolla with the sinus between the lobes produced into small triangular teeth[32. *Huernia*](#)
- Corolla without teeth at the sinuses between the lobes[33. *Caralluma*](#)

1. SECAMONE

R. Br.-F.T.A. 4, 1: 276.

- 1 Style with a truncate apex, not protruding beyond the anthers; flowers very small, rotate, about 3 mm. diam.; follicles horizontally spreading; leaves abruptly and fairly long-acuminate, ovate to oblong-elliptic, up to 5 cm. long and 2 cm. broad[1. *afzelii*](#)
- Style apex ovoid-clavate, most often somewhat bilobed, protruding beyond the anthers; flowers larger than above, corolla-lobes erecto-patent, 3 mm. long, the tube about 1.5 mm. long; follicles reflexed; leaves gradually acuminate or merely acute, somewhat narrowly ovate or elliptic, up to 7.5 cm. long but often less [2. *africana*](#)

1. *Secamone afzelii* (Schultes) K. Schum. in Engl. Bot. Jahrb. 23: 234 (1896); Bullock in Kew Bull. 9: 586 (1955). *APD acc*

Widely distributed in tropical Africa, extending to **Arabia** and further east.

8. PENTARRHINUM

E. Mey. -F.T.A. 4, 1: 378.

- 1 Twining climber; leaves glabrous or nearly so, ovate-oblong, deeply cordate with a wide rounded sinus at the base, caudate-acuminate, up to about 10 cm. long and 6 cm. broad; petioles slender, 2-5 cm. long; inflorescence umbelliform, lateral at the nodes; peduncle about as long as the petioles, thinly pubescent; pedicels very slender, 1-5 cm. long, pubescent; corolla saucer-shaped, about 1 cm. diam., the lobes ovate, rounded at the apex; corona-lobes with an abruptly inflexed apical horn; follicles narrowly ovoid, narrowed to a beak at apex, more or less softly tuberculate-echinate or nearly smooth and glabrous *insipidum*

Pentarrhinum insipidum *E. Mey.* Comm. Pl. Afr. Austr. 200 (1837); F.T.A. 4, 1: 378. *APD acc*

APD: *Synonym of Pentarrhinum abyssinicum subsp. angolense (N.E. Br.) Liede & Nicholas*

Twining herbaceous climber 4-6 ft. or more high; corolla-lobes grey-green with faint purple lines, corona-lobes white, gynostegium brownish; **in open parts of montane forest.**

[Br.] Cam.: Cam. Mt., near Mann's Spring, 7,000 ft. (Mar.) Brenan 9510!

Tropical and S. Africa generally.

9. PENTATROPIS

Wight & Arn. -F.T.A. 4, 1: 380; Bullock in Kew Bull. 10: 283 (1955).

- 1 Stems twining, wiry, glabrescent; leaves elliptic to ovate, slightly cordate at base, acute, 2-5 cm. long, 1-2 cm. broad, glabrescent; flowers 1-4 on a very short extra-axillary peduncle; pedicels about 1 cm. long, very slender; calyx-lobes ovate, very small; corolla deeply lobed, lobes lanceolate, acuminate, about 1 cm. long, puberulous inside *spiralis*

Pentatropis spiralis (*Forsk.*) *Decne.* in Ann. Sci. Nat., sér. 2, 9: 327, t. 11E (1838); Bullock l.c. 284.

APD: *Synonym of Pentatropis nivalis (J.F. Gmel.) D.V. Field & J.R.I. Wood*

Asclepias spiralis *Forsk.* Fl. Aegypt.-Arab. 49 (1775).

Pentatropis senegalensis *Decne.* l.c. 328 (1838).

Pentatropis cynanchoides var. *senegalensis* (*Decne.*) *N. E. Br.* in F.T.A. 4, 1: 381; F.W.T.A., ed. 1, 2: 54.

A woody twiner with slightly fleshy leaves; flowers dull purplish-green; [in thickets, sandy places and by seasonal streams.](#)

Sen.: Roger! Heudelot 530! Berhaut 86. **Mali:** Koubita (Feb.) Davey 452! Rharous (Sept.) Hagerup 321! **N. Nig.:** Katagum Dist. (Aug.) Dalz. 94!

Extending across the northern dry savanna to [Kenya](#), [Ethiopia](#) and [Somalia](#), the Orient, Pakistan and India; also in Madagascar and the Comoro Islands.

10. CALOTROPIS

R. Br. -F.T.A. 4, 1: 294.

- 1 Shrub or small tree; leaves oblong-obovate to broadly obovate, cordate at base, abruptly and shortly acuminate, up to 30 cm. long and up to 15 cm. or more broad, very glaucous; cymes umbelliform, pedunculate, extra-axillary, several-flowered; pedicels 1-3 cm. long; calyx segments 6 mm. long; corolla campanulate, about 2 cm. diam.; follicles inflated, subglobose to obliquely ovoid, up to 10 cm. or more long [procera](#)

Calotropis procera (*Ait.*) *Ait. f.* Hort. Kew. ed. 2, 2: 78 (1811); F.T.A. 4, 1: 294; Berhaut Fl. Sén. 82. *APD acc*

A shrub or small tree with large glaucous leaves; flowers green with blue or violet markings; follicles bladder-like; seeds with a dense coma used as kapok; [found abundantly in semi-arid conditions.](#)

Sen.: Berhaut 37. **Gam.:** Ozanne 3! Pirie 52! Dawe 71! Kuntaur Ruxton! **Port. G.:** Bissau (fl. & fr. Mar.) Esp. Santo 1158! **S. L.:** Yoni, Bonthe Isl. (cult., Mar.) Widely distributed through the savanna of tropical and S. Africa.

14. TRACHYCALYMMA

Bullock in Kew Bull. 8: 348 (1953).

- 1 Corona-lobes truncate, the internal papillae exserted; leaves linear-lanceolate, up to 10 cm. long and scarcely 5 mm. broad, with prominent midrib, narrowed to the base and sessile or nearly so; flowers 4-6, in umbelliform lateral cymes, saucer-shaped; follicles up to 20 cm. long, erect, narrowly fusiform, the stipe more than half the total length [1. cristatum](#)
- Corona-lobes produced upwards to a rounded distal horn, the internal papillae not exserted; leaves, etc., very much as above [2. pulchellum](#)

1. **Trachycalymma cristatum** (Decne.) Bullock l.c. 349 (1953).

APD: *Synonym of Asclepias palustris* (K. Schum.) Schltr.

Gomphocarpus cristatus Decne. in Ann. Sci. Nat. sér. 2, 9: 325 (1838).
Asclepias palustris (K. Schum.) Schltr. (1895)-F.T.A. 4, 1: 349.

A weak erect perennial herb of [open savanna](#), from a small turnip-like tuber, a few inches to 1 ft. high, with white flowers suffused with pink and very long erect fusiform follicles.

N. Nig.: Mongu, 4,300 ft. (Aug.) Lely 442! Rabo'utu R., Birnin Gwari Dist. (June) Keay FHI 25885! [**Br.**] **Cam.:** Lakom, Bamenda (Apr.) Maitland 1494!

Widely distributed in savanna country of tropical Africa.

2. **Trachycalymma pulchellum** (Decne.) Bullock l.c. 350 (1953).

APD: *Synonym of Asclepias foliosa* (K. Schum.) Hiern

APD: *Synonym of Asclepias ameliae* S. Moore

Gomphocarpus pulchellus Decne. l.c. (1838).
Asclepias foliosa (K. Schum.) Hiern (1898)-P.T.A. 4, 1: 349; F.W.T.A., ed. 1, 2: 56.

A weak erect herb very like the preceding but differing markedly in the form of the corona; in [savanna country](#).

N. Nig.: Naraguta (fl. & fr. July) Lely 317! Vom Dent Young 172! Anara F.R., Zaria Prov. (May) Keay FHI 22915! Mando F.R., Birnin Gwari Dist. (June) Keay FHI 25816! Kaciya to Zonkwa, Zaria Prov. (June) G. V. Summerhayes 96!

Widely distributed in savanna country of tropical Africa.

[Note: It is possible that the two species enumerated above represent no more than ecotypic genotypes of the same species. Although both are well-represented in herbaria, collectors' observations are not sufficient for a decision to be made.]

15. ASCLEPIAS

Linn.-F.T.A. 4, 1: 313, partly (introduced New World species). *APD acc*

- 1 Erect more or less glabrous herb up to 1.5 m. high; leaves lanceolate, acuminate, 1.5-2.5 cm. broad; corolla red-orange, the lobes soon reflexed; follicles erect, fusiform, smooth, about 8 cm. long [curassavica](#)

Asclepias curassavica Linn. Sp. Pl. 215 (1753); F.T.A. 4, 1: 328; Berhaut Fl. Sén. 88, 85.

An erect, shrubby herb up to 5 ft. high with umbelliform inflorescences of flowers with scarlet reflexed corolla-lobes and yellow corona.

Widely cultivated in our area as an ornamental plant and recorded from most countries from Senegal to Fernando Po. A native of tropical America and an escape from cultivation in our area, but not known to have established itself among the native flora.

16. GOMPHOCARPUS

R. Br. in Mem. Wem. Soc. 1: 37 (1810).

Asclepias of F.T.A. 4, 1: 294; of F.W.T.A., ed. 1, 2: 56, partly, not of Linn.

- 1 Follicles densely invested with filiform bristle-like outgrowths; peduncles and pedicels densely pubescent; flowers more or less cream-coloured; leaves linear to lanceolate up to 15 cm. long:**2**
 Follicles without outgrowths, narrowly fusiform, membranous, glabrous; peduncles and pedicels glabrous or with lines of sparse short hairs; leaves linear, up to 20 cm. long or more; flowers greenish-blue:**3**
- 2 Follicles inflated, bladder-like when ripe, apex rounded; calyx-lobes up to 1 cm. long; corona-lobes shorter than the staminal column [1. *physocarpus*](#)
 Follicles not inflated, more or less ovoid, apex rostrate; calyx-lobes not exceeding 5 mm. long; corona-lobes at least as long as the staminal column [2. *fruticosus*](#)
- 3 Leaves linear, very sharply ascending, 15-20 cm. long, scarcely 5 mm. wide; the whole plant glabrous; flowers more or less nodding, 2 cm. or more in diam. [3. *solstitialis*](#)
 Leaves linear-lanceolate, about 10 cm. long, 5-6 mm. wide, glabrous or with a few very short hispid hairs beneath; flowers not more than 1.5 cm. diam., pedicels and peduncles with opposite lines of sparse short hairs [4. *kamerunensis*](#)

1. **Gomphocarpus physocarpus** *E. Mey.* Comm. Pl. Afr. Austr. 202 (1837); Bullock in Kew Bull. 7: 408 (1952). *APD acc*

APD: Synonym of Gomphocarpus semilunatus A. Rich.

Gomphocarpus semilunatus *A. Rich.* (1851).

Asclepias semilunata (*A. Rich.*) *N. E. Br.* in F.T.A. 4, 1: 328 (1902); F.W.T.A., ed. 1, 2: 56, partly; Berhaut Fl. Sén. 265.

A perennial herb up to 6 ft. high with cream flowers and bladder-like fruits; [in upland seasonal swamp grassland](#).

Sen.: Kayar & Niayes Berhaut 1386. **N. Nig.:** Jos Plateau (fl. & fr. Apr.) Lely P248! [**Br.**] **Cam.:** Bamenda, 5,000 ft. (fl. & fr. Dec.) Baldwin 13863! Nchan, 5,000 ft., Bamenda (May) Maitland 1708!

Widespread in tropical and S. Africa.

2. **Gomphocarpus fruticosus** (*Linn.*) *Ait. f.* Hort. Kew ed. 2, 2: 80 (1811); Bullock l.c. 406. *APD acc*

Asclepias fruticosa *Linn.* (1753)-F.T.A. 4, 1: 330.

A. foliosa of F.W.T.A., ed. 1, 2: 56, partly, not of N. E. Br.

A. semilunata of F.W.T.A., ed. 1, 2: 56, partly (synonymy).

A. euphorbioides *A. Chev.* (1909).

Perennial herb up to 6 ft. high, with cream flowers; the fruits are not inflated; [in savanna grassland](#).

Guin.: Mali (Sept., Oct.) Schnell 7267! Jac.-Fél. 1970! Dalaba-Diaguissa Plateau Chev. 18372! Ditinn to Diaguissa Chev. 12849!

Widespread in tropical and S. Africa.

3. **Gomphocarpus solstitialis** (*A. Chev.*) *Bullock* l.c. 340 (1953).

APD: Synonym of Asclepias solstitialis A. Chev.

Asclepias solstitialis *A. Chev.* in Mém. Soc. Bot. Fr. 2, 8: 270 (1917); Chev. Bot. 434; F.W.T.A., ed. 1, 2: 56.

A perennial herb about 3 ft. high with small bluish flowers; [in stream beds](#).

Guin.: Soarella (June) Pobéguin 1007! **Iv. C.:** Mt. Kamouéniboka, Marabadiassa (July) Chev. 22017! **Ghana:** Yeji (Aug.) Pomeroy 1343! **N. Nig.:** Aguji, Ilorin Thornton! Zungeru (fl. & fr. July) Dalz. 3! **S. Nig.:** Ogbuga, Enugu (June) Stevenson FHI 23643!

4. **Gomphocarpus kamerunensis** (*Schltr.*) *Bullock* l.c. 8: 340 (1953).

APD: Synonym of Asclepias kamerunensis Schltr.

Asclepias kamerunensis *Schltr.* in Engl. Bot. Jahrb. 51: 137 (1913).

A perennial herb about 3 ft. high, with bluish-green flowers; [in stream beds](#).

Ghana: Shiare, Buen-Krachi Dist. (Apr.) Hall 1448! **N. Nig.:** Mando, Zaria Prov. (June) Keay FHI 25857! **S. Nig.:** Nsuka, Onitsha Prov. (June) Thompson! [**Br.**] **Cam.:** Ngong, Bamenda (fl. & fr. June) Maitland 1747!

Also in [Cameroun](#).

17. XYSMALOBIMUM

R. Br.-F.T.A. 4, 1: 298, partly.

- 1 Leaves elliptic-oblong-oblancheolate, long-cuneate at base, with a petiole up to 1 cm. long, the lamina broadly acute, up to 8 cm. long and 1.5 cm. broad; inflorescences sessile, 6-8-flowered, extra-axillary at the upper nodes, umbelliform; pedicels 8-15 mm. long; corolla-lobes spreading-campanulate, oblong, 7 mm. long, 3 mm. broad [1. membraniferum](#)

Leaves narrowly oblong-linear, narrowly oblong, lanceolate, oblanceolate or rarely ovate or obovate, never long-cuneate at the base, usually rounded, very shortly petiolate, up to 11 cm. long, but usually 4-7 cm. long; inflorescences 10-12-flowered, extra-axillary at the upper nodes, umbelliform on very short or obsolete peduncles; pedicels 8-12 cm. long; corolla-lobes abruptly reflexed, oblong-lanceolate, 4-5 mm. long [2. heudelotianum](#)

1. *Xysmalobium membraniferum* *N. E. Br.* in Kew Bull. 1895: 251; F.T.A. 4, 1: 304. *APD acc*

An erect herb 12-18 in. high.

S. L.: Port Loko Sc. Elliot 5183! Falaba (Mar.) Sc. Elliot 5184!

2. *Xysmalobium heudelotianum* *Decne.* in DC. Prod. 8: 520 (1844); F.T.A. 4, 1: 304. *APD acc*

APD: *Synonym of Xysmalobium membraniferum N.E. Br.*

An erect herb from a fusiform tuber a few inches to 4 ft. high; flowers greenish-yellow, follicles erect, long-stipulate, narrowly fusiform, up to nearly 1 ft. long but often much less; [in grassy savanna](#).

Sen.: Komba Heudelot! *Gam.*: Genieri (Feb.) Fox 84! *S. L.*: Samaia (fr. May) N. W. Thomas 233! *Ghana*: Achimota (May) Irvine 1617! Aburi Anderson! Nangodi to Bongo (Nov.) Morton A3802! *N. Nig.*: Nupe Barter 1323! Anara F.R., Zaria (May) Keay FHI 19199! Assob (Feb.) McClintock 237! Mongu (July) Lely 439! Abinsi (fl. & fr. June-July) Dalz. 692! 693! 694! Kyana, Nassarawa Prov. (Feb.) Hepburn 3!

Widely distributed in savanna country of tropical and S. Africa.

[It is very doubtful whether *X. membraniferum* can be maintained as a species distinct from *X. heudelotianum*. The distinctions made above are somewhat poor and can be explained as artefactual or developmental. I have seen only the two original specimens of *X. membraniferum*-A.A.B.]

18. PACHYCARPUS

E. Mey. Comm. Pl. Afr. Austr. 200 (1837).

- 1 Follicles inflated, broadly rounded at base and apex; corona-lobes arising from the base of, and shorter than the gynostegium; leaves oblong-elliptic, rounded to subacute at base and apex, 6-15 cm. long, 2-6 cm. broad, with numerous parallel patent lateral veins; petiole 4-10 mm. long; stems simple, up to 1 m. high; inflorescence pedunculate, lateral from the upper nodes, umbelliform; the whole plant more or less hispid hairy [1. lineolatus](#)

Follicles broadly fusiform, narrowed to a beak above and a stipe below; corona-lobes from above the base of, and slightly overtopping the gynostegium; habit and leaves as in the preceding [2. schweinfurthii](#)

1. *Pachycarpus lineolatus* (*Decne.*) *Bullock* in Kew Bull. 8: 333 (1953). *APD acc*

APD: *Synonym of Pachycarpus bisacculatus (Oliv.) Goyder*

Gomphocarpus lineolatus *Decne.* in Ann. Sci. Nat. Paris, sér. 2, 9: 326 (1838).

Aselepias lineolata (*Decne.*) *Schltr.* in J. Bot. 33: 336 (1895), partly; F.T.A. 4, 1: 322; F.W.T.A., ed. 1, 2: 56; Berhaut Fl. Sén. 82.

An erect simple-stemmed perennial, hispid-hairy all over, with inflated bladder-like follicles; [savanna](#).

Sen.: Niokolo-Koba Berhaut 1555. *Guin.*: Beyla (June) Jac.-Fél. 985! Fabala, Kérouané (July) Collenette 75! *Ghana*: Aburi Anderson 3! Yeji (Aug.) Vigne FH 3310! Tolon (June) Williams 822! Logba Lota (June) Howes 925! *N. Nig.*: Aguji, Ilorin Thornton! Nupe Barter 1323a! Zungeru (July) Dalz. 2! Jos Plateau (May, July) Lely P329! Dent Young 171! Keay &

King FHI 37100! Maska, Katsina Prov. (June) Keay FHI 25897! **[Br.] Cam.:** Bamenda, 5,000 ft. (fl. & fr. May) Maitland 1428! Nchan, Bamenda (fl. & fr. June) Maitland 1748! 1789!

Widely distributed in the savanna of tropical Africa.

2. *Pachycarpus schweinfurthii* (N. E. Br.) Bullock l.c. 330 (1953).

APD: *Synonym of Pachycarpus lineolatus (Decne.) Bullock*

Asclepias schweinfurthii N. E. Br. in Kew Bull. 1895: 253; F.T.A. 4, 1: 323.

A hispid hairy perennial very similar to the preceding, but the follicles fusiform, not inflated; [savanna](#).

N. Nig.: Mando F.R., Birnin Gwari Dist. (June) Keay FHI 25837! **[Br.] Cam.:** Nchan, 5,000 ft., Bamenda (fr. May) Maitland 1521! Ngong, Bamenda (June) Maitland 1746! Nguroje, Mamblla Plateau (Jan.) Hepper 2819!

Widely distributed in the savanna of tropical Africa.

[A specimen collected by T. D. Maitland (No. 1437) at Bamenda in May 1931 may represent a third species for our area.]

19. SARCOSTEMMA

APD: *Synonym of Cynanchum L.*

R. Br.—F.T.A. 4, 1: 383; Bullock in Kew Bull. 11: 504 (1957).

- 1 Scrambling and twining shrub; branchlets leafless, terete, pubescent at the nodes; flowers numerous in sessile umbelliform fascicles, lateral at the nodes; pedicels 6-10 mm. long, more or less woolly; corolla cream or greenish, 5-6 mm. long; follicles up to 10 cm. long, narrowly linear-lanceolate, thinly puberulous [viminale](#)

Sarcostemma viminale (Linn.) R. Br. in Mem. Wern. Soc. 1: 51 (1810); F.T.A. 4, 1: 384.

APD: *Synonym of Cynanchum viminale (L.) L.*

Forming dense scrambling bushes with intricately interlaced branches; flowers cream or greenish, sweetly scented; [a plant of dry savanna country, or frequently found in semi-arid conditions](#).

Ghana: Komenda (Sept.) Chipp 577! Accra (Jan.) Dalz. 71! Accra Plains Vigne FH 2911! Achimota (fr. Jan.) Irvine 1969! Krobo Plains (Jan.) Johnson 604! **N. Nig.:** Takwara Lely 109! **S. Nig.:** Iseyin (Apr.) Onochie FHI 34687! Idanre (Jan.) Brenan, Jones, Richards & Keay 8649!

Widely distributed in tropical Africa.

20. NEOSCHUMANNIA

Schltr. in Engl. Bot. Jahrb. 38: 38 (1905).

- 1 Twining glabrous climber with very slender stems and long internodes; leaves elliptic or oblong elliptic, shortly acuminate, rounded at the base, 9-12 cm. long, 5-6.5 cm. broad; petiole flexuous, 2-2.5 cm. long; inflorescence extra-axillary, racemiform, with a slender naked peduncle as long as or longer than the leaves, the floriferous upper part bracteate, stouter, with numerous flowers borne on filiform pedicels about 4 cm. long; corolla lobed almost to the base, lobes about 11 mm. long, lanceolate, ciliate with clavate hairs; corona in three series, the outer lobes reflexed, glabrous, oblong, 2 mm. long, the intermediate lobes sickle-shaped, erect distally and bidentate, about 1 mm. long, maculate, the inner lobes lanceolate, erect, from a narrow base, elliptic, obtusely acuminate, 3 mm. long, ciliate on the margins and villous inside [kamerunensis](#)

Neoschumannia kamerunensis Schltr. l.c., fig. 4 (1905). *APD acc*

A slender twining climber [among shrubs at the forest edge](#); flowers dark purple outside, greenish inside.

[Br.] Cam.: near Man O' War Bay (Apr.) Schlechter 12384.

[I have not seen a specimen of this remarkable plant which is unique in the family in its inflorescence and corona.]

21. DALZIELIA

Turrill in Hook. Ic. Pl. 31: t. 3061 (1916).

- 1 A shrub or woody herb 60-100 cm. high with simple shortly pubescent stems; leaves narrowly linear-oblongate, 10-12 cm. long, 1-1.5 cm. broad, glabrous; flowers racemously umbelliform, numerous, at the apex of a short extra-axillary peduncle; pedicels 2 cm. long; calyx-lobes subulate-lanceolate, 4-5 mm. long, minutely ciliate; corolla lobed to the middle, the lobes ovate, 8 mm. long [oblanceolata](#)

Dalzielia oblanceolata *Turrill* l.c. (1916). *APD acc*

Xysmalobium graniticola A. Chev. Bot. 432, name only.

A shrubby perennial herb with simple stems up to 3 ft. high, crowded willow-like leaves and cream flowers, bearded on the inner face of the lobes; [along seasonal rivers](#).

Guin.: Macenta (fl. & fr. May) Jac.-Fél. 894! Mt. Nimba (Apr.) Schnell 5010! Upper Niger (Apr.) Chev. 13596! **S. L.:** Bandajuma (May) Aylmer 74! York (Apr.) Adames 204! York Pass (June) Lane-Poole 50! Makump (July) Thomas 933! Yifin (Apr.) Deighton 5085! **Iv. C.:** Guinea frontier (Aug.) Boughey 18135!

22. GYMNEMA

R. Br.—F.T.A. 4, 1: 413.

- 1 Shrubby scrambling twiner, young parts more or less tomentose; leaves more or less ovate, acuminate, cuneate to rounded or cordate at base, densely pubescent to glabrescent, up to about 7 cm. long and 4 cm. broad, but often smaller; flowers numerous, in sessile or shortly pedunculate lateral umbelliform cymes; pedicels about 6 mm. long; corolla about 4 mm. long, lobes spreading-recurved; follicles lanceolate, up to 10 cm. long [sylvestre](#)

Gymnema sylvestre (*Retz.*) *Schultes* Syst. Veg. 6: 57 (1820); F.T.A. 4, 1: 413; Chev. Bot. 436; Bullock in Kew Bull. 8: 68 (1953); Berhaut Fl. Sén. 719. *APD acc*

Periploca sylvestris *Retz.* Obs. Bot. 2: 5 (1781).

A scrambling shrub, leaves and young shoots densely hairy; flowers greenish, inconspicuous, sweetly scented; [a plant of savanna or deciduous forest](#).

Maur.: Webb! **Sen.:** (fl. & fr. Mar.) Roger 49! Sieber 22! Dagana (fr. Feb.) Roberty 16878! Berhaut 719. **Mali:** Bone (Aug.) Demange 39/1957! **Port. G.:** Carache (fr. May) Esp. Santo 1999! Kaduna (fr. Dec.) Meikle 837! Katagum (fr. Aug.) Dalz. 97! Bornu (fr. Oct.) Elliott 119! **S. Nig.:** Aguku Dist. Thomas 1022/3! Ibadan South F.R. (Sept.) Keay FHI 25401! Ogun R., Oyo (Sept.) Latilo FHI 23536! Oyo (Sept.) Keay FHI 28040! Ukpon F.R., Obubra Dist. (Aug.) Adebuseyi FHI 43961!

Widely distributed throughout tropical Africa, and in S. Africa and Madagascar, extending eastwards into India and beyond.

23. TYLOPHORA

R. Br.—F.T.A. 4, 1: 404.

- 1 Twining climbers; leaves petiolate, spreading:.....2
Erect perennial herb or sub-shrub with a woody rhizome and simple stems; leaves ascending, linear-lanceolate, sessile, apex acute, 3-7 cm. long, 5 mm. broad, glabrous; inflorescence lateral, longer than the leaves, with scattered fascicles of a few flowers in the upper half; flowers brown, about 3 mm. diam., with narrowly triangular acute lobes; follicles very slightly divergent, linear-acute, 3-4 cm. long [9. congolana](#)
- 2 Leaves large, about 15 cm. diam. or more, suborbicular, rounded subcordate at base, very shortly cuspidate at

- apex; flowers purple:3
- Leaves much smaller, oblong-obovate to linear-lanceolate, usually more than twice as long as broad, often acuminate, but not, or only rarely, cuspidate at apex:4
- 3 Stems and leaves glabrous; leaves green [1. cameroonica](#)
- Stems and inflorescences golden-tomentose; leaves glaucous, tomentose on the veins beneath [2. glauca](#)
- 4 Flowers dark reddish-brown, 1.5 cm. diam., in crowded racemiform spikes at the ends of the inflorescence branches; pedicels 1 cm. long; leaves oblong-obovate, deeply cordate at base, broadly acuminate, 10-16 cm. long, up to 8 cm. broad [3. conspicua](#)
- Flowers not exceeding 1 cm. diam., usually 3-5 mm. diam.:5
- 5 Flowers in very short racemiform clusters scattered diffusely along the inflorescence branches; pedicels about 5 mm. long; leaves oblong-ovate to obovate, rarely almost rotund, acutely acuminate, deeply cordate at base, with broad sinus, up to 16 cm. long and 8 cm. broad, thinly herbaceous, petiole 2-3 cm. long; follicles usually solitary, somewhat falcate, linear, about 7-9 cm. long [4. sylvatica](#)
- Flowers in umbelliform or racemiform groups at the ends of the inflorescence branches, or in simple cymes:6
- 6 Leaves 3-5-nerved from the cordate base, oblong, ovate or somewhat obovate, acutely acuminate, up to 8 cm. long and 4 cm. broad; petiole 1-2 cm. long [5. gillettii](#)
- Leaves pinninerved:7
- 7 Corolla-lobes broadly rounded, the flower about 1 cm. diam.:8
- Corolla-lobes narrow, acute, the flower 2-3 mm. diam.; leaves rounded or obtuse at base, not at all cordate, ovate to oblong-ovate, scarcely acuminate but with fine mucronate tip, lamina usually less than 5 cm. long and about half as broad; petiole 0.5-1 cm. long; inflorescence a lateral cyme about as long as the leaves ... [8. dahomensis](#)
- 8 Leaves with a definite narrow sinus at the cordate base, oblong, ovate or elliptical, apex acute, often apiculate but scarcely acuminate, up to 10 cm. long and 5 cm. broad, but usually smaller, glabrous; corona of 5 small, separate, fleshy tubercles [6. oculata](#)
- Leaves obtusely cuneate, truncate or cordate with a broad shallow sinus at base, oblong, ovate, elliptical or obovate, somewhat larger than above; corona of 5 laterally elongated, contiguous fleshy tubercles [7. oblonga](#)

1. **Tylophora cameroonica** *N. E. Br.* in Kew Bull. 1895: 258; F.T.A. 4, 1: 407; Bullock in Kew Bull. 9: 585 (1955). *APD acc*

A glabrous climber with very broad leaves and small purple flowers in clusters along the branches of large diffuse panicle cymes.

[Br.] Cam.: Rio del Rey Johnston! Buea (fl. & fr. Feb.) Dalz. 8236 bis!

Also in [Uganda](#).

2. **Tylophora glauca** *Bullock* l.c. 585 (1955). *APD acc*

A climber very like the above, but with less expanded panicles, the purple flowers larger and fewer, stems, inflorescences and veins golden-tomentose and the leaves very glaucous.

S. Nig.: Obomkpa, Benin Prov. (fl. & fr. Aug.) Onochie FHI 33430!

Also in [Congo](#).

3. **Tylophora conspicua** *N. E. Br.* in Kew Bull. 1895: 298; F.T.A. 4, 1: 405; Bullock l.c. 583. *APD acc*

Twiner with dark reddish-brown flowers.

Lib.: Ganta (May) Harley 1203! Ghana: Aburi (May) Johnson! Tafo (July) Owen 572! Amentia Irvine 518! W. Ashanti (May) Irvine 2501! Kumasi (fr. Oct.) Baldwin 13473!

Extending to Cameroun, Congo and E. Africa.

4. **Tylophora sylvatica** *Decne.* in Ann. Sci. Nat. sér. 2, 9: 273 (1838); F.T.A. 4, 1: 407; Berhaut Fl. Sén. 57; Bullock l.c. 582. *APD acc*

Tylophora adalinae *K. Schum.* (1895)-F.T.A. 4, 1: 410; Bullock in Kew Bull. 15: 202 (1961).

Marsdenia profusa *N. E. Br.* (1895)-F.T.A. 4, 1: 425; F.W.T.A., ed. 1, 2: 60.

Herbaceous twiner; flowers dull purple-brown; in thickets.

Sen.: Berhaut 1554. **Guin.:** Heudelot 816! Nzérékoré (fr. Oct.) Baldwin 9731! **S. L.:** Leicester (June) Lane-Poole 288! Kuntaia (fl. & fr. June) Thomas 418! Rokupr (fl. Apr., fr. Extending to [Egypt](#) and [Arabia](#).

30. BRACHYSTELMA

R. Br. in Bot. Mag. t. 2343 (1822).

- 1 Flowers several, in umbelliform fascicles at the apex of leafy branches; corolla with a broad flat or funnel-shaped disk and triangular lobes; stems stout, branched sparingly, leafy: [2](#)

Flowers solitary at the upper nodes of leafless stems; pedicels filiform, up to 2 cm. long; corolla divided almost to the base into linear segments more than 4 cm. long and about 1 mm. wide at the base, beset with long purple clavate (? vibratile) hairs particularly towards the base; stems arising from a small flattened tuber, slender, with 2-3 long internodes below the flowering upper third, leaves reduced to scale-like cataphylls; stems extending after flowering to become leafy and flexuous; leaves lanceolate, sessile, subacute, subcordate at base, up to about 6.5 cm. long and 1 cm. wide, thinly scaberulous-puberulous on both sides [3. exile](#)

- 2 Pedicels about 4 cm. long; corolla purple, densely tomentose inside, with a very short tube and broad flat disk, nearly 2 cm. diam., the lobes very short, deltoid; leaves oblong-oblancoate, up to 6 cm. long and 1.5 cm. broad, more or less hispid on both sides [1. omissum](#)

Pedicels from less than 10 to 14 mm. long; corolla glabrous or pubescent inside, yellow, green or purple, the tube widely funnel-shaped, 5 mm. long, the lobes triangular, 5-10 mm. long and about 4 mm. broad at the base; leaves oblong-oblancoate, up to 11 cm. long and 4 cm. broad, more or less pubescent on both sides [2. togoense](#)

1. *Brachystelma omissum* Bullock in Kew Bull. 17: 193, fig. 2 (1963). *APD acc*

A perennial herb up to 1 ft. high, from a fleshy disciform tuber, with purple flowers.

[Br.] Cam.: Jua, Bamenda (Apr.) Maitland 1712!

2. *Brachystelma togoense* *Schltr.* in Engl. Bot. Jahrb. 38: 40, fig. 5H-O (1905); Bullock l.c. 191 *APD acc*

Brachystelma atacorensis A. Chev. (1917)-F.W.T.A., ed. 1, 2: 65.

A perennial erect herb up to 1 ft. high, from a fleshy disciform tuber, with green flowers, or greenish-yellow and often flecked with purple.

Ghana: Accra Plains (Feb., Mar.) Cox 130! **Togo Rep.:** Foot of Agomé Mts. (Mar.) Schlechter 12961. **Dah.:** Atacora Mts., Kovandé, 1,200-1,500 ft. (June) Chev. 24013. **N. Nig.:** Mongu, 4,300 ft. (July) Lely 443! Cece F.R., Niger Prov. (June) E. W. Jones 188! Mando, Birnin Gwari Dist. (June) Keay FHI 25856!

3. *Brachystelma exile* *Bullock* l.c. fig. 1 (1963). *APD acc*

A precocious erect geophytic herb of *savanna grassland*, about 18 in. high, the purple flowers with long spidery corolla-lobes beset with vibratile purple hairs.

N. Nig.: Ancho, Plateau Prov. (May) Hepburn 141! Mando F.R., Birnin Gwari Dist. (June) Keay FHI 25848!

Also in *Cameroun*.

Brachystelma bingeri A. Chev. in Rev. Cult. Colon. 8: 67, with fig. (1901); F.T.A. 4, 1: 469.

I have been unable to identify this plant from the description. Chevalier's description of the corona makes reference to the genus *Brachystelma* very doubtful, whilst his figure shows a turnip-like tuber unlike that of any other species of the genus. The small cyme is also strange, whilst the rather poor sketch of the flowers recalls the genus *Pentagonanthus* (Periplocaceae) rather than *Brachystelma*. The plant is recorded from the dry savanna of Mali and Dahomey (Chev. 992; 1015; 2703; 24251).

31. CEROPEGIA

Linn.-F.T.A. 4, 1: 435; H. Huber in Mem. Soc. Brot. 12: 5-203 (1958).

In the first edition of this work no fewer than 22 species were recognized; in this treatment several of them are reduced to synonymy following the work by Huber and by the present writer. There is no doubt, however, that several further species will be found in our area.

- 1 Slender erect herbs from a few to 40 cm. high; leaves linear to very narrowly lanceolate, sometimes absent at flowering time; corolla-lobes more or less coherent:2
- Twining climbers; leaves lanceolate to broadly ovate or elliptic:5
- 2 Corolla with subulate spreading appendage 3-6 mm. long at the sinus between corolla-lobes; tube 4-7 cm. long, mottled in upper half, lobes linear, 4-6 cm. long; leaves 5-8 cm. long, rarely as much as 8 mm. broad1. *ledermannii*
- Corolla without appendages at the sinus between corolla-lobes, or these reduced to very short broadly deltoid teeth:3
- 3 Corolla-tube about 2 cm. long; leaves linear, about 4 cm. long; corolla-lobes linear, minutely pubescent but with a few long purple hairs2. *deightonii*
- Corolla-tube 4 cm. long or usually more;4
- 4 Corolla-tube broadly funnel-shaped and 5-angled at the throat and somewhat flask-shaped at the base, glabrous outside, lobes very variable in length, up to 5 cm. long3. *campanulata*
- Corolla-tube almost cylindrical and very slender, pubescent outside, plants usually leafless at flowering time; corolla-lobes up to 9 cm. long4. *porphyrotricha*
- 5 Corolla-lobes quite free from each other, short and spreading in the open flower, triangular to oblong, somewhat longer than broad; tube 8-10 mm. long, thinly to densely pubescent, more or less globose at the base; leaves ovate or ovate-lanceolate, more or less cordate at base, thinly setulose above, and thinly pubescent beneath5. *nigra*
- Corolla-lobes connate into a slender column about 8 mm. long terminating in an ellipsoid head, tube 1.5-2 cm. long, swollen at the base; leaves ovate-lanceolate, ovate or elliptic; flowers in umbelliform lateral cymes; stems

- and leaves somewhat fleshy [6. rhynchantha](#)
- Corolla-lobes coherent at the tips only **6**
- 6** Calyx-lobes linear-subulate, about 2 cm. long; corolla-tube cylindric for 2-5 cm., expanded above, lobes 1-5 cm. long; leaves ovate, caudate-acuminate, almost glabrous [7. talbotii](#)
- Calyx-lobes more or less triangular, not more than about 5 mm. long: **7**
- 7** Leaves ovate or elliptic, not linear or linear-lanceolate: **8**
- Leaves linear or linear lanceolate: **14**
- 8** Leaves more or less hairy, at least on the veins beneath: **9**
- Leaves glabrous: **10**
- 9** Corolla-tube cylindric, 2-5 cm. long, the lobes 1-4 cm. long; leaves densely pilose on the veins beneath, subulate-acuminate, mostly cordate at base [8. johnsonii](#)
- Corolla-tube curved, 2 cm. long, the lobes 4 cm. long; leaves thinly pubescent on the veins beneath, subulate-acuminate [9. peulhorum](#)
- 10** Corolla-lobes with a fringe of long hairs at the apex, about 8 mm. long, the tube 1-5 cm. long; sepals 2-5 mm. long; leaves obovate-ob lanceolate, acutely acuminate, 4-7 cm. long [10. sankuruensis](#)
- Corolla-lobes without a fringe of long hairs at the apex: **11**
- 11** Corolla-lobes glabrous inside, broadly lanceolate: **12**
- Corolla-lobes pilose inside, linear, 1 cm. long, the tube 1-5-2-5 cm. long, mottled towards the apex; calyx-lobes narrowly lanceolate, glabrous: **13**
- 12** Corolla-tube 3 cm. long; leaves elliptic, acutely long-mucronate-acuminate, about 6 cm. long and 3-5 cm. broad [11. fusiformis](#)
- Corolla-tube 1-5 cm. long, gibbous at the base; leaves elliptic, narrowly long-triangular-acuminate [aristolochioides](#)
- 13** Leaves small, ovate, apex acute, base rounded or acute, not cordate; stems with fleshy deciduous axillary jointed gemmae [13. gemmifera](#)
- Leaves ovate-rounded, very acute, cordate at base; stems without gemmae [14. yorubana](#)
- 14** Corolla-lobes densely covered with purple setae, about 6 mm. long; leaves linear [15. tourana](#)
- Corolla-lobes without purple setae: **15**
- 15** Leaves linear, somewhat fleshy; corolla-tube 8-14 mm. long, the lobes narrowly linear, 5-7 mm. long [16. linophyllum](#)
- Leaves usually linear-lanceolate, rarely broader; corolla-tube 1-2 cm. long, the lobes oblong or ovate, 5-12 mm. long, thinly white-pilose inside [17. racemosa](#)

- 1. *Ceropegia ledermannii* Schltr.** in Engl. Bot. Jahrb. 51: 154 (1913); Hutch. in Kew Bull. 1921: 387; H. Huber in Mem. Soc. Brot. 12: 131 (1958). *APD acc*

Erect herb 6-12 in. high with an underground discoid tuber about 2 in. across, and purple-mottled tubular flowers with long green thread-like lobes.

N. Nig.: Takwara (May) Lely 110! Vom, Jos Plateau Dent Young! **S. Nig.:** Oyo (June) Burton H1616/38!

Also in **Cameroun**.

- 2. *Ceropegia deightonii* Hutch. & Dalz.** F.W.T.A., ed. 1, 2: 61, 62 (1931); Kew Bull. 1937: 340; H. Huber l.c. 133. *APD acc*

From a few to 18 in. high, from a tuber up to 3/4 in. diam.; flowers green to deep red or purple with very hairy lobes; **often frequent in grassland on wet lateritic soils.**

S. L.: Waterloo (fl. & fr. June, fl. Aug.) Deighton 2057! 2743a! Melville & Hooker 279! Kambia (fl. Aug., fr. Sept.) Jordan 292! Adames 183! Binkolo (Aug.) Deighton 1289! Gbap (June) Adames 48! - 3. *Ceropegia campanulata* G. Don** Gen. Syst. 4: 112 (1837); F.T.A. 4, 1: 462; Bullock in Kew Bull. 9: 592 (1955), partly; H. Huber l.c. 129, partly, incl. var. *abinsica* (N. E. Br.) H. Huber l.c. 130 (1958). *APD acc*

- Ceropegia kerstingii* K. Schum. (1903)-F.W.T.A., ed. 1, 2: 63.
Ceropegia abinsica N. E. Br. (1914)-F.W.T.A., ed. 1, 2: 62; Bullock l.c.
Ceropegia dalzielii N. E. Br. (1913)-F.W.T.A., ed. 1, 2: 62.
Ceropegia hepburnii Hutch. & Dalz. F.W.T.A., ed. 1, 2: 62 (1931); Kew Bull. 1937: 341.
Ceropegia tamalensis W. W. Sm. (1922).

Erect herb, 6 in. high, from a tuber, with dark purple-brown flowers 2 in. long including the corolla lobes.

Mali: Mowan. **Ghana:** Don! Tamale Dalz. 60 (partly)! Achimota (cult. July,) Adams 967! **Togo Rep.:** Kersting 307! **N. Nig.:** Naraguta (Apr.) King in Hb. Hepper 2869! Abinsi (fl. June, fl. & fr. July) Dalz. 689! 690! Randa (fl. & fr. May) Hepburn 57! 62! **S. Nig.:** Old Oyo F.R. (Feb.) Keay FHI 23434!

4. *Ceropegia porphyrotricha* W. W. Sm. in Notes Roy. Bot. Gard. Edinb. 13: 307 (1922).

APD: Synonym of *Ceropegia campanulata* var. *porphyrotricha* (W.W. Sm.) H. Huber

- Ceropegia campanulata* of Bullock l.c. 592, partly, not of G. Don.
Ceropegia campanulata var. *porphyrotricha* (W. W. Sm.) H. Huber l.c. 130 (1958).

Erect herb about 1 ft. high, simple, from a discoid tuber; flowers 3-4 in. long, green and deep purple including the erect linear lobes, the lower part of the tube only slightly dilated, the base of the lobes fringed with dark purple hairs; in the leafy state one pair of leaves is much larger than the others.

Ghana: Accra (Apr.) Adams 230! Tamale (Apr.) Dalz. 60 (partly)! Kales Hill, Wa (Apr.) Adams 4004! 4007! **N. Nig.:** Katagum Dist. Dalz. 418!

5. *Ceropegia nigra* N. E. Br. in Kew Bull. 1895: 261; F.T.A. 4, 1: 440; Bullock l.c. 591; H. Huber l.c. 159. *APD acc*

- Ceropegia kroboensis* N. E. Br. in F.T.A. 4, 1: 440 (1903); F.W.T.A., ed. 1, 2: 63; Berhaut Fl. Sén. 59.

A pubescent twiner; flowers 1/2-2/3 in. long, the corolla-tube curved above the obliquely inflated base, the lobes dark blue-green, turning black.

Sen.: Tambacounda Berhaut 871. **Port. G.:** Bafatá (Aug.) Esp. Santo 2747! **S. L.:** Rokupr (Oct.) Adames 255a! **Ghana:** Krobo Plains (fl. & fr. Oct.) Johnson 790! Apla, E.P. (Oct.) Vigne FH 4047! **N. Nig.:** Niger Baikie! **S. Nig.:** Gambari, Oshun Dist. (Oct.) Onochie FHI 34936!

6. *Ceropegia rhynchantha* Schltr. in Engl. Bot. Jahrb. 51: 155 (1913); Berhaut Fl. Sén. 58; H. Huber l.c. 100. *APD acc*

A slender perennial twiner with glabrous stems and peduncled cymes of green and red-mottled flowers 1-1 1/4 in. long including the club-topped connate corolla-lobes.

Sen.: Tambacounda Berhaut 859. **Mali:** Bamako Waterlot 1281. **Guin.:** Kouroussa Pobéguin 438. **N. Nig.:** Lely 599! Naraguta (Aug.) Lely 523! 550! Anara F.R., Zaria Prov. (July) Keay FHI 25951!

Also in **Cameroun**.

7. *Ceropegia talbotii* S. Moore in Cat. Talb. 65 (1913); H. Huber l.c. 86. *APD acc*

A nearly glabrous twiner usually leafy, with flowers 2 in. long, dirty white with purple blotching.

S. L.: Masingbe (Oct.) Deighton 4401! Bobuabu (Sept.) Deighton 2249! Kanya (Oct.) Thomas 2987! **Lib.:** Gbanga (Sept.) Linder 817! Peahtah (Oct.) Linder 1032! **S. Nig.:** Ibadan (Sept.) Newberry 69! Eket Dist. Talbot 3357! Oban Talbot 116!

8. *Ceropegia johnsonii* N. E. Br. in F.T.A. 4, 1: 451 (1903); H. Huber l.c. 85. *APD acc*

A twiner with fairly stout, half-succulent glabrous stems; flowers 1 1/2 -2 in. long, whitish or green with purple blotches, the tube slightly curved.

Lib.: Ganta (Sept.) Harley 656! **Ghana:** Aburi (Nov.) Johnson 768! 1055! Ho to Adaklu (fl. & fr. Nov.) Adams 5376!

Also recorded from **Congo** and **Uganda**.

9. *Ceropegia peulhorum* A. Chev. in Journ. de Bot. 22: 118 (1909); H. Huber l.c. 87, incl. var. *breviloba*

Huber l.c. (1958); Adam in Bull. I.F.A.N. 24: 944 (1962). *APD acc*

Habit of the last, rather slender stemmed, glabrous, with dull mottled purple or almost black-purple flowers 2 in. or more long including the linear lobes; fruits narrow, paired, 3-5 in. long.

Sen.: Sélety, Diouloulou (Oct.-Nov.) Adam 18189. **Mali:** Chev. 18395! Macleod 73! **Port. G.:** Cumura, Bissau (Nov.) Esp. Santo 2231! Balanasinho, Fulacunda (July) Esp. Santo 2147! **S. L.:** Freetown Peninsula (Aug., Sept.) Melville & Hooker 83! 394! 470! Litchford! Rokupr (Aug.) Adames 115! Masasa (Sept.) Jordan 322! Mabum (Aug.) Thomas 1608!

Also in **Ubangi-Shari**.

10. *Ceropegia sankuruensis* *Schltr.* in Engl. Bot. Jahrb. 51: 155 (1913), as "sankurnensis"; H. Huber l.c. 79. *APD acc*

Ceropegia anceps S. Moore in Cat. Talb. 66 (1913); F.W.T.A., ed. 1, 2: 63.

Ceropegia degemensis S. Moore (1919).

Ceropegia batesii S. Moore (1926).

Ceropegia aristolochioides of F.W.T.A., ed. 1, 2: 63 (1931), partly, not of Decne.

A glabrous leafy climber, with flowers in short-pedunculate cymes, creamy-white and blotched on the tube, the lobes dark purple.

S. L.: Ronietta (Nov.) Thomas 5561! Yonibana (Oct.) Thomas 3982! Kanya (Oct.) Thomas 2981! Mamaka (Nov.) Thomas 4434! Mabonto (Oct.) Thomas 3561! **Lib.:** Bumbuma (Oct.) Linder 1323! Ganta (Oct.) Harley 718! **Ghana:** Nsemse F.R., Borku to Sunyani (fr. Dec.) Adams 5237! Wenchi (Sept.) Irvine 4769! **S. Nig.:** Degema Talbot 3652! Oban Talbot 174! Calabar (Nov.) Lloyd (drawing)!

Also in **Cameroun**, **Congo**, **E. Africa** and extending to S. Rhodesia.

11. *Ceropegia fusiformis* N. E. Br. in Kew Bull. 1897: 273; F.T.A. 4, 1: 450; H. Huber l.c. 91. *APD acc*

A glabrous twiner with curved flowers 13/4 in. long, subumbellate (at first) on a peduncle 1-1 1/2 in. long, greenish-white, purple at the base; fruits narrow, 8 in. long.

iv. C.: Baoulé Chev. 22216! Pobéguin 181! **Ghana:** Krobo Plains (fl. & fr. Dec.) Johnson 499! Odumasi (Aug.) Johnson 1075! Kumawu (Aug.) Cansdale 123! **S. Nig.:** Lagos (Sept.) Millen 89! Idanre (Oct.) Keay FHI 25501! Olokemeji F.R. (Sept.) Keay FHI 25391! Ibadan (Mar., Sept.) Latilo FHI 31775! Keay FHI 25382!

12. *Ceropegia aristolochioides* Decne. in Ann. Sci. Nat., sér. 2, 9: 263 (1838); F.T.A. 4, 1: 464; F.W.T.A., ed. 1, 2: 63, partly; Berhaut Fl. Sén. 57; H. Huber l.c. 91. *APD acc*

APD: *Synonym of Ceropegia sankuruensis Schltr.*

Ceropegia perrottetii N. E. Br. (1898)-F.T.A. 4, 1: 448.

A glabrous half-succulent twiner, with flowers clustered at the end of a peduncle scarcely 1 in. long, dark purple and mottled, about 1 in. long.

Sen.: Heudelot 477! Perrottet 791! Berhaut 386. **Mali:** Chev. 24499!

Extending eastwards to Ethiopia, Somalia, E. Africa and Congo.

13. *Ceropegia gemmifera* K. Schum. in Engl. Bot. Jahrb. 33: 328 (1903); F.T.A. 4, 1: 620.

APD: *Synonym of Ceropegia nilotica var. simplex H. Huber*

Ceropegia nilotica var. *simplex* H. Huber l.c. 104 (1958).

A half-succulent twiner, usually with few leaves, the axillary jointed gemmae acting as propagules and the species is unique in this respect; flowers 1 1/2 in. long, lurid-purple mottled; fruits 4-5 in. long.

Ghana: Accra (July) Dalz. 153! Achimota (May) Milne-Redhead 5086b! Pawmpawm R. (May) Morton 7261! **Togo Rep.:** Lomé Warnecke 242!

[The writer cannot agree with Huber in uniting this with *C. denticulata* K. Schum. as a variety of *C. nilotica* Kotschy.-A.A.B.]

14. *Ceropegia yorubana* *Schltr.* in Engl. Bot. Jahrb. 38: 48 (1905); Milne-Redhead in Kew Bull. 3: 465 (1948); H. Huber l.c. 93. *APD acc*

A glabrous climber, usually leafy with flowers about 1 in. long.

Ghana: Amosima, Cape Coast (Mar.) Hall 1737! Abokobi (Feb.) Irvine 1989! Anum (Dec.) Plumptre 31! Kumasi (Aug., Nov.) Darko 617! 705! **S. Nig.:** Ibadan (fl. & fr. Mar.) Meikle 1256!

15. *Ceropegia tourana* *A. Chev.* in Mém. Soc. Bot. Fr. 2, 8: 61: 274 (1917); H. Huber l.c. 132. *APD acc*

A climber with deep purple flowers 3/4 in. long, and slender fruit follicles 10 in. long.

iv. C.: Toura, Sassandra Chev. 21653. **S. Nig.:** near Ado-Awaive, Oyo Dist. Hambler 650!

16. *Ceropegia linophyllum* *H. Huber* l.c. 115 (1958). 15 *C. senegalensis* *H. Huber* l.c. 116 (1958). *APD acc*

A slender twiner with small tubers, corolla dull purple outside, the lobes and inside very dark crimson.

Sen.: Near Dakar Pilot! **Ghana:** Navrongo (Sept.) Vigne FH 4602! Boro, near Wa Adams 1751! **S. Nig.:** Idanre Hills Keay FHI 22588! 37908!

17. *Ceropegia racemosa* *N. E. Br.* in Kew Bull. 1895: 262; F.T.A. 4, 1: 456; Werderman in Engl. Bot. Jahrb. 70: 207 (1939); Bullock in Kew Bull. 9: 591 (1955); H. Huber l.c. 93. *APD acc*

Ceropegia pedunculata *Turrill* in Kew Bull. 1921: 389; F.W.T.A., ed. 1, 2: 62.

A. atacorensis *A. Chev.* Bot. 439, name only.

A. gourmaca *A. Chev.* Bot. 439, name only.

A slender twiner with glabrous stems and flowers 1 1/2 in. long, orange or brown-purple with paler corolla-lobes; fruit follicles very narrow.

Mali: Ouagadougou to Ouahigouya, Mossi, Upper Volta (Aug.) Chev. 24689! 24732! **Port. G.:** Bafata, Tamtam Cossé (f. Sept.) Esp. Santo 3340! Farim (Aug.) Esp. Santo 3056! Fulacunda (Aug.) Esp. Santo 2179! Gabu, Gitche (fr. Oct.) Esp. Santo 3488! **Ghana:** Boro, Wa (June) Adams 681! **N. Nig.:** Anara F.R. Zaria Prov. (July) Keay & Clayton FHI 37084! Bonu Hill, Gwari, Niger Prov. (fl. & fr. Aug.) Onochie FHI 18262! Jos (Aug.) Keay FHI 20183! Naraguta (Aug.) Lely 495! Kilba country, near Yola (Aug.) Dalz. 96!

Widely distributed through tropical and S. Africa, and in Madagascar.

A highly polymorphic species; four subspecies are recognized by Huber (l.c. 1958), but I am unable to agree with his circumscriptions.

Ceropegia achtenii subsp. *togoensis* *H. Huber* l.c. 157 (1958).

C. achtenii De Wild. is widely distributed in central equatorial Africa. This subspecies is based on a single specimen (Ghana: Waribo Mt., N. of Wurupong (Adams 1834) preserved in the East African Herbarium, Nairobi.

32. HUERNIA

R. Br.-F.T.A. 4, 1: 495; White & Sloane, Stapelieae, ed. 2, 3: 819 (1937).

- 1 Stems succulent, glabrous, erecto-patent, about (3-)5(-8) cm. long and up to 1.5 cm. thick, 4-5 angled, glabrous, bluntly toothed; leaves opposite, triangular, 2 mm. long, at the tips of the stem teeth; flower solitary, extra-axillary, near the base of young stems; pedicel about 1 cm. long; corolla campanulate, tube 7-8 mm. long, 8-9 mm. diam., lobes broadly triangular, about 10 mm. long, sinus teeth deltoid, about 1.5 mm. long; flower pink outside, crimson-blotched on yellow papillate ground inside, corona very dark purple *nigeriana*

Huernia nigeriana *Lavranos* in Journ. S. Afr. Bot. 27: 233 (1961). *APD acc*

Succulent herb with campanulate flowers, pink outside and with crimson blotches inside; corona-lobes blackish-purple.

N. Nig.: Mongu F.R., Plateau Prov. Keay FHI 37098! 48 km. W.S.W. of Bauchi (July) Lavranos 1058.

33. CARALLUMA

R. Br.-F.T.A. 4, 1: 477; White & Sloane, Stapelieae, ed. 2, 1: 151 (1937).

- 1 Stems cylindric, not angled or winged, 20-30 cm. long, slender, much branched; leaves minute, caducous; flowers 1-2 together, extra-axillary near the stem apex, on slender curved pedicels 4-6 mm. long; calyx-lobes ovate-lanceolate, 3-4 mm. long, glabrous; corolla quite glabrous, campanulate urceolate, 7-8 mm. long and as broad, yellowish-green, longitudinally ridged inside corolla-limb dark purple with a narrow disk and 5 erect oblong-triangular lobes 5 mm. long and 2.5 mm. broad at the base; outer corona lobes bipartite, forming 10 filiform horns 5 mm. long [1. mouretii](#)
- Stems winged or angled: **2**
- 2 Stems with 4 wing-like ribs up to 2 cm. wide, indurated at the margins and with recurved or spreading indurated teeth from which the minute triangular leaves are early caducous; the stems branched, erect, up to about 60 cm. high; flowers in large apparently sub-terminal umbels forming a compound globose head 7-10 cm. or more diam. and with a hundred or more flowers; pedicels 2-4 cm. long, glabrous; calyx-lobes narrowly lanceolate, 2-5 mm. long; corolla 12-16 mm. diam., rotate, lobed to about half-way, the lobes ovate-triangular, 5-6 mm. long and as broad at the base, sparsely covered with purple hairs or glabrous, ciliate with vibratile club-shaped hairs; outer corona cup-shaped with 5 pairs of arcuate-subulate teeth 1-1.5 mm. long; follicles erecto-divergent, terete, 12-18 cm. long [2. retrospiciens](#)
- Stems 4 or 5 angled but not winged: **3**
- 3 Corolla-lobes 4-5 mm. long, lanceolate, with a constriction near the base, pilose inside with purple multicellular hairs, distinctly maculate below the constriction; outer corona lobes deeply bipartite into subulate horns; corolla almost rotate, the tube shortly campanulate; flowers in extra-axillary fascicles of 1-3 scattered along the upper part of the stem; calyx-lobes subulate-lanceolate, about 4 mm. long; stems 30 cm. or more high, with minute, caducous triangular leaves [3. dalzielii](#)
- Corolla-lobes 10-12 mm. long, ovate-oblong, acute; outer corona annular, truncate, with a reddish rim; corolla 2-5 cm. diam., rotate, with a very short tube; flowers in fascicles of 2-4 near the apex of the stem; calyx-lobes oblong-subulate, 4-5 mm. long, glabrous; stems 10-40 cm. high, up to 1.5 cm. thick at base, the minute triangular leaves borne at the apex of stout conical teeth, shield-shaped at the base 4. [decaisneana](#)

1. **Caralluma mouretii** A. Chev. in Rev. Bot. Appliq. 14: 270 (1934); White & Sloane l.c. 181.

APD: *Synonym of Caudanthera edulis* (Edgew.) Meve & Liede

Caralluma edulis A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 2: 65 (1931); Chev. Bot. 440, name only, not of Benth. (1876).

A succulent with yellowish-green flowers.

Maur.: Tidjikja (Sept.) Charles in Hb. Chev. 28733.

Also in **Morocco**.

[There is no specimen of this plant at Kew, and I rely on the identification given by White and Sloane.-A.A.B.]

2. **Caralluma retrospiciens** (Ehrenb.) N. E. Br. in Gard. Chron. 12: 370 (1892); F.T.A. 4, 1: 480; White & Sloane l.c. 236. *APD acc*

Desmidorchis retrospiciens Ehrenb. in Abh. Acad. Berlin 33 (1831).

Boucerosia tombuctuensis A. Chev. (1900).

Caralluma tombuctuensis (A. Chev.) N. E. Br. in F.T.A. 4, 1: 622; F.W.T.A., ed. 1, 2: 65; Berhaut Fl. Sén. 3.

Caralluma retrospiciens var. *tombuctuensis* (A. Chev.) White & Sloane l.c. 240 (1937).

An erect sparsely branched greyish-green shrubby succulent, perhaps the largest of the stapeliads, the winged stems indurated on the margins and armed with spreading or reflexed hard teeth; flowers almost black in large globose heads at the tips of the branches.

Sen.: Guiers Berhaut. **Mali:** near Timbuktu and Arnassay (July) Chev. 1317; 1318.

The species as here understood is widespread in semi-arid areas from the west of our area to the Red Sea coast and islands, **Ethiopia**, **Kenya** and **Somalia**. Within our area, White and Sloane record it from "many points in Mauretania, Senegal, French **Sudan** (i.e. Mali), Nigeria, and the Algerian Sahara, up to 6,000 ft. elevation", but I have not seen specimens from most of these areas.

White and Sloane admit five varieties, all except one having been regarded as distinct species at one time or another. It is likely that some other plants which have been treated as distinct species, may belong here.

3. **Caralluma dalzielii** *N. E. Br.* in Kew Bull. 1912: 280; White & Sloane l.c. 185. *APD acc*

An erect sparsely branched succulent herb with green stems and scattered dark reddish-purple star-like flowers.

Ghana: Gambaga (Dec.) Morton A1408! **N. Nig.:** Sokoto (July) Dalz. 317! Katagum (cult.) Dalz. 367!

Found in cultivation in many localities.

4. **Caralluma decaisneana** (*Lem.*) *N. E. Br.* in Gard. Chron. 12: 369 (1892); F.T.A. 4, 1: 488; F.W.T.A., ed. 1, 2: 65; Bullock in Kew Bull. 17: 195 (1963).

APD: *Synonym of Orbea decaisneana* (*Lem.*) *Bruyns*

Boucerosia decaisneana *Lem.* in Herb. Gén. Amat, sér. 2, 4: t. 21 (1844).

Stapelia ango *A. Rich.* (1851).

Caralluma ango (*A. Rich.*) *N. E. Br.* (1892).

Caralluma sprengeri *N. E. Br.* (1895).

Caralluma commutata *Berger* (1910).

Caralluma hesperidum *Maire* (1922).

Caralluma venenosa *Maire* (1934).

Stapelia decaisneana (*Lem.*) *A. Chev.* (1934)-Berhaut Fl. Sén. 2, 3.

A slender much-branched succulent, the stems decurved and rooting freely in contact with the soil; flowers blackish-purple, frosted with minute white papillae.

Maur.: Tichoten Charles in Hb. Chev. 28690. **Mali:** Dienné (July) Chev. 1145! **Sen.:** fide Berhaut l.c. St. Louis Chev. 3489.

A widespread and variable species extending through the Sahara and **Sudan** to **Ethiopia**, **Somalia** and southern **Arabia**.

RUBIACEAE

Trees, shrubs or rarely herbs. Leaves opposite or rarely verticillate, entire; stipules inter- or intra-petiole, often connate, rarely leafy and not distinguishable from the leaves. Flowers usually hermaphrodite, actinomorphic or very rarely slightly zygomorphic, solitary to capitate. Calyx adnate to the ovary. Corolla epigynous, more or less tubular, rarely campanulate; lobes 4-12, contorted, imbricate or valvate. Stamens epipetalous, as many as and alternate with the corolla-lobes; anthers mostly separate, 2-celled, opening lengthwise or rarely by terminal pores, rarely transversely septate. Ovary inferior or rarely superior, 2- or more-celled, with axile, apical or basal placentas, or rarely 1-celled with parietal placentas; style often slender; ovules 1 to many. Fruit a capsule, berry or drupe. Seeds rarely winged, mostly with endosperm, the latter rarely ruminate; embryo straight or curved.

A very large and mostly tropical family, the herbaceous representatives largely in temperate regions.

Recognised at once in the Metachlamydeae (Gamopetalae) by the usually inferior ovary, regular corolla, separate anthers, and stipulate simple entire leaves.

KEY TO THE TRIBES

- 1 Corolla-lobes contorted or imbricate: **2**
Corolla-lobes valvate; trees, shrubs or herbs: **3**
- 2 Flowers not in globose heads; corolla contorted (rarely imbricate); trees, shrubs, climbers, or rarely subherbaceous (use combined Key for genera Nos. 4-42) 2. GARDENIEAE, 3. ALBERTEAE, 4. IXOREAE, 5. HAMELIEAE
Flowers in globose heads; corolla imbricate; trees or shrubs 6. NAUCLEEAE
- 3 Ovules 2 or more in each ovary-cell: **4**
Ovule solitary in each ovary-cell: **7**
- 4 Fruit a capsule or dicocous; seeds winged or appendaged: **5**
Fruit a berry or dry and indehiscent 7. MUSSAENDEAE
- 5 Trees or shrubs: **6**
Herbs or very small shrublets 12. HEDYOTIDEAE

- 6 Flowers in lax panicles or spike-like cymes [1. CINCHONEAE](#)
 Flowers in globose heads [6. NAUCLEEAE](#)
- 7 Ovule pendulous from near the top of the cell: **8**
 Ovule erect from near the base or peltately attached towards the middle of the cell: **10**
- 8 Woody plants: **9**
 Herbs [12. HEDYOTIDEAE](#)
- 9 Stigma capitate; cystoliths absent on leaves etc. [8. VANGUERIEAE](#)
 Stigma bilobed; cystoliths present on leaves and calyx; leaves often yellowish [9. CRATERISPERMEAE](#)
- 10 Stipules not leaf-like: **11**
 Stipules leaf-like, the "leaves" verticillate; herbs or herbaceous climbers [15. RUBIEAE](#)
- 11 Calyx-tubes confluent; flowers in heads; fruits more or less united into a mass; trees or shrubs [10. MORINDEAE](#)
 Calyx-tubes not confluent: **12**
- 12 Fruits fleshy, indehiscent; ovule attached to base of the cell; mostly trees and shrubs; flowers cymose or capitate, rarely axillary (in *Lasianthus*) [11. PSYCHOTRIEAE](#)
 Fruits dry, usually dehiscent; herbs or undershrubs often with small flowers in axillary or terminal clusters: .. **13**
- 13 Ovule attached to the septum of the ovary; flowers hermaphrodite [13. SPERMACOCEAE](#)
 Ovule attached to base of the ovary; flowers sometimes unisexual (*Anthospermum*) [14. ANTHOSPERMEAE](#)

Tribe 1—CINCHONEAE

- 1 Flowers in simple or slightly branched spike-like racemes, sometimes subtended by large leaf-like white or coloured bracts; corolla-lobes without appendages; anthers included; style long-exserted; capsules loculicidally dehiscent [1. Hymenodictyon](#)
 Flowers in panicles; corolla-lobes with appendages: **2**
- 2 Anthers and style exserted; capsule loculicidally dehiscent; flowers (in our species) 4-merous; corolla-appendages (in our species) short, subspherical, close together in bud [2. Corynanthe](#)
 Anthers and style included; capsule septicidally (and sometimes partially loculicidally) dehiscent; flowers 5-merous; corolla-appendages long, filiform or subulate, erect and often divergent in bud [3. Pausinystalia](#)

Tribes 2—GARDENIEAE, 3—ALBERTEAE, 4—IXOREAE & 5—HAMELIEAE

(Corolla-lobes contorted or rarely imbricate, overlapping to the left (except in some species of *Rothmannia*); fruit indehiscent (except *Crossopteryx*); trees, shrubs and lianes).

- 1 Fruit capsular; seeds winged; ovary 2-celled; ovules numerous; style long-exserted, style-head clavate, slightly 2-lobed; stamens exserted; flowers (4-)5(-6)-merous; flowers numerous in dense terminal corymbs [4. Crossopteryx](#)
 Fruit indehiscent; seeds not winged: **2**
- 2 Ovary (3-)6-celled; ovules 2 to numerous per cell, placentation axile; inflorescences several- to many-flowered, appearing laterally: **3**
 Ovary 1-2-celled: **4**
- 3 Corolla-lobes 5, longer than the short tube; ovules 2-4 per cell; stamens 5, exserted; style-head fusiform, undivided; flowers pedicellate in pedunculate cymes borne laterally at alternate nodes; leaves petiolate, up to 14 cm. long and 8 cm. broad [5. Morelia](#)
 Corolla-lobes (6-) 12, shorter than the long tube; ovules numerous in each cell; stamens (6-)13, included; style-head 4-6-lobed; flowers sessile in a dense sessile cluster subtended by broad bracts and borne at ends of shoots opposite a single leaf and just above a pair of leaves; leaves up to 120 cm. long and 45 cm. broad; ovary (3-)6-celled [10. Schumannioophyton](#)
- 4 Solitary flowers or inflorescences terminal (sometimes on lateral branchlets), or appearing laterally by sympodial growth of stem, never truly axillary, if apparently in axils then never on both sides of stem at same node (to p. 107): **5**
 Solitary flowers or subsessile clusters of flowers, axillary on both sides of the node; growth of stem monopodial: **34**
- 5 Ovules several to numerous; placentas on walls or septum of ovary (to p. 107): **6**
 Ovules solitary or paired; ovary 2-celled, placentation not parietal: **30**
- 6 Style-head usually capitate, clavate or fusiform, undivided or sometimes shortly cleft but never with spreading arms; calyx-lobes mostly open (but see *Pseudogardenia* and *Sherbournia*) (to p. 107): **7**
 Style with 2 recurved spreading arms: **28**
- 7 Inflorescences several- to many-flowered appearing laterally at alternate nodes; pollen grains not in tetrads; ovary 2-celled with placentas on the septum, rarely 1-2-celled with parietal placentation (*Brenania* only): **8**

- Inflorescences terminal, or appearing laterally at successive nodes, or flowers solitary or paired: 11
- 8 Stipules not forming a truncate sheath; laminae rounded to acuminate at apex usually with a fringe of hairs around the node inside them; ovary 2-celled, placentas borne on the septum; small or medium sized trees: 9
- Stipules forming a truncate sheath, ciliate at the margin; corolla-tube broadly cylindrical, glabrous except for a ring of hairs inside, lobes broad, rounded, erect; anthers included; style-head divided; placentas parietal, ovary 1-celled or partially 2-celled; pollen grains single; a large tree [9. Brenania](#)
- 9 Style well exerted from the cylindrical corolla-tube; corolla-lobes often reflexed: 10
- Style and anthers included in the funnel-shaped corolla-tube; corolla-lobes mostly erect; corolla silky pilose outside except at base, glabrous inside except for a band of hairs near the base; pollen grains single; style-head entire; fruits ellipsoid, up to 3 cm. long [8. Porterandia](#)
- 10 Corolla villous in the throat, glabrous or pubescent outside; anthers well exerted; pollen grains single; style-head entire; fruits subglobose, up to 1.5 cm. diam. [6. Aidia](#)
- Corolla glabrous inside and outside; anthers included; pollen grains aggregated into spindle-shaped masses about 250 μ long; style-head divided; fruits ovoid, beaked, 5-9 cm. long [7. Massularia](#)
- 11 The inflorescences several- to many-flowered always terminal (sometimes on lateral branchlets): 12
- The inflorescences appearing laterally at successive nodes, or if terminal then flowers 1-2 (very rarely 3): 20
- 12 Placentas attached to the septum of the distinctly 2-celled ovary: 13
- Placentas parietal; ovules numerous; ovary 1-2-celled: 16
- 13 Inflorescence either an elongated panicle of small cymes, or flowers in axils few or congested; fruits globose, not exceeding 1 cm. diam.; ovules numerous [41. Bertiera](#)
- Inflorescences not as above; trees, shrubs or lianes: 14
- 14 Fruits oblong or fusiform, 3-11 cm. long; ovules numerous; flowers in small cymes; lianes [40. Atractogyne](#)
- Fruits globose: 15
- 15 Corolla with 1 lobe imbricated; calyx-lobes foliaceous; fruit 1.5 cm. diam.; ovules numerous; inflorescences few-flowered [42. Heinsia](#)
- Corolla contorted; calyx small; fruit not more than 1 cm. diam.; ovules 1-6; inflorescences mostly corymbose; trees or shrubs, rarely climbers; see also below [28. Tarenna](#)
- 16 Anthers not included in the tubular lower portion of the corolla but completely exerted at the top between the lobes; style-head subglobose, very long-exserted; cymes 1- to many-flowered, terminating long and short shoots; corolla hairy outside; ovary 1-celled [11. Macrosphyra](#)
- Anthers included wholly or mostly in the corolla-tube; style-head usually longer than broad, not long-exserted: 17
- 17 Calyx-lobes distinct; corolla-tube cylindrical or infundibuliform, without a large campanulate upper portion: 18
- Calyx truncate; lower portion of corolla shortly and narrowly tubular, abruptly expanded into the relatively large upper campanulate portion; corolla glabrous except for a dense band of hairs inside at the top of the narrow tubular portion; ovary 1-celled; style-head elongate fusiform; cymes short, few-flowered; stem and leaves glabrous [15. Oligocodon](#)
- 18 Cymose panicles subsessile at the ends of long shoots: 19
- Cymose panicles borne terminally on young relatively short lateral shoots with 1-3 pairs of new leaves and conspicuous stipules; stem and leaves glabrous; corolla very narrowly infundibuliform, glabrous inside and outside; style-head obovate-spathulate; ovary 1-celled [14. Polycoryne](#)
- 19 Leaves and stem hirsute, the latter hollow; calyx-lobes subulate or lanceolate; corolla infundibuliform, pubescent outside, glabrous inside except for a ring of hairs near base; style-head clavate or obovate; ovary 1-celled . [12. Calochone](#)
- Leaves and stems glabrous, the latter solid; calyx-lobes leafy, persistent in fruit; corolla-tube cylindrical, glabrous outside, slightly pubescent inside; style-head linear-ellipsoid; ovary 2-celled, sometimes only partially so [13. Preussiodora](#)
- 20 Branches usually armed with spines formed from modified lateral branchlets; flowers 1-2 (-3) together, terminating opposite pairs of very much abbreviated leafy lateral shoots; ovary 2-celled, placentas attached to the septum which divides the seed-masses in fruit; pollen grains single [16. Xeromphis](#)
- Branches not armed with spines (but if, in some species of *Gardenia*, lateral branchlets tend to be spine-like, then pollen grains in tetrads and ovary 1-celled with 3-9 placentas); placentas 2-9, parietal; ovary 1-2-celled; seeds forming a single mass in fruit: 21
- 21 Flowers solitary or paired, terminal, or appearing lateral by sympodial growth; corolla usually more or less funnel-shaped and often large: 22
- Flowers 3 or more together in cymes appearing laterally or axillary (on only one side of the stem): 26
- 22 Stipules chaffy, persistent; leaves deciduous, crowded below the solitary flowers, with long almost leafless internodes between the clusters; calyx-tube very short, lobes spreading; ovary 2-celled; pollen grains in tetrads

- [17. Euclinia](#)
- Stipules not chaffy, leaves not as above: **23**
- 23** Stipules sheathing, persistent, often truncate; young parts usually glutinous; ovary 1-celled (or partially 2-celled in *G. sokotensis*), placentas 2-9; calyx-tube well developed; pollen grains in tetrads [18. Gardenia](#)
- Stipules not as above, mostly soon caducous; young parts not glutinous (except in *Rothmannia lujae*); ovary 1-2-celled; placentas 2; pollen grains single: **24**
- 24** Calyx-lobes in bud open or overlapping to the left; flowers terminal, solitary (except *Rothmannia lujae*), or appearing laterally on abbreviated shoots on account of the sympodial growth:..... **25**
- Calyx-lobes in bud contorted and over-lapping to the right (in species with short lobes, see very young bud or the thin margin on the left of each lobe); cymes 1 to several-flowered normally axillary on one side of stem at successive nodes, rarely terminal; calyx-tube finely velutinous inside and outside; corolla velutinous outside except for a glabrous portion at the base, lobes short and broad, overlapping to the left; lianes; see also below [21. Sherbournia](#)
- 25** Calyx-tube glabrous and minutely papillose inside, truncate, with broad leafy overlapping lobes attached outside; corolla-lobes overlapping to left; ovary 1-celled; scandent shrubs [19. Pseudogardenia](#)
- Calyx-tube velutinous inside, with dentate, linear or filiform lobes not attached outside a truncate tube and not overlapping in bud; calyx-tube sometimes split at anthesis; corolla-lobes overlapping to left or right; ovary 2-celled or partially 2-celled; erect shrubs or trees [20. Rothmannia](#)
- 26** Stipules rounded at apex, caducous and exposing a fringe of hairs at the nodes; ovary and fruit often distinctly 10-ribbed; ovary 2-celled; corolla funnel-shaped or campanulate, with short broad lobes; anthers and style included; cymes 1- to several-flowered; climbing shrubs [21. Sherbournia](#)
- Stipules acute at apex, persistent: **27**
- 27** Anthers not included in the long narrowly cylindrical corolla-tube; style well-exserted [22. Oxyanthus](#)
- Anthers included (or nearly so) in the funnel-shaped corolla-tube; style included or just exserted [23. Mitriostigma](#)
- 28** Calyx-lobes open in bud; flowers in terminal and axillary cymes; ovules several in each cell, pendulous from the upper part of the septum [25. Pouchetia](#)
- Calyx-lobes contorted in bud; flowers in terminal corymbs; placentas adnate to the septum of the 2-celled ovary: **29**
- 29** Anther cells divided into small compartments by longitudinal and numerous transverse septa [26. Dictyandra](#)
- Anther cells not divided into compartments [27. Leptactina](#)
- 30** Flowers normally 4-merous; ovules attached to the septum (if ovules basally attached, see Rutidea); flowers mostly in terminal corymbs:..... **31**
- Flowers normally 5-merous (but 4-merous in 2 spp. of Rutidea, ovules then basally attached); bacterial nodules absent: **32**
- 31** Style-head clavate, subentire; bracts stipular in origin (hence at right angles to the lateral branches of the inflorescence); floral bracts and bracteoles absent or very small; leaves and stems often with bacterial nodules; ovule solitary (rarely 2) [29. Pavetta](#)
- Style with 2 recurved spreading arms; bracts foliar in origin (hence subtending the lateral branches of the inflorescence); floral bracts and bracteoles well-developed (in our species); bacterial nodules absent; ovule solitary [30. Ixora](#)
- 32** Flowers 1-several subtended by a single leaf, clustered together at the ends of very short terminal branchlets often appearing laterally at the nodes owing to sympodial growth of the stem; ovules paired in each ovary-cell, immersed in a pendulous placenta; style long and very narrowly clavate, sometimes with 2 short arms [31. Aulacocalyx](#)
- Flowers not arranged as above, mostly in terminal panicles or corymbs; style clavate, subentire: **33**
- 33** Ovules 1-6, attached to the septum; endosperm not ruminant; see also above [28. Tarenna](#)
- Ovule 1, attached to base of ovary; endosperm ruminant [32. Rutidea](#)
- 34** Style-head fusiform or clavate, entire; ovules numerous on 2 parietal placentas which often meet to make the ovary partially 2-celled; flowers solitary, supra-axillary; corolla trumpet-shaped, longitudinally ribbed; stems often armed with spinescent abbreviated lateral shoots [24. Didymosalpinx](#)
- Style more or less filiform, entire or with 2 arms; ovary 2-celled, ovules 1-16 in each cell; placentas not parietal: **35**
- 35** Style exserted; anthers exserted or included; corolla-tube glabrous or hairy inside: **36**
- Style and anthers included in the corolla-tube, style not reaching to the level of the anthers; corolla-tube glabrous inside; flowers sessile or subsessile, solitary or a few together; bracteoles often cupular: **40**
- 36** Style undivided or shortly bifid; ovules solitary and pendulous, or 2-4 and attached to the septum: **37**
- Style distinctly divided into two spreading arms; ovules solitary and attached to the septum, or 1-16 and inserted

- in the placentas; bracteoles often cupular: **39**
- 37** Flowers opposite and solitary, appearing on lateral branchlets usually before these elongate and while they are still more or less covered by the bud-scales; bracteoles lanceolate; ovules 2-3, attached to the septum; corolla puberulous or glabrous inside [33. *Feretia*](#)
- Flowering not as above; ovules solitary and pendulous; corolla densely hairy in the throat: **38**
- 38** Flowers 5(-6)-merous; bracteoles not cupular; anthers exserted; calyx-teeth distinct; endosperm not ruminate [34. *Cremaspora*](#)
- Flowers 4-merous; bracteoles cupular; anthers included; calyx truncate or subtruncate; seeds with ruminate endosperm [35. *Polysphaeria*](#)
- 39** Corolla pubescent or pilose inside; ovules 1-16, inserted on the outer face of each placenta; placentas peltately attached to the septum; bracteoles often cupular, but only rarely with foliaceous appendages [36. *Tricalysia*](#)
- Corolla glabrous inside; ovules solitary in each cell, attached to the lower half of the septum, very rarely 2 immersed in each placenta; bracteoles usually cupular and often with foliaceous appendages; see also below [37. *Coffea*](#)
- 40** Ovules solitary in each cell, attached to the septum; calyx-lobes open in bud: **41**
- Ovules 2 in each cell, inserted on the inner face of a pendulous placenta; fruits marked at the apex by the wide remains of the disk and the calyx-lobes; calyx-lobes imbricate in bud, not enlarged in fruit; seeds 2-4 in each fruit, without longitudinal grooves [39. *Belonophora*](#)
- 41** Calyx-lobes not accrescent; seeds without a longitudinal groove; (*Coffea rupestris* and *C. ebracteolata*), for other species see above [37. *Coffea*](#)
- Calyx-lobes accrescent in fruit; seeds with a longitudinal groove [38. *Psilanthus*](#)

Tribe 6—NAUCLEEAE

- 1** Flowers entirely free from one another; fruit a capsule: **2**
- Flowers fused together by their ovaries and calyx-tubes, syncarpous in fruit; seeds not winged; corolla-lobes imbricate; stigma fusiform, with two papillose areas in the lower half [46. *Nauclea*](#)
- 2** Corolla-lobes valvate; seeds shortly winged; bracteoles present; stigma caplike, longitudinally grooved [43. *Mitragyna*](#)
- Corolla-lobes imbricate; seeds with tail-like wings; stigma more or less clavate, smooth: **3**
- 3** Scandent shrubs; branchlets more or less 4-angled, armed with axillary pairs of recurved spines; leaves not whorled; bracteoles absent [44. *Uncaria*](#)
- Trees; branchlets terete, without spines; leaves whorled; bracteoles present [45. *Adina*](#)

Tribe 7—MUSSAENDEAE

- 1** Inflorescences terminal, often one of the calyx-lobes of the outer flowers enlarged and petaloid; straggling shrubs [47. *Mussaenda*](#)
- Inflorescences axillary (terminal and axillary in *Pauridiantha viridiflora*); calyx-lobes never petaloid: **2**
- 2** Calyx-teeth minute or calyx truncate (up to 3 mm. long in *P. stipulosa*); bracts not enclosing inflorescence; erect shrubs or sometimes trees [48. *Pauridiantha*](#)
- Calyx-teeth well-developed; bracts often present and sometimes enclosing the inflorescence; mostly climbing shrubs, others erect shrubs [49. *Sabicea*](#)

Tribe 8—VANGUERIEAE

- 1** Corolla-tube curved, broad and about 2.5 cm. long, glabrous; stems annual from a rhizome; calyx-limb truncate [50. *Temnocalyx*](#)
- Corolla-tube always straight, mostly short (except *Hutchinsonia* & *Robynsia*); trees or shrubs (herbs in *Fadogia*): **2**
- 2** Corolla about 2 cm. long, densely pubescent, narrowly tubular; shrubs: **3**
- Corolla small (up to about 1 cm. long), usually glabrous; flowers rarely solitary: **4**
- 3** Flowers solitary; corolla-lobes with long filiform apex; stigma vertically lobed, shortly exserted [51. *Hutchinsonia*](#)
- Flowers cymose, numerous; corolla-lobes without appendages; stigma laterally lobed, long exserted [52. *Robynsia*](#)
- 4** Bracts and bracteoles foliaceous and conspicuous; calyx-lobes usually foliaceous or very rarely truncate; ovary 2-5-locular; corolla very acute; straggling shrubs [53. *Cuviera*](#)
- Bracts and bracteoles not foliaceous: **5**
- 5** Leaves in whorls of 3-5; stems mostly herbaceous, angular, rarely trees or shrubs; calyx-limb truncate, irregularly dentate or lobed; stigma 3-5-lobed [54. *Fadogia*](#)
- Leaves opposite; shrubs or trees: **6**
- 6** Ovary 2-locular; fruits didymous or by abortion 1-celled: **7**

-
- Ovary (3-)4-5-locular; fruits mostly of 5 pyrenes:9
- 7 Inflorescences with the ultimate branches always elongated, cymose-racemose; corolla-throat glabrous; calyx deeply lobed [55. *Vangueriopsis*](#)
- Inflorescences with the ultimate branches not elongated, mostly cymose-corymbose or umbellate; corolla-throat bearded or glabrous; calyx truncate or minutely denticulate:8
- 8 Flowers numerous, inflorescences mostly cymose-corymbose or rarely clustered [56. *Canthium*](#)
- Flowers few, in clusters (R. affine) [57. *Rytigynia*](#)
- 9 Flowers in clusters or very short cymes: 10
- Flowers in cymose racemose inflorescences with ultimate branches always elongated; calyx lobed; corolla throat villous [59. *Vangueria*](#)
- 10 Calyx truncate or minutely denticulate [57. *Rytigynia*](#)
- Calyx deeply lobed [58. *Globulostylis*](#)
- Tribe 9—CRATERISPERMEAE
- 1 Shrubs or small trees; leaves often yellowish; flowers in axillary clusters; fruits free from one another [60. *Craterispermum*](#)
- Tribe 10—MORINDEAE
- 1 Trees or climbing shrubs; flowers in heads; fruits fused [61. *Morinda*](#)
- Tribe 11—PSYCHOTRIEAE
- 1 Inflorescences strictly axillary, flowers fasciculate and sessile:2
- Inflorescences terminal (rarely also axillary), paniculate, capitate or spicate:3
- 2 Ovules solitary [62. *Schizocolea*](#)
- Ovules 6-10 [63. *Lasianthus*](#)
- 3 The inflorescences paniculate or if capitate not surrounded by an involucre; mainly shrubs:4
- The inflorescences capitate and involucre, or spicate and without an involucre:7
- 4 Ovary superior; stipules markedly ochreate [64. *Gaertnera*](#)
- Ovary inferior:5
- 5 Inner surface of seeds deeply and broadly concave, endosperm not ruminant; corolla-tube often curved, rather long [65. *Chassalia*](#)
- Inner surface of seeds more or less flat:6
- 6 Erect shrubs with panicles or if undershrubs inflorescences not capitate; endosperm either ruminant or not ... [66. *Psychotria*](#)
- Undershrubs with capitate inflorescences; endosperm not ruminant [69. *Trichostachys*](#)
- 7 Inflorescences capitate and involucre or flowers 1-few:8
- Inflorescences spicate, sometimes shortly so [69. *Trichostachys*](#)
- 8 Shrubs or creeping undershrubs; leaves cuneate; flowers numerous [67. *Cephaelis*](#)
- Herbs with soft, creeping stems; leaves usually cordate; flowers numerous or 1-few [68. *Geophila*](#)
- Tribe 12—HEDYOTIDEAE
- 1 Ovules solitary; ovary 2-celled; uncommon plants:2
- Ovules numerous:3
- 2 Pyrophyte, 5-25 cm. high; fruit indehiscent; calyx-lobes unequal; in upland savanna [70. *Pentanisia*](#)
- Half-succulent herb, 50-200 cm. high; fruit dehiscent; one calyx-lobe enlarged and leafy; in crevices of rock outcrops [71. *Neobaumannia*](#)
- 3 Stigma capitate:4
- Stigma lobed:5
- 4 Anthers opening by terminal pores, connivent; fruit dehiscing irregularly; small annual herbs in wet places with a basal rosette of leaves [72. *Argostemma*](#)
- Anthers opening by longitudinal slits; fruit with one valve remaining attached by a pedicel, the other deciduous; large herbs [73. *Virectaria*](#)
- 5 Flowers mainly 4-merous:6
- Flowers mainly 5-merous:8
- 6 Stigma over-topped by anthers, all inserted; common weeds [74. *Kohautia*](#)
- Anthers over-topped by stigma which is often exerted:7

- 7 Capsule with a horny wall, with or without a beak, but never with a solid beak, early dehiscent; common weeds [75. Oldenlandia](#)
- Capsule with a thick woody wall and a solid conical beak, dehiscence delayed; rare [76. Lelya](#)
- 8 Plant glabrous; leaves half-succulent; inflorescences lax axillary cymes; in wet places [77. Pentodon](#)
- Plants not glabrous; leaves not succulent: **9**
- 9 Climbing plants: **10**
- Erect, ascending or procumbent plants: **11**
- 10 Corolla-tube 5-6 mm. long; inflorescences terminal lax or congested panicles slender shrubs [78. Sacosperma](#)
- Corolla-tube 25-40 mm. long; flowers in a terminal cluster; herb; (O. volubilis) [83. Otomeria](#)

Raf. Sylva Tellur. 21 (1838).

Lachnosiphonium Hochst. (1842).

- 1 Branches whitish, pubescent, armed with sharp spines 1-3 cm. long; spines usually solitary and alternate, but sometimes in unequal pairs; leaves and flowers on much abbreviated lateral branchlets borne in pairs just below the spines; leaves obovate, cuneate at base, rounded at apex, 2-7 cm. long, 1-3 cm. broad, shortly pubescent especially beneath, with 3-4 main lateral nerves on each side of midrib; flowers solitary or paired, terminating the lateral branchlets; pedicels 5-10 mm. long; calyx about 7 mm. long, shortly toothed, glabrous outside; corolla about twice as long as the calyx, villous outside; fruits ellipsoid, 1.8-2 cm. long, 1-1.5 cm. broad, glabrous, 2-celled [nilotica](#)

Xeromphis nilotica (*Stapf*) *Keay* in Bull. Jard. Bot. Brux. 28: 39 (1958).

APD: *Synonym of Catunaregam nilotica* (*Stapf*) *Tirveng.*

Randia nilotica *Stapf* (1906)—F.W.T.A., ed. 1, 2: 78; Aubrév. Fl. For. Soud.-Guin. 462, t. 100, 5-6.

Lachnosiphonium niloticum (*Stapf*) *Dandy* (1952).

Randia dumetorum of F.T.A. 3: 94, not of (Retz.) Lam.

A stiff, spiny shrub, often many-stemmed, with whitish bark; corolla white; fruits yellowish; [in arid types of savanna woodland](#).

Guin.: Gaya Aubrév. 19n. **N. Nig.:** Sokoto (fl. & fr. May, July) Lely 824! Ryan 39! 68! Keay FHI 37787! Katagum Dalz. 298! Sherifuri (fr. May) Thornewill 182! Lantewa, Bornu Prov. (June) Onochie FHI 23369!

Extends to [Sudan](#), [Ethiopia](#) and E. Africa.

17. EUCLINIA

Salisb. Parad. Lond. index sexualis & errata sub. t. 93 (1808).

- 1 Stipules chaffy, persistent, 5-16 mm. long; leaves crowded at the ends of almost leafless branchlets, deciduous, membranous, oblong or oblong-obovate, cuneate at base, acuminate, 7-28 cm. long, 3-5-10 cm. broad, with 8-10 main lateral nerves on each side of midrib, pubescent beneath on midrib, nerves and in axils of nerves; petioles up to 4 cm. long; flowers 5-merous; ovary and calyx glabrous, tube up to 1.5 mm. long only, lobes triangular-lanceolate, spreading, 9-16 mm. long; corolla-tube 16-24 cm. long, glabrous outside, pubescent inside, lobes 1.5-5 cm. long and 1.5-3.5 cm. broad; fruits ellipsoid-globose, 2.6-4 cm. diam., with 15-16 faint longitudinal lines, crowned with the persistent, spreading calyx-lobes [longiflora](#)

18. GARDENIA

Ellis-F.T.A. 3: 99. Nom. cons.

- 1 Corolla-tube 1-1.2 cm. long, campanulate, with 5 lobes about 5 mm. long and broad; calyx-tube 2-3 mm. long, with 5(-6) linear lobes, 7-8 mm. long; placentas 2, often joining to make the ovary spuriously 2-celled; flowers puberulous outside, borne in terminal pairs (rarely solitary) usually appearing at the nodes on account of sympodial growth; pedicels slender, 3-12 mm. long in flower, up to 18 mm. long in fruit; fruits ellipsoid-subglobose, about 10 mm. long and 7 mm. diam., with a thin shell; leaves oblong-elliptic, obtuse or sometimes cuneate at base, subacute to rounded at apex, 2-10 cm. long, 1-5 cm. broad, with (6-)9-13 main lateral nerves on each side of midrib, puberulous beneath [1. sokotensis](#)
- Corolla-tube 1.2-22.5 cm. long, relatively slender and gradually expanded, with 5-9 (-11) lobes; placentas (2-) 3-9; flowers sessile or on short stout pedicels; fruits at least 2 cm. long, with thick walls: **2**
- 2 Corolla-tube scabrid-puberulous outside, 11-22.5 cm. long, much widened towards the 3-4 cm.-wide top, with 5 lobes 2.5-5 cm. long; flowers in pairs, terminal but often appearing at the nodes on account of sympodial growth; ovary and calyx-tube each about 10 mm. long, calyx-lobes 12-15 mm. long; placentas 2-3; fruits ellipsoid, 4.5-5 cm. long, 3.5-5 cm. broad; leaves more or less sessile, obovate, with small pouches at the base, shortly acuminate, 20-50(-80) cm. long, 10-22.5(-40) cm. broad, with 13-29 main lateral nerves on each side of midrib, venation parallel, scabrid puberulous beneath; tree to 20 m. high [2. imperialis](#)
- Corolla-tube 1.2-15 cm. long, less than 1 cm. wide at top, with 5-9 lobes; flowers usually solitary (but see Nos. 3 & 4), terminal (but see No. 3); placentas 3-6(-9); leaves up to 30 cm. long and 11 cm. broad; shrubs or small trees to 5 m. high: **3**
- 3 Calyx-lobes broadly spatulate or obovate, 12-25 mm. long, 3-13 cm. broad, tube 8-11 mm. long; flowers solitary or rarely paired, terminal but often appearing laterally at the nodes by sympodial growth; corolla-tube 7.5-10.5 cm., lobes 2.5-4.5 cm. long; placentas 4; fruits clavate, woody, 5-8 cm. long, 1.5-2.5 cm. broad; leaves elliptic, cuneate at base, acuminate, 3.3-14.5 cm. long, 1.3-7 cm. broad, with 6-12 main lateral nerves on each side of midrib, glabrous [3. nitida](#)
- Calyx-lobes filiform to linear-oblong, 1-15 mm. long; flowers terminal: **4**
- 4 Corolla-tube 12-15 cm. long, with 5(-6) lobes 3-8.5 cm. long; calyx-tube 15-18 mm. long, very sparsely setose outside, lobes 1-15 mm. long; flowers solitary or sometimes 3 together, the 2 lateral ones borne on very short lateral shoots and subtended by short broad bract-like leaves; placentas 3; fruits elongate, up to 11 cm. long and 1.3 cm. diam.; leaves oblong-oblancoolate, cuneate at base, acuminate, margin sometimes lobulate, 8.5-30 cm. long, 3-10.5 cm. broad, with 10-12 main lateral nerves on each side of midrib, glabrous; a forest shrub or small tree, with relatively slender branchlets [4. vogelii](#)
- Corolla-tube 1.2-9 cm. long with 6-9 lobes; flowers solitary, terminal; placentas 6(-9); savanna shrubs or small trees with stout branchlets; leaves and branching often ternate: **5**
- 5 Plants puberulous, pubescent or tomentose at least on the branchlets and outside of calyx: **6**

Plants quite glabrous (except for the style); calyx subtruncate or with 1-10 mm. long linear-oblong lobes; corolla-tube 4-9 cm., lobes 2-4 cm. long; fruits more or less ellipsoid, up to 10 cm. long, fibrous or woody; leaves obovate, to 19 cm. long and 7 cm. broad, prominently reticulate with more or less parallel venation on both surfaces [9. ternifolia](#)

- 6 Leaves pubescent on both surfaces; fruits fibrous or woody: **7**

Leaves glabrous, except occasionally for a few hairs near the very short petiole and rarely in the axils of the nerves beneath: **8**

- 7 Corolla-tube 1.2-3(-4) cm. long, pubescent outside, lobes 0.9-2 cm. long; calyx-lobes subulate, 1.5-3 mm. long; leaves oblanceolate or obovate, rather densely pubescent especially beneath, nerves and veins very prominent beneath and more or less impressed above at maturity, 2-6 cm. long, 1-2 cm. broad on flowering shoots; fruits ellipsoid, ribbed, 2-3(-4) cm. long, 1.2-1.6(-2) cm. broad [5. aqualla](#)

Corolla-tube 4-6(-9) cm. long, glabrescent outside, lobes 3-5 cm. long; calyx lobes linear-oblong, 3-15 mm. long; leaves obovate, scabrid-puberulous, nerves and veins prominent on both surfaces, 3.5-12 cm. long, 1.2-5.5 cm. broad; fruits ellipsoid, ribbed when young, 4-8 cm. long, 1.8-3.5 cm. broad [6. triacantha](#)

- 8 Calyx-tube and branchlets densely tomentose; leaves drying with the upper surface reddish and the lower surface glaucous green with reddish nerves, broadly obovate, up to 21 cm. long and 11 cm. broad; calyx-lobes subulate; corolla-tube 2-8 cm. long; fruits ellipsoid or subglobose, up to 8 cm. long, rather fleshy, edible [7. erubescens](#)

Calyx-tube puberulous, branchlets pubescent; leaves drying uniformly greenish, obovate to oblanceolate, up to 20 cm. long and 8 cm. broad; calyx-lobes linear-oblong, often very short; corolla-tube 2.5-6(-9) cm. long; fruits ellipsoid, up to 6 cm. long, fibrous or woody [8. lutea](#)

[*G. jovis-tonantis* (Welw.) Hiern is widespread in tropical Africa south of the Equator. It differs from *ternifolia* in the calyx which is puberulous and in the normally 8-9-merous ovary and corolla. Aubréville (l.c.) treats it as *G. ternifolia* var. *jovis-tonantis* (Welw.) Aubrév.-R.W.J.K.]

Gardenia alba *J. D. Kennedy* For. Fl. S. Nig. 211 (1936), name only.

S. Nig.: Olokemeji Kennedy 73.

Specimen not traced.

19. PSEUDOGARDENIA

Keay in Bull. Jard. Bot. Brux. 28: 45 (1958).

- 1 Young stems, petioles and underside of leaves rusty- setose -pilose; leaves obovate, cuneate or obtuse at base, shortly acuminate, 9-25 cm. long, 4-11 cm. broad, with 8-14 main lateral nerves on each side of midrib; flowers solitary, terminal; calyx sparingly or more or less densely setose outside, glabrous and minutely papillose inside, lobes 2.5-3 cm. long, 1-2 cm. broad, attached outside the truncate 2.5-3.2 cm. long tube; corolla-tube 10.5-15 cm. long, gradually expanded, densely silky outside, lobes 6-8 cm. long; anthers 2.5 cm. long, partially exerted; style-head fusiform, about 4 cm. long; fruits obovoid-cylindrical, 10-ribbed, about 6 cm. long and 4.5 cm. diam., crowned with the persistent calyx-tube[kalbreyeri](#)

Pseudogardenia kalbreyeri (Hiern) Keay l.c. 46 (1958).

APD: *Synonym of Adenorandia kalbreyeri* (Hiern) Robbr. & Bridson

Gardenia kalbreyeri Hiern in J. Bot. 16: 97, t. 195 (1878); F.W.T.A., ed. 1, 2: 73.

G. gossleriana J. Braun & K. Schum. (1889).

Randia purpureo-maculata C. H. Wright (1901).

A forest shrub, usually scrambling, 5-40 ft. high; corolla cream or yellow, streaked, dark red inside.

20. ROTHMANNIA

APD: *Synonym of Hyperacanthus E. Mey. ex Bridson*

Thunb. in Vet. Acad. Handl. Stockh. 65 (1776); Fagerlind in Arkiv för Bot. Stockh. 30A, No. 7: 39 (1943).

- 1 Corolla-lobes overlapping to the right:2
Corolla-lobes overlapping to the left; flowers 5-merous:4
- 2 Flowers 7-8-merous; calyx-tube 3-5 mm. long, not split, lobes 2-4.5 cm. long, setose-pilose; corolla-tube 14-18 cm. long, gradually expanded towards apex, spreading-pubescent outside, lobes 3.5-8 cm. long, 1-1.5 cm. broad, acute; branchlets and leaves hirsute; leaves oblanceolate or elliptic-oblanceolate, cuneate at base, caudate or shortly acuminate, 9-22 cm. long, 2.5-8 cm. broad, with 5-12 main lateral nerves on each side of midrib; fruits cylindrical-club-shaped, about 13.5 cm. long and 3.5 cm. broad, nearly glabrous[1. octomera](#)
Flowers 5-merous; calyx usually split down one side:3
- 3 Calyx-tube 2.5-4 cm. long, markedly spathaceous, lobes linear or lanceolate, 3-4 cm. long; corolla-tube 13-17 cm. long, densely shaggy villous outside, lobes 2.5-3 cm. long; fruits ellipsoid and markedly 5-ridged, each ridge longitudinally grooved, 6-11 cm. long, 3.5-6 cm. broad; branchlets and leaves spreading-pilose; leaves elliptic, more or less obtuse at base, long-acuminate, 9-20 cm. long, 3.5-8 cm. broad, with 7-8 main lateral nerves on each side of midrib[2. hispida](#)
Calyx-tube 1-1.5 cm. long, lobes filiform, 0.3-1 cm. long; corolla-tube 4.5-6.5 cm. long, pilose outside, lobes 1.5-3 cm. long; fruits ellipsoid or subglobose, not ridged but with 10-12 longitudinal lines, 3.5-7.5 cm. long, 3.3-5.5 cm. broad; branchlets and leaves pubescent and glabrescent or quite densely pilose; leaves elliptic, cuneate or obtuse at base, acuminate, 8-13 cm. long, 2.8-5.5 cm. broad, with 5-8 main lateral nerves on each side of midrib[3. urcelliformis](#)
- 4 Corolla glabrous outside, consisting of a 11-18 cm. long narrow lower portion and an abruptly expanded 1.5-3 cm. long campanulate upper portion, lobes 2-3 cm. long; flowers normally in pairs; calyx-tube 5-angled, glabrous, 7-9 mm. long, teeth 1-2 mm. long; fruits 15-20 cm. diam., woody, taking several years to grow; leaves obovate-oblong, cuneate at base, acuminate, 11-28 cm. long, 4.5-14 cm. broad, with 6-15 main lateral nerves on each side of midrib; a tree 10-30 m. high[4. lujae](#)
Corolla appressed-puberulous (at least when young) or densely tomentellous or velutinous outside, tube gradually expanded and funnel-shaped; flowers solitary; fruits up to 12 cm. long:5
- 5 Calyx glabrous outside, teeth usually much shorter than tube; leaves glabrous except for tufts in nerve-axils:6
Calyx densely brown-tomentellous outside, lobes linear, (3-)5-66 mm. long; leaves rusty pubescent on midrib and nerves beneath when young; fruits up to 7 cm. long; Ovary and fruit 5-ridged, the latter ellipsoid, about 6 cm. long and 3.5 cm. diam.; calyx-tube inside finely silvery velutinous above, sparsely so below, lobes up to 3-

15 mm. long; corolla-tube densely and shortly velutinous outside, 20-25 cm. long, very gradually widened and only about 2.5 cm. wide at mouth, lobes about 4-5 cm. long; leaves obovate-oblongate, cuneate at base, acuminate, 12-24 cm. long, 4-9 cm. broad, with 7-9 main lateral nerves on each side of midrib, venation very obscure beneath 7. *talbotii*.....7c136fn1_7
Ovary 10-ridged; fruit 10-ridged or nearly smooth, subglobose, up to 7 cm. diam.; calyx-tube densely and evenly brown-velutinous inside, lobes 15-66 cm. long; corolla-tube densely long-velutinous outside, 3-17 cm. long, with expanded part (including lobes) 3.7-12 cm. long, lobes 1.7-6 cm. broad; leaves oblong-obovate, oblanceolate or narrowly elliptic, cuneate at base, acuminate, 6-30 cm. long, 2-11 cm. broad, with 7-12 main lateral nerves on each side of midrib, venation obvious beneath8. *whitfieldii*

- 6 Leaves more or less elliptic, cuneate at base, acuminate, 5-13 cm. long, 2.5-2 (-6.5) cm. broad with 4-6 main lateral nerves on each side of midrib; corolla appressed-puberulous outside, sometimes glabrescent, tube 12-25 cm. long, lobes 1.5-4 cm. long; fruits subglobose, 4-5 cm. diam.5. *longiflora*

Leaves obovate-oblongate, broadly cuneate to subcordate at base, very shortly and broadly acuminate, 19-35 cm. long, 9.5-21.5 cm. broad, with 7-10 main lateral nerves on each side of midrib; fruits ellipsoid, 10-12 cm. long, 6.5-9 cm. broad6. *megalostigma*

1. **Rothmannia octomera** (Hook.) Fagerlind in Arkiv för Bot. Stockh. 30A, 7: 39 (1943). *APD acc*

Gardenia octomera Hook. Bot. Mag. t. 5410 (1868).

Randia octomera (Hook.) Hook. f. (1873)-F.T.A. 3: 98; F.W.T.A., ed. 1, 2: 78.

Rothmannia galtonii Wernham (1914).

Rothmannia cunliffeae Wernham (1914).

A forest shrub or small tree, about 7 ft. high; "calyx very dark green, corolla-tube bright green, lobes white within and divided on the back longitudinally into a bright green half and a creamish-white half, stamens light drab, style and stigma cream"; "fruits green with pale green speckles".

Rothmannia capensis Thunb. in Vet. Acad. Handl. Stockh. 67, t. 2 (1776).

Gardenia rothmannia Linn. f. (1781).

Randia maculata of F.T.A. 3: 96 and F.W.T.A., ed. 1, 2: 78, partly (Boteler ex Gambia).

This is a South African species and it is very unlikely that Boteler's specimen was indigenous in the Gambia. I suggest that either the specimen was not in fact collected in the Gambia, or that it was from an introduced cultivated plant.

21. SHERBOURNIA

G. Don in Loudon Encycl. Pl., Suppl. 2, 1303 (1855).

Amaralia Welw. ex Hook. f.-F.T.A. 3: 112; Wernham in J. Bot. 55: 1 (1917); Keay in Bull. Jard. Bot. Brux. 28: 57 (1958).

- 1 Calyx-lobes 6-28 mm. long, much longer than the calyx-tube:.....2
Calyx-lobes broadly triangular, up to 2.5 mm. long, much shorter than the 9-10 mm. long tube; cymes up to 7-flowered; fruit oblong-ellipsoid, strongly ribbed:.....5
- 2 Main lateral nerves (4-)5-7 on each side of midrib; lamina appressed-puberulous to nearly glabrous beneath, midrib and main nerves usually more densely puberulous or pubescent; flowers solitary, rarely paired:3
Main lateral nerves 10-12 on each side of midrib; leaves rather densely appressed-pubescent beneath, elliptic, ovate-elliptic or obovate-elliptic, acute or obtuse at base, acuminate, 9-14 cm. long, 3.3-7 cm. broad; cymes 1-3(-5)-flowered; calyx-tube about 3 mm. long, lobes 12-15 mm. long, 5-7 mm. broad; corolla-tube 26-32 mm.

long, lobes about 10 mm. long and broad; fruits cylindrical, strongly ribbed, about 3.5 cm. long and 1.5 cm. broad [4. zenkeri](#)

- 3 Leaves mostly cordate and often unequal at base, ovate-elliptic or obovate-elliptic, acuminate, 9-21 cm. long, 5-11.5 cm. broad; calyx-tube 3-10 mm. long, lobes 17-28 mm. long; corolla-tube 36-55 mm. long, lobes 10-18 mm. long and broad; fruits ellipsoid-subglobose, faintly ribbed about 7.5 cm. long and 5.5 cm. diam. [1. bignoniiflora](#)

Leaves cuneate to obtuse or rarely rounded at base, narrowly elliptic or obovate-elliptic, gradually acuminate, 7-17 cm. long, 2.5-7.5 cm. broad; calyx-tube up to 4 mm. long; corolla-tube up to 30 mm. long: [4](#)

- 4 Calyx-tube very short, up to 1 mm. long, lobes 15-28 mm. long, 6-10 mm. broad; corolla-tube 15-30 mm. long, lobes 10-11 mm. long, 12-14 mm. broad; fruits campanulate or broadly ellipsoid, only very slightly ribbed, 3.2-4.5 cm. long, 2.5-3 cm. broad [2. calycina](#)

Calyx-tube 3-4 mm. long, lobes 6-10 mm. long, 3.5-4.5 mm. broad; corolla-tube 24-28 mm. long, lobes 4-7 mm. long, 5-8 mm. broad; fruits cylindrical, often slightly curved, somewhat ribbed, 2.5-3.2 cm. long, 1-1.2 cm. broad [3. millenii](#)

- 5 Leaves densely setose-pubescent beneath, with 9-15 main lateral nerves on each side of midrib, broadly elliptic or obovate-elliptic, unequal and rounded at base, abruptly acuminate, 14-31 cm. long, 7-15 cm. broad; corolla-tube about 26 mm. long, lobes about 8 mm. long and broad; fruits about 2.3 cm. long and 2 cm. broad [5. hapalophylla](#)

Leaves pubescent only on midrib beneath, with 5-6 main lateral nerves on each side of midrib, broadly elliptic, acute or somewhat obtuse at base, shortly acuminate, 10-17 cm. long, 5-8 cm. broad; corolla-tube about 35 mm. long, lobes about 6 mm. long and 5 mm. broad; fruits about 3.5 cm. long and 1.7 cm. broad [6. amaraliocarpa](#)

Amaralia amaraliocarpa (Wernham) Keay l.c. 59 (1958).

A scandent shrub; calyx " bronzy-green " with greyish indumentum; corolla-tube creamy yellow, lobes with dark purplish to black spots; **in farm clearings in the forest regions**.

S. Nig.: Oron to Eket Talbot 3021!

22. OXYANTHUS

DC.-F.T.A. 3: 106; K. Schum. in E. & P. Pflanzenfam. 4, 4: 78 (1891).

- 1 Branchlets and leaves more or less densely puberulous, pubescent or pilose; corolla-tube 10-17 cm. long:.....2
Branchlets and leaves quite glabrous, or leaves sparingly pubescent or puberulous beneath mainly by midrib
(Nos. 4, 5 & 8):4
- 2 Leaves 18-40 cm. long, 10-25 cm. broad, very asymmetrical at base with one side broadly auriculate, lamina ovate-elliptic, shortly acuminate, spreading pilose beneath and on midrib above, with 8-14 main lateral nerves on each side of midrib; inflorescences widely paniculate, axes (including pedicels) up to 8 cm. long, with very numerous flowers; calyx-lobes filiform, about 7 mm. long; corolla-tube 13-15.5 cm. long, lobes about 2 cm. long; fruits about 2.5 cm. diam.*I. unilocularis*

- Leaves not exceeding 24 cm. long and 10 cm. broad; inflorescence-axes (including pedicels) up to 2 cm. long, with not more than about 12 flowers; calyx-lobes triangular-lanceolate, 1.5-2.5 mm. long; main lateral nerves 7-10 on each side of midrib: [3](#)
- 3** Branchlets, petioles and undersurface of leaves setose-pilose; corolla-tube 16-17 cm. long, glabrous outside; leaves oblong, more or less asymmetrical and rounded to cuneate at base, acuminate, 14-22 cm. long, 5.3-10 cm. broad; inflorescence-axes (including pedicels) up to 0.8 cm. long [2. setosus](#)
- Branchlets, petioles and undersurface of leaves softly puberulous or pubescent; corolla-tube 11-14 cm. long, pubescent or glabrescent; leaves oblong, very asymmetrical, cuneate and rounded to subcordate at base, broadly acuminate, (5-) 9-20 cm. long, (1.5-) 2-8 cm. broad; inflorescence-axes (including pedicels) up to 2 cm. long [3. racemosus](#)
- 4** Corolla-tube 10-17.5 cm. long, 2-3 mm. wide (when flattened), lobes (1.5-) 2-3.2 cm. long: [5](#)
- Corolla-tube 2.5-7 cm. long, up to 1.5 mm. wide (when flattened), lobes 0.5-1.2 cm. long; leaves more or less symmetrical and often cuneate at base: [8](#)
- 5** Calyx-lobes well-developed, 1.5-2.5 mm. long; leaves symmetrical and usually cuneate at base, oblong, acuminate; flowers up to about 15, but usually much fewer: [6](#)
- Calyx subtruncate or with very short teeth; leaves usually asymmetrical, cuneate to obtuse and obtuse to subcordate at base, with 9-11 main lateral nerves on each side of midrib, oblong, shortly and broadly acuminate, 15-30 cm. long, 4-12 cm. broad; inflorescence-axes (including pedicels) up to 10 cm. long, flowers up to about 30, but usually much fewer, bracts minute [7. formosus](#)
- 6** Leaves pubescent on midrib and especially in axils of main nerves beneath, rarely minutely puberulous on lamina, 5-18 cm. long, 2-7 cm. broad; inflorescence-axes (including pedicels) less than 1 cm. long, with conspicuous persistent bracts: [7](#)
- Leaves quite glabrous, 11-25 cm. long, 4-10 cm. broad, with 6-8 main lateral nerves on each side of midrib; inflorescence-axes (including pedicels) up to 2.5 cm. long, with minute bracts; fruits ellipsoid, about 3.5 cm. long and 1.8 cm. broad [6. pallidus](#)
- 7** Main lateral nerves 5-8 on each side of midrib; corolla-tube 11-15 cm., lobes 2-2.5 cm. long; fruits ellipsoid, about 3.2 cm. long and 1.8 cm. broad [4. subpunctatus](#)
- Main lateral nerves (8-) 10-12 on each side of midrib; corolla-tube 10-10.5 cm., lobes 1.5-2 cm. long; immature fruits ovoid, about 5 cm. long [5. sp. A](#)
- 8** Calyx 1 mm. wide or less, teeth less than 1 mm. long; corolla-tube 0.75-1.5 mm. wide (when flattened); inflorescence a lax corymbose cyme, with axes (including the slender pedicels) up to 2 cm. long, bracts inconspicuous, usually 1 mm. or less long: [9](#)
- Calyx about 1.5 mm. wide, teeth 1-2 mm. long; corolla-tube about 1.5 mm. wide (when flattened); inflorescence a dense, many-flowered, narrow panicle, with the main axis up to 8 cm. long and conspicuous bracts up to 7 mm. long; corolla-tube (2.5-) 4.5-5(-6.5) cm., lobes 0.6-1.2 cm. long; leaves oblong, rounded, obtuse or cuneate at base, shortly and broadly acuminate, 7-25 cm. long, 2-13 cm. broad, with 7-10 main lateral nerves on each side of midrib; fruits ellipsoid, stipitate, about 2.5 cm. long and 1.5 cm. broad, black and shiny when dry [10. speciosus](#)
- 9** Corolla-tube 5-2-7 cm., lobes 1-1.2 cm. long; branchlets slender; leaves membranous, slightly pubescent by midrib beneath, especially in the axils of the 5-7 main lateral nerves; lamina oblong-elliptic, acuminate, 8.5-16 cm. long, 3-6.5 cm. broad [8. gracilis](#)
- Corolla-tube 2-7-3.2 cm., lobes 0.5-0.9 cm. long; branchlets rather stout; leaves subcoriaceous, quite glabrous, with 4-6 main lateral nerves on each side of midrib; lamina oblong or oblong-elliptic, acuminate, 9-20 cm. long, 3-8.5 cm. broad [9. laxiflorus](#)
- 1. *Oxyanthus unilocularis* Hiern** in F.T.A. 3: 110 (1877); Aubrév. Fl. For. C. Iv., ed. 2, 3: 286, t. 357; F. W. Andr. Fl. Pl. A.-E. Sud. 2: 455. *APD acc*
- Oxyanthus macrophyllus* Schweinf. ex Hiern l.c. (1877).
Oxyanthus litoreus S. Moore (1905).

A shrub or tree, to 25 ft. high, with stout, more or less angled branchlets sometimes becoming hollow; leaves dark glossy green above, coarsely hairy beneath; calyx green, corolla white; **in forest, including fringing forest in the savanna regions.**

Also in **S. Tomé** and widespread in tropical Africa.

Oxyanthus tubiflorus (*Andr.*) *DC.* Prod. 4: 376 (1830); not of F.T.A. 3: 107, nor of F.W.T.A., ed. 1, 2: 80.

Gardenia tubiflora *Andr.* Bot. Repos. 3: t. 183 (1801).

Andrews' plate is of a plant grown in a hot-house at Hammersmith (London) from seed sent from Sierra Leone; I have not been successful in tracing a specimen of this plant. The plate differs from *O. racemosus* (the plant referred to as *O. tubiflorus* in the F.T.A. and F.W.T.A.) as follows:-(i) stem, leaves and flowers glabrous, (ii) leaves cuneate at base, (iii) inflorescence shorter and ebracteate, (iv) calyx-lobes broader. I cannot, moreover, satisfactorily match Andrews' plate with any other specimen. It is perhaps nearest to *O. subpunctatus* but differs in the broadly triangular calyx-lobes. Since the name *O. tubiflorus* cannot certainly be associated with any known species of *Oxyanthus* it seems best to cease using it.-R.W.J.K.

23. MITRIOSTIGMA

Hochst.-F.T.A. 3: 111.

- 1 Branchlets glabrous; leaves broadly oblanceolate, very acute at base, acutely acuminate, 10-15 cm. long, 3-4.5 cm. broad, glabrous, with about 6-8 pairs of looped lateral nerves and lax venation between; stipules subulate from a broad base, glabrous; cymes axillary, very short and few-flowered; calyx-lobes subulate, 1-1.5 mm. long; corolla 1 cm. long, gradually widened from a cylindric base; fruits oblong-lanceolate in outline, beaked, 3 cm. long; seeds with a fibrous testa[barteri](#)

Mitriostigma barteri *Hook. f. ex Hiern* in F.T.A. 3: 111 (1877); Gen. Pl. 2: 90 (1873), name only. *APD acc*

Randia barteri (*Hook. f. ex Hiern*) *K. Schum.* in E. & P. Pflanzenfam. 4, 4: 75 (1891).

Half-woody undershrub 3 ft. high; " calyx green, corolla brown ".

F. Po: Barter! Mann 234!

24. DIDYMOSALPINX

Keay in Bull. Jard. Bot. Brux. 28: 61 (1958).

- 1 Calyx glabrous, tube scarcely 1 mm. long, lobes triangular 2-4 mm. long; corolla-tube 3.5-8 cm. long, lobes ovate, acuminate, 1.5-3 cm. long; anthers 1-1.4 cm. long; style-head dilated, fusiform; pedicels 1.2-2.4 cm. long, without bracteoles; branchlets, stipules and leaves glabrous; arrested lateral branchlets sometimes becoming spines; petioles up to 8 mm. long; leaves drying greenish, elliptic to elliptic-lanceolate, cuneate at base, acuminate at apex, 3.5-18 cm. long, 1.7-8 cm. broad, with 5-7 main lateral nerves on each side of midrib, usually pitted in the axils; fruits subglobose, about 2.5 cm. diam.[1. abbeokutae](#)

Calyx puberulous, tube about 2 mm. long, lobes triangular, 1.5-2 mm. long; corolla-tube 1.8-2.5 cm. long, lobes obovate-elliptic, rounded at apex, 1.5-2 cm. long; anthers about 1 cm. long; style-head attenuate; pedicels about 1.2 cm. long, with puberulous bracteoles; stipules and young leaves pubescent; branchlets not becoming spines; petioles 8-16 mm. long; leaves drying reddish beneath, oblong or obovate-oblong, usually obtuse at base, acuminate at apex, 8.5-22 cm. long, 4-8 cm. broad, with 5-10 main lateral nerves on each side of midrib, not pitted in axils; young fruits fusiform[2. parviflora](#)

1. **Didymosalpinx abbeokutae** (*Hiern*) *Keay* in Bull. Jard. Bot. Brux. 28: 62, t. 5 (1958); Aubrév. Fl. For. C. Iv., ed. 2, 3: 274. *APD acc*

Gardenia abbeokutae *Hiern* in F.T.A. 3: 104 (1877); F.W.T.A., ed. 1, 2: 75.

G. hiernii *Sc. Elliot* (1894).

A scrambling glabrous shrub with shining leaves and cream-white or greenish-yellow flowers; [in forest vegetation](#).

26. DICTYANDRA

Welw. ex Hook. f.-F.T.A. 3: 85; K. Schum. in E. & P. Pflanzenfam. 4, 4: 73 (1891).

- 1 Corolla about 2½ times as long as the calyx, silky-tomentose outside, 3 cm. long; calyx-lobes broadly elliptic, about 1 cm. long, with one thickened recurved margin; leaves obovate-elliptic, shortly-acuminate, 12-20 cm. long, 5-9 cm. broad, slightly pubescent in the axils of the nerves beneath; stipules broadly triangular, 5 mm. long; flowers in lax cymes; style hairy [1. *arborescens*](#)

Corolla about 8 times as long as the calyx, slender, appressed-pilose, about 8 cm. long; calyx-lobes lanceolate, hardly 1 cm. long, with slightly curled edges; leaves obovate, sharply cuneate at the base, 12-23 cm. long, 6-12 cm. broad, glabrous; stipules semi-orbicular, leafy, 1-1.5 cm. long; flowers rather crowded [2. *involucrata*](#)

1. **Dictyandra arborescens** *Welw. ex Hook. f.* in Benth. & Hook. f. Gen. Pl. 2: 85 (1873); F.T.A. 3: 86; Aubrév. Fl. For. C. Iv., ed. 2, 3: 272, t. 350. **APD acc**

A shrub or small tree, up to 25 ft. high, with shining dark green foliage, white silky fragrant flowers 1-1½ in. long in cymes, and small guava-like fruits crowned by the leafy calyx; bole with short, stout, blunt, conical spines; **in forest**.

Also in **Cameroun** and **Rio Muni**.

27. LEPTACTINA

Hook. f.-F.T.A. 3: 87; K. Schum. in E. & P. Pflanzenfam. 4, 4: 73 (1891).

- 1 Style included in the corolla-tube; leaves more than 7.5 cm. long and 3 cm. broad, with 7-10 main lateral nerves on each side of midrib; petioles more than 5 mm. long; calyx-lobes 1.3-3 cm. long; corolla-tube (2-)4-8(-10.5) cm., lobes (1.2-)1.8-3 (-3.5) cm. long; branchlets densely or sparingly pilose, or nearly glabrous; leaves broadly elliptic to obovate, obtuse or cuneate at base, more or less acuminate at apex, 7.5-20 cm. long, 3-11 cm. broad:..... [2](#)

Style exserted; leaves narrowly elliptic, acute at both ends, 3-8 cm. long, 1-3.5 cm. broad, softly pubescent beneath, with 5-8 main lateral nerves on each side of midrib; petioles 3-4 mm. long; calyx-lobes about 1.3 cm.

- long; corolla-tube 2-5 cm., lobes 1-5-2-5 cm. long, ovary densely pubescent [2. senegambica](#)
- 2 Ovary densely pubescent; leaves usually with long weak hairs and tufts of shorter hairs by the midrib and nerves beneath [1. densiflora var. densiflora](#)
- Ovary glabrous or sparingly pubescent; leaves with only short hairs beneath [1a. densiflora var. glabra](#)

Leptactina densiflora Hook. f. *APD acc*

1. *Leptactina densiflora var. densiflora* -Hook. Ic. Pl. sub t. 1092 (1871); F.T.A. 3: 87. *APD acc*

A large bushy shrub with rather large leaves, and white fragrant tubular flowers 1-3 in. long, velvety outside, in dense heads; fruits black, ribbed and wrinkled, 1/2 in. diam., crowned by the long calyx.

28. TARENNA

Gaertn.-F.T.A. 3: 88.

- 1 Style pilose in the lower half, always well-exserted; ovules several in each ovary cell: **2**
- Style glabrous in the lower half, often only slightly exserted or included; leaves usually drying blackish; pedicels (2-) 4-7 mm. long: **14**
- 2 Calyx glabrous outside, lobes very short, often broader than long; inflorescences glabrous or puberulous; corolla-tube glabrous outside, pilose within: **3**
- Calyx pubescent or setose outside, lobes short or long, mostly longer than broad; corolla-tube glabrous, puberulous or pubescent outside, glabrous or pilose inside; inflorescences mostly densely puberulous, pubescent or setose; pedicels 0-5-10 mm. long: **7**
- 3 Corolla-tube 9-30 mm. long; pedicels 4-35 mm. long, glabrous or puberulous: **4**
- Corolla-tube 2-5-4 mm., lobes 4-6(-7) mm. long; pedicels 1-2 mm. long, puberulous; leaves oblong-elliptic, rather asymmetrically cuneate at base, acuminate, 8-17 cm. long, 2-5-6-5 cm. broad, glabrous, with 4-6 main lateral nerves on each side of midrib, prominent beneath [4. pallidula](#)
- 4 Pedicels 25-35 mm. long; cymes 1-3-flowered; corolla-tube 10-13 mm. long, lobes 7-8 mm. long; leaves elliptic, rounded or obtuse at base, abruptly spatulate-acuminate, 3-5-8-5 cm. long, 1-2-3-8 cm. broad, glabrous, with 2-4 main lateral nerves looped on each side of the midrib [1. flavo-fusca](#)
- Pedicels 4-10 mm. long; cymes several- to many-flowered; leaves more or less asymmetrically long-cuneate at base, acumen not spatulate; main lateral nerves 4-9 on each side of midrib: **5**
- 5 Corolla-tube 25-30 mm., lobes 8-9 mm. long; leaves oblong-oblancoate or oblong-elliptic, acuminate, 12-24 cm. long, 4-9-5 cm. broad, glabrous; fruits sub-globose, 10-12 mm. diam., 10-ribbed, glabrous [2. grandiflora](#)

- Corolla-tube 9-10 mm., lobes 6-8 mm. long; leaves oblong-oblancoate, long-acuminate, 5-5-17 cm. long, 1-7-5 cm. broad; fruits as above, but scarcely ribbed: **6**
- 6** Leaves rather densely pubescent beneath [3. *vignei* var. *vignei*](#)
 Leaves glabrous or nearly so beneath [3a. *vignei* var. *subglabra*](#)
- 7** Corolla-tube glabrous inside: **8**
 Corolla-tube pilose inside: **9**
- 8** Outside of corolla-tube puberulous; leaves glabrous; calyx-lobes ovate-triangular, up to 0-5 mm. long, densely puberulous; corolla-tube 6-8 mm., lobes 4-6 mm. long; pedicels 3-5 mm. long; leaves ovate, elliptic or obovate-elliptic, cuneate at base, acuminate, 7-18 cm. long, 2-7-5 cm. broad, with 7-10 main lateral nerves on each side of midrib; fruits slightly bilobed, 8-9 mm. diam., glabrous, wrinkled and shining when dry [5. *gracilis*](#)
 Outside of corolla-tube glabrous; leaves pubescent on midrib and nerves and appressed-puberulous on lamina beneath; calyx-lobes triangular-lanceolate, 1-2 mm. long, densely setose-pubescent; corolla-tube 3-5 mm., lobes 5-7 mm. long; pedicels 1-3 mm. long; leaves oblanceolate, oblong-elliptic or lanceolate, cuneate at base, 2-8-12 cm. long, 1-5-5 cm. broad, with 6-9 main lateral nerves on each side of midrib; fruits subglobose, 5 mm. diam., glabrous, wrinkled and shining when dry [6. *thomasi*](#)
- 9** Outside of corolla-tube pubescent, at least when young; inflorescence-axes, the 4-10 mm. long pedicels, ovary and the 1 mm. long ovate-acute calyx-lobes densely golden-brown (when dry) silky pubescent; corolla-tube 6 mm., lobes 4-4-5 mm. long; leaves coriaceous, drying brown, elliptic to obovate, cuneate at base, acuminate, 8-5-15 cm. long, 2-7-6 cm. broad, pubescent beneath especially on the midrib, with 5-8 main lateral nerves on each side of midrib [7. *eketensis*](#)
 Outside of corolla-tube glabrous; pedicels 1-4 mm. long: **10**
- 10** Calyx-lobes oblong, rounded at apex, 2 mm. long, 1-5 mm. broad, margins ciliate, often overlapping at anthesis; leaves rounded or obtuse at base, oblong, 10-17 cm. long, 4-5 cm. broad, rather abruptly acuminate, glabrous, with 4-6 main lateral nerves on each side of midrib; corolla-tube 7-8 mm., lobes 8 mm. long; pedicels 1-1-5 mm. long [8. *baconoides*](#)
 Calyx-lobes triangular, ovate or lanceolate, narrower and/or shorter than above, not overlapping at anthesis; leaves cuneate at base, mostly puberulous beneath: **11**
- 11** Calyx-lobes lanceolate, 1-5-3-5 mm. long, up to 1 mm. broad; inflorescence-axes, pedicels and ovary densely setose-pilose; corolla-tube 7-10 mm., lobes 5-8 mm. long; leaves elliptic or obovate, obtuse or cuneate at base, acuminate, 8-20 cm. long, 3-10 cm. broad, appressed-puberulous on midrib above and on midrib, nerves and lamina beneath; main lateral nerves 6-13 on each side of midrib; fruits subglobose, glabrous, about 7 mm. diam., wrinkled, black and shining when dry [9. *lasiorhachis*](#)
 Calyx-lobes broadly triangular or ovate, up to 1-5 mm. long; inflorescence-axes, pedicels and ovary more or less densely appressed-pubescent: **12**
- 12** Inflorescence up to 3-5 cm. diam., densely flowered, with pedicels up to 2 mm. long, closely subtended by 1-2 pairs of small leaves near the apex of long lateral shoots; calyx-lobes 1-1-5 mm. long; corolla-tube and lobes each about 5 mm. long; leaves obovate or elliptic, distinctly and often abruptly acuminate, 8-17-5 cm. long, 3-7-8 cm. broad, rather densely puberulous beneath, with 6-9 main lateral nerves on each side of midrib; fruits subglobose, about 8 mm. diam., glabrous, shining [10. *conferta*](#)
 Inflorescence 4-10 cm. diam., pedicels 1-4 mm. long; leaves sparingly puberulous, especially in axils of nerves, or glabrous beneath; calyx-lobes 0-5-1 mm. long: **13**
- 13** Inflorescence dense; leaves obovate, acuminate, 7-16 cm. long, 3-6-5 cm. broad, with 6-9 main lateral nerves on each side of midrib; corolla-tube 4-5 mm., lobes 4-5-5 mm. long [11. *pavettoides*](#)
 Inflorescence lax; leaves narrowly elliptic or elliptic-oblancoate, very gradually long-acuminate, 6-14 cm. long, 2-5-5 cm. broad, with 5-8 main lateral nerves on each side of midrib; corolla-tube and lobes each 5-8 mm. long [12. *nitidula*](#)
- 14** Calyx and ovary glabrous; corolla-tube glabrous inside: **15**
 Calyx and ovary puberulous outside; corolla-tube pilose inside: **16**
- 15** Calyx-lobes broad and imbricate, overlapping to the left, 1 mm. long; corolla-tube short (specimens available only in bud); pedicels setose; leaves oblanceolate-elliptic, cuneate at base, acuminate, 7-12 cm. long, 2-5 cm. broad, with 6-8 main lateral nerves on each side of midrib; ovules 4 per cell [13. *hutchinsonii*](#)
 Calyx-lobes triangular, 0-5 mm. long; corolla-tube 12-19 mm. long, glabrous inside and outside, lobes 6-10 mm. long; pedicels glabrous; leaves ovate, lanceolate, elliptic or obovate, obtuse, cuneate or rounded at base, acuminate, 6-16 cm. long, 2-9 cm. broad, with 3-6 main lateral nerves on each side of midrib; ovules 1 per cell; fruit usually with a single seed or with a second imperfectly developed seed [14. *soyauxii*](#)
- 16** Corolla-tube 4-7(-10) mm. long, glabrous or puberulous outside, lobes 7-8(-9) mm. long; calyx puberulous, lobes lanceolate to subulate, 1-2 mm. long; pedicels puberulous; leaves narrowly elliptic, elliptic-lanceolate or oblanceolate, usually unequal at base, obtuse and/or cuneate, gradually obtusely acuminate, 6-5-18 cm. long, 3-8 cm. broad, with 7-11 main lateral nerves on each side of midrib; ovules usually 3 per cell; fruit with 2-6 seeds [15. *bipindensis*](#)
 Corolla-tube 4 mm. long, glabrous outside, lobes 4-4-5 mm. long; calyx minutely puberulous; lobes triangular,

0.75 mm. long; pedicels glabrous or puberulous; leaves similar to above [16. brachysiphon](#)

1. **Tarenna flavo-fusca** (*K. Schum.*) *S. Moore* in J. Linn. Soc. 37: 302(1906).

APD: *Synonym of Tarenna fusco-flava* (*K. Schum.*) *S. Moore*

Chomelia flavo-fusca *K. Schum.* in Engl. Bot. Jahrb. 33: 339 (1903).

C. laxissima *K. Schum.* l.c. 340 (1903).

Ixora laxissima (*K. Schum.*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 87 (1931).

A slender climber, or small tree to 12 ft. high; flowers white; **in forest**.

Lib.: Yeh R., 2 miles above junction with St. Paul R. (Oct.) Linder 993! **Ghana:** Konongo (Apr.) Vigne FH 1929! Abofaw (June) Vigne FH 1175! **S. Nig.:** Oban Talbot 232! **[Br.] Cam.:** Kumba (June) Preuss 312! Mbalange F.R., Kumba Div. (fr. Jan.) Binuyo & Daramola FHI 35479!

Also in **Cameroun**, **Angola** and **Uganda**.

2. **Tarenna grandiflora** (*Benth.*) *Hiern* in F.T.A. 3: 91 (1877). *APD acc*

Styllocoryne grandiflora *Benth.* (1849).

Chomelia grandiflora (*Benth.*) *O. Ktze.* (1891).

C. neurocarpa *K. Schum.* (1903).

A shrub or small tree to 50 ft. high; corolla green outside and white inside; fruits pale orange; **in forest**.

S. Nig.: Eket Dist. Talbot 3366! Oban Talbot 279! Ikom (ft. May) Jones & Onochie FHI 17444! **[Br.] Cam.:** Mile 49, Victoria to Kumba road (Aug.) Olorunfemi FHI 30745! Korop F.R., Kumba (fr. July) Olorunfemi FHI 30670! **F. Po:** (June, Dec.) Barter! Mann 25! T. Vogel 262!

Also in **Cameroun**.

Tarenna vignei *Hutch. & Dalz.* *APD acc*

3. **Tarenna vignei var. vignei** -F.W.T.A., ed. 1, 2: 76 (1931). *APD acc*

A forest shrub.

Ghana: Amentia (fl. buds Nov.) Vigne FH 1461!

3a. **Tarenna vignei var. subglabra** *Keay* in Bull. Jard. Bot. Brux. 27: 98 (1957). *APD acc*

Tarenna sp. of Aubrév. Fl. For. C. Iv., ed. 1, 3: 237.

A forest shrub or small tree, to 12 ft. high; flowers white, fragrant; fruits yellow or orange when ripe.

S. L.: Gola Forest Small 554! Gorahun to Zimi, Gola Forest (fl. & fr. Apr.) Deighton 3640! 3685! **Lib.:** Vahon, Kolahun Dist. (ft. Nov.) Baldwin 10248! Ba, Mano R., (fr. Sept.) Baldwin 10724! 7. **Tarenna eketensis** *Wernham* in J. Bot. 52: 4 (1914). *APD acc*

Rutidea degemensis *Wernham* in op. cit. 55: 80 (1917).

R. talbotiorum *Wernham* l.c. 81 (1917).

A scandent shrub to 30 ft. high, or a tree; inflorescence light golden-silky pubescent, flowers white; in forest, especially in regrowth.

Lib.: Karmadhun, Kolahun (fr. Nov.) Baldwin 10164! **Ghana:** Bou, W. Prov. (Nov.) Vigne FH 1411! Bogosu (Dec.) Vigne FH 3147! **S. Nig.:** Sapoba (Mar., Nov.) Jones FHI 547! Keay FHI 28076! Oron-Eket Road Talbot 3024! Degema Disk. Talbot 3827! 3828! s.n.! Oban Dist. Talbot! **[Br.] Cam.:** Abonando (May) Rudatis 61!

Also in **Cameroun**, **Rio Muni** and **Gabon**.

[Chomelia gillettii De Wild. & Th. Dur. (1900) from Congo is very similar but has membranous instead of coriaceous leaves.]

8. **Tarenna baconioides** *Wernham* in Cat. Talb. 44 (1913). *APD acc*

A shrub, glabrous except on the inflorescence; flowers white, crowded in terminal trichotomous cymes; in forest.

S. Nig.: Oban Talbot 1595!

9. **Tarenna lasiorhachis** (*K. Schum. & K. Krause*) *Bremek.* in Fedde Rep. 37: 196 (1934). *APD acc*

Pavetta lasiorhachis *K. Schum. & K. Krause* in Engl. Bot. Jahrb. 39: 550 (1907).

A forest shrub or small tree, to 10 ft. high; flowers white.

[Br.] Cam.: Victoria (fl. Nov., fr. Apr.) Maitland 87! 620! Mamfe (Mar.) Richards 5221!

Also in **Cameroun**.

10. **Tarenna conferta** (*Benth.*) *Hiern* in F.T.A. 3: 90 (1877); F.W.T.A., ed. 1, 2: 78, partly (**S. Nig.** & **F. Po** spec. only). *APD acc*

Stylocoryne conferta *Benth.* (1849).

Tarenna talbotii *Wernham* (1913).

A shrub or liane; flowers white, fragrant; in swampy and riverside forest.

S. Nig.: Lagos (Feb., Apr., July, Oct., fr. July) Dalz. 1019! 1054! 1202! Jones FHI 18846! 19428! Sapoba Kennedy 1795! Brass Barter 28! R. Nun (fi. & fr. Aug.) Barter 2131! T. Vogel 23! Oban Talbot 1548! **F. Po:** (fl. & fr. Jan.) Mann 207!

Also in **Cameroun** and **Gabon**.

11. **Tarenna pavettoides** (Harv.) Sim For. & For. Fl. Col. Cape of Good Hope 239 (1907). *APD acc*

APD: Synonym of Tarenna pavettoides subsp. affinis (K. Schum.) Bridson

APD: Synonym of Tarenna pavettoides subsp. gillmanii Bridson

Kraussia pavettoides Harv. Fl. Cap. 3: 22 (1865).

A shrub, in fringing forest.

[Br.] Cam.: Bamenda Prov.: Bum, 4,000 ft. (May) Maitland 1530! Lakom, 6,000 ft. (May) Maitland 1776!

Also in **Uganda**, **Sudan**, **Tanganyika**, N. & **S. Rhodesia** and **S. Africa**.

(A specimen (Deighton 3211) from Jaiama, Sierra Leone, is, perhaps also this species.)

12. **Tarenna nitidula** (Benth.) Hiern in F.T.A. 3: 90 (1877), excl. var. afzelii Hiern; Chev. Bot. 319; F.W.T.A., ed. 1, 2: 76, partly. *APD acc*

Stylocoryne nitidula Benth. (1849).

Pavetta striatula Hutch. & Dalz. F.W.T.A., ed. 1, 2: 91 (1931); Bremek. in Fedde Rep. 37: 205.

Tarenna nimbana Schnell in Bull. I.F.A.N. 16: 87, fig. 5 (1954).

A shrub 6-7 ft. high, with shining leaves; flowers white, fragrant; fruits white; in forest.

Port. G.: Cumura, Bissau (fr. Nov.) Esp. Santo 2229! **Guin.:** Koundian to Ouria, Kissi (Feb.) Chev. 20758! Nimba Mts. (Apr.) Schnell 4361! 4955! 4988! 5331! **S. L.:** Barter! Smythe 48! 131! 256! 16. *Tarenna brachysiphon* (Hiern) Keay in Bull. Jard. Bot. Brux. 27: 99 (1957). *APD acc*

Ixora brachysiphon Hiern in F.T.A. 3: 165 (1877); F.W.T.A., ed. 1, 2: 89.
Tarenna ombrophila Schnell in Bull. I.F.A.N. 16: 85, fig. 4 (1954).
Tarenna tomensis Schnell l.c. 81, fig. 3 (1954).

A glabrous shrub with shining leaves and white flowers in lax cymes.

Guin.: Nimba Mts. (Apr.) Schnell 5114! Macenta (Feb.) Adam 3885! **S. L.:** Thomas 10045! Bagroo R. (Mar.) Mann 792! Mabonto (fr. Oct.) Thomas 3546! 8657!

29. PAVETTA

Linn.-F.T.A. 3: 167; Bremekamp in Fedde Rep. 37: 1-208 (1934).

- 1 Corolla-tube 2-5-7 mm. long, usually shorter than the lobes but sometimes equalling them; throat of corolla bearded (i.e. with a dense ring of long hairs); calyx often imbricate in bud-(Subgen. Baconia): **2**
 Corolla-tube 8-40 mm. long (but only 3-4 mm. long in No. 20), usually longer than the lobes but sometimes as long as the lobes; throat of corolla not bearded; calyx very rarely imbricate-(Subgen. Pavetta): **16**
- 2 Each ovary cell with 2 collateral ovules; midrib, nerves and veins of leaves impressed above; leaves more or less elliptic, 10-22 cm. long, 4-10 cm. broad, softly pubescent beneath, with 11-15 main lateral nerves on each side of midrib, prominent beneath; branchlets, inflorescence-axes and calyces densely pubescent; flowers numerous in corymbose cymes; corolla-tube 5 mm., lobes 8 mm. long [1. lasioclada](#)
 Each ovary cell with a solitary ovule; nerves and veins not impressed above; leaves mostly glabrous or nearly so beneath (but see Nos. 2a and 3): **3**
- 3 Stipules and bracts pilose inside: **4**
 Stipules and bracts entirely glabrous; branchlets and leaves glabrous or nearly so; bacterial nodules usually present: **12**
- 4 Calyx-lobes persistently imbricate at anthesis, 1-1.5 mm. long, 1.5-2 mm. broad, rounded or truncate at apex, puberulous outside; corolla-tube about 5 mm., lobes about 10 mm. long; cymes many-flowered, widely corymbose; leaves oblanceolate to elliptic, 7.5-20 cm. long, 2-8 cm. broad, with 7-9 main lateral nerves on each side of midrib, bacterial nodules usually conspicuous: **5**
 Calyx-lobes open or imbricate in bud only, or calyx truncate; corolla (tube and lobes together) 5-5-17 mm. long: **6**
- 5 Leaves puberulous or nearly glabrous; branchlets and inflorescence puberulous ... [2. corymbosa var. corymbosa](#)
 Leaves more or less densely pubescent beneath; branchlets and inflorescence pubescent [2a. corymbosa var. neglecta](#)
- 6 Leaves softly and densely pubescent all over the lower surface, especially on the midrib and nerves; branchlets, inflorescence and calyx shortly tomentose; leaves elliptic to obovate, 8-20 cm. long, 4-10 cm. broad, with 9-14 main lateral nerves on each side of midrib; corolla about 10 mm. long; flowers numerous, in rather dense, widely corymbose cymes [3. mollissima](#)
 Leaves glabrous or puberulous beneath mainly on midrib and nerves or in axils of nerves; branchlets glabrous or puberulous: **7**
- 7 Corolla 8-17 mm. long: **8**
 Corolla about 5-5 mm. long; calyx-lobes distinct; inflorescence puberulous, up to 7 cm. diam.; branchlets and leaves glabrous; leaves oblong-elliptic, 11-17 cm. long, 2.5-6 cm. broad, with 6-8 main lateral nerves on each side of midrib, venation slightly prominent, lower surface shining, bacterial nodules conspicuous .. [9. obanica](#)
- 8 Calyx-lobes less than 0.5 mm. long, or calyx merely 4-lobulate; corolla about 8 mm. long; inflorescences puberulous, up to 5 cm. diam.; branchlets and leaves glabrous or nearly so; leaves elliptic, 9-22 cm. long, 2-5-9

- cm. broad, with 4-9 main lateral nerves on each side of midrib, venation rather obscure 4. brachycalyx Calyx-lobes distinct, 1-3 mm. long: [9c136fn1_9](#)
- Leaves sessile or subsessile, oblong or oblanceolate, shortly cuneate or rounded at base, 8-15 cm. long, 1.8-4.8 cm. broad, puberulous beneath mainly on midrib and nerves, with 7-8 main lateral nerves on each side of midrib; branchlets and inflorescence puberulous, the latter less than 4 cm. diam.; corolla about 11 mm. long [5. oblongifolia](#)
- Leaves distinctly petiolate, mostly long-cuneate at base: **10**
- 10** Calyx-lobes longer than broad, 1.5-3 mm. long, slightly keeled; corolla 15-17 mm. long; inflorescence puberulous, up to 10 cm. diam., rather lax; branchlets and leaves glabrous or nearly so; leaves oblanceolate to elliptic, 9-24 cm. long, 2.5-7 cm. broad, with 5-8 main lateral nerves on each side of midrib [6. glaucescens](#)
- Calyx-lobes as long as broad or shorter, 1-2 mm. long, not keeled; corolla 8-12 mm. long: **11**
- 11** Corolla 8-9 mm. long; plant usually drying blackish; calyx-lobes broad and rounded; branchlets glabrous; leaves oblanceolate to obovate, 7-12 cm. long, 2.5-5 cm. broad, with 7-11 main lateral nerves on each side of midrib [7. hookeriana](#)
- Corolla 10-12 mm. long; plant drying greenish-brown; calyx-lobes obtuse to subacute; branchlets minutely puberulous; leaves elliptic to oblanceolate or obovate, 7-22 cm. long, 3-9 cm. broad, with 6-12 main lateral nerves on each side of midrib [8. owariensis](#)
- 12** Corolla 6-8 mm. long; inflorescences 1-3 cm. diam., subtended by a single pair of leaves at the ends of long axillary shoots: **13**
- Corolla 10-16 mm. long; inflorescences 3-13 cm. diam., subtended by 1-3 pairs of leaves: **14**
- 13** Venation of leaves obscure, main lateral nerves 8-11 on each side of midrib; calyx and inflorescence glabrous; calyx-lobes distinct, imbricate at anthesis; leaves coriaceous, elongate-oblong-elliptic, 14-25 cm. long, 6-10 cm. broad [10. mannioides](#)
- Venation of leaves prominently reticulate on both surfaces, main lateral nerves 10-14 on each side of midrib; calyx and inflorescence puberulous; calyx subtruncate or with short broad lobes not imbricate at anthesis; leaves stiffly chartaceous (when dry), elliptic to lanceolate, 9-25 cm. long, 2.5-10 cm. broad [11. ixorifolia](#)
- 14** Calyx-lobes persistently imbricate, subquadrate, very short; corolla about 13 mm. long; leaves oblong or lanceolate, 10-18 cm. long, 3.5-5 cm. broad, with 7-9 main lateral nerves on each side of midrib ... [12. staudtii](#)
- Calyx-lobes imbricate in bud only, triangular to ovate: **15**
- 15** Corolla about 11 mm. long; leaves oblong-elliptic, 15-22 cm. long, 6-8.5 cm. broad, with 9-13 main lateral nerves on each side of midrib; stipules not seen [13. neurocarpa](#)
- Corolla 12-16 mm. long; leaves lanceolate, elongate-elliptic or broadly oblanceolate, 12-28 cm. long, 3.5-9 cm. broad, with 12-14 main lateral nerves on each side of midrib; stipules with points up to 10 mm. long [14. bidentata](#)
- 16** Calyx-lobes 12-20 mm. long, linear-filiform, densely plumose-pilose; corolla 32-38 mm. long; branchlets and leaves densely spreading pilose: **17**
- Calyx-lobes up to 6 mm. long, or if up to 12 mm. then oblong, obovate or spatulate and up to 5 mm. broad; corolla 7-50 mm. long; branchlets and leaves pilose, pubescent or glabrous: **18**
- 17** Leaves elongate-obovate or oblanceolate, 20-35 cm. long, 6-11 cm. broad, with (12-) 15-16 main lateral nerves on each side of midrib; corolla glabrous outside, tube 17-18 mm., lobes 15-20 mm. long [15. hispida](#)
- Leaves oblong-elliptic, 15-22 cm. long, 5-8 cm. broad, with 9-11 main lateral nerves on each side of midrib; corolla-tube about 22 mm. long, lobes pilose outside, about 13 mm. long [16. plumosa](#)
- 18** Calyx-lobes oblong, obovate or spatulate, accrescent and reaching 9-12 mm. long and 3-5 mm. broad in fruit; corolla 24-32 mm. long; leaves narrowly elliptic, with 7-12 main lateral nerves on each side of midrib: **19**
- Calyx-lobes 0.6 mm. long, broadly triangular to linear-filiform: **21**
- 19** Flowers in a dense subglobose cluster; calyx-lobes oblong to obovate-oblong, up to 11 mm. long and 3 mm. broad; upper surface of leaves glabrous except near the petiole; branchlets pubescent to pilose; leaves 11-28 cm. long, 3.5-8.5 cm. broad, more or less densely pubescent beneath; corolla-tube 16-22 mm., lobes about 10 mm. long [17. genipifolia](#)
- Flowers in corymbose cymes; calyx-lobes obovate or spatulate; corolla-tube 14-14.5 mm., lobes 10-11 mm. long: **20**
- 20** Leaves pilose on both surfaces; calyx-lobes spatulate, up to 12 mm. long and 5 mm. broad; leaves 8-23 cm. long, 2.5-7.5 cm. broad, rather densely pilose beneath [18. leonensis](#)
- Leaves glabrous or sparsely pubescent; calyx-lobes obovate, about 9 mm. long and 5 mm. broad; leaves 10-25 cm. long, 3.5-10 cm. broad [19. platycalyx](#)
- 21** Each ovary cell with 2 collateral ovules; glabrous shrub, not exceeding 1 m. high; leaves oblanceolate, attenuate at base into the 0.5-3 cm. long petiole, acuminate, 9.5-20 cm. long, 2.5-7.5 cm. broad, with 8-11 main lateral nerves on each side of midrib; inflorescences up to 2 cm. long; calyx-lobes broad and rounded, scarcely 1 mm. long; corolla-tube 5-8 cm. long, pubescent inside, lobes about 5 mm. long and 3-4 mm. broad; style about 30 mm. long, far-exserted [20. tetramera](#)

- Each ovary cell with a solitary ovule; shrubs exceeding 1 m. high: **22**
- 22** Corolla-tube 3-4 mm. long, approximately equal in length to the lobes; calyx-lobes broadly triangular, up to 2 mm. long; branchlets and leaves glabrous; leaves elliptic-oblong, up to 32 cm. long and 9 cm. broad, petiole up to 7 cm. long, with about 12 main lateral nerves on each side of midrib; cymes up to 2 cm. long, appearing axillary [21. talbotii](#)
- Corolla-tube (8-) 10-40 mm. long, longer than the lobes: **23**
- 23** Calyx-lobes (3-)5-6 mm. long, linear-lanceolate to filiform; corolla-tube 24-40 mm. long; main lateral nerves 6-8 on each side of midrib: **24**
- Calyx-lobes 0-2 mm. long, or if up to 3 mm. long (species No. 28) then corolla not exceeding 16 mm. long and leaves, branchlets, inflorescence and outside of flowers glabrous or sparingly pubescent: **25**
- 24** Inflorescence subumbellate, congested; corolla-tube about 24 mm. long, lobes about 9 mm. long; leaves broadly elliptic, 12-20 cm. long, 6-12.5 cm. broad, pubescent beneath [22. dolichosepala](#)
- Inflorescence paniculate, lax; corolla-tube 35-40 mm. long, lobes about 10 mm. long, acute-acuminate; leaves elliptic, 5-11 cm. long, 2.5-4 cm. broad, densely and softly pubescent beneath [23. mollis](#)
- 25** Flowering shoots greenish; corolla-lobes 10-16 mm. long, tube 13-19 mm. long; branchlets and leaves glabrous or nearly so; inflorescence laxly corymbose, minutely puberulous; calyx-lobes broadly triangular, 0.2-1 mm. long; leaves elliptic, 15-30 cm. long, 7.5-14 cm. broad, with 8-11 main lateral nerves on each side of midrib [24. rigida](#)
- Flowering shoots covered with whitish corky bark; corolla-lobes 5-8 mm. long; leaves with 5-8 main lateral nerves on each side of midrib: **26**
- 26** Stipules and bracts glabrous inside; branchlets stout; leaves often in threes, subsessile, glabrous, narrowly elongate-oblong-oblancheolate, rounded at apex, 15-25 cm. long, 3-5 cm. broad, corymbs many-flowered, glabrous; calyx subtruncate, glabrous outside; corolla-tube 12-18 mm. long, lobes about 5 mm. long [25. crassipes](#)
- Stipules and bracts pilose inside; branchlets more slender; leaves elliptic, oblong or obovate, 3-11(-16) cm. long, 1.5-4.5(-7) cm. broad; calyx-lobes mostly distinct: **27**
- 27** Flowers subsessile, in clusters on very short lateral shoots; corolla-tube about 20 mm. long, 3-4 times as long as the lobes; calyx densely puberulous outside, lobes triangular; branchlets and leaves densely pubescent; leaves elliptic, rounded or obtuse at apex, 4-7 cm. long, 2-4 cm. broad [26. subcana](#)
- Flowers rather long-pedicellate, in lax corymbs on relatively long shoots; corolla-tube not more than twice as long as the lobes: **28**
- 28** Leaves rather densely puberulous, especially beneath when young, obtuse at apex, cuneate at base, 10-16 cm. long, 3-7 cm. broad, sessile or nearly so; branchlets, inflorescence and calyx puberulous; corolla glabrous, tube 7 mm., lobes 5 mm. long; fruits 6 mm. diam. [27. cinereifolia](#)
- Leaves, branchlets, inflorescence and outside of flowers glabrous or sparingly pubescent: **29**
- 29** Leaves elliptic or oblong, 5-8 cm. long, 2.5-4 cm. broad, with a distinct pubescent petiole 4-15 mm. long; calyx-lobes to 3 mm. long; corolla-tube 14-15.5 mm., lobes 7-8 mm. long; style 40-45 mm. long [28. subglabra](#)
- Leaves obovate or oblanceolate, 3-6.5(-8) cm. long, 1.2-2(-3) cm. broad, long-attenuate and almost sessile at base, quite glabrous; calyx-lobes less than 0.5 mm. long; corolla-tube 8-12 mm., lobes 5-7 mm. long; style 20-22 mm. long [29. saxicola](#)

1. Pavetta lasioclada (*K. Krause*) *Mildbr. ex Bremek.* in Fedde Rep. 37: 62 (1934); Aubrév. Fl. For. Soud.-Guin. 471-474, t. 104, 1. *APD acc*

Chomelia lasioclada *K. Krause* (1909).

Pavetta vibunoides *A. Chev. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 91 (1931); Chev. Bot. 334, name only.

A shrub 8-15 ft. high, pale brownish-pubescent, with white flowers.

Mali: Moussaia (Feb.) Chev. 403! **Guin.:** Timbo (Feb.) Pobéguin 158! KoUangui (Mar.) Chev. 12193! Mali (Jan.) Roberty 16554! Labé Chev. 12351. Timbo Chev. 12523. 18. *Pavetta leonensis* Keay in Bull. Jard. Bot. Brux. 27: 101 (1957). *APD acc*

Pavetta genipifolia of Hiern in F.T.A. 3: 175; F.W.T.A., ed. 1, 2: 91, partly (spec. ex S.L.); Bremek. l.c. 136; not of Schum.

A shrub, to 10 ft. high.

Guin.: Nimba Mts. (June) Schnell 3014! **S. L.:** Barter! Near top of Sugar Loaf Mt. (fr. Dec.) Sc. Elliot 4024! Kent (fr. Nov.) Tindall 13! Nyandehun (young fr. July) Deighton 5792! Benikoro (fr. Oct.) Thomas 2886! Masankoi (June) Marmo 24!

19. *Pavetta platycalyx* Bremek. l.c. 137 (1934). *APD acc*

A forest shrub; flowers white.

Guin.: Forocontan (fr. Oct.) Jaeger 86! **S. L.:** Sankan Biriwa Massif (fr. Jan.) Cole 178! **Lib.:** Bilimu (fr. Dec.) Harley 1629! **Iv. C.:** Sassandra Chev. 17982. Foot of Mt. Momy, Haut-Cavally (Apr.) Chev. 21353!

20. *Pavetta tetramera* (Hiern) Bremek. l.c. 134 (1934). *APD acc*

A low shrub, 1-3 ft. high, with white flowers; in forest.

[**Br.**] **Cam.:** S. Bakundu F.R., Banga, Kumba Div. (Jan.) Binuyo & Daramola FHI 35156! Keay FHI 28559!

Also in **Cameroun**, **Rio Muni**, **Gabon**, **Congo** and **Angola**.

21. *Pavetta talbotii* Wernham in Cat. Talb. 52 (1913); Bremek. l.c. 133. *APD acc*

S. Nig.: Oban Talbot 1638!

22. *Pavetta dolichosepala* Hiern in F.T.A. 3: 174 (1877); Bremek. l.c. 141. *APD acc*

A forest shrub, to 6 ft. high.

[**Br.**] **Cam.:** Likomba (young fr. Nov.) Mildbr. 10602!

Also in **the Congos**.

[Although cited, without comment, by Bremekamp, the specimen from our area has the sepals considerably more pubescent than in the type from Middle Congo.]

23. *Pavetta mollis* Afzel. ex Hiern in F.T.A. 3: 174 (1877); Bremek. in Fedde Rep. 37: 178. *APD acc*

Pavetta apiculata Hutch. & Dalz. F.W.T.A., ed. 1, 2: 91 (1931); Bremek. l.c. 139.

A shrub, to 15 ft. high. with pale branchlets; flowers whitish, scented.

Guin.: Kouroussa (July) Pobéguin 274! **Iv. C.:** Lomo (fr. Sept.) Aké Assi 5947! **Ghana:** Cape Coast Brass! Okroase (fl. buds May) Johnson 754! Achimota (fl. buds Apr.) Irvine 330! 756! Afram to Mankrong (Apr.) Morton A731!

[Hiern cites a specimen from Hb. Afzelius, and Bremekamp cites Afzelius s.n. in Hb. Berlin, both from Sierra Leone; I have not been able to trace these specimens.]

24. *Pavetta rigida* Hiern in F.T.A. 3: 178 (1877); Bremek. l.c. 188. *APD acc*

Pavetta macrostemon K. Schum. (1899)-Bremek. l.c. 132.

Pavetta grandiflora K. Schum. & K. Krause (1907).

Pavetta neurocarpa of F.W.T.A., ed. 1, 2: 91, partly (Kalbreyer 171).

A glabrous shrub, to 12 ft. high; corolla white except for a green stripe down back of lobes; inflorescence, ovary and calyx green; in forest.

S. Nig.: Afi River F.R., Ikoma Div. (May) Jones & Onochie FHI 18761! [**Br.**] **Cam.:** Cam. Mt., 4,000 ft. (Mar.) Deistel 134; Kalbreyer 171! Maitland 509! Rudatis 164. Barombi Preuss 293. Also in **Cameroun**.

1. ***Pavetta oresitropha* Bremek.** in Fedde Rep. 37: 73 (1934). Type specimens presumably destroyed in Berlin.

F. Po: Mildbr. 7100; 7135.

Near to *P. owariensis* and *P. hookeriana*.

2. ***Pavetta bangweensis* Bremek.** l.c. 79 (1934). Type specimen presumably destroyed in Berlin.

[Br.] Cam.: Bangwe Conrau 66.

In addition to the above, I have seen a number of sterile and fruiting specimens which probably belong to *Pavetta* but which cannot at present be satisfactorily determined.-R.W.J.K.

30. IXORA

Linn.-F.T.A. 3: 162.

- 1 Leaves oblanceolate or oblanceolate-obovate, subsessile, with conspicuous pouches (1-1.5 cm. long) on either side at the base, acuminate, 20-33 cm. long, 7.5-10 cm. broad, with 10-12 main lateral nerves; peduncle 1.5-16 cm. long; flowers sessile, in clusters; calyx with short triangular lobes; corolla-tube about 20 mm., lobes about 6 mm. long [1. hippoperifera](#)
- Leaves without large pouches at their base: 2
- 2 Corolla-tube not exerted from the calyx, about 0.5 mm. long, lobes 3.5-4 mm. long; calyx-lobes short and broad; inflorescence and flowers glabrous; peduncle 4.5-8.5 cm. long, pedicels 5-15 mm. long; leaves glabrous, obovate or obovate-oblong, cuneate, distinctly acuminate, 4.5-16.5 cm. long, 1.8-6 cm. broad, with 10-16 main lateral nerves [2. divaricata](#)
- Corolla-tube well exerted from the calyx, 5-60 mm. long: 3
- 3 Corolla-tube 5-35(-37) mm. long (to p. 142): 4
- Corolla-tube (25-)40-60 mm. long; pedicels 0-1 (-2) mm. long; flowers in rather dense terminal corymbs; leaves glabrous: 19
- 4 Leaves mostly glabrous or sometimes puberulous beneath; peduncle 0-13(-15) cm. long (to p. 142): 5
- Leaves densely covered with short hairs beneath; peduncle 13-31 cm., pedicels 0-4.5 mm. long, both densely pubescent; corolla densely pubescent outside, tube red, 19-20 mm. long, lobes 7-8 mm. long, acuminate in bud; calyx-lobes triangular; bracteoles nearly as long as the calyx; leaves oblong-elliptic, cuneate, abruptly acuminate, 12-30 cm. long, 3.5-8.5 cm. broad, with 12-15 main lateral nerves rather conspicuous beneath [17. nigerica](#)
- 5 Corolla-tube 5-11 mm. long: 6
- Corolla-tube 13-37 mm. long (but occasional flowers in No. 14 have corolla-tubes 7-13 mm. long): 10
- 6 Peduncle 5-15 cm. long; lateral pedicels 8-17 mm. long; corolla-tube 6-11 mm., lobes 7-10 mm. long; leaves oblong or obovate-oblong, obtuse to cuneate at base, abruptly acuminate, 11-20 cm. long, 3-8 cm. broad, with about 12 main lateral nerves [3. nematopoda](#)
- Peduncle 0-2 cm. long; lateral pedicels 0-3.5 mm. long: 7
- 7 Corolla-lobes 9-11 mm., tube 10-11 mm. long; calyx with short broad lobes; inflorescence up to 3 cm. long, with the primary branches up to 1.2 cm. long, minutely and sparingly puberulous; leaves elliptic, oblong-elliptic or lanceolate, cuneate or obtuse at base, acuminate, 6-16 cm. long, 2.5-8 cm. broad, thinly membranous, drying pale green, with 10-16 main lateral nerves spreading at a wide angle [4. delicatula](#)
- Corolla-lobes 4-5.5 mm. long: 8
- 8 Inflorescences 4-11 cm. long, with the primary branches 1.5-7 cm. long, puberulous: 9
- Inflorescences up to 3 cm. long, with the primary branches not exceeding 1.5 cm., minutely puberulous; corolla-tube 5.5-11 cm., lobes 4-5 mm. long; leaves oblanceolate to elongate-elliptic, cuneate, usually acutely acuminate, 6.5-15 cm. long, 2.5-4.5 cm. long, with 8-10 main lateral nerves; whole plant not more than 1 m. high [7. talbotii](#)
- 9 Corolla-tube 10-15 mm. long; inflorescence up to 7 cm. long, with the primary branches 1.5-3 cm. long; leaves elliptic or oblong-elliptic, cuneate, acuminate, 6-17(-19) cm. long, 3-8 cm. broad, with 6-8 main lateral nerves; at low altitudes [5. guineensis](#)
- Corolla-tube 4.5-8 mm. long; inflorescence up to 11 cm. long, with the primary branches 2-7 cm. long; leaves 9-19 cm. long, 3.5-6.5 cm. broad, with 7-10 main lateral nerves; at higher altitudes [6. breviflora](#)
- 10 Peduncle 0-3.5 cm. long; bracteoles minute, caducous; corolla rounded or subacute in bud: 11
- Peduncle 2-2-13 cm. long; bracteoles ovate or triangular 1/4 to 3/4 length of calyx, often persistent; corolla rounded, subacute or acuminate in bud: 15
- 11 Inflorescence glabrous; corolla-tube 13-17 mm. long: 12
- Inflorescence densely puberulous, with the primary branches 1.7-4 cm. long; corolla-tube 10-30 mm. long: .. 14
- 12 Primary branches of inflorescence not exceeding 1 cm., lateral pedicels 0-1 mm. long; leaves thin, elliptic, cuneate or obtuse at base, broadly acuminate, 4.5-9.5 cm. long, 2-4 cm. broad, with 8-10 main lateral nerves; corolla-tube 14.5 mm., lobes 5.5 mm. long [8. sp. A](#)
- Primary branches of inflorescence 1.5-4 cm., lateral pedicels 1-6 mm. long: 13
- 13 Leaves membranous, very narrowly elliptic, attenuate at base, gradually acutely acuminate, 5-13 cm. long, 1.2-2.4 cm. broad, with 6-13 main lateral nerves; corolla-tube 13-14 mm., lobes 6-7 mm. long [9. sp. B](#)
- Leaves subcoriaceous, elliptic to oblanceolate, cuneate at base, subacute or obtuse at apex, 6-17 cm. long, 2-2.5

- cm. broad, with 8-15 main lateral nerves; corolla-tube 13-17 mm., lobes 6 mm. long [10. bauchiensis](#)
- 14** Corolla-tube 10-15 mm., lobes 4.5-5.5 mm. long; inflorescence very shortly puberulous; see also above [5. guineensis](#)
- Corolla-tube 16-30 mm., lobes 6-8 mm. long; inflorescence puberulous; leaves subcoriaceous, elongate-elliptic, acute at each end, 12-20 cm. long, 4.2-6.8 cm. broad, with 10-15 main lateral nerves [11. hiernii](#)
- 15** Main lateral nerves 2-7, looped well within the margin; peduncle 3.5-4.5 cm., lateral pedicels 3-6 mm. long; corolla-tube 30 mm., lobes 11 mm. long, acuminate in bud; leaves elliptic or oblong-elliptic, rounded or obtuse at base, long-acuminate, 3-12 cm. long, 1.5-5.5 cm. broad [12. baldwinii](#)
- Main lateral nerves 8-21: **16**
- 16** Corolla white or pale pink, tube (7-)15-24(-34) mm. long, lobes at least 1/3 length of tube: **17**
- Corolla-tube and outside of lobes red, tube 24-37 mm. long, lobes 5-7 mm. long (i.e. about 1/5 length of tube), rounded or subacute in bud; peduncle 6-13 cm. long, lateral pedicels 0-4 mm. long; calyx-lobes ovate-triangular to lanceolate; leaves oblong-lanceolate or oblong-oblongeolate rounded, obtuse or cuneate at base, acuminate, 10-25 cm. long, 3-9 cm. broad, with 7-12 main lateral nerves [16. nimbana](#)
- 17** Peduncle 9-13 cm. long; flowers numerous and congested in a flat corymbose cyme, pedicels 0-1 mm. long; corolla-tube 16-20 mm., lobes 8 mm. long, conspicuously acuminate in bud; leaves oblanceolate, cuneate into a distinct petiole, long-acuminate, 18-35 cm. long, 4-12 cm. broad, with 15-21 main lateral nerves; leaves subtending the inflorescences subcordate and sessile [13. aggregata](#)
- Peduncle 2.2-8.5 cm. long; flowers in usually lax inflorescences, pedicels 0-12 mm. long; corolla subacute or rounded in bud; leaves up to 25 cm. long and 9 cm. broad, with up to 18 main lateral nerves: **18**
- 18** Calyx-lobes ovate-triangular, about 1 mm. long; bracteoles 3/4 length of calyx; corolla-tube (7-)13-18 mm., lobes 6 mm. long; lateral pedicels 0.2-5 mm. long; leaves obovate or elliptic, cuneate, shortly and obtusely acuminate, 7-14 cm. long, 3-6 cm. broad, with about 12 main lateral nerves; leaves subtending inflorescences often smaller and relatively broad; stipules with long points [14. foliosa](#)
- Calyx subtruncate or with short broad lobes; bracteoles about 1/4 length of calyx; corolla-tube (10-)15-25(-34) mm., lobes 8-12 mm. long; lateral pedicels (1-)4-12 mm. long; leaves elliptic-oblongeolate, oblong-obovate, oblong-elliptic, ovate-oblong or lanceolate, cuneate to rounded at base, shortly acuminate, 4.5-20 cm. long, 2-7.5 cm. broad, with 8-18 main lateral nerves [15. laxiflora](#)
- 19** Peduncle 0-1 cm. long; upper and lower leaves with petioles about 1 cm. long, elliptic or obovate-elliptic, cuneate at base, gradually and acutely acuminate, 12-15 cm. long, 4-6 cm. broad, with about 8 main lateral nerves; corolla-tube 40-45 mm., lobes 6-7 mm. long [18. degemensis](#)
- Peduncle 3-7 cm. long; upper leaves sessile, rounded or subcordate at base, lower leaves petiolate; leaves oblong, elliptic, ovate or oblanceolate, shortly acuminate, 11-27 cm. long, 4.4-11(-13.5) cm. broad, with 9-13 main lateral nerves; corolla (37-)40-60 mm. long, lobes 8-9 mm. long [19. brachypoda](#)

1. *Ixora hippoperifera* Bremek. in Hook. Ic. Pl. t. 3241 (1934). APD acc

A glabrous shrub, with white flowers; in forest.

S. Nig.: Kwa Falls, Calabar (fr. Mar.) Brenan 9241! [**Br.**] **Cam.:** S. Bakundu F.R., Kumba Div. (Jan., Mar.) Binuyo & Daramola FHI 35163! Onochie FHI 30868!

Also in **Cameroun**.

2. *Ixora divaricata* Hutch. & Dalz. F.W.T.A., ed. 1, 2: 89 (1931).

APD: *Synonym of Ixora laxiflora Sm. var. laxiflora*

A forest shrub or small tree, 10-35 ft. high, with small flowers in a lax panicle; fruits red.

S. L.: Gola Forest (Apr.) Small 619! **Lib.:** Dukwia R. (May) Cooper 58! 307! 308! Zwedru, Tchien (fr. Aug.) Baldwin 7014!

3. *Ixora nematopoda* K. Schum. in Engl. Bot. Jahrb. 33: 357 (1903). APD acc

***Ixora rosea* K. Schum. l.c. 358 (1903); F.W.T.A., ed. 1, 2: 89; not of Wall. (1820).**

***Ixora tetramera* K. Schum. ex Wernham in Cat. Talb. 132 (1913), name only.**

A forest shrub.

S. Nig.: Oban Talbot 231! 2037! Eyeyin, Ikom Div. (July) Mason FHI 4209 (partly)! [**Br.**] **Cam.:** Preuss 1338! Barombi to Ninga (June) Preuss 345! Mungo (May) Buchholz. Kumba to Barombi (Aug.) Preuss 338. **F. Po:** Mann!

[The specimen Preuss 1338 which I have seen at the British Museum is quite possibly a duplicate of the specimen cited by K. Schumann as Preuss 338.]

4. *Ixora delicatula* Keay in Bull. Jard. Bot. Brux. 27: 96 (1967). *APD acc*

Erect shrub, to 6 ft. high; corolla white; **in forest**.

S. Nig.: Degema Dist. Talbot 3822! **[Br.] Cam.:** S. Bakundu F.R., Banga (Jan.) Keay FHI 28668!

5. *Ixora guineensis* Benth. in Fl. Nigrit. 414 (1849); F.T.A. 3: 165. *APD acc*

Ixora riparia Hiern in F.T.A. 3: 164 (1877); F.W.T.A., ed. 1, 2: 89.

(?) *I. buchholzii* Engl. (1886).

Ixora obanensis Wernham (1913).

A small shrub; corolla pale pinkish-white; **near the sea coast and by streams**.

S. Nig.: Oban Talbot 230! **[Br.] Cam.:** Victoria (Apr., Nov.) Brenan 9592! Maitland 771! Tiko (Jan.) Dunlap 169! Mungo R. Buchholz. Bai to Bokosso (Jan.) Keay FHI 37367! S. Bakundu F.R., Kumba (fl. & fr. Dec.) Latilo FHI 43810! **F. Po:** (Dec.) Mann 19!

Also in **Cameroun** and **Rio Muni**.

[The type of *I. guineensis* Benth. is a specimen at Kew from Hb. Hooker; it has the locality "Guinea Coast" but no collector's name.]

6. *Ixora breviflora* Hiern in F.T.A. 3: 165 (1877).

APD: *Synonym of Ixora guineensis Benth.*

(?) *I. carniflora* K. Krause (1917).

Erect shrub or small tree, to 25 ft. high; corolla creamy-white, fragrant, becoming pinkish (or red fide Mann).

S. Nig.: Ikvette Plateau, 5,200 ft., Obudu Div. (Dec.) Keay & Savory FHI 25213! **[Br.] Cam.:** Bafut-Ngemba F.R., 7,200 ft., Bamenda (Feb.) Hepper 2132! **F. Po:** 1,000 ft. Mann 315! N. side of St. Isabel Peak, 3,000-3,200 ft. (Aug.) Mildbr. 6391.

Also in **Cameroun**.

7. *Ixora talbotii* Wernham in Cat. Talb. 51 (1913).

APD: *Synonym of Ixora minutiflora subsp. chasalliensis De Block*

APD: *Synonym of Ixora guineensis Benth.*

Low shrub, with red calyx and white corolla; **in forest**.

S. Nig.: Oban Talbot 1413! 2038! Ikom (Dec.) Rosevear 63/30a! Cross River North F.R. (Dec.) Keay FHI 28152! A fl River F.R. (Jan.) Motuba PHI 28686! **[Br.] Cam.:** Mamfe (Dec.) Baldwin 13818!

8. *Ixora* sp. A. *APD acc*

Flowers cream; **in forest**; further material required.

Lib.: Mt. Bili (Dec.) Barker 1153! Ganta (Dec.) Barley 1465!

9. *Ixora* sp. B. *APD acc*

A **forest** shrub; flowers white; further material required.

Ghana: Esem Epan F.R., W. Prov. (Oct.) Darko 1013! Southern Scarp F.R. (fr. Feb.) Moor FH 2229!

10. *Ixora bauchiensis* Hutch. & Dalz. F.W.T.A., ed. 1, 2: 87 (1931). *APD acc*

A shrub, to 20 ft. high; flowers white, sweetly scented; **in fringing forest by streams**.

N. Nig.: Naraguta (Nov.) Lely 723! Jos Plateau (fl. Jan., Oct., fr. Jan.) Lely P102! 845! **S. Nig.:** Kundeve, Obudu Div. (Dec.) Keay & Savory FHI 25138! 25148! **[Br.] Cam.:** Mai-Isoanu, Gashaka Dist. (Dec.) Latilo & Daramola FHI 28972!

11. *Ixora hiernii* *Sc. Elliot* in J. Linn. Soc. 30: 82 (1894); Aubrév. Fl. For. C. Iv., ed. 2, 3: 292, t. 360 B. *APD acc*

Ixora breviflora of F.W.T.A., ed. 1, 89, partly (S.L. records).

A shrub or tree, to 15 ft. high, with white flowers and red berries.

Guin.: Chev. 12980. Pobéguin 883. Eremakuna Sc. Elliot 5405! **S. L.:** Freetown Sc. Elliot 5909! Koflu, R. Scarcies (Jan.) Sc. Elliott 4596! Ninia, Talla Hills (fr. Feb.) Sc. Elliot 4890! 31. AULACOCALYX

Hook. f.-F.T.A. 3: 129; K. Schum. in E. & P. Pflanzenfam. 4, 4: 87 (1891). *APD acc*

***Dorothea* Wernham** (1913)-F.W.T.A., ed. 1, 2: 76.

- 1 Corolla-tube not split at anthesis:2
Corolla-tube split down one side at anthesis; style recurved through the slit in the corolla-tube; anthers exerted well beyond the corolla-tube:3
- 2 Anthers 13-15 mm. long, exerted for at least half their length; main lateral nerves 2-4 on each side of midrib, not

conspicuously looped, with numerous closely parallel fine transverse tertiary nerves spreading at right angles to the midrib; leaves elliptic, long-cuneate to obtuse or rarely rounded at base, gradually long-acuminate, 6.5-16 cm. long, 2.2-6(-9) cm. broad, thinly pilose on midrib and main nerves beneath; flowers silky outside, 1-8 together; corolla-tube 1.5-2.8 cm., lobes 1-1.5 cm. long [1. *jasminiflora*](#)

Anthers 10-12 mm. long, only very slightly exerted; main lateral nerves 6-10 on each side of midrib, looped well within the margin, with rather irregular tertiary nerves between; leaves elliptic or ovate-elliptic or obovate-elliptic, subcordate to auriculate and often asymmetric at base, long-acuminate, 7.5-19 cm. long, 3.5-9 cm. broad, thinly pilose on midrib and main nerves beneath; flowers pilose outside, 1-3 together; corolla-tube 4-5 cm., lobes 1.5-1.7(-2.4) cm. long [2. *caudata*](#)

- 3 Calyx divided into subulate teeth, 4-5 mm. long; tube about 3.5 mm. long; corolla-tube 0.7-1.5 cm., lobes 1-2 cm. long; anthers 1-1.3 cm. long; flowers 3-4 together, pilose outside; branchlets pubescent; leaves elliptic to narrowly obovate, cuneate or obtuse at base, gradually long-acuminate, 6-10 cm. long, 2-4 cm. broad, with 5-7 main lateral nerves on each side of midrib, pubescent beneath [3. *divergens*](#)

Calyx subtruncate, sulcate, about 5 mm. long; corolla-tube 3.5-4.5 cm., lobes 1.5-2 cm. long; anthers 1.8-2 cm. long; flowers 2-3 together, pilose outside; branchlets glabrous; leaves elliptic to obovate-elliptic, cuneate at base, gradually acuminate, 8-18 cm. long, 3.5-8.5 cm. broad, with 3-5 main lateral ascending nerves on each side of midrib, conspicuous and pubescent beneath [4. *talbotii*](#)

1. ***Aulacocalyx jasminiflora* Hook. f.** in Hook. Ic. Pl. t. 1126 (1873); F.T.A. 3: 129; Aubrév. Fl. For. C. Iv., ed. 2, 3: 290. *APD acc*

Nig.:** Nupe Barter 1242! Sokoto Ryan 24! Zungeru (Apr.) Dalz. 91! Keay FHI 25720! Katagum Dalz. 164! Yola (May) Dalz. 38!

Also in **Ubangi-Shari**, **Sudan**, **Ethiopia**, **Kenya** and **Uganda**.

[Experimental field studies are needed to determine how far the variation in length of pedicel is significant taxonomically. Specimens with long pedicels have been named *F. canthioides* and are commoner in western than in eastern Africa, but there are many intermediates. It would appear that when the flowers first appear on leafless shoots the pedicels are very short, but as flowering continues in the rainy season they are then much longer].

34. CREMASPORA

Benth.-F.T.A. 3: 126; K. Schum. in E. & P. Pflanzenfam. 4, 4: 87 (1891).

- 1 Underside of leaves pubescent with relatively short hairs more or less appressed and directed away from the base, scattered on the lamina as well as on the midrib and nerves; branchlets pubescent; leaves broadly or narrowly ovate, or elliptic rounded or obtuse at base, broadly acuminate, 3-10 cm. long, 1.8-5 cm. broad, with 4-6 main lateral nerves on each side of midrib; flowers in dense axillary clusters; calyx setosepilose, teeth about 1 mm. long; corolla-tube 4-6 mm. long, pubescent or glabrous outside, lobes 3-5 mm. long, pubescent outside; fruits ellipsoid, ultimately glabrous, about 1 cm. long, tipped with the persistent calyx [1. *triflora*](#)

Underside of leaves pilose with 1-1.5 mm.-long spreading hairs mainly on midrib and nerves; branchlets long-spreading pilose; leaves oblong-ovate, rounded at base, abruptly acuminate, 2.5-11 cm. long, 1.3-5 cm. broad, with 3-6 main lateral nerves on each side of midrib; fruits spreading-pilose; otherwise similar to above [2. *thomsoni*](#)

1. ***Cremaspora triflora* (Thonn.) K. Schum.** in E. & P. Pflanzenfam. 4, 4: 88, fig. 31, F-G (1891); Hutch. & Dalz. F.W.T.A., ed. 1, 2: 86 (1931), excl. Warnecke 415. *APD acc*

Widespread in tropical Africa.

2. ***Cremaspora thomsoni* Hiern** in F.T.A. 3: 126 (1877). *APD acc*

A climbing shrub with brown-hirsute branchlets with white flowers 1/2 in. long, few, sessile in axillary clusters; fruits deep red.

S. Nig.: Eket Talbot 3189! Oban Talbot 1049! Calabar (fl. & fr. Mar.) Thomson 94!

Also in **Cameroun**.

35. POLYSPHAERIA

Hook. f.-F.T.A. 3: 127; K. Schum. in E. & P. Pflanzenfam. 4, 4: 201 (1891); Brenan in Kew Bull. 4: 854 (1949).

- 1 Axillary flower-clusters with peduncle up to 9 mm. long; flowering branchlets subterete; leaves lanceolate or narrowly ovate-lanceolate, shortly cuneate or obtuse at base, gradually tapered at apex, 7.5-19 cm. long, 1.6-6.2 cm. broad, with 8-10 looped lateral nerves on each side of midrib, glabrous, shining above when dry; calyx obconic, undulately lobed, 1.5 mm. long, puberulous or nearly glabrous outside, corolla-tube 4 mm. long, densely villous inside, lobes 4 mm. long; anthers included; style long-exserted, densely pilose; fruits ellipsoid-globose, about 1 cm. diam., capped by the cupular persistent calyx [1. *arbuscula*](#)

Axillary flower-clusters sessile; flowering branchlets angled; leaves oblong-elliptic, obtuse or acute at base, gradually acuminate, 13-25 cm. long, 5-8 cm. broad, with 8-12 looped lateral nerves on each side of midrib, glabrous, often drying rather dull and blackish; calyx glabrous outside; corolla-tube and lobes each about 3 mm. long; fruits nearly 1.5 cm. long; otherwise similar to above [2. *macrophylla*](#)

1. ***Polysphaeria arbuscula* K. Schum.** in Engl. Bot. Jahrb. 33: 349 (1903); F.W.T.A., ed. 1, 1: 86, excl. syn. *P. pedunculata* K. Schum. ex De Wild.; Aubrév. Fl. For. Soud.-Guin. 469, t. 103, 1-2. *APD acc*

***Polysphaeria lagosensis* A. Chev.** Bot. 328 (1920), name only.

A shrub or small tree, up to 12 ft. high; flowers cream, sweet-scented; ripe fruits red; **especially common in fringing forest in savanna regions.**

36. TRICALYSIA

A. Rich. ex DC.-F.T.A. 3: 117. *APD acc*

- 1 Calyx not covering the corolla in bud and not splitting into 2 paleaceous pieces at anthesis; corolla-tube glabrous, or nearly so outside (but densely appressed-pilose in No. 21) (to p. 150): **2**
- Calyx covering the corolla in bud and splitting at anthesis into usually 2 paleaceous pieces 5-7 mm. long, densely pilose outside; corolla-tube densely appressed-pilose outside; flowers 6-8-merous; ovules 1-3 on each placenta; fruits about 1-2 cm. diam.: **24**
- 2 Calyx consisting of a rim less than 0.25 mm. high and teeth up to 1 mm. long, glabrous; ovules 1 on each placenta; style glabrous; bracteoles not cupular; corolla-tube and lobes each 3-3.5 mm. long, glabrous outside, lobes acute in bud, reflexed at anthesis, throat very densely villous; leaves oblong or narrowly elliptic, margins revolute at the cuneate or obtuse base, apex acuminate, 7.5-16 cm. long, 2-6.3 cm. broad, midrib and nerves (5-6 on each side) and reticulate venation prominent on both surfaces, glabrous [1. *reflexa*](#)
- Calyx with a distinct campanulate tube or with well-developed lobes; placentas attached to the upper part of the septum back to back, with 1-16 ovules immersed or partially immersed on the face: **3**
- 3 Style glabrous (to p. 150): **4**
- Style pilose or pubescent; calyx truncate or subtruncate or with short teeth, closely subtended by the connate calyx-like bracteoles: **15**
- 4 Branchlets densely pubescent (to p. 149): **5**
- Branchlets glabrous, or with very minute hairs when young: **9**

- 5 Leaves cordate or auriculate at base, petiole very short; calyx-tube about 4 mm. long, with short teeth; flowers 8-merous, solitary; corolla densely appressed-pilose outside, lobes subglabrous inside, tube 9 mm., lobes 8 mm. long; leaves oblong-elliptic or oblong-obovate, sometimes subfalcate, (5-)12-19.5 cm. long, 2.8-4.8 cm. broad, long-acuminate, with conspicuous parallel venation; fruits ellipsoid, about 3 cm. long and 2 cm. diam.; ovules 4 on each placenta [21. auriculata](#)
- Leaves cuneate at base; calyx-tube 1 mm. long or less; corolla-tube glabrous or nearly so outside; fruits up to 1.5 cm. long: **6**
- 6 Flowers solitary, on peduncles 4-5 mm. long; calyx-tube about 1 mm. long, with 4-5 filiform lobes about 2 mm. long; calyx densely puberulous, closely subtended by the connate calyx-like bracteoles; leaves oblong-lanceolate, cuneate at base, caudate-acuminate, 7-14 cm. long, 3-4.5 cm. broad, glabrous beneath, with about 5 main lateral nerves and very obscure venation; fruits fusiform, about 15 mm. long and 6 mm. diam.; ovules 1 on each placenta [2. wernhamiana](#)
- Flowers several; calyx not as above: **7**
- 7 Calyx-tube about 1 mm. long, with short teeth; calyx puberulous outside, closely subtended by the connate calyx-like bracteoles; corolla-lobes densely pubescent outside; inflorescences rather lax, with branches up to 10 mm. long; leaves ovate- or obovate-elliptic or oblong-elliptic, cuneate at base, acuminate, 5-18 cm. long, 2.3-6.5 cm. broad, with 3-5 main lateral nerves on each side of midrib, nearly glabrous except for the midrib beneath; ovules 2 on each placenta [3. oligoneura](#)
- Calyx deeply divided into ovate or triangular lobes, densely pubescent outside; bracteoles connate but scarcely calyx-like; flowers in dense sessile clusters; corolla-lobes glabrous or nearly so outside; ovules 2(-3) on each placenta: **8**
- 8 Leaves shortly appressed-pubescent mainly on midrib and nerves beneath; corolla-tube about 4 mm. long; leaves oblong-elliptic or slightly obovate-elliptic, cuneate or obtuse at base, shortly and obtusely acuminate, 2-9 cm. long, 1.2-4 cm. broad, with usually 4 main lateral nerves on each side of midrib [4. deightonii](#)
- Leaves spreading-pilose mainly on midrib and nerves beneath; corolla-tube 3-3.5 mm. long; leaves elliptic or obovate-elliptic, cuneate or obtuse at base, acutely acuminate, 4-12 cm. long, 2-4.7 cm. broad, with 4-8 main lateral nerves on each side of midrib, impressed above [5. talbotii](#)
- 9 Calyx closely subtended by the connate calyx-like bracteoles; calyx subtruncate, glabrous outside: **10**
- Calyx separated from the connate bracts by pedicels which bear usually free, ovate or lanceolate bracteoles: . **11**
- 10 Flowers with short but distinct pedicels and peduncles; bracteolar calyculus with two processes; calyx up to 1 mm. long; corolla-tube 2-4 mm., lobes about 4 mm. long; leaves elongate-elliptic, ovate-elliptic or obovate-elliptic, cuneate at base, gradually long-acuminate, 8-18 cm. long, 3-7 cm. broad, glabrous, with 5-8 main lateral nerves on each side of midrib; ovules (1-)2 on each placenta [6. biafrana](#)
- Flowers sessile in the leaf-axils; bracteolar calyculus with undulate margin; calyx 1-2 mm. long; corolla-tube about 5 mm., lobes 6-7 mm. long; leaves oblong or broadly elliptic, cuneate, obtuse or rounded at base, broadly acuminate, 13-25 cm. long, 4.5-11 cm. broad, glabrous, with 6-8 main lateral nerves on each side of midrib; fruits globose, 7-8 mm. diam.; ovules 3 on each placenta [7. vignei](#)
- 11 Corolla-tube 9-12 mm. long; calyx-tube 3 mm. long, subtruncate, with short teeth, appressed-pubescent outside; ovules 5-8 on each placenta; leaves elongate-elliptic, cuneate (or obtuse or rounded) at base, gradually long-acuminate, 8-25 cm. long, 3-7 cm. broad, glabrous, except for tufts in the axils of the 5-7 pairs of main lateral nerves [8. elliotii](#)
- Corolla-tube 2.5-7 mm. long; calyx-tube distinctly and rather deeply lobed: **12**
- 12 Leaves glabrous beneath; inflorescence and outside of calyx pubescent: **13**
- Leaves minutely puberulous on midrib and nerves beneath; inflorescence and outside of calyx glabrous or pubescent; ovules 2 on each placenta: **14**
- 13 Calyx-lobes rounded-oblong, overlapping at anthesis, about 1 mm. long; corolla-tube and lobes each 3.5-4 mm. long; ovules 12-16 on each placenta; leaves broadly lanceolate, rather abruptly narrowed to the cuneate base, gradually acuminate, 11-22 cm. long, 4-8 cm. broad, with 6-10 main lateral nerves prominent on each side of midrib beneath, strongly reticulate [9. macrophylla](#)
- Calyx-lobes ovate, not overlapping at anthesis, about 1.5 mm. long; corolla-tube 3.5-4 mm., lobes 4.5-5 mm. long; ovules 2(-5) on each placenta; leaves elliptic, oblong-elliptic, ovate-elliptic or obovate-elliptic, obtuse or cuneate at base, distinctly acuminate, 6.5-16 cm. long, 1.5-7 cm. broad, with 4-6 main lateral nerves on each side of midrib, venation reticulate; fruits 5-7 mm. diam. [10. bracteata](#)
- 14 Corolla-tube 5-7 mm. long, densely pilose in the throat, lobes 4-5 mm. long; leaves oblong-lanceolate or oblong-elliptic, cuneate at base, acuminate, 13-26 cm. long, 4-9 cm. broad, with 8-11 main lateral nerves on each side of midrib; seeds with ruminate endosperm [11. discolor](#)
- Corolla-tube 3.5-4 mm. long, sparingly pubescent in the throat, lobes 3-4 mm. long; leaves narrowly elliptic or oblong-lanceolate, 12-20 cm. long, 4.5-6 cm. broad, with about 7 main lateral nerves on each side of midrib [12. mildbraedii](#)
- 15 Flowers 11-14-merous; corolla-tube about 10 mm., lobes about 6 mm. long; anthers densely pubescent, long-exserted; calyx puberulous outside, 3-3.5 mm. diam.; leaves oblong or oblong-lanceolate, obtuse or rounded at

- base, broadly acuminate, about 22 cm. long and 7.5 cm. diam., glabrous with 8-9 main lateral nerves on each side of midrib; ovules several on each placenta [13. pleiomera](#)
- Flowers 5-8-merous; corolla-tube 2.5-5 mm. long; anthers glabrous, or pubescent mainly at the tips: **16**
- 16** Calyx glabrous outside, 2-2.5 mm. long, margin undulate; corolla-tube and lobes, each 3-4 mm. long; flower-cluster crowded and sessile; leaves coriaceous, broadly elliptic to oblong-obovate, cuneate or obtuse at base, broadly and shortly acuminate, 9-16 cm. long, 3-9 cm. broad, glabrous, venation rather obscure between the 4-6 main lateral nerves; ovules about 4 on each placenta; fruits about 10 mm. diam. [14. coriacea](#)
- Calyx pubescent outside: **17**
- 17** Branchlets glabrous; corolla-tube 4-5 mm. long; calyx-tube 1.5-2.5 mm. long; leaves glabrous except often in nerve-axils: **18**
- Branchlets pubescent or puberulous, sometimes very minutely so: **20**
- 18** Calyx with subulate teeth 1-1.5 mm. long; corolla-lobes 3.5-4 mm. long; midrib of leaves only very slightly prominent beneath, venation and the 3-4 pairs of main lateral nerves obscure; leaves elliptic, cuneate at base, long-acuminate, 6.5-9 cm. long, 2.5-3.5 cm. broad; ovules 2 on each placenta [15. parva](#)
- Calyx subtruncate; corolla-lobes 5-7 mm. long; midrib venation and the 4-6 pairs of main lateral nerves prominent beneath; ovules 3-4 on each placenta: **19**
- 19** Outside of calyx and inflorescence rather densely setose-pubescent; outside of corolla-lobes pubescent; leaves more or less elliptic, cuneate at base, broadly and slightly pointed at apex, 6-14.5 cm. long, 2-7 cm. broad [16. okelensis var. okelensis](#)
- Outside of calyx and inflorescence puberulous; outside of corolla-lobes appressed-puberulous or subglabrous; leaves oblanceolate, cuneate at base, obtuse at apex, 4.5-12 cm. long, 1.8-4.5(-5.5) cm. broad . [16b. okelensis var. oblanceolata](#)
- 20** Leaves densely and softly pubescent beneath; branchlets densely and softly puberulous; otherwise similar to var. okelensis (see above) [16a. okelensis var. pubescens](#)
- Leaves glabrous or sparsely puberulous beneath: **21**
- 21** Venation of leaves strongly reticulate; corolla-tube 4.5-5 mm., lobes 5-6 mm. long; calyx-tube 2 mm. long; leaves oblong-elliptic, lanceolate-elliptic or obovate-elliptic, cuneate at base, rather abruptly acuminate, 5.5-17 cm. long, 1.8-6.2 cm. broad, with 4-6 main lateral nerves on each side of midrib: **22**
- Venation of leaves obscure; corolla-tube 2-3 mm. long; branchlets puberulous: **23**
- 22** Young branchlets very minutely puberulous; pedicels very short; ovules 3-6 on each placenta [17. reticulata](#)
- Young branchlets appressed-puberulous or shortly pubescent; pedicels 2-4 mm. long; ovules 2 on each placenta [18. faranahensis](#)
- 23** Lateral nerves very obscure, 5-6 on each side of midrib; leaves papery, oblanceolate to elliptic-lanceolate or obovate-elliptic, cuneate or obtuse at base, distinctly acuminate, 5.5-16 cm. long, 2.5-5 cm. broad; fruits about 5 mm. diam.; ovules 2 on each placenta [19. pallens](#)
- Lateral nerves distinct, 3-4(-5) on each side of midrib; leaves subcoriaceous, elliptic or obovate-elliptic, cuneate at base, acuminate, 4-12.5 cm. long, 2-4.5 cm. broad; ovules 3-4 on each placenta [20. obanensis](#)
- 24** Leaves glabrous or sparingly pubescent on midrib and nerves beneath, but sometimes with tufts of hair in the nerve-axils, oblanceolate, cuneate at base, often undulate towards the apex: **25**
- Leaves densely pilose beneath, obovate-oblong, rounded or subcordate at base, acuminate, 6-17 cm. long, 2.5-6.5 cm. broad, with 7-10 main lateral nerves on each side of midrib [25. chevalieri](#)
- 25** Leaves with 7-8 main lateral nerves spreading on each side of midrib, lamina abruptly acuminate, 12-17 cm. long, 4.5-8 cm. broad; ovules solitary on each placenta; fruits about 2 cm. diam.; trees, up to 20 m. high ... [22. toupetou](#)
- Leaves with 4-5 main lateral nerves ascending on each side of midrib, lamina acute or obtuse at apex, 4-12 cm. long, 1.2-4.5 cm. broad; ovules 2-3 on each placenta; fruits about 1 cm. diam.; shrubs, up to 4 m. high: **26**
- 26** Branchlets densely pubescent; leaves sparingly pubescent on midrib and nerves beneath [23. trilocularis](#)
- Branchlets glabrous; leaves glabrous on midrib and nerves beneath [24. paroissei](#)

1. *Tricalysia reflexa* Hutch. in Kew Bull. 1915: 44. *APD acc*

7. **Tricalysia vignei** *Aubrév. & Pellegr.* in Bull. Soc. Bot. Fr. 83: 41, fig. 2A (1936); Aubrév. Fl. For. C. Iv., ed. 2, 3: 288, t. 358, A.

APD: *Synonym of Tricalysia coriacea* (*Benth.*) *Hiern subsp. coriacea*

A shrub or small tree, with large coriaceous leaves; flowers white; fruits red; **in forest**.

Iv. C.: Danané Aubrév. 1103! **Ghana:** Beyin, W. Prov. (Nov.) Vigne FH 1469!

8. **Tricalysia elliotii** (*K. Schum.*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 83 (1931). *APD acc*

Probletoctemon elliotii *K. Schum.* in Engl. Bot. Jahrb. 23: 450 (1897).

Tricalysia batesii A. Chev. Caf. du Globe 3: 243 (1947); op. cit. 2: t. 146, name and plate only (1942).

A tree, to 20 ft. high; flowers white, fragrant; **in forest**.

S. L.: Lumbaraya (Feb.) Sc. Elliot 4937! **Ghana:** Akwapim Hills (Nov.) Johnson 775! Aburi Hills (Feb.) Johnson 941! Kumasi (Jan.) Vigne FH 1000! 1576! **S. Nig.:** Ugo, Benin (Jan.) Latilo & Olorunfemi FHI 33692!

Also in **Cameroun**.

9. **Tricalysia macrophylla** K. Schum. in Engl. Bot. Jahrb. 28: 66 (1899); Brenan in Kew Bull. 2: 73 (1947).

APD: *Synonym of Empogona macrophylla (K. Schum.) J. Tosh & Robbr.*

Tricalysia pluriovulata K. Schum. ex Hoyle in Gold Coast Checklist 119 (1937), English descr. only.

A shrub or tree, to 50 ft. high, with long drooping branches; fruits black, red and white.

iv. C.: Abengourou (young fr. Mar.) Renaud in Hb. Bodard 1380! **Togo:** Asuokoko R. (fr. Mar.) Beveridge FH 2943! **S. Nig.:** Jamieson R., Sapoba (young fr. Nov.) Kennedy 1822! 1854! 1922! Meikle 549!

Also in **Cameroun**.

10. **Tricalysia bracteata** Hiern in F.T.A. 3: 120 (1877); Chev. Bot. 327; Aubrév. Fl. For. Soud.-Guin. 466-469, t. 102, 4-7.

APD: *Synonym of Empogona bracteata (Hiern) J. Tosh & Robbr.*

Tricalysia syrmanthera Hiern l.c. (1877).

A shrub or tree, 5-20 ft. high; flowers white; fruits white at first, turning red and finally brownish-purple; **in forest**.

Port. G.: Balanasinho, Fulacunda (young fr. June) Esp. Santo 2083! **Guin.:** Labé (Mar.) Chev. 12414! Between R. Konkouré and Timbo (Mar.) Chev. 12482! Karkandy Heudelot 855! Bafing (fr. Apr.) 20. *Tricalysia obanensis* Keay in Bull. Jard. Bot. Brux. 28: 294 (1958). *APD acc*

S. Nig.: Oban Talbot 1324! s.n.!

21. *Tricalysia auriculata* Keay l.c. 295 (1958).

APD: *Synonym of Sericanthe auriculata* (Keay) Robbr.

S. Nig.: near waterside, between Budeng and Ewen Road, Calabar Prov. (fl. & fr. Nov.) Rosevear C33! C34!

Also in **Cameroun**.

22. *Tricalysia toupetou* Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 100: 26 (1953); Aubrév. Fl. For. Soud.-Guin. 466, 468 (1950), French descr. only.

APD: *Synonym of Sericanthe toupetou* (Aubrév. & Pellegr.) Robbr.

Tree to about 65 ft. high and 4 ft. girth; in forest.

Iv. C.: Tabou Serv. For. 2797! 2800!

23. *Tricalysia trilocularis* (Sc. Elliot) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 83 (1931).

APD: *Synonym of Sericanthe trilocularis* (Scott-Elliot) Robbr. subsp. *trilocularis*

Aulacocalyx trilocularis Sc. Elliot in J. Linn. Soc. 30: 81 (1894).

Shrub to 12 ft. high, with fragrant white flowers; leaves usually with bacterial nodules; on river banks.

S. L.: Moria (fl. buds & fr. Jan.-Feb.) Sc. Elliot 4435! 4563! Mange (Apr.) Hepper 2609! Njala (Feb.) Deighton 1815! 4154! 4158! Rowalla (young fr. July) Thomas 1063! Laminaiya (Apr.) Thomas 138!

24. *Tricalysia paroissei* Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 100: 26 (1953); Aubrév. Fl. For. Soud.-

Guin. 466, 468 (1950), French descr. only.

APD: Synonym of Sericanthe trilocularis subsp. paroissei (Aubrév. & Pellegr.) Robbr.

A shrub, about 3 ft. high.

Guin.: Konkouré Falls, Lahaya Paroisse 112! R. Badi, Toudou (Apr.) Roberty 17482!

25. **Tricalysia chevalieri** K. Krause in Engl. Bot. Jahrb. 43: 141 (1909); not of Aubrév. (1950).

APD: Synonym of Sericanthe chevalieri (K. Krause) Robbr. var. chevalieri

APD: Synonym of Sericanthe chevalieri var. velutina Robbr.

APD: Synonym of Sericanthe chevalieri var. coffeoides (A. Chev.) Robbr.

APD: Synonym of Tricalysia faranahensis Aubrév. & Pellegr.

Feretia coffeoides A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 179 (1912); Chev. Bot. 326.

Tricalysia coffeoides (A. Chev.) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 83 (1931); Aubrév. Fl. For. Soud.-Guin. 466, 469, t. 102, 8-10; Berhaut Fl. Sén. 102, 105; not of Good (1926).

Tricalysia sudanica A. Chev. Caf. du Globe 3: 238 (1947); Brenan in Kew Bull. 5: 221 (1950).

Tricalysia jasmiflora of Chev. Bot. 327.

A shrub, erect or scandent, 3-12 ft. high, flowers white, appearing when the reddish twigs are almost leafless; ripe fruit red and glossy.

Sen.: Tambacounda Berhaut 1244; 4068. **Mali:** Birgo Dubois 196. Chute de la Conisé Adam 15282! **Port. G.:** Madina, Boé (fl. buds Jan.) Esp. Santo 2357! **Guin.:** Dalaba (fl. & fr. Dec.-Jan.) Also in **Ubangi-Shari**.

1. **Tricalysia** sp. A

Small tree or shrub; fruits bright red; **in forest**. Probably near *T. biafrana*, but with narrowly elliptic-lanceolate leaves, 6-9 cm. long, 1-2 cm. broad. More material required.

[Br.] Cam.: banks of Mainya R., Mundani, Mamfe Div. (fl. & fr. Sept.) Eyeku FHI 22306!

2. **Tricalysia** sp. B

Shrub or small tree, 5-15 ft. high; flowers white fragrant. More material required.

Ghana: Tumfa Hills, 1,000 ft., Akim (Dec.) Johnson 274! Opon-Mansi F.R., Atobiasi (fr. Mar.) Foggie 189!

37. COFFEA

Linn.-F.T.A. 3: 179; A. Chev. Les Caféiers du Globe 1 (1929), 2 (1942), 3 (1947); Lebrun Inst. Roy. Colon. Belg., sect. Sci. Nat. et Méd., Mém. 11 (1941).

- 1 Anthers wholly exerted on distinct filaments; leaves evergreen; corolla-tube less than twice as long as the lobes; style exerted (to p. 154):2
- Anthers included in the corolla-tube for most of their length, sessile or on very short filaments; leaves deciduous, with 4-6 main lateral nerves on each side of midrib; calyx very short; flowers solitary to few: 15
- 2 Calyx consisting of a mere rim or very small teeth, shorter than the disk; seeds with a longitudinal groove on the flat inner face; flowers solitary to numerous in each axil:3

- Calyx well-developed; seeds (where known) without a longitudinal groove; flowers 1-few in each axil: **10**
- 3** Leaves usually cuneate at base or sometimes obtuse, rarely rounded, never long-attenuate to a subcordate or rounded base; petioles 3 mm. or more long; trees or shrubs, often exceeding 2 m. high: **4**
- Leaves oblanceolate, long-attenuate to a rounded or subcordate base, acuminate, 15-37 cm. long, 5-11 cm. broad, with 10-15 main lateral nerves on each side of midrib, domatia (pits) present or absent; petiole 1-3 mm. long; stipules with subulate points; whole plant seldom exceeding 2 m. high; flowers 1-3 in each leaf axil; foliar appendages of bracteoles up to 15 mm. long; fruits 15-25 mm. long, 8-12 mm. broad, red when ripe [8. humilis](#)
- 4** Stipules obtuse or subacute at apex; leaves rounded, obtuse, or shortly and broadly acuminate at apex, obovate, oblanceolate or broadly elliptic, (9-)14-37(-47) cm. long, (4-)6-13.5(-20) cm. broad, usually coriaceous, with 6-16 main lateral nerves on each side of midrib, domatia (pits) usually on the base of the nerves; flowers 4-50 in each axil, 5-6(-9)-merous, exserted from the connate bracteoles which lack foliar appendages; corolla-tube (6-)10-15(-18) mm., lobes (6-)10-21 (-25) mm. long; disk distinctly lobed at apex; fruits 12-25 mm. long, 9-21 mm. broad, 8-16 mm. thick, disk generally prominent at the apex [1. liberica](#)
- Stipules cuspidate or long-acuminate at apex; leaves distinctly and often long-acuminate at apex; connate bracteoles often with foliar appendages, disk not lobed at apex: **5**
- 5** Flowers (4-)10-24(-48) in each axil, 5-6(-7)-merous; calyx subtruncate; main lateral nerves 9-14 on each side of the midrib; fruits red, orange, or yellow at maturity: **6**
- Flowers 1-2(-4) in each axil, (4-)5-8(-9)-merous; calyx with more or less distinct teeth; main lateral nerves 6-10 on each side of midrib: **7**
- 6** Foliar appendages of the bracteoles conspicuous, 2-22 mm. long, 1-9 mm. broad; calyces more or less hidden by the bracteoles at anthesis; leaves broadly elliptic or oblong or obovate, 12-35(-40) cm. long, 5-12 cm. broad; puberulous domatia (pits) usually present in the axils of the main lateral nerves; corolla-tube (5-)9-14(-16) mm., lobes (8-)9-14(-21) mm. long; fruits 9-17 mm. long, 7-13 mm. broad, 6-12 mm. thick [2. canephora](#)
- Foliar appendages of the bracteoles small, 0.5-5 mm. long, 0.3-1.5 mm. broad; calyces well exserted from the bracteoles at anthesis; leaves elliptic or oblong or ovate, (6-)8-16(-18) cm. long, 3-7(-8.5) cm. broad; domatia (pits) in the axils of the main lateral nerves usually glabrous; corolla-tube 5-11 mm., lobes 8-13 mm. long; fruits 13-17 mm. long, 9-13 mm. broad, 7-10 mm. thick [3. arabica](#)
- 7** Calyx well exserted from the bracteoles at anthesis; corolla-tube 6-8 mm., lobes 10-15 mm. long; leaves with glabrous domatia (pits) usually present in the axils of the 6-10 main lateral nerves on each side of midrib: **8**
- Calyx hidden by the bracteoles at anthesis: **9**
- 8** Branchlets minutely puberulous; leaves oblong-elliptic, 6-11 cm. long, 2-4 cm. broad; fruits 10-14 mm. long, 7-10 mm. broad, colour not recorded [4. togoensis](#)
- Branchlets glabrous; leaves narrowly oblong-oblanceolate, 5-14 cm. long, 0.7-4.5 cm. broad; ripe fruits violet-black, 12-13 mm. long, 8-10 mm. broad and 6-8 mm. thick [5. stenophylla](#)
- 9** Stipules with the point not exceeding 1 mm. long; leaves obovate, obovate-elliptic or oblanceolate, 7-14 cm. long, 2.8-6.5 cm. broad, with glabrous domatia (pits) usually present in the axils of the 6-8 main lateral nerves on each side of midrib; corolla-tube 3.5-4(-6) mm., lobes 10(-19) mm. long [6. sp. nr. carrisoi](#)
- Stipules with points about 2 mm. long; leaves oblanceolate or obovate-elliptic, 10-21 cm. long, 3.8-8 cm. broad, with 7-8 main lateral nerves on each side of midrib, domatia absent; corolla-tube about 7 mm., lobes about 10 mm. long; ripe fruits red [7. brevipes](#)
- 10** Flowers shortly pedicellate; calyx-tube 2-7 mm. long; erect shrubs or trees, to 8 m. high; leaves 7-24 cm. long, 2-9 cm. broad: **11**
- Flowers sessile; calyx deeply divided into distinct lobes; lianes or low shrubs; leaves 3-10 cm. long, 1.5-5.5 cm. broad, oblong-elliptic or elliptic or more or less obovate or ovate, usually rather abruptly long-acuminate: ... **12**
- 11** Calyx-tube about 2 mm. long, not split at anthesis; corolla-tube 7-10 mm. long, lobes 10-12 mm. long, 5-8 mm. broad; bracteoles with foliar appendages up to 10 mm. long; leaves elliptic, obtuse at base, long-acuminate, 17-24 cm. long, 6.5-9 cm. broad with 9-11 main lateral nerves on each side of midrib; stipules with a point about 1 cm. long; each ovary cell with 2 collateral ovules completely immersed in the placenta [9. macrochlamys](#)
- Calyx-tube 3-7 mm. long, split down one side at anthesis; corolla-tube 9-14 mm. long, lobes 10-12 mm. long, 3-5.5 mm. broad; bracteoles with small narrow foliar appendages up to 2.5 mm. long; leaves elliptic narrowly oblong-elliptic or lanceolate, obtuse or cuneate at base, abruptly long-acuminate, 7-19 cm. long, 2-6.5 cm. broad, with 4-9 main lateral nerves on each side of midrib; stipules with a point 2.5-4 mm. long; each ovary cell with 1 ovule completely immersed in the placenta [10. spathicalyx](#)
- 12** Branchlets and leaves glabrous; leaves cuneate, obtuse or sometimes rounded at base, main lateral nerves 3-5 on each side of midrib with glabrous domatia (pits) at their bases or in their axils: **13**
- Branchlets puberulous or densely hispid; leaves puberulous or pubescent mainly on midrib and nerves beneath; main lateral nerves 4-6 on each side of midrib with pubescent domatia (pits): **14**
- 13** Corolla-tube 8-16 mm., lobes 10-15 mm. long; foliar appendages of bracteoles more or less ovate, up to 10 mm. long and 6 mm. broad [11. afzelii](#)
- Corolla-tube 2-3 mm., lobes 4-5 mm. long; foliar appendages of bracteoles ovate-orbicular, about 2 mm. long

and broad [12. pulchella](#)

- 14** Branchlets closely puberulous; leaves obtuse or rounded at base; calyx-lobes rounded; corolla-tube 5-7 mm., lobes 5-6.5 mm. long [13. lemblini](#)

Branchlets densely hispid; leaves subcordate or rounded at base; calyx-lobes triangular; corolla-tube 7-17 mm., lobes 5-10 mm. long [14. subcordata](#)

- 15** Flowers axillary, subtended by several glumaceous or foliaceous bracts and bracteoles, sessile, corolla-tube at least twice as long as the lobes; fruits subglobose 6-10 mm. diam.; seeds without a longitudinal groove; young branchlets densely pubescent or minutely and rather sparingly puberulous: **16**

Flowers subtended only by a pair of leaves, solitary or paired, terminal; corolla-tube (7-)13-20 mm., lobes 7-15 mm. long; style included; fruits 2-lobed, 7-8 mm. long and broad, 4 mm. thick; seeds with a longitudinal groove; young branchlets minutely puberulous or glabrous; leaves elliptic or ovate, cuneate at base, long-acuminate, 2.5-10.5 cm. long, 1.5-3 cm. broad, glabrous [17. ebracteolata](#)

- 16** Flowers subtended by rigid dry bracts and bracteoles with inrolled margins and sharp setose points; style exserted; corolla-tube (10-)18-30 mm., lobes (5-)7-11 mm. long; leaves elliptic or ovate or obovate, rounded or subcordate or obtuse at base, long-acuminate, 3-11 cm. long, 1.5-6 cm. broad, pubescent beneath especially on midrib and main lateral nerves [15. eketensis](#)

Flowers subtended by soft, often rather leafy, bracts and bracteoles; style included, much shorter than corolla-tube; corolla-tube 28-45 mm., lobes 7-18 mm. long; leaves broadly or narrowly elliptic or obovate-elliptic, cuneate or obtuse at base, gradually acuminate, 3-12 cm. long, 1.5-4.5 cm. broad, glabrous or pubescent beneath [16. rupestris](#)

There is a tendency for the specimens from forest to have longer, narrower leaves and minutely puberulous branchlets, and for those from open situations to have smaller, broader leaves and more densely spreading pubescent branchlets; these distinctions break down however, especially in W. Nigeria, and do not seem to be of sufficient importance for specific recognition. [The Congo plant (e.g. Louis 1234) referred to by Lebrun (l.c.) as *Argocoffea rupestris* is a distinct species, note in particular the exerted style.]

39. BELONOPHORA

Hook. f.-F.T.A. 3: 129; *Keay in Bull. Jard. Bot. Brux. 28: 297 (1958).* *APD acc*

Kerstingia K. Schum. (1903).

Diplosporopsis Wernham (1913).

- 1 Leaves cordate-auriculate and sometimes pouched at base, up to 35 cm. long, and 20 cm. broad, with 9-12 main lateral nerves on each side of midrib:2
Leaves cuneate or obtuse at base, elliptic, oblong-elliptic or obovate-elliptic, up to 27 cm. long and 12.5 cm. broad; petiole distinct; branchlets glabrous; calyx-lobes 1-2 mm. long:3
- 2 Branchlets scurfy puberulous; stipules lanceolate and long-acuminate, up to 3 cm. long and 0.5 cm. broad, with a strong dorsal nerve; petiole up to 7 mm. long; leaves obovate or obovate-elliptic, narrowed to the markedly-pouched auriculate base, gradually long-acuminate, 16-30 cm. long, 6-13 cm. broad; calyx-lobes triangular-ovate, about 4 mm. long, conspicuous; corolla-tube 15-20 mm. long, lobes 10-13 (-18) mm. long, 3.5-5 mm. broad; anthers about 6 mm. long, their tips 1-5 mm. below the apex of the corolla-tube[l. wernhamii](#)

Branchlets glabrous; stipules broadly ovate, acuminate, up to 4.5 cm. long and 2.5 cm. broad, without a strong dorsal nerve; petiole up to 15 mm. long; leaves elliptic or obovate-elliptic, broadly cordate-auriculate at base, rather abruptly acuminate, 22-35 cm. long, 9-19.5 cm. broad; calyx-lobes small; corolla-lobes 18 mm. long, anthers 8-9 mm. long; otherwise similar to above [2. talbotii](#)

- 3 Stipules linear-oblong, oblong-spathulate, or oblong, rounded at apex, 8-14(-20) mm. long, 1.5-6(-10) mm. broad; leaves shortly acuminate, (5-)10-27 cm. long, (2.5-) 4-11 cm. broad, with 6-7 main lateral nerves; corolla-tube about 13 mm. long, lobes about 8 mm. long and 3 mm. broad; anthers about 6 mm. long, their tips about 1 mm. from the apex of the corolla-tube; fruits about 15 mm. diam. [3. coriacea](#)

Stipules lanceolate or triangular, with long points, up to 18 mm. long; leaves gradually and often long acuminate, 12-23 cm. long, 3-9(-12.5) cm. broad, with 4-6(-7) main lateral nerves on each side of midrib; corolla-tube 9-17 mm. long, lobes 4-9 mm. long and 2-4 mm. broad; anthers 4.5-5.5 mm. long, with their tips 1-4 mm. from the apex of the corolla-tube; fruits ellipsoid-subglobose, about 12 mm. long [4. hypoglauca](#)

1. **Belonophora wernhamii** *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 85 (1931). *APD acc*

Diplosporopsis coffeoides *Wernham* in Cat. Talb. 47, t. 8 (1913), not *B. coffeoides* Hook. f. (1873).

Treelet, 3-8 ft. high; corolla white; [in forest](#).

2. *Atractogyne gabonii Pierre* in Bull. Soc. Linn. Paris 2: 1262 (1896) F. Hallé l.c. 311, t. 2. *APD acc*

Atractogyne batesii Wernham (1919).

A liane; fruits red when ripe; in forest.

[Br.] **Cam.:** S. Bakundu F.R., Kumba Dist. (fr. Mar., Apr.) Olorunfemi FHI 30547! Binuyo & Daramola FHI 35598!

Also in **Cameroun** and **Gabon**.

41. BERTIERA

Aubl.-F.T.A. 3: 82; Wernham in J. Bot. 50: 110 (1912); N. Hallé in Notulae Syst. 16: 280 (1960).

- 1 Flowers on elongated inflorescences: 2
Flowers axillary, not in elongated inflorescences: 11
- 2 Inflorescence with stalked lateral branchlets, lax flowered: 3
Inflorescence with sessile or subsessile clusters of crowded flowers, or subsimply racemose: 6
- 3 Inflorescence with a few scorpioid branches at length recurved, like that of *Heliotropium*, pubescent; leaves elliptic to broadly oblanceolate, acuminate, 7-12 cm. long, 3-6 cm. broad, sparingly pubescent beneath, lateral nerves about 5 pairs [1. breviflora](#)
Inflorescence more or less elongated and raceme-like: 4
- 4 Stipules 5-8 mm. long, connate and shortly sheathing, acuminate; leaves rather broadly and shortly elliptic, pubescent on the 5-6 pairs of nerves beneath, glabrous between them, abruptly acuminate, 8-12 cm. long, 3-6 cm. broad; inflorescence slender, many flowered; bracteoles linear, about 5 mm. long; corolla 7 mm. long; fruits globose, 4 mm. diam., strongly ribbed [2. bracteolata](#)
Stipules 20-35 mm. long, free; corolla about 2 cm. long; fruits globose, 5-7 mm. diam., strongly ribbed; leaves with 7-9 pairs of nerves, sparsely appressed-pubescent beneath: 5
- 5 Leaves, branchlets and stipules glabrous, inflorescence-rhachis pubescent; stipules lanceolate, very acute, 2-2.5 cm. long, 7-8 mm. broad; leaves elliptic, abruptly acuminate, 10-17 cm. long, 4-7 cm. broad, with 7-8 pairs of nerves; inflorescence lax [3a. laxa var. bamendae](#)
Leaves (at least the nerves beneath), branchlets and stipules pubescent; stipules broadly lanceolate to ovate, shortly and very acutely acuminate, 2-2.5(-3.5) cm. long, 7-11 mm. broad; leaves narrowly elongated-ovate, acuminate, 10-20 cm. long, 4-8 cm. broad, with 7-9 pairs of nerves; inflorescence rather few flowered, lax .. [3. laxa var. laxa](#)
- 6 Branchlets densely clothed with long spreading hairs; leaves ovate-oblong, acutely acuminate, rounded or subcordate at base, 15-25 cm. long, 4-7 cm. broad, pilose beneath, especially on the 10-12 pairs of lateral nerves; inflorescence up to 20 cm. long; calyx pubescent with short triangular lobes; corolla nearly 1 cm. long, sparsely pubescent [4. spicata](#)
Branchlets glabrous or with closely appressed hairs: 7

- 7 Flowers on simple pedicels on the axis; corolla 4 mm. long, minutely pubescent; calyx 1 mm. long; leaves oblong-elliptic, abruptly acuminate, 6-9 cm. long, 3-4 cm. broad, pubescent on the 4-5 pairs of nerves beneath; stipules connate and shortly sheathing, acuminate, about 5 mm. long [5. *chevalieri*](#)
- Flowers in crowded cymes on the main axis; stipules 1-3 cm. long: **8**
- 8 Stipules very acutely long-acuminate, sheathing, thin, 1.0-1.8 mm. long, 4 mm. broad, median nerve prominent with pubescence limited to it; corolla-limb ovoid in bud, nearly as broad as long, corolla-tube 6-7 mm. long, all densely pubescent; flowers densely clustered in whorls on the rachis; calyx 1 mm. long, densely pubescent; leaves oblong-lanceolate, gradually long-acuminate, cuneate at base, 10-15 cm. long, 4-5 cm. broad, pubescent on the 8-10 pairs of lateral nerves beneath [6. *subsessilis*](#)
- Stipules subacute at apex, thick, 1-2.5 cm., about 7 mm. broad at base, more or less evenly appressed-pubescent, 1-nerved; flowers in subsessile clusters, not whorled; corolla limb narrowly ellipsoid in bud, pubescent or glabrous; **9**
- 9 Calyx glabrous or slightly pubescent; corolla-limb glabrous at apex or entirely so; inflorescence-branches 1-2 cm. long; leaves oblong-elliptic, acuminate, rounded at base, distinctly petiolate, 15-20 cm. long, about 10 cm. broad, with about 8 pairs of lateral nerves: **10**
- Calyx densely pubescent; corolla-limb entirely pubescent, acutely acuminate at apex; inflorescence branches up to 1 cm. long; leaves slightly oblanceolate, shortly acuminate, slightly cuneate at base, subsessile, 10-35 cm. long, 4-11 cm. broad, with about 9 pairs of lateral nerves [8. *retrofracta*](#)
- 10 Corolla pubescent [7. *racemosa* var. *racemosa*](#)
- Corolla glabrous [7a. *racemosa* var. *glabrata*](#)
- 11 Stoloniferous subherbaceous plant of the forest floor; stems about 3 cm. high above ground; flowers solitary or almost so, sessile; leaves elliptic, 5-7 cm. long, 2.5-4 cm. broad, rather densely appressed-pilose, spreading on the margins; petiole slender [9. *adamsii*](#)
- Shrub up to 1.2 m. high, upper nodes congested, internodes about 1.5 cm. long obscured by large sheathing stipules with fimbriate margins; flowers concealed within the stipules; leaves elongate-ob lanceolate and slightly pandurate, 30-42 cm. long, 6-7 cm. broad, young leaves sericeous beneath; petiole short and stout [10. *fimbriata*](#)

1. *Bertiera breviflora* *Hiern* in F.T.A. 3: 85 (1877); Wernham in J. Bot. 60: 156 (1912). *APD acc*

Small single-stemmed shrub 3-12 ft. high; flowers greenish-white on the spreading branches of terminal and axillary cymes, fruits red; **in forest**.

47. MUSSAENDA

Linn.—F.T.A. 3: 65; Wernham in J. Bot. 51: 233 (1913); F. Hallé in *Adansonia* 1: 266-298 (1961).

- 1 Upper leaf-surface glabrous or at most ciliate on midrib (see also No. 14); one enlarged white calyx-lobe present on some flowers; corolla-tube about 2 cm. long:.....2
- Upper leaf-surface pubescent (at least on nerves) or scabrid; enlarged red, white or yellow calyx-lobe present or absent:4
- 2 Corolla and calyx pilose outside; calyx-lobes linear, about 1 cm. long; leaves broadly elliptic, shortly acuminate at apex, rounded at base, setose on nerves beneath, 13-16 cm. long, 8-9 cm. broad, with about 8 nerves on each side; petiole 6 mm. long, setose[1. conopharyngiifolia](#)
- Corolla and calyx minutely pubescent or glabrous:.....3
- 3 Corolla-tube 11/2-21/2 times as long as corolla-lobes; calyx glabrous (rarely pubescent), lobes subulate, 2-10 mm. long, erect or slightly recurved, enlarged lobe glabrous; inflorescence usually glabrous; leaves elliptic to ovate, acuminate, cuneate to rounded at base, 7-16 cm. long, 4-8 cm. broad, glabrous or ciliate on the nerves beneath[2. arcuata](#)
- Corolla-tube 5-7 times as long as corolla-lobes; calyx appressed-pubescent, lobes triangular-subulate, 1-2 (-3) mm. long, slightly incurved, enlarged lobe shortly pubescent on the nerves; inflorescence puberulous; leaves elliptic, caudate-acuminate, rounded to cuneate at base, 7-12 cm. long, 3-5-6 cm. broad, slightly ciliate on the nerves beneath[3. polita](#)
- 4 Leaves covered with white appressed hairs on both surfaces, specially above when young, ovate to elliptic, slightly acuminate, cuneate at base, 7-9 cm. long, 4-5 cm. broad, with about 10 pairs of lateral nerves; petiole about 1-5 cm. long; corolla densely pubescent, 1-5 cm. diam., tube 2 cm. long; calyx-lobes 1 cm. long, oblanceolate, densely pubescent outside, glabrous inside, enlarged lobe absent[4. nivea](#)

- Leaves variously more or less pubescent beneath, but not white-appressed:.....5
- 5 Calyx-lobes (both the normal and enlarged) red, normal lobes lanceolate, about 1 cm. long, pubescent and ciliate; corolla 1.5 cm. diam., tube 2 cm. long, pilose; leaves broadly ovate to elliptic, truncate to cuneate at base, shortly acuminate, 7-15 cm. long, 5-11 cm. broad, densely to slightly tomentose beneath [5. erythrophylla](#)
- Calyx-lobes not red:6
- 6 Lobes of calyx obtuse, mucronate, obovate, 3-4 mm. long, all softly pubescent; corolla-tube 2 cm. long, densely reflexed appressed-pubescent; leaves ovate, ovate-elliptic or oblanceolate, rounded or subcordate at base, 10-14 cm. long, 4.5-7 cm. broad, with about 13 closely parallel nerves, shortly scabrid-hispid on both sides; fruit about 2.5 cm. long and 1.5 cm. broad, densely pubescent [6. afzelii](#)
- Lobes of calyx acute or acuminate, not mucronate:7
- 7 Corolla-tube 4-5 (-6) mm. diam. in middle, about 2.5 cm. long, lobes 6 (-7); stamens 6 (-7), style-lobes (2-) 3 (-4); calyx-lobes 7 mm. broad at base:8
- Corolla-tube 1.5-3 mm. diam. in middle; calyx-lobes up to 1.5 mm. broad:9
- 8 Hairs on outside of corolla-tube reflexed, lobes ovate, apiculate, 1.5 cm. long; flowers terminal, 1-several; calyx-lobes triangular-lanceolate, about 1 cm. long, about 5 mm. broad at base; leaves ovate to elliptic, 10-15 cm. long, 4-7 cm. broad, pilose on nerves beneath [7. grandiflora](#)
- Hairs on outside of corolla-tube ascending, lobes suborbicular, apiculate, 5 mm. long; leaves obovate, 8-11 cm. long, 3.5-5 cm. broad, pilose on nerves beneath [8. tristigmatica](#)
- 9 Corolla-lobes 1-4 cm. long, 1-2.5 cm. broad, broadly obovate to elliptic, densely pubescent outside, tube 2-3 cm. long; calyx-lobes linear to linear-ob lanceolate, 5-10 mm. long, not enlarged; leaves elliptic to obovate-elliptic, subacute to rounded at base, 7-11 cm. long, 3-6 cm. broad, shortly pubescent beneath; fruits oblong-ellipsoid, glabrescent, with persistent calyx-lobes [9. elegans](#)
- Corolla-lobes 2-4 mm. long:..... 10
- 10 Leaves scabrid above with many minute acute papillae and short curved hairs: 11
- Leaves hispid or subglabrous above: 12
- 11 Lower surface of leaves densely to moderately covered with long, soft, brown hairs, oblong-elliptic, shortly and abruptly acuminate; calyx-lobes triangular to triangular-subulate, densely appressed-pubescent, enlarged lobe 1.5-3 cm. diam. on stalk about 1 cm. long; corolla densely appressed-pubescent outside, lobes not tailed ... [10. linderi](#)
- Lower surface of leaves glabrous and papillose (for other characters see below) [12. chippii](#)
- 12 Calyx-lobes subulate (to linear-triangular) 3-6 mm. long; corolla-lobes distinctly tailed, tube pubescent with rather long more or less appressed brown hairs; leaves elliptic, acutely acuminate, 9-12 cm. long, 5-8 cm. broad, setulose on the 8-10 lateral nerves beneath [11. tenuiflora](#)
- Calyx-lobes shortly triangular, 1-2 mm. long:..... 13
- 13 Leaves beneath (at least when dry) papillose; corolla-tube minutely and sparsely pubescent, hairs often in longitudinal lines, corolla-lobes acute but not tailed; branchlets more or less appressed-pubescent .. [12. chippii](#)
- Leaves beneath not papillose; corolla-tube pubescent:..... 14
- 14 Corolla-tube densely pubescent with erect spreading hairs, 2-3 cm. long, lobes slightly tailed; branchlets hispid with recurved hairs; leaves with about 10 nerves on each side [13. landolphioides](#)
- Corolla-tube appressed-pubescent:..... 15
- 15 Leaves with about 6 nerves widely spaced on each side; corolla-tube 3-4 cm. long, lobes slightly tailed; branchlets shortly pubescent, glabrescent [14. isertiana](#)
- Leaves with 11-14 nerves, closely parallel, on each side; corolla-tube 2-2.5 cm. long; branchlets pubescent .. [15. afzeliioides](#)

1. **Mussaenda conopharyngiifolia** Stapf in J. Linn. Soc. 37: 104 (1905); Wernham in J. Bot. 51: 275 (1913); Chev. Bot. 313, partly. *APD acc*

A straggling shrub with rather large leaves and hirsute corymbs.

Lib.: Sinoe Basin Whyte! **IV. C.:** fide Chev. l.c.

2. **Mussaenda arcuata** Lam. ex Poir. in Lam. Encycl. Méth. Bot. 4: 392 (1797); F.T.A. 3: 68; Wernham l.c. 274. Aubrév. Fl. For. Soud.-Guln. 478, t. 108, 5-7; F. W. Andr. Fl. Pl. Sud. 3: 446 (incl. var. pubescens Wernham). *APD acc*

Mussaenda laurifolia A. Chev. Bot. 314.

Erect or scrambling shrub; flowers yellow with yellow-hairy centre which turns brown later, fruits orange, enlarged calyx white; **in forest and beside streams.**

Guin.: Dalaba to Diaguissa Chev. 18582; 18847. Macenta (Oct.) Baldwin 9794! **S. L.:** Jigaya (Sept.) Thomas 2743! Warantamba (Oct.) Small 351! Firana (fr. Mar.) Sc. Elliot 5353! Loma Mts. (Sept.) Also in Cameroun.

15. *Mussaenda afzelioides* Wernham in Cat. Talb. 40 (1913); J. Linn. Soc. 51: 238. *APD acc*

A climbing shrub.

S. Nig.: Oban Talbot 212! 275!

Mussaenda lancifolia K. Krause in Engl. Bot. Jahrb. 57: 58 (1920).

F. Po: Bokoko (Oct.) Mildbr. 6813.

The type specimen was destroyed at Berlin and it has not been possible to key out the species satisfactorily from the description alone.

48. PAURIDIANTHA

Hook. f.-F.T.A. 3: 71; Bremkamp in Engl. Bot. Jahrb. 71: 200-227 (1940).

Urophyllum of F.T.A. 3: 72; of F.W.T.A., ed. 1, 2: 103, not of Wall.

- 1 Inflorescences (6-) 10-20 cm. long, sometimes as long as or longer than the leaves, openly cymose; stipules large and foliaceous:2
- Inflorescences axillary clusters at most 4 cm. long (in No. 11), often dense:3
- 2 Calyx glabrous, shortly toothed; inflorescences always axillary, the branches puberulous with very short crispate hairs; leaves broad at base, oblong-elliptic, acuminate, up to 20 cm. long and 7 cm. broad, glabrous beneath,

- except in the axils of the 15-20 pairs of lateral nerves, reticulate between them; stipules broadly ovate, abruptly mucronate [1. floribunda](#)
- Calyx shortly pubescent outside, undulate; inflorescences terminal with some axillary, the branches pubescent with loose hairs; leaves similar to above but acute at base; stipules broadly ovate, gradually acute; fruits globose, wrinkled when dry about 5 mm. diam., capped by cupular calyx [2. viridiflora](#)
- 3 Branchlets more or less glabrous: [4](#)
- Branchlets conspicuously pubescent: [7](#)
- 4 Calyx undulate or with triangular teeth: [5](#)
- Calyx-teeth subulate, 1 mm. long; leaves long-acuminate, cuneate at base, lanceolate to oblong-elliptic, 7-11 cm. long, 2-3(-4) cm. broad, with about 8 pairs of lateral nerves; stipules linear-triangular [5. paucinervis](#)
- 5 Stipules spatulate, at least 1.5 mm., and up to 6 mm., broad, early caducous; leaves reddish beneath, rather coriaceous, 10-28 cm. long, 4-12 cm. broad, with distinct intra-marginal nerve; inflorescences 2-3 cm. long; branchlets glabrous: [6](#)
- Stipules filiform; branchlets sparsely and minutely pubescent; inflorescences few-flowered, 1 cm. long; leaves light green, long-acuminate, mucronate, shortly cuneate at base, oblong-elliptic, 4-14 cm. long, 1.5-4.5 cm. broad, with 5-6 pairs of lateral nerves [9. sylvicola](#)
- 6 Intra-marginal nerve of leaves beneath clearly looped, lateral nerves about 7, apex acute; calyx about 2 mm. diam., truncate; fruits 5-6 mm. diam.; stipules ovate, 4-6 mm. broad [3. rubens](#)
- Intra-marginal nerve of leaves beneath almost parallel with margin, lateral nerves about 12, apex acuminate; calyx about 4 mm. diam., slightly lobed; stipules linear-lanceolate, 1.5-3 mm. broad [4. ziamaeana](#)
- 7 Stipules filiform or subulate: [8](#)
- Stipules ovate to lanceolate; branchlets hirsute: [10](#)
- 8 Branchlets hirsute with spreading hairs; leaves oblong-elliptic, broadly acuminate, about 12 cm. long and 5 cm. broad, pilose on nerves beneath, tertiary nerves inconspicuous [6. insculpta](#)
- Branchlets shortly and densely pubescent (see also No. 9 above); calyx-teeth shortly subulate or triangular: [9](#)
- 9 Tertiary nerves numerous (obvious at least when dry) and at right angles to the midrib, leaves elliptic to oblong-elliptic, broadly acuminate, 3-6 cm. long, 1.5-3 cm. broad; calyx-lobes very shortly subulate [7. canthiiflora](#)
- Tertiary nerves inconspicuous and anastomosing, leaves oblong-elliptic, acuminate, 4-8 cm. long, (1.5-) 2-2.5 cm. broad; calyx-lobes triangular [8. afzelii](#)
- 10 Inflorescence congested axillary cluster; calyx-lobes lanceolate about 3 mm. long, densely hairy; stipules lanceolate 1.5-2 cm. long, 5-7 mm. broad; leaves narrowly oblong-elliptic, acuminate, 15-18 cm. long, 5-6 cm. broad, pilose beneath, about 18 pairs of lateral nerves [10. stipulosa](#)
- Inflorescence shortly pedunculate; calyx truncate, glabrous; stipules ovate-lanceolate, 1.3-2.5 cm. long, 7-11 mm. broad; leaves oblanceolate, acute or abruptly acuminate, 5-8 cm. broad, pubescent beneath, about 20 pairs of lateral nerves [11. hirtella](#)

1. *Pauridiantha floribunda* (K. Schum. & K. Krause) Bremek. in Engl. Bot. Jahrb. 71: 216 (1940). *APD acc*

Urophyllum floribundum K. Schum. & K. Krause (1907)-F.W.T.A., ed. 1, 2: 104.

Erect shrub 12-25 ft. high; flowers small and whitish; [in high forest](#).

S. Nig.: Sapoba Kennedy 354! 2308! Eket Dist. Talbot! Ikom (July) Catterall 12! Boshi-Okwangwo F.R., Ogoja (May) Latilo FHI 30950! **[Br.] Cam.:** S. Bakundu F.R., Kumba (fr. Aug.) Akuo FHI 15170! Mungo F.R., Kumba (May) Olorunfemi FHI 30603!

2. *Pauridiantha viridiflora* (Schweinf. ex Hiern) Hepper in Kew Bull. 13: 405 (1959). *APD acc*

Urophyllum viridiflorum Schweinf. ex Hiern in F.T.A. 3: 74 (1877); F.W.T.A., ed. 1, 2: 104.

U. eketense Wernham (1914).

Pamplathantha viridiflora (Schweinf. ex Hiern) Bremek. l.c. 217 (1940).

Shrub or small tree 10-20 ft. high, with yellow-green leaves; flowers greenish or grey; [at edges of forest](#).

S. Nig.: Eket Dist. Talbot 3327! Degema Dist. Talbot! **[Br.] Cam.:** Buea and Mopanya, Cam. Mt., 2,400-3,200 ft. (Mar.-Apr.) Maitland 502! 1075! Bali (May) Ujor FHI 30378! Wum (June) Daramola FHI 41093!

Also in [Cameroun](#), [Ubangi-Shari](#), [Congo](#), [Uganda](#) and [Tanganyika](#).

3. *Pauridiantha rubens* (Benth.) Bremek. l.c. 215 (1940). *APD acc*

Urophyllum rubens Benth. (1849)-F.T.A. 3: 73; F.W.T.A., ed. 1, 2: 104.

A glabrous shrub with the branches and leaves beneath reddish; at forest edge.

[Br.] Cam.: Bulifambo, Buea, 2,500 ft. (fr. Mar.) Maitland 576! Johann-Albrechtshöhe (= Kumba) Staudt 860a. F. Po: (Oct.) T. Vogel 48! Arabin! Musola, 1,600 ft., Mildbr. 6933; 7006. Also in Cameroun, Congo and S. Tomé.

4. *Pauridiantha ziamaeana* (Jac.-Fél.) Hepper in Kew Bull. 13: 405 (1959).

APD: Synonym of Stelechantha ziamaeana (Jacq.-Fél.) N. Hallé

Urophyllum ziamaeum Jac.-Fél. in Bull. I.F.A.N. 16: 990 (1954).

U. rubens Benth. (1849), partly (Afzelius).

Shrub up to 15 ft. high.

Guin.: Ziam, near Macenta (Mar.) Jac.-Fél. 1559! S. L.: Afzelius! Kambui Hills (Feb.) Edwardson 9! Lib.: Truo, Sinoe Co. (fr. Mar.) Baldwin 11390! Kulo, Sinoe Co. (fr. Mar.) Baldwin 11414!

5. *Pauridiantha paucinervis* (Hiern) Bremek. l.c. 212 (1940). *APD acc*

Urophyllum paucinerve Hiern in F.T.A. 3: 74 (1877); F.W.T.A., ed. 1, 2: 10.

A shrub 10-20 ft. high with arching branches and slender green branchlets; flowers white; fruits red; in understorey of upland forest.

[Br.] Cam.: Cam. Mt., 4,000-5,000 ft. (Feb.) Maitland 1308! 1320! Bali-Ngemba F.R. (May) Ujor FHI 30342! Nkambe (fl. & fr. Feb.) Hepper 1896! F. Po: Mann 577! Mioko, 4,500 ft. (Feb.) Exell 844! Las Cascadas (Jan.) Guinea 2172! Finca Puente (Jan.) Guinea 1791!

6. *Pauridiantha insculpta* (Hutch. & Dalz.) Bremek. l.c. 215 (1940).

APD: Synonym of Empogona talbotii (Wernham) J. Tosh & Robbr.

Urophyllum insculptum Hutch. & Dalz. F.W.T.A., ed. 1, 2: 104 (1931).

A shrub with shortly hirsute branches.

S. Nig.: Oban Talbot! Orem, Oban F.R. (fr. Feb.) Onochie FHI 36257x!

7. *Pauridiantha canthiiflora* Hook. f. in Benth. & Hook. f. Gen. Pl. 2: 70 (1871); F.T.A. 3: 71 (as *P. canthiifolia*); Bremek. l.c. 210. *APD acc*

Urophyllum canthiiflorum (Hook. f.) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 104 (1931).

U. talbotii Wernham in Cat. Talb. 41 (1913).

A shrub 6-15 ft. high; flowers few, yellowish.

S. Nig.: Oban Talbot 225! [Br.] Cam.: Victoria (Oct.) Winkler 548! Johann-Albrechtshöhe (= Kumba) Staudt 566! 804! Banga F.R., Kumba (fr. Mar.) Binuyo & Daramola FHI 35591! Mamfe (fr. Mar.) Richards 5222! F. Po: Mann 167!

Also in Congo.

8. *Pauridiantha afzelii* (Hiern) Bremek. l.c. 212 (1940). *APD acc*

Urophyllum afzelii Hiern in F.T.A. 3: 73 (1877); F.W.T.A., ed. 1, 2: 104; Chev. Bot. 315; Aubrév. Fl. For. C. Iv., ed. 2, 3: 298.

U. micranthum of Chev. Bot. 315, not of Hiern.

A shrub up to 15 ft. high (or tree, in Ghana, to 40 ft. high), with slightly pubescent green branchlets; flowers greenish-white; fruits red; in high forest.

Port. G.: Bissau (fl. & fr. Feb., Mar.) Esp. Santo 1833! 1888! Guin.: Labé (Apr.) Chev. 12301! Fiffa (fr. Dec.) Roberty 16221! Erimakuna (Mar.) Sc. Elliot 5263! S. L.: Berria, Falaba (fr. Mar.) Sc. Also in **Cameroun**.

49. SABICEA

Aubl. (1775)-F.T.A. 3: 74; Wernham Monogr. Sabicea (1914); Hepper in Kew Bull. 13: 289 (1958); F. Hallé in *Adansonia* 1: 266-298 (1961).

Stipularia P. Beauv. (1807)-F.T.A. 3: 79; F.W.T.A. 2: 107.

- 1 Leaves more or less thinly pilose or pubescent beneath, not completely covered with a felt of hairs; (to p. 171): **2**
 Leaves completely covered with a dense felt of usually white hairs: **28**
 - 2 Inflorescences cauliflorous, i.e. on older stems and separated from the leaves (see also No. 8): **3**
 Inflorescences not cauliflorous, in axils of leaves, flowers solitary or clustered: **6**
 - 3 Lateral nerves of leaves 8-10 (-15) pairs; leaves up to 15 cm. long; stipules ovate, about 1 cm. long; corolla hairy outside: **4**
 Lateral nerves of leaves 20-25 pairs; leaves 30 or more cm. long; stipules 3-6 cm. long; corolla glabrous; calyx-lobes filiform, about 1 cm. long: **5**
 - 4 Inflorescences on aerial shoots, sessile, few-flowered; calyx-lobes linear-filiform, 1-5 cm. long, whole calyx densely pilose; corolla densely pilose; bracts wanting or very small; leaves broadly elliptic, rounded or subcordate at base, slightly acuminate, 10-14 cm. long, 4-7.5 cm. broad, thinly pilose above and densely spreading-pilose on midrib beneath *1. speciosa*
- Inflorescences on rooting prostrate shoots, shortly pedunculate, many-flowered; calyx-lobes broadly oblong to lanceolate, 1-5 cm. long, whole calyx long-ciliate; corolla villose; bracts forming an open involucre; leaves

- obovate, cuneate at base, long-caudate-acuminate, 12-15 cm. long, 4-7 cm. broad, thinly pilose above and on nerves beneath [2. pilosa](#)
- 5 Leaves shortly pubescent on nerves beneath, weakly pilose above, ciliate; stipules ovate about 3 cm. long; young branchlets densely hispid with long spreading hairs [3. xanthotricha](#)
- Leaves long-pilose on nerves beneath, pilose above; stipules broadly lanceolate about 6 cm. long; young branchlets densely villose [4. urbaniana](#)
- 6 Prostrate undershrub; flowers in bracteate heads 2-3 cm. diam.; calyx and corolla villose; peduncle about 1.5 cm. long; stems far-creeping, rooting at nodes; leaves elliptic, 3-7 cm. long, 2-4 cm. broad, laxly pilose [19. geophiloides](#)
- Climbing or erect shrubs: 7
- 7 Flowers solitary in leaf axils: 8
- Flowers clustered: 11
- 8 Calyx-lobes 2.5-5 mm. long, triangular; leaves cuneate at base, elliptic, about 8 cm. long and 4 cm. broad, with about 11 pairs of lateral nerves, pubescent on nerves beneath; corolla densely pilose; bracts small and inconspicuous at base of calyx: 9
- Calyx-lobes 10-15 mm. long, subulate or linear; bracts united into a cup 5 mm. long closely surrounding ovary: 10
- 9 Corolla 14 mm. long; calyx-lobes long-triangular, about 5 mm. long [5. bracteolata](#)
- Corolla 20 mm. long; calyx-lobes short-triangular, about 2.5 mm. long [6. rosea](#)
- 10 Calyx-lobes subulate, 0.5 mm. broad; corolla about 3 cm. long, densely pilose with spreading pink hairs; leaves cordate to cuneate at base, ovate-elliptic, 10-13 cm. long, 4-6.5 cm. broad, pubescent beneath on the 9-12 pairs of lateral nerves; branchlets spreading-pilose [7. cordata](#)
- Calyx-lobes linear, 2 mm. broad; corolla 2 cm. long, densely appressed-pilose; leaves cuneate at base, elliptic, 8-10 cm. long, 3-4.5 cm. broad, pilose all over lower surface, lateral nerves about 12 pairs; branchlets appressed-pilose, becoming subglabrous [10. liberica](#)
- 11 Stout, erect, shrub; stipules free, foliaceous (3-) 7 cm. long, (1-) 4 cm. broad; leaves oblanceolate, long-cuneate to base, 20-50 cm. long, 8-20 cm. broad 24. gigantistipula Climbing shrubs:..... [12c136fn1_12](#)
- Inflorescences lax, not distinctly surrounded by bracts: 13
- Inflorescences close, usually globose, surrounded by distinct bracts: 14
- 13 Flowers in small cymes, 2-3 cm. long, with about 2 small often reflexed bracts at base; corolla 9-10 mm. long; calyx-lobes about 3 mm. long; leaves oblong-elliptic to ovate, acutely acuminate, rounded to subcordate at base, 8-10 cm. long, 4-5 cm. broad, distinctly setulose above [12. venosa](#)
- Flowers in large cymes, up to 20 cm. long, with numerous bracteoles; corolla about 4 mm. long; calyx-lobes about 2 mm. long; leaves oblong-elliptic to elliptic, acute to acuminate, cuneate to subcordate at base, 10-15 cm. long, 5-7 cm. broad, almost glabrous above except on nerves [13. floribunda](#)
- 14 Flower-heads long-pedunculate, (2-) 4-8 cm. long:..... 15
- Flower-heads sessile or shortly pedunculate (with peduncle up to 1 cm. long):..... 19
- 15 Peduncles glabrous; calyx-lobes 5-8 mm. broad, foliaceous, ovate; ovary glabrous; corolla-lobes pubescent, tube glabrous; leaves oblong-elliptic, acutely acuminate, rounded to cordate at base, 5-8 cm. long, 3-4 cm. broad, thinly pilose beneath, with 8-12 pairs of lateral nerves [14. calycina](#)
- Peduncles pubescent; calyx-lobes linear (narrowly lanceolate in No. 15); ovary pubescent: 16
- 16 Calyx-lobes spreading-pilose, linear, 9-12 mm. long, 1 mm. broad; (see other characters below) [20. vogelii](#)
- Calyx-lobes appressed- or sparsely-pubescent: 17
- 17 Peduncle 4-8 cm. long: 18
- Peduncle 2-2.5 cm. long; leaves oblong-elliptic, shortly cuneate at base, 6-10 cm. long, 3-4 cm. broad, pubescent only on the 10 pairs of lateral nerves; calyx campanulate, lobes linear; bracts leafy at apex [23. robbii](#)
- 18 Leaves glabrous above, ovate, 5-8 cm. long, 3-6 cm. broad, acuminate, evenly appressed-pubescent and densely so on the midrib and lateral nerves beneath; calyx-lobes linear, 1.5-2 mm. broad, 10-12 mm. long, shortly pubescent inside, ciliate on margins, pubescent along midrib outside; corolla densely pubescent .. [16. harleyae](#)
- Leaves pubescent above, narrowly elliptic, cuneate at both ends, 8-12 cm. long, 2.5-5 cm. broad, with 14-18 pairs of appressed-pubescent lateral nerves, otherwise nearly glabrous; corolla appressed-pilose . [15. schaeferi](#)
- 19 Flowers 2-4 together, sessile: 20
- Flowers numerous (at least 4) in the head: 24
- 20 Bracts an obscure cup about 1 mm. long at base of each distinct flower; calyx shortly pubescent; (see also above) [6. rosea](#)
- Bracts fused into an open or urn-shaped cup:..... 21

- 21 Bracts fused into an urn-shaped cup about 1 cm. long completely enclosing the calyx; corolla glabrous, about 2.5 cm. long; leaves obovate, 7-11 cm. long, 3-5 cm. broad, hispid on both sides, with about 15 pairs of arching lateral nerves [11. urceolata](#)
- Bracts forming an open involucre cup; corolla densely pilose; 22
- 22 Branchlets and leaves on both surfaces spreading-pilose: 23
- Branchlets shortly and densely pubescent; leaves glabrous above except the nerves, pubescent on the nerves beneath [5. bracteolata](#)
- 23 Leaves shortly and abruptly acuminate, cuneate at base, ovate to obovate, 7-11 cm. long, 4-6 cm. broad, shortly pilose above and on midrib and nerves beneath, with 9 pairs of lateral nerves; calyx-lobes long-triangular, 4-5 mm. long, tube densely pilose at base; involucre about 7 mm. diam.; stipules ovate about 7 mm. long and broad [8. sp. nr. cordata](#)
- Leaves long-acuminate at apex, cuneate to rounded at base, elliptic to oblanceolate, 10-17 cm. long, 3-7 cm. broad spreading-pilose above and on the midrib and nerves beneath, with about 11 pairs of lateral nerves; calyx-lobes linear, 10 mm. long, densely pilose; involucre about 1.5 cm. diam.; stipules broadly ovate, up to 12 mm. long and broad [9. neglecta](#)
- 24 Bracts usually obscure except when young, reflexed beneath the globose inflorescence, ovate-lanceolate about 1 cm. long; corolla-lobes pubescent, tube glabrous; calyx-lobes linear, 9-12 mm. long, 1 mm. broad; leaves ovate, about 8 cm. long and 4 cm. broad, thinly pilose; petioles up to 1 cm. long [20. vogelii](#)
- Bracts conspicuous at all stages of inflorescence; most of corolla pubescent: 25
- 25 Inflorescences aggregated near ends of shoots, compact; 1 cm. diam.; bracts ovate, about 1 cm. long; leaves ovate-elliptic, acuminate, 8-9 cm. long, 3.5-4 cm. broad, scabrid above, sparingly pubescent beneath [22. talbotii](#)
- Inflorescences axillary, not specially towards ends of shoots: 26
- 26 Bracts ovate to ovate-lanceolate, up to 1.5 cm. long and at most 1 cm. broad at base; leaves ovate 6-9 (-12) cm. long, 3-5 cm. broad, long-cuneate to acute at apex, rounded at base, rather densely pubescent on both sides; petiole about 1 cm. long [21. brevipes](#)
- Bracts very broadly ovate, broadest above the base, up to 2 cm. broad, enclosing the inflorescences: 27
- 27 Petioles 3-6 cm. long; leaves obovate to ovate-elliptic, 9-17 cm. long; 5-9 cm. broad, with 12-15 pairs of lateral nerves, acute or shortly acuminate at apex, often long-cuneate at base, glabrous or shortly pubescent above, pubescent beneath; in lowland forest [17. gabonica](#)
- Petioles about 1 cm. long; leaves elliptic to ovate-elliptic, 4-11 cm. long, 2-7 cm. broad, with about 13 pairs of lateral nerves, acute or shortly acuminate at apex, rounded to cuneate at base, pubescent above and often densely so beneath; upland species [18. efulensis](#)
- 28 Flowers in a loose shortly pedunculate cyme; leaves oblong or ovate-elliptic, acutely acuminate, 6-9 cm. long, 3-4.5 cm. broad, shortly pilose above, with 12-18 pairs of lateral nerves; stipules ovate, about 7 mm. long; corolla appressed-pubescent outside, 1 cm. long [26. discolor](#)
- Flowers in a compact head or solitary (then also with creeping habit); involucre of bracts usually conspicuous: 29
- 29 The flowers solitary or a few together; creeping and with erect stems up to 15 cm. high; lower leaves markedly smaller than upper, normal leaves about 9 cm. long and 5 cm. broad, appressed-pilose above; stipules 8-14 cm. long, margins densely brown-pilose [27. medusula](#)
- The flowers numerous; climbing or erect shrubs: 30
- 30 Stipules very large, about 30 mm. long and broad, enclosing sessile inflorescence in urn-shaped fused bracts 2-3 cm. long; leaves lanceolate-elliptic or broadly oblanceolate, subacute at apex, 10-15 cm. long, 4-7 cm. broad, glabrous above, margins and petioles ciliate; erect shrub [25. africana](#)
- Stipules 5-20 mm. long (when over 10 mm. long then inflorescence pedunculate):
- 31 Bracts fused into a sessile urn-shaped involucre enclosing the flowers; stipules about 5 mm. long; leaves broadly lanceolate to obovate or elliptic, acute, 10-15 cm. long, 4-7 cm. broad, with about 11 pairs of distinct lateral nerves; erect shrub [28. elliptica](#)
- Bracts not fused into urn-shaped involucre; climbers: 32
- 32 Flowers pedicellate in the heads; leaves ovate-elliptic, acutely acuminate, 8-13 cm. long, 4-6 cm. broad: 33
- Flowers sessile or subsessile in the head: 34
- 33 Calyx-lobes 5-6 mm. long, narrowly lanceolate, spreading, ciliate; pedicels about 6 mm. long; leaves with up to 20 pairs of lateral nerves; corolla a little longer than the calyx, pubescent on lobes outside [29. johnstonii](#)
- Calyx-lobes 1.5-2.5 mm. long, narrowly triangular, reflexed against ovary, woolly outside; pedicels about 6 mm. long, up to 13 mm. long in fruit; leaves with about 10 pairs of lateral nerves; corolla much longer than the calyx, pubescent on lobes outside [30. pedicellata](#)
- 34 Heads sessile or subsessile: 35
- Head pedunculate, peduncle 4-10 cm. long: 37

- 35** Leaves yellow rusty-brown beneath; (see other characters below) [33. ferruginea](#)
 Leaves white or greyish-brown beneath: **36**
- 36** Calyx-lobes lanceolate, acute, more or less brown appressed-pubescent, about 3 mm. long; inflorescences sessile or with peduncle up to 1.5 cm. long; leaves ovate-elliptic to oblanceolate, 5-15 cm. long, 2-8 cm. broad, subglabrous above, greyish-brown beneath [31. capitellata](#)
 Calyx-lobes markedly acuminate from ovate base, densely clothed with long white hairs, about 7 mm. long; inflorescences sessile; leaves ovate to obovate, rounded to subcordate at base, 5-12 cm. long, 3-5 cm. broad, rather densely pubescent above, white beneath (at least when young) [32. arachnoidea](#)
- 37** Leaves yellow rusty-brown beneath, broadly ovate subcordate to rounded or subacute at base, 10-15 cm. long, 5-11 cm. broad, sparsely hairy above; stipules broadly ovate, 1-1.5 (-2) cm. long, striate; inflorescences 3-5 cm. diam.; calyx-lobes filiform, about 1 cm. long [33. ferruginea](#)
 Leaves grey or light brownish beneath, elliptical, subacute at both ends, 8-12 cm. long, 4-6.5 cm. broad, glabrous or loosely woolly above when young; calyx-lobes oblong, 4 mm. long [34. lanuginosa](#)

1. *Sabicea speciosa* K. Schum. in Engl. Bot. Jahrb. 23: 429 (1896); Wernham Monogr. Sabicea 44 (1914). *APD acc*

Slender climbing shrub; flowers densely pink-hairy, in dense clusters.

Togo Rep.: Büttner 263. **S. Nig.:** Oban Talbot 1040. Afi River F. R., Ogoja Prov. (May) Jones & Onochie FHI 18906! 18936! [**Br.**] **Cam.:** Victoria Winkler 27. Barombi (Nov.) Preuss 150! Abonando Rudatis 57! Lakka, Bamenda, 4,000 ft. (June) Maitland 1569!

Also in **Cameroun**.

2. *Sabicea pilosa* Hiern in F.T.A. 3: 76 (1877); Wernham l.c. 61. *APD acc*

A creeping and climbing shrub up to 10 ft. or more high, flowering on the fairly stout older stems which root at the nodes; flowers pink.

[**Br.**] **Cam.:** Barombi Preuss 15; 278.

Also in **Cameroun** and **Gabon**.

[Vigne FH 2807 (Simpa, Ghana) and Aké Assi 2830 (Gabo to Gaouri, Iv.C.) are closely allied but have narrow calyx-lobes and sparsely pilose corolla.-F.N.H.]

3. *Sabicea xanthotricha* Wernham in Cat. Talb. 42, t. 11, 1-4 (1913), and Monogr. Sabicea 28. *APD acc*

Hairy erect shrub with fascicles of flowers on older branches.

S. Nig.: Oban Talbot 249! 251!

4. *Sabicea urbaniana* Wernham Monogr. Sabicea 28 (1914). *APD acc*

Undershrub up to 8 ft. high; flowers white, densely clustered on older wood.

F. Po: Musola, 1,950-3,900 ft., Mildbr. 7041.

[This specimen was apparently destroyed in Berlin and the species needs to be re-collected. It appears to be a shrub 8 ft. high and not up to 70 ft. as stated in F.W.T.A., ed. 1.]

5. *Sabicea bracteolata* Wernham l.c. 73 (1914). *APD acc*

Sabicea aff. segregata of Chev. Bot. 316, partly (Chev. 12390).

A shrub, the branchlets densely rusty-tomentose when young; flowers densely silky-pubescent outside, solitary.

Guin.: Labé (Apr.) Chev. 12367! 12390! Pita Adam 11651!

[Vigne FH 4841 from Tarkwa, Ghana, has filiform calyx-lobes about 1 cm. long.-F.N.H.]

6. *Sabicea rosea* A. C. Hoyle in Kew Bull. 1935: 264. *APD acc*

Slender scrambling or climbing shrub; flowers red, very hairy; in forest.

IV. C.: Yapo (Dec.) Aké Assi 3889! Gouro to Gouékangouiné Chev. 21397! Taï (Mar.) Leeuwenberg 3013! **Ghana:** Boinsu (Dec.) Vigne FH 3190! Axim (fr. Feb.) Irvine 2376! **S. Nig.:** Omo (formerly part Shasha) F.R. (fl. & fr. Apr.) Jones & Onochie FHI 17279!

7. **Sabicea cordata** Hutch. & Dalz. F.W.T.A., ed. 1, 2: 106 (1931). *APD acc*

Slender climbing shrub up to 10 ft. high; flowers scarlet, densely hairy, fruits red; in secondary deciduous forest.

IV. C.: Daoukrou to Morénou (Dec.) Chev. 22499! **Ghana:** Mampong Scarp (Apr.) Dalz. 54! Nsuta (fl. & fr. May) Vigne FH 1738! Abetifi (Jan.) Irvine 1691a! Odomi River F.R., Hohoe Dist. (Oct.) St. C. Thompson 1569!

8. **Sabicea sp. nr. cordata** Hutch. & Dalz. l.c. (1931). *APD acc*

Climbing shrub.

S. Nig.: Iagos Batten Poole 1!

[This is probably a form of *S. cordata* with short calyx-lobes like those of *S. bracteolata*.]

9. **Sabicea neglecta** Hepper in Kew Bull. 14: 255 (1960). *APD acc*

Climbing shrub; flowers red; in forest.

S. Nig.: Oban F.R. (May) Ujor FHI 30836!

10. **Sabicea liberica** Hepper in Kew Bull. 13: 293, fig. 1 (1968). *APD acc*

A climbing shrub; flowers pink, fruits red.

Lib.: Moala (Nov.) Linder 1380! Bahtown, Tchien Dist. (fr. Aug.) Baldwin 8030!

11. **Sabicea urceolata** Hepper in Kew Bull. l.c., fig. 4 (1968). *APD acc*

Slender climbing shrub about 4 ft. high; flowers white, bracts green sometimes tipped pink; in secondary forest.

S. Nig.: Okomu F.R., Benin (Feb.) Brenan 9032! Oban F.R. (Feb.) Onochie FHI 36325! **F. Po:** Musola (Jan.) Guinea 1053!

12. **Sabicea venosa** Benth. in Fl. Nigrit. 399 (1849); Wernham l.c. 32; Chev. Bot. 317. *APD acc*

Sabicea discolor of Chev. Bot. 316 (Chev. 17493), not of Stapf.

Sabicea schumanniana of Wernham l.c. 42, partly; of Aké Assi Contrib. 1: 151, not of Büttner.

A climbing shrub with branchlets pubescent or subglabrous; flowers whitish, fruits red.

Port. G.: Bissau (Mar.) Esp. Santo 1876! Fulacunda (fr. July) Esp. Santo 2105! **Guin.:** Karkandy Heudelot 821! Timbo to Conakry (fr. July) Pobéguin 770! Timbo Chev. 12423! **S. L.:** Hill Station Smythe 58! Sulimania (Mar.) Sc. Elliot 5276! Mabum (fr. Aug.) Thomas 1616! Njala (fr. May) Deighton 2518! **Lib.:** Yratoke, Webo Dist. (fr. July) Baldwin 6257! **IV. Miles 7! **[Br.] Cam.:** Buea (fl. Apr., fr. July) Maitland 32! Hutch. & Metcalfe 95!

Also in **Cameroun**, and **the Congos**.

13. **Sabicea floribunda** K. Schum. in Engl. Bot. Jahrb. 23: 428 (1897); Wernham l.c. 72. *APD acc*

Slender climbing shrub; flowers white or greenish-white, fruit whitish.

S. Nig.: Oban Talbot 228! New Ndebiji, Calabar (Apr.) Ejiofor FHI 21883!

Also in **Cameroun**, **Gabon** and **the Congos**.

14. **Sabicea calycina** Benth. in Fl. Nigrit. 399 (1840); F.T.A. 3: 76; Wernham l.c. 63; Chev. Bot. 316. *APD acc*

Sabicea barteri Wernham l.c. 64, t. 11, 5-7 (1914).

Slender climbing shrub, sometimes creeping; flowers white, calyx and stipules pinkish, fruits red; **in thickets chiefly in transitional savanna to forest regions.**

S. L.: Njala (May) Deighton 4765! Kasewe Hills F.R. (June) Deighton 5829! Bumbuna (fr. Oct.) Thomas 3338! **Lib.:** Cess River, Tchien Dist. (fr. Aug.) Baldwin 9021! **Iv. C.:** Alépé Chev. 17421! Indenié Chev. 17667! Sanvi Chev. 17722! Danané (fl. & fr. June) Collenette 46! **Ghana:** Dajon, near Axim (fl. & fr. Apr.) Chipp 167! Amentia Irvine 514! Nsuta (ft. May) Vigne FH 1742! (fr. July) Ujor FHI 30476! **F. Po:** Clarence Peak (Oct.) T. Vogel 35! Las Corteras (Jan.) Guinea 2072! Musola (Jan.) Guinea 973!

Also in **Cameroun**, **Gabon** and **Congo**.

15. *Sabicea schaeferi* Wernham l.c. 59 (1914). *APD acc*

Slender climbing shrub up to 12 ft. high; flowers white, buds pink.

F. Po: Moka (Jan.) Guinea 2241! L. Blao (Sept.) Wrigley 656!

Also in **Cameroun**.

16. *Sabicea harleyae* Hepper in Kew Bull. 13: 292, fig. 3 (1958). *APD acc*

A slender climbing shrub; flowers white, bracts and calyx-lobes pinkish.

S. L.: Kambui Hills (May) Bakshi 186! **Lib.:** Ganta (May) Harley 1167! s.n.!

17. *Sabicea gabonica* (Hiern) Hepper l.c.(1958). *APD acc*

***Stipularia gabonica* Hiern** in F.T.A. 3: 80 (1877).

A slender climbing shrub in **forest**.

S. Nig.: Okomu F.R., Benin (fr. Dec., Feb.) Brenan 8410! 8997! **[Br.] Cam.:** Mamfe (fr. Jan.) Maitland 1161! S. Bakundu F.R., Kumba (fr. Jan.) Binuyo & Daramola FHI 35067!

Also in **Gabon**.

18. *Sabicea efulenensis* (Hutch.) Hepper l.c. (1958).

***APD:* *Synonym of Sabicea gabonica* (Hiern) Hepper**

***Stipularia efulenensis* Hutch.** in Kew Bull. 1908: 291.

***Sabicea tchapensis* K. Krause** (1912), and var. *glabrescens* Wernham l.c. 59 (1914).

Climbing shrub up to 15 ft. high; fruits red; **upland forest margins and stream sides.**

S. Nig.: Sonkwala, Obudu Div. (Dec.) Savory & Keay FHI 25217! **[Br.] Cam.:** Bamenda (Jan., Apr.) Migeod 433! Maitland 1706! Daramola FHI 40615! Mambila Plateau (Jan.) Hepper 1800! 2807! Vogel Peak, Adamawa (Nov.) Hepper 1439!

Also in **Cameroun**.

19. *Sabicea geophiloides* Wernham in Cat. Talb. 41 (1913), and Monogr. Sabicea 60. *APD acc*

Prostrate herb with long reddish stems giving rise to erect leafy shoots; flowers white, calyx lobes pink, fruits red; **on stream banks in forest.**

Ghana: Kumasi (Apr.) Piening 2345! Mpraeso Scarp (Apr.) Morton A707! **S. Nig.:** Sapoba Kennedy 1098! Ibadan North F.R. (fl. & fr. June) Jones FHI 3643! Olokemeji F.R. (June) Jones & Keay FHI 18813! Oban Talbot 255! **[Br.] Cam.:** Abonando Rudatis 44!

20. *Sabicea vogelii* Benth. in Fl. Nigrit. 398 (1849); F.T.A. 3: 76; Wernham Monogr. Sabicea 43; Chev. Bot. 317. *APD acc*

***Sabicea globifera* Hutch. & Dalz., F.W.T.A., ed. 1, 2: 106 (1931).**

Slender climbing shrub; flowers white or pale pink.

Guin.: Labé Chev. 12348! Diaguissa Chev. 12687! Nimba Mts. (Nov.) de Wilde 873! **S. L.:** Kumrabai (Jan.) Thomas 6855! Kenema (Apr.) Lane-Poole 227! Yonibana to Moyamba (Apr.) Deighton 6049! Bintumane (fr. Aug.) Jaeger 1058!

21. *Sabicea brevipes* Wernham l.c. 58 (1914). *APD acc*

APD: Synonym of Sabicea solitaria J.B. Hall

Climbing or erect shrub 3 or 4 ft. high; flowers white or mauvish, fruits and calyx red.

Iv. C.: Yapo (Aug.) Aké Assi 3122! **Ghana:** Volta River F.R. (Oct.) Morton GC 6069! Kpeve (May) Darko 567! Trawa (Jan.) Vigne FH 4396! **N. Nig.:** Gawu Hills, Niger Prov. (Aug.) Onochie FHI 35931! 22. *Sabicea talbotii* Wernham in Cat. Talb. 43 (1913), and Monogr. Sabicea 66. *APD acc*

S. Nig.: Oban Talbot 259!

23. *Sabicea robbii* Wernham Monogr. Sabicea 69, t. 10, 1-2 (1914).

APD: Synonym of Sabicea duparquetiana var. robbianella N. Hallé

APD: Synonym of Sabicea duparquetiana Baill. ex Wernham var. duparquetiana

A (? climbing) shrub 10-15 ft. high; flowers whitish.

S. Nig.: Calabar Robb!

Also in **Gabon**.

24. *Sabicea gigantistipula* K. Schum. in Engl. Bot. Jahrb. 33: 337 (1903), as *S. gigantostipula*; Wernham l.c. 27. *APD acc*

Erect shrub 10 ft. high, soft-wooded and with large leaves; **in forest**.

S. Nig.: Oban Talbot 259! s.n.! **F. Po:** Mt. Balen Guinea 427! El Pico, 3,000 ft. (Dec.) Boughey 192!

Also in **Cameroun**.

25. *Sabicea africana* (P. Beauv.) Hepper in Kew Bull. 13: 292 (1958). *APD acc*

Stipularia africana P. Beauv. (1807)-F.T.A. 2: 80; F.W.T.A., ed. 1, 2: 108; Chev. Bot. 317.

Soft-stemmed shrub 3-8 ft. high; flowers white, involucre reddish, fruits red; **in swamps and wet places**.

S. L.: Lusenya Sc. Elliot 4077! Samuel Town (Dec.) Deighton 3306! Bagroo R. (Apr.) Mann 877! Mano Bonjema Deighton 3708! **Lib.:** Paynesville (Apr.) Bequaert 165! Duport (Nov.) Linder 1482! Also in **Cameroun**, **Gabon** and **Congo**.

26. *Sabicea discolor* Stapf in J. Linn. Soc. 37: 105 (1905); Wernham l.c. 35. *APD acc*

Sabicea loxothyrsus K. Schum. & Dinkl. ex Stapf (1906).

Sabicea discolor var. **β laxothyrsa** Wernham l.c. (1914).

Climbing shrub with leaves white beneath; flowers pink or white.

S. L.: Njala (May, Sept.) Deighton 2125! 4766! Mayaso (Aug.) Thomas 1381! Falaba (Apr.) Aylmer 31! **Lib.:** Monrovia Whyte! Grand Bassa (May) Dinklage 1903! Ganta Harley 425! Brewersville (fr. June) Barker 1329! **Iv. C.:** Abidjan Chev. 15343! Borobo Chev. 17664! **Ghana:** Akwapim (Mar.) Murphy 679! Essiama (fr. Apr.) Williams 433! Kumasi (Mar.) Vigne FH 1642! Tarkwa (Jan.) Vigne FH 4118!

27. *Sabicea medusula* K. Schum. ex Wernham l.c. 44, t. 6, 1-3 (1914). *APD acc*

Creeping herb about 6 ins. high, leaves white-felted beneath; fruits white; **in high forest**.

[Br.] Cam.: Mamfe (fr. Mar.) Coombe 198! 237!

Also in Cameroun.

28. *Sabicea elliptica* (Schweinf. ex Hiern) Hepper in Kew Bull. 13: 292 (1958). *APD acc*

Stipularia elliptica Schweinf. ex Hiern in F.T.A. 3: 80 (1877); F.W.T.A., ed. 1, 2: 108.

Soft-stemmed shrub about 4 ft. high, with quadrangular branches, hoary on the young parts and underleaf; flowers white, enclosed in an urn-shaped involucre of red-tinged bracts; in wet places.

S. Nig.: Onitsha Barter 166!

Also in Sudan.

29. *Sabicea johnstonii* K. Schum. ex Wernham l.c. 69 (1914). *APD acc*

A climbing shrub up to 10 ft. high, with leaves pale tomentose beneath; flower whitish.

S. Nig.: Ologbo Kennedy 2103! Ulasi, Onitsha Prov. (Mar.) Brenan 9204! Calabar (fr. Mar.) Holland 95! Brenan 9217! Eket Taltob! Cross R. Johnston!

Also in Congo.

30. *Sabicea pedicellata* Wernham in Cat. Talb. 42 (1913), and Monogr. Sabicea 67.

APD: *Synonym of Pseudosabicea pedicellata* (Wernham) N. Hallé

Climbing shrub; fruits red.

S. Nig.: Oban (Mar.) Talbot 1367! 2033. Onochie FHI 36477x! Afi River F.R., Ogoja Prov. (fr. May) Jones & Onochie FHI 18940! Boshi-Okwangwo F.R., Obudu Dist. (fr. May) Latilo FHI 30945! [Br.] Cam.: Kumba to Mamfe (Jan.) Keay FHI 28556!

31. *Sabicea capitellata* Benth. in Fl. Nigrit. 398 (1849); Wernham Monogr. Sabicea 65. *APD acc*

Sabicea brunnea Wernham l.c. (1914).

A climbing shrub with rufo-pilose branchlets; flowers pinkish-brown; fruits red, yielding a red juice, with stiff grey hairs.

S. Nig.: Oban F.R. (fr. Jan.) Onochie FHI 36101x! Okuni and Ikom Holland 262! [Br.] Cam.: S. Bakundu F.R. (fr. Mar.) Brenan 9299! Kembong F.R. (fl. & fr. Mar.) Richards 5210! Ikom to Mamfe (Mar.) Onochie FHI 30894! F. Po: Mann 41! T. Vogel 88!

Also in Cameroun, Gabon, Congo and S. Tomé.

32. *Sabicea arachnoidea* Hutch. & Dalz. F.W.T.A., ed. 1, 2: 106 (1931). *APD acc*

A rather slender-branched pubescent climber with pale underleaf; flowers in woolly heads.

S. L.: Roruks (Nov.) Thomas 5703! Yonibana (Nov.) Thomas 5062! 5275!

33. *Sabicea ferruginea* (G. Don) Benth. in Fl. Nigrit. 397 (1849); F.T.A. 3: 75; Wernham Monogr. Sabicea 60. *APD acc*

Cephaelis ferruginea G. Don (1834).

Sabicea lasiocalyx Stapf (1905)-F.W.T.A., ed. 1, 2: 107.

Sabicea ferruginea var. *lasiocalyx* (Stapf) Wernham l.c. (1914).

Sabicea salmonea A. Chev. Bot. 316, name only.

A climbing shrub with fairly large rusty-tomentose leaves.

S. L.: Don! Jigaya (fr. Sept.) Thomas 2842! Bagroo R. Mann 862! Jaiama (Apr.) Deighton 3161! Lib.: Tappita (fr. Aug.) Baldwin 9072! Monrovia Whyte! Banga Linder 1193! Dukwia R. (May) Cooper 459! Iv. C.: Guébo Chev. 17031! Alépé Chev. 17418! Mamba (ft. Oct.) Aké Assi 287! Gouék-angouiné (May) Chev. 21452! Lamé (Nov.) Leeuwenberg 1898! Ghana: Assin Juaso West-Skinn 24!

[Specimens from Sierra Leone and Liberia have pedunculate inflorescences while those from Ivory Coast and Ghana have them sessile.]

34. *Sabicea lanuginosa* Wernham l.c. 67, t. 9, 1-3 (1914). *APD acc*

A climbing shrub up to 12 ft. high; flowers white; in mangrove swamps and swamp forest.

S. Nig.: Lagos Millen 68! Hagerup 808! Ikoyi Plains Dalz. 1377! Apapa (Nov.) Keay & Savory FHI 22451!

50. TEMNOCALYX

Robyns in Bull. Jard. Bot. Brux. 11: 23, 317 (1928).

- 1 Branches glabrous, with rather long internodes; leaves in whorls of three, obovate, shortly and bluntly pointed, 3-5 cm. long, 2-3 cm. broad, glabrous, with about 4 pairs of lateral nerves; flowers supra-axillary, paired; pedicels 1 cm. long; calyx truncate, rim-like; corolla-tube curved, 1.5-2 cm. long; anthers partly exerted; stigma, long-exserted, short and cylindric-capitate; ovary 5-celled; fruit globose [obovatus](#)

Temnocalyx obovatus (N. E. Br.) Robyns l.c. 320, figs. 31, 32 (1928).

APD: *Synonym of Fadogia ancylantha Schweinf.*

Fadogia obovata N.E. Br. in Kew Bull. 1906: 105.

An undershrub sometimes in clumps, 2-3 ft. high, with 3-angled slightly pubescent stems; flowers greenish with darker apex, solitary or a few together in the axils.

N. Nig.: Kontagora Prov. (June) Dalz. 554! Naraguta, Jos Plateau (June) Lely 326!

Extends in savanna regions to E. Africa and south to S. Rhodesia.

51. HUTCHINSONIA

Robyns in Bull. Jard. Bot. Brux. 11: 24 (1928).

- 1 Branchlets covered with long slender spirally twisted hairs; leaves ovate-oblong or oblong-elliptic, slightly cordate at base, acuminate, 3.5-6 cm. long, 1.5-2 cm. broad, laxly pilose on both surfaces with setose hairs, with 5-6 pairs of lateral nerves; stipules linear from a broad base, 3-5 mm. long; flowers solitary, axillary; pedicels 3-4 mm. long, setose; calyx-lobes filiform, 2.5-3 mm. long; corolla cylindric, tube 2.3 cm. long, lobes ovate, with long ciliate tails; ovary 3-4-celled [1. barbata](#)

Branchlets nearly glabrous; leaves ovate-oblong or oblong-elliptic, slightly cordate at base, gradually acuminate, 3.5-5.5 cm. long, 1.3-2 cm. broad, glabrous except the midrib and the axils of the nerves; lateral nerves about 6 pairs; stipules linear-subulate from a broad base, 5 mm. long, sparingly ciliate; flowers axillary or terminal; pedicels 4 mm. long; calyx-lobes linear, 2.5-3 mm. long; corolla-tube 2.2 cm. long, lobes narrowly triangular, appendiculate; ovary 3-celled [2. glabrescens](#)

1. *Hutchinsonia barbata* Robyns l.c. 25, figs. 5 & 6 (1928). *APD acc*

A straggling shrub up to 10 ft. high with occasional spines on the lower stems; flowers yellow or orange; undershrub in forest.

Guin.: Kolamba, Gueckedou Adam 5773! **S. L.:** Kambui F.R. (Feb.) Lane-Poole 341! Small 864! Nongowa Forest, Kenema (fl. & fr. Mar.) Jordan 1007! Baiima (May) Deighton 5773! Makump (May) Deighton 1716! Gola F.R. (Apr.) Small 604! **Lib.:** Peahtah (Dec.) Baldwin 10605! Kitoma (Feb.) Adam 16648! **iv. C.:** confluence of R. Davo and R. Sassandra (May) Chev. 17954!

2. *Hutchinsonia glabrescens* Robyns l.c. 28 (1928). *APD acc*

A straggling shrub up to 6 ft. high; flowers yellow or orange.

Lib.: Monrovia (July) Linder 40! at the mouth of Since R. (Dec.) Dinklage 2144! Tappita (Aug.) Baldwin 9109!

52. ROBYNSIA

Hutch. F.W.T.A., ed. 1, 2: 108 (1931). Nom. cons.

- 1 Branchlets shortly pubescent; stipules with a long tail about 2 cm. long, the sheath at the base villous within; leaves elliptic, subcordate at the base, acuminate, 10-14 cm. long, 5-6 cm. broad, nearly glabrous beneath, lateral nerves about 8 pairs; petiole up to 1 cm. long, pubescent; cymes axillary, shortly pedunculate, many-flowered; bracts linear, 1-1.5 cm. long; calyx-lobes linear, 1 cm. long, pubescent; corolla long-tubular, 2 cm. long, pubescent, lobes broadly linear; style exserted for 1 cm.; fruit globose [glabrata](#)

Robynsia glabrata *Hutch.* l.c. (1931); Hepper in Kew Bull. 16: 157 (1962). *APD acc*

Cuviera bolo *Aubrév. & Pellegr.* in Bull. Soc. Bot. Fr. 83: 38 (1936); Aubrév. Fl. For. C. Iv., ed. 2, 3: 300; N. Hallé in Bull. Soc. Bot. Fr. 106: 346.

A shrub or tree 40-60 ft. high with a drooping crown; flowers greenish-white.

Iv. C.: Mudjika (fr. Aug.) Aubrév. 1798! **Ghana:** Amumuniso to Enchi (fl. & fr. May) Enti FH 6707! Mim, Ashanti (fl. & fr. June) Andoh FH 5512! **S. Nig.:** Sapoba Kennedy 177! 2552!

53. CUVIERA

DC.-F.T.A. 3: 156. Nom. cons.

- 1 Style pubescent; ovary 5-locular:2
Style glabrous; ovary (1-) 2-5-locular:4
- 2 Bracteoles ovate-lanceolate to linear-lanceolate, 1.5-4 cm. long, 4-8 mm. broad; calyx-lobes 5, linear to oblanceolate, 1-1.5 cm. long, 2.5-4 mm. broad; leaves oblong to oblong-elliptic, 15-27 cm. long, 5-10 cm. broad, with about 10 pairs of lateral nerves, subcordate or upper ones cuneate at base [1. longiflora](#)
Bracteoles and calyx-lobes subulate to linear, 1-2 (-4) mm. broad:3
- 3 Calyx-lobes and bracteoles subulate, about 1 cm. long and 1 mm. broad; inflorescences congested; leaves oblong-elliptic to narrowly oblong, 18-20 cm. long, 3-6 cm. broad, with 6-8 pairs of lateral nerves, cuneate to rounded or rarely subcordate at base [2. macroua](#)
Calyx-lobes and bracteoles linear, 2-4 cm. long, 2 (-4) mm. broad; inflorescences branched; leaves oblong, 20-35 cm. long, 6-8 cm. broad, subcordate at base [3. subuliflora](#)
- 4 Calyx-lobes spatulate, 1 cm. long; ovary 3-celled; leaves oblong to oblong-elliptic, broadly acuminate at apex, rounded at base, about 15 cm. long and 5 cm. broad, with about 8 pairs of lateral nerves; petiole 1 cm. long; flowers few in a small cyme; corolla glabrous; fruits obliquely ellipsoid, ribbed, 3 cm. long [4. trilocularis](#)
Calyx-lobes never spatulate:5
- 5 Calyx truncate or calyx-lobes 1-5, unequal; bracteoles oblanceolate, 3.5-4 cm. long; leaves oblong, about 25 cm. long and 10 cm. broad, coriaceous [5. truncata](#)
Calyx-lobes 5, equal, calyx never truncate:6
- 6 Corolla glabrous; inflorescences much-branched paniculate cymes:7
Corolla sparsely pilose; leaves not coriaceous, elliptic, 6-12 cm. long, 2.5-5.5 cm. broad, long-apiculate at apex:8
- 7 Ovary and fruit 5-locular; calyx-lobes linear-lanceolate, about 10 mm. long, 1-2 mm. broad; bracteoles similar, 1.5-2.5 cm. long, 2-3 mm. broad; leaves coriaceous, oblong, 12-20 cm. long, 4-9.5 cm. broad, shortly acuminate at apex, rounded to subcordate at base [6. acutiflora](#)
Ovary and fruit (1-) 2-locular; calyx-lobes lanceolate, acute, 5 mm. long, 1.5 mm. broad at base; bracteoles similar, about 1 cm. long; leaves hardly coriaceous, oblong to lanceolate, 11-14 cm. long, 3.5-7 cm. broad, acuminate at apex, cuneate to rounded at base [7. sp. A](#)
- 8 Calyx-lobes lanceolate, long-attenuate at apex, longer than corolla, about 2 cm. long and 6 mm. broad at base [8. calycosa](#)
Calyx-lobes narrowly oblong-elliptic, acute at apex, shorter than corolla, about 8 mm. long and 3 mm. broad [9. nigrescens](#)

1. **Cuviera longiflora** *Hiern* in F.T.A. 3: 157 (1877); Hepper in Kew Bull. 16: 453 (1963). *APD acc*

Cuviera angolensis *Welw. ex Hiern* (1898).

A small glabrous tree up to 30 ft. high, with arching branches usually infested with ants; flowers green, with pale yellowish bracts; **in montane forest**.

[Br.] Cam.: Cam. Mt., 2,000-3,200 ft. (Dec.-Jan.) Mann 1211! Maitland 1212! Bafut-Ngemba F.R. (Mar.) Richards 5307! Tiku FHI 22247! Bali-Ngemba F.R., 6,500 ft. (June) Ujor FHI 30415! Lakom, 6,000 ft., Bamenda (May) Maitland 1361! Nkambe, 3,600 ft. (Feb.) Hepper 1916!

Also in **Cameroun**, **Congo** and **Angola**.

2. **Cuviera macroura** K. Schum. in Engl. Bot. Jahrb. 33: 352 (1903). *APD acc*

Cuviera subuliflora of Chev. Bot. 331, not of Benth.

Cuviera djalonensis A. Chev. Bot. 331, name only.

A glabrous, straggling tree 20-40 ft. high; flowers white, becoming yellow, fragrant, crowded in short axillary cymes.

Guin.: Diaguissa Chev. 12417! Konkouré to Timbo Chev. 12496. Bilima Caille in Hb. Chev. 14821! **S. L.:** Binkolo (bud Aug.) Thomas 1857! Bumbuna (Oct.) Thomas 3184! Komorobai (Dec.) Thomas 6914! 3. **Cuviera subuliflora** Benth. in Fl. Nigrit. 407 (1849); F.T.A. 3: 157 (1877). *APD acc*

Cuviera plagiophylla K. Schum. (1903).

A small tree 15-25 ft. high, with horizontal branches; flowers reddish and green with yellow anthers; **at the edge of forest**.

Ghana: Kumasi (July) Vigne FH 1242! **S. Nig.:** Degema Talbot 3383! Oban Talbot 222! 2036! [Br.] Cam.: Victoria (Feb., Oct.) Maitland 417! 740! Barombi (Feb.) Binuyo & Daramola FHI 35530! **F. Po:** T. Vogel 83! Mann 87!

4. **Cuviera trilocularis** Hiern in F.T.A. 3: 157 (1877). *APD acc*

A small glabrous shrub; flowers few in axillary cymes, green, bracts greenish-white.

S. Nig.: Calabar Thomson 122! Oban Talbot 221! 272!

5. **Cuviera truncata** Hutch. & Dalz. F.W.T.A., ed. 1, 2: 118 (1931). *APD acc*

Cuviera subuliflora of Wernham in Cat. Talb. 131, not of Benth.

A scrambling shrub with occasional sharp supra-axillary spines; corolla greenish outside and orange-yellow inside, with conspicuous pale yellow-green bracts.

N. Nig.: Sanga River F.R., Jemaa Dist. (Nov.) Keay & Onochie FHI 21535! Keay FHI 37246! **S. Nig.:** Onitsha Unwin 64! Degema Talbot 3686! Oban Talbot 286! [Br.] Cam.: Gangumi, Adamawa (Dec.) Latilo & Daramola FHI 28861! Vogel Peak, Adamawa (Nov.) Hepper 1448!

[Note: most of these specimens have irregular calyx-lobes and are intermediate between true *C. truncata* (Talbot 286, 3686) and *C. acutiflora*-F.N.H.]

6. **Cuviera acutiflora** DC. Ann. Mus. Paris 9: 222, t. 15 (1807); F.T.A. 3: 156; Chev. Bot. 331; Aubrév. Fl. For. C. Iv., ed. 2, 3: 300, t. 363. *APD acc*

Vangueriopsis coriacea Robyns in Bull. Jard. Bot. Brux. 22: 319 (1952).

Shrub or small tree up to 30 ft. high with leathery shining leaves; flowers whitish-green, sometimes with a pink centre, in spreading cymes with conspicuous pale bracteoles and calyx-lobes.

Guin.: R. Lanfomé (Mar.) Pobéguin 907! **S. L.:** Leicester Peak (Dec.) Sc. Elliot 3898b! Kambui Hills (Mar.) Lane-Poole 463! Njala (Nov.) Small 808! Rokupr (Apr.) 54. FADOGIA

Schweinf.-F.T.A. 3: 152, partly; Robyns in Bull. Jard. Bot. Brux. 11: 41 (1928).

- 1 Leaves glabrous beneath except sometimes (in No. 4) on the midrib and lateral nerves:.....2
- Leaves pubescent or tomentose more or less all over the lower surface:.....5
- 2 Small tree or shrub; leaves in whorls of 3, elliptic, 4-7 cm. long, 2-4 cm. broad, glabrous, with paler conspicuous lateral nerves; flowers in dense clusters on the previous season's growth; calyx-lobes oblong-lanceolate, 2-5 mm. long; corolla 4-5 mm. long, 5-6-lobed; fruit oblique, 1 cm. long [1. erythrophloea](#)
- Perennial herbs or undershrubs:3
- 3 Calyx truncate; flowers in few-flowered cymes without bracteoles or solitary; pedicels about 1 cm. long; corolla 5-6 mm. long, glabrous; leaves usually in threes, elliptic-lanceolate, 3-5-6 (-10) cm. long, 1-2 (-2-5) cm. broad, glabrous [2. ledermannii](#)
- Calyx toothed:4
- 4 Branchlets glabrous; leaves paired or in threes, oblanceolate, 4-5 cm. long, about 1-5 cm. broad, closely venose beneath; flowers few, in very shortly pedunculate cymes; calyx-lobes ovate; corolla 1 cm. long, with acuminate lobes [3. andersonii](#)
- Branchlets pubescent; leaves in whorls of 3 or 4, obovate-elliptic, abruptly apiculate, subsessile, 6-8 cm. long, 3-4-5 cm. broad, setulose above, at length glabrous, setulose on the midrib beneath, glaucous-green; flowers about 3 in shortly pedunculate axillary cymes; pedicels about 3 mm. long; calyx-lobes linear-lanceolate; corolla about 8 mm. long, lobes acuminate; fruit globose [4. pobeguinii](#)
- 5 Calyx subulate-dentate:6
- Calyx with broad ovate-triangular lobes; leaves obovate, rounded at apex, subcuneate at base, 4-8 cm. long, 2-4 cm. broad, densely softly tomentose beneath; flowers several in short axillary cymes, tomentose all over; corolla about 8 mm. long [7. agrestis](#)
- 6 Leaves lanceolate, acute at both ends, 5-6 cm. long, 1-1-5 cm. broad, sparingly setulose above, softly

tomentellous beneath, with 4-5 pairs of lateral nerves; flowers in small 2-3-flowered cymes [5. *rostrata*](#)

Leaves obovate or elliptic-obovate, subacute, 3-5-8 cm. long and about 2-5 cm. broad, softly tomentellous beneath; flowers about 3 in each axillary cyme; corolla-lobes sparingly pubescent outside; fruits globose, hardly 1 cm. diam. [6. *cienkowski*](#)

1. ***Fadogia erythrophloea*** (*K. Schum. & K. Krause*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 109 (1931); Hepper in Kew Bull. 16: 453. *APD acc*

Vangueria erythrophloea *K. Schum. & K. Krause* in Engl. Bot. Jahrb. 39: 533 (1907).

V. dalzielii *Hutch.* (1913).

Fadogia djalensis *A. Chev. ex Robyns* in Bull. Jard. Bot. Brux. 11: 88 (1928); Chev. Bot. 331, name only.

Fadogia cinerascens *Robyns* l.c. (1928).

Fadogia leucophloea var. *djalensis* *Aubrév.* Fl. For. Soud.-Guin. 480, name only.

Shrub or small tree 4-19 ft. high, with the younger branches grey, the bark later flaking and becoming red; flowers yellow-green or white, usually on leafless branches; [in savanna woodland](#).

Mali: Kobale Chev. 334! **Guin.:** Bissikrima (June) Pobéguin 801! Kankan Chev. 572! Labé (fr. Apr.) Chev. 12307! Mamou to Timbo (Dec.) Chev. 14639! **S. L.:** Sc. Elliot 5159b! **Iv. Also in **Cameroun**, **Ubangi-Shari** and **Sudan**.

55. VANGUERIOPSIS

Robyns in Bull. Jard. Bot. Brux. 11: 23, 248 (1928).

- | | | |
|---|---|--------------------------------|
| 1 | Corolla glabrous outside or at most shortly puberulous: | 2 |
| | Corolla tomentose or (at least the lobes) pilose outside; branchlets pubescent or setose: | 6 |
| 2 | Young branches glabrous: | 3 |
| | Young branches pubescent or tomentose: | 5 |
| 3 | Petioles 4-6 mm. long; leaves obovate-elliptic, shortly abruptly acuminate, 10-14 cm. long, 4-5-7 cm. broad, leathery, with about 5 pairs of lateral nerves; pedicels and ovary puberulous; calyx-lobes suborbicular, conspicuous; branchlets without spines | 1. calycophila |
| | Petioles about 1 cm. long; pedicels and ovary glabrous: | 4 |
| 4 | Branchlets greenish, without spines; leaves broadly oblong-elliptic, abruptly long-acuminate, rounded at base, 10-15 cm. long, 5-7 cm. broad, with 6-7 pairs of lateral nerves; calyx-lobes 1-2 mm. long, linear-lanceolate | 2. chlorantha |
| | Branchlets grey, with sharp slightly curved spines; leaves broadly elliptic to obovate, acutely acuminate, rounded and subcordate to acute at base, 6-12 cm. long, 2-5-7 cm. broad, very thin, glabrous; calyx-lobes inconspicuous | 3. spinosa |
| 5 | Branchlets often spiny; leaves much paler beneath, broadly elliptic, abruptly and obtusely acuminate, 6-10 cm. long, 3-4 cm. broad, puberulous on the nerves beneath; cymes many-flowered; calyx-lobes broadly ovate, small; corolla 5 mm. long; fruit very oblique, 1-5 cm. long | 4. discolor |
| | Corolla-buds with long subulate apices; leaves ovate-elliptic, acutely acuminate, rounded at base, 6-12 cm. long, 3-5-7 cm. broad, pubescent only on the nerves beneath; veinlets very close and parallel beneath; fruit mostly | |

kidney-shaped, 2.5-3 cm. long 5. vanguerioides7c136fn1_7
 ...Corolla-buds not apiculate or very shortly so; leaves ovate-elliptic to lanceolate, shortly acuminate, more or less rounded at base, 8-15 cm. long, 4.5-7 cm. broad, shortly pubescent on the nerves and veins beneath, the latter close and fine; cymes laxly few-flowered, with rather large persistent bracts and broad calyx-lobes; fruit about 2.5 cm. long, 1-2-seeded6. *nigerica*

6 Corolla tomentose outside; calyx-lobes ovate, 3 mm. long:

Corolla-lobes pilose; calyx-lobes subulate, 1-5 mm. long:

Leaves ovate-oblong or elliptic, never over 5.5 cm. broad, caudate-acuminate, very thin, rather densely pilose on both surfaces; branchlets setose and with curved sharp spines; cymes subracemose, long-pilose; pedicels slender, about 5 mm. long; upper part of corolla long-pilose; calyx-lobes 3-5 mm. long, subulate 7. subulata

.....8c136fn1_8
 ...Leaves broadly ovate-rounded up to 8.5 cm. long, 6.5-7 cm. broad, abruptly and shortly acuminate, shortly pilose on the nerves beneath; branchlets with rather long spines; cymes subracemose, shortly pilose; pedicels 3 mm. long; corolla-lobes very thinly pilose; calyx-lobes 1 mm. long, subulate3. *spinosa*

1. *Vangueriopsis calycophila* (K. Schum.) Robyns in Bull. Jard. Bot. Brux. 11: 256 (1928).

APD: *Synonym of Vangueriella laxiflora* (K. Schum.) Verdc.

Electronia calycophila K. Schum. (1899). Erect or climbing shrub; flowers greenish, few in short loose cymes; in forest.

S. Nig.: Oban Talbot 246! 1657! Eket Talbot!

Also in Cameroun and Gabon.

2. *Vangueriopsis chlorantha* (K. Schum.) Robyns l.c. 255 (1928).

APD: *Synonym of Vangueriella chlorantha* (K. Schum.) Verdc.

Electronia chlorantha K. Schum. (1897).

A glabrous shrub 6-10 ft. high with smooth greenish branchlets and thorns on the bole; flowers greenish-white: in forest.

S. Nig.: Oban Talbot 1549! 1653! Aningeje to Mamfe, Calabar Dist. (ft. Apr.) Ujor FHI 31778! [Br.] Cam.: Banga, S. Bakundu F.R. (Mar.) Binuyo & Daramola FHI 35607!

Also in Cameroun.

3. *Vangueriopsis spinosa* (Schum. & Thonn.) Hepper in Kew Bull. 17: 170 (1963).

APD: *Synonym of Vangueriella spinosa* (Schumach. & Thonn.) Verdc.

Vangueriopsis leucodermis (K. Krause) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 117 (1931).

Phallaria spinosa Schum. & Thonn. Beskr. Guin. Pl. 133 (1827).

Canthium thonningii Benth. (1849)-F.T.A. 3: 134.

Chomelia leucodermis K. Krause (1909).

Vangueriopsis membranacea Robyns l.c. 271 (1928).

Vangueriopsis violacea Robyns l.c. 270 (1928).

A shrub or small tree up to 12 ft. high; flowers greenish, the corolla appearing inflated; in shady savanna woodland.

Iv. C.: Ouango-Fitini (Apr.) Mangenot & Aké Assi 4266! Ghana: Accra Plains (Jan., Apr., fr. Mar.) Irvine 207! Adams 3741! 3790! Damongo Scarp (Mar.) Hepper & Morton A3179! Akim, Ashanti (fr. Apr.) Irvine 960! Kpandu (Feb.) Robertson 108! Togo Rep.: Lomé Warnecke 349! Basari (fr. June) Kersting A69. S. Nig.: Lagos Rowland! Olokemeji foster! Hepper 2305! Ijebu (Apr.) Tamajong FHI 23251!

4. *Vangueriopsis discolor* (Benth.) Robyns l.c. 264 (1928); Aubrév. Fl. For. Soud.-Guin. 484; Berhaut Fl. Sén. 99.

APD: *Synonym of Vangueriella discolor* (Benth.) Verdc.

Canthium discolor Benth. (1849)-F.T.A. 3: 138; Chev. Bot. 329.

Canthium venosissimum Hutch. & Dalz. F.W.T.A., ed. 1, 2: 115, partly (Linder 267).

Small tree or scrambling shrub, often spiny, the young branchlets rusty-pubescent, with leaves pale beneath; flowers greenish in short branched cymes often at nodes below the leaves.

Sen.: Diouloulou, Casamance (fr. Sept.) Adam 18139! Badi Berhaut 1807; 4736. **Port. G.:** Fonte, Bubaque (May) Esp. Santo 2021! 2052! Pessubé, Bissau (Mar.) Esp. Santo 1153! **Guin.:** Kouroussa (Mar.) Pobéguin 664! Ditinn (Apr.) Chev. 12993! Fouta Djallon Heudelot 802! Bafing (Apr.) Adam 11864! **S. L.:** Freetown (Apr.) Deighton 4747! Hepper 2481! Bagroo R. 5. *Vangueriopsis vanguerioides* (Hiern) Robyns l.c. 260 (1928); Aubrév. Fl. For. C. Iv., ed. 2, 3: 302.

APD: Synonym of Vangueriella vanguerioides (Hiern) Verdc.

Canthium vanguerioides Hiern in F.T.A. 3: 146 (1877), mostly; Chev. Bot. 329.

Plectronia vanguerioides (Hiern) K. Schum. (1897).

Shrub or small tree up to about 25 ft. high; flowers greenish in lax branched cymes mostly at nodes below the leaves; **in secondary forest**.

Guin.: Kouria Dumas 18194. Kaba to Mamou Chev. 12754! **S. L.:** Sugar Loaf Mt. (Mar., Apr.) Sc. Elliot 5776! Hepper 2544! Kenema (May) Lane-Poole 280! Baoma (Apr.) Deighton 3218! Boruks (fr. 6. *Vangueriopsis nigerica* Robyns l.c. 261, figs. 25, 26 (1928).

APD: Synonym of Vangueriella nigerica (Robyns) Verdc.

Canthium vanguerioides Hiern in F.T.A. 3: 138 (1877), partly; Robyns l.c. 260, partly (Chev. 23710, Baumann 308); F.W.T.A., ed. 1, 2: 116, partly.

Vangueriopsis lanceolata Robyns l.c. 271 (1928).

A shrub or tree with arching branches; flowers greenish in lax branched cymes mostly at older nodes; **in streamside forest**.

Ghana: Afram Plains (Mar.) Johnson 710! Neung F.R., Tarkwa Enti FH 6229! **Togo Rep.:** Misahöhe Baumann 243! 308! **Dah.:** Savalou (May) Chev. 23710! **N. Nig.:** Lokoja Elliot 229! Katsina Allah (June) Dalz. 756! Mando F.R., Zaria (June) Keay FHI 25820! **S. Nig.:** Abeokuta Irving 155! Idu Barter 1251! Ibadan (Apr.) Meikle 1442! Ijaiye F.R., Oyo (Apr.) Onochie FHI 21970!

Also in **Cameroun**.

7. *Vangueriopsis subulata* Robyns l.c. 268 (1928).

APD: Synonym of Vangueriella campylacantha (Mildbr.) Verdc.

Vangueriopsis setosa Robyns l.c. 268 (1928).

A scrambling or climbing shrub with spines; flowers greenish; **in forest**.

Guin.: Mt. Boola (Mar.) Chev. 20928! **S. L.:** Berria, Falaba (Mar.) Sc. Elliot 5400! **S. Nig.:** Obani Talbot 1688! Degema Talbot. **[Br.] Cam.:** Mbalange F.R., Kumba (Mar.) Binuyo & Daramola FHI 35649! Fonfuka, Bamenda (Apr.) Maitland 1768!

Also in **Cameroun** and **Ubangi-Shari**.

56. CANTHIUM

Lam.-F.T.A. 3: 132.

This genus presents considerable taxonomic difficulties owing to great variability and often wide distribution of the species.

- 1 Inflorescences sessile or subsessile umbellate fascicles; calyx truncate:2
- Inflorescences shortly pedunculate cymes; corolla-buds obtuse:5

- 2 Flower-buds very acute:3
 Flower-buds rounded at apex; leaves acutely cuneate at base, ovate, gradually acuminate, 4-10 cm. long, 2-4.5 cm. broad, glabrous beneath, glossy above; pedicels of flower about 7 mm. long, densely fasciculate4.
[schimperianum](#)
- 3 Corolla 1-1.3 cm. long; pedicels slender, 8 mm. long, about 6 or more on a short peduncle; leaves elliptic, shortly and broadly acuminate, 9-13 cm. long, 4-6 cm. broad, with about 6 pairs of lateral nerves raised on both surfaces, glabrous, tertiary nerves obscure [1. henriquesianum](#)
 Corolla up to 7 mm. long, or if 10 mm. long (in No. 3) then the tertiary veins prominent on the leaves above: ...4
- 4 Veins between the 4-5 pairs of lateral nerves obscure or invisible when dry; leaves broadly elliptic, acuminate, rounded to the acute base, 6-10 cm. long, 3-5 cm. broad, with very prominent sharp nerves beneath, glabrous; corolla about 7 mm. long [2. acutiflorum](#)
 Veins between the lateral nerves prominent and raised on the upper surface when dry; pedicels elongated and slender in fruit; leaves oblong-elliptic, acuminate, shortly cuneate at the base, 7-10 cm. long, 4-6 cm. broad, glabrous; corolla about 8 mm. long; fruits didymous or obliquely globose, the lobes about 7 mm. diam., black [3. horizontale](#)
- 5 Branchlets conspicuously hispid-pilose, but not pubescent or glabrous:6
 Branchlets glabrous or pubescent, but not hispid-pilose:9
- 6 Stipules large and persistent, broadly lanceolate about 1 cm. broad and 2 cm. long; stems, leaves beneath and inflorescences densely pilose with reddish hairs; leaves oblong-elliptic, rounded at base, shortly acuminate at apex, 10-14 cm. long, 4-5 cm. broad, glabrous above including midrib; calyx-teeth acute, about 2 mm. long [5. sp. A](#)
 Stipules inconspicuous and often caducous; leaves pilose above, at least the midrib:7
- 7 Leaves with 8-9 parallel nerves on each side of midrib, oblong-elliptic, shortly cordate at base, acuminate at apex, 5-12 cm. long, 3-5.5 cm. broad, pilose or scabrid above, usually densely pubescent beneath; calyx shortly lobed, densely pilose; stems densely pilose [6. rufivillosum](#)
 Leaves with 5-6 widely spaced nerves on each side of midrib; calyx pilose or nearly glabrous:8
- 8 Hairs on stems few and near the nodes; leaves 8-15 cm. long, 4-8 cm. broad; (see other characters below) [10. setosum](#)
 Hairs evenly spaced on stems; leaves 5-11 (-13) cm. long, 2-4(-6) cm. broad, rounded to slightly cordate at base, hispid; calyx rather densely pubescent [7. hispidum](#)
- 9 Branchlets glabrous or almost so: 10
 Branchlets conspicuously pubescent: 21
- 10 Pedicels densely and rather long-pubescent: 11
 Pedicels glabrous or more or less shortly pubescent: 12
- 11 Stipules linear-lanceolate, with a broad base and linear above, about 6 cm. long, caducous and only seen at the younger nodes; leaves elliptic or obovate-elliptic, cuneate at base, shortly acuminate at apex, 8-15 cm. long, 2.5-6 cm. broad, entirely glabrous on both sides (rarely a few hairs in the axils of the lateral nerves beneath) [8. manni](#)
 Stipules ovate-lanceolate, 9-16 mm. long, 5-13 mm. broad, persistent; (other characters as below) [21. rubens](#)
- 12 Pedicels of flowers 5-8 mm. long; inflorescences not spreading-branched: 13
 Pedicels of flowers up to 3 mm. long (4 mm. in No. 15); inflorescences spreading-branched: 17
- 13 Inflorescences subsessile; leaves cordate or truncate at base: 14
 Inflorescences pedunculate; flowers congested on the peduncle: 16
- 14 Armed with 1 cm.-long supraxillary spines; leaves oblong-ovate, cuneate at base, caudate at apex, 5-10 cm. long, 2-4 cm. broad, glabrous or sparsely pubescent; pedicels more or less pubescent; flowers few; calyx very shortly toothed [9. orthacanthum](#)
 Unarmed; flowers numerous: 15
- 15 Leaves setose on both surfaces, especially beneath, glabrescent above later, subcordate at base, shortly and abruptly acuminate, broadly ovate-elliptic, 8-15 cm. long, 4-8 cm. broad; pedicels setose; calyx shortly lobed [10. setosum](#)
 Leaves glabrous except for the nerves and clusters of brown hairs in some axils, rather long acutely and abruptly acuminate, broadly obovate, 9-13 cm. long, 5-8 cm. broad; pedicels glabrous; calyx truncate [11. rubrinerve](#)
- 16 Leaves broadly ovate-rounded, unequally rounded at base, broadly acuminate, 4-5 cm. long, 2.5-3.5 cm. broad, glabrous; calyx-lobes glabrous [12. inaequilaterum](#)
 Leaves elliptic to ovate, shortly acuminate, cuneate or rarely rounded at base, (5-)7-10 cm. long, 3-4.5 cm. broad, glabrous; calyx-lobes usually with a tuft of hairs [13. multiflorum](#)
- 17 Stipules persistent, densely pilose inside; leaves ovate, 4-7 cm. long, 2.5-3.5 cm. broad, glabrous; peduncle and

- pedicels slightly puberulous; calyx glabrous [14. pobeguinii](#)
- Stipules caducous, glabrous inside: 18
- 18 Calyx, ovary, pedicels and peduncle minutely pubescent: 19
- Calyx glabrous: 20
- 19 Inflorescences 1-2 cm. long, congested; leaves oblong-elliptic, 6-9 cm. long, 3-4 cm. broad, midrib and lateral nerves raised above with lamina smooth between them [15. arnoldianum](#)
- Inflorescences about 5 cm. long, rather lax and branched; leaves ovate or ovate-elliptic, 11-16 cm. long, 5-7 cm. broad, with raised reticulation above (at least when dry) [16. vulgare](#)
- 20 Leaves broadly ovate, rounded, truncate or slightly cordate at base, 9-20 cm. long, 5-17 cm. broad, sparsely setose or glabrous on both sides; lowland tree [17. subcordatum](#)
- Leaves oblong or oblong-elliptic, rounded to cuneate at base, 15-20 cm. long, about 6 cm. broad, glabrous; highland tree [18. dunlapii](#)
- 21 Leaves harshly scabrid above and beneath with short stiff hairs, lanceolate, cuneate to rounded at base, acuminate at apex, 9-15 cm. long, 3.5-7 cm. broad; calyx, ovary, pedicels and peduncle densely pubescent [19. scabrosum](#)
- Leaves pubescent or glabrous above, not scabrid: 22
- 22 Leaves long-oblong, truncate at base, long-acuminate at apex, 9-15 cm. long, 2.5-4 cm. broad, shortly pubescent beneath; petiole about 3 mm. long; pedicels etc. pubescent [20. palma](#)
- Leaves more or less ovate or elliptic: 23
- 23 Stipules ovate, sometimes broadly so, more or less persistent; bracteoles ovate at apex of the peduncles; leaves ovate, rounded at base, shortly acuminate at apex, 6-13 cm. long, 3.5-7.5 cm. broad, glabrous above, pubescent beneath; (see other characters above) [21. rubens](#)
- Stipules lanceolate usually with a linear apex: 24
- 24 Corolla-lobes 4: 25
- Corolla-lobes 5; tertiary nerves reticulate: 27
- 25 Leaves densely and softly pubescent beneath, ovate-elliptic, 6-8 cm. long, 3-4 cm. broad, tertiary nerves parallel [22. sp. B](#)
- Leaves pubescent on the nerves beneath: 26
- 26 Tertiary nerves markedly parallel, numerous and prominent especially beneath [23. venosum](#)
- Tertiary nerves reticulate, few and not prominent [24. zanzibaricum](#)
- 27 Pedicels glabrous, or sparsely setose; (other characters as above) [10. setosum](#)
- Pedicels densely pubescent: 28
- 28 Leaves with about 10 lateral nerves on each side of the midrib, impressed above and prominent beneath, rounded at base, shortly acuminate at apex, ovate, 7-14 cm. long, 3-7 cm. broad, pubescent on the nerves beneath, more or less glabrous above; inflorescences slightly branched [25. gueinzii](#)
- Leaves with about 7 lateral nerves on each side of the midrib: 29
- 29 Flowers clustered at the end of the peduncle; leaves subcordate to rounded at base, acuminate at apex, ovate, 6-8.5 cm. long, 2.5-4 cm. broad, lateral nerves impressed above; calyx shortly toothed [26. manense](#)
- Flowers in a closely branched inflorescence; leaves usually cuneate, sometimes rounded or subcordate at base, acute or slightly acuminate at apex, 4-10 cm. long, 2-5 cm. broad, pubescent beneath or on the nerves only; calyx deeply lobed [27. cornelia](#)

1. **Canthium henriquesianum** (*K. Schum.*) *G. Tayl.* in Cat. S. Tomé 210 (1944).

APD: *Synonym of Psydrax kraussioides* (Hiern) Bridson

APD: *Synonym of Psydrax acutiflora* (Hiern) Bridson

Plectronia henriquesiana *K. Schum.* (1893).

Canthium kraussioides *Hiern* in Cat. Welw. 1: 473 (1898); F.W.T.A., ed. 1, 2: 113; Aubrév. Fl. For. Soud.-Guin. 484.

A glabrous climbing or scrambling shrub with shiny coriaceous leaves; flowers yellow-green; **beside upland streams.**

Guin.: Pita Pobéguin 2185! Boulivel Pobéguin 18042. Mali Schnell 2301! **S. L.:** Bintumane Peak, 5,400 ft. (Jan.) T. S. Jones 141! Jaeger 4170! Sankan Biriwa summit, 5,500 ft. (fr. Jan.) Cole 150! **N. Nig.:** Jos Plateau (Nov., Jan.) Lely 719! P51! Batten-Poole 255! **S. Nig.:** Ikwette Plateau, 5,000 ft., Obudu Div. (Dec.) Savory & Keay FHI 25132! 25241! [**Br.**] **Cam.:** Sabga, 6,200 ft., Bamenda (fl. & fr. Jan.) Keay FHI 28462! Mambila Plateau, 6,000 ft., Adamawa (fr. Jan.) Latilo & Daramola FHI 34398! Vogel Peak, 4,000 ft., Adamawa (Nov.) Hepper 1487!

Also in **S. Tomé**, **Angola** and **Nyasaland**.

2. **Canthium acutiflorum** *Hiern* in F.T.A. 3: 136 (1877).

APD: Synonym of Psydrax acutiflora (Hiern) Bridson

Electronia acutiflora (*Hiern*) *K. Schum.* (1907).

A glabrous shrub with coriaceous shiny leaves.

Ghana: Gradaw, Banda Hills (fl. & fr. Oct.) Rose Innes GC 31620! Damongo Scarp Harris! **N. Nig.:** Anara F.R., Zaria Prov. (fr. May) Keay FHI 22989! **S. Nig.:** Stubbs Creek F.R., Eket Dist. (fr. May) Onochie FHI 33174! Calabar Thomson 97! Oban Talbot 1543! **[Br.] Cam.:** foot of Cam. Mt. (Feb.) Mann 1179! Mopanya, Cam. Mt. 4,000-5,000 ft. (July) Kalbreyer 182!

[Species 2, 3 and 4 are easily confused when not in flower.]

3. **Canthium horizontale** (*Schum. & Thonn.*) *Hiern* in F.T.A. 3: 137 (1877).

APD: Synonym of Psydrax horizontalis (Schumach.) Bridson

Phallaria horizontalis *Schum. & Thonn.* (1827).

Canthium anomocarpum *DC.* (1830)-F.T.A. 3: 136; F.W.T.A., ed. 1, 2: 113; Aubrév. Fl. For. Soud.-Guin. 484; Berhaut Fl. Sén. 101.

Canthium caudatiflorum *Hiern* in F.T.A. 3: 137 (1877); Chev. Bot. 328.

Electronia anomocarpa (*DC.*) *K. Schum.* (1900).

Glabrous shrub, more or less scrambling; flowers greenish-white, fruits black; **beside streams usually in savanna.**

Sen.: Heudelot 567! Berhaut 1862! Floup-Fedyan Chev. 2093! **Mali:** Tabacco Chev. 3025. **Port. G.:** Biombo, Bissau (fr. Feb.) Esp. Santo 1797! Prabis, Bissau (fr. Mar.) Esp. 4. **Canthium schimperianum** *A. Rich.* Tent. Fl. Abyss. 1: 350 (1847); F.T.A. 3: 385; Bullock in Kew Bull. 1932: 385; Aubrév. Fl. For. Soud.-Guin. 483, t. 107, 3.

APD: Synonym of Psydrax schimperiana (A. Rich.) Bridson

Canthium euryoides *Bullock ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 113 (1931); Bullock l.c. 384; F.W. Andr. Fl. Pl. A.-E. Sud. 2: 429.

Canthium nitens *Hiern* in F.T.A. 3: 135 (1877), not of DC.

Evergreen shrub, climber or small tree; flowers whitish.

Dah.: Atacora Mts. Chev. 24049. **S. Nig.:** R. Nun Barter 2114!

Also in **Cameroun**, **Sudan**, **Ethiopia**, **Uganda**, **Kenya**, **Tanganyika** and **Congo**.

5. **Canthium** *sp. A.* *APD acc*

Climbing shrub with long brown hairs; **in high forest and edge of savanna.**

S. Nig.: Sapoba (Sept.) Onochie FHI 34313! Mamu F.R., Akwa Dist. Onochie FHI 34067!

[Apparently closely related to *C. rubens* Hiern].

6. **Canthium rufivillosum** *Robyns ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 113 (1931).

APD: Synonym of Keetia rufivillosa (Robyns ex Hutch. & Dalziel) Bridson

APD: Synonym of Keetia molundensis (K. Krause) Bridson var. molundensis

A scrambling shrub densely covered with rust-coloured hairs; **in forest**.

S. L.: Yonibana (Nov.) Thomas 4740! 4946! **Lib.:** Kakatown Whyte! **S. Nig.:** Calabar (Nov.) Baldwin 13790! **[Br.] Cam.:** mile 42, Victoria to Kumba (Apr.) Olorunfemi FHI 30513!

7. **Canthium hispidum** *Benth.* in Fl. Nigrit. 409 (1849); F.T.A. 3: 140; Chev. Bot. 329, partly.

APD: Synonym of Keetia gueinzii (Sond.) Bridson

APD: Synonym of Keetia hispida (Benth.) Bridson

Climbing or straggling shrub; flowers white; **in forest**.

S. L.: Don! Sugar Loaf summit, 2,490 ft. (fr. Nov.) Deighton 5619! Gbangbama Thomas 9467! **Lib.:** Dukwia R. (fr. Mar.) Cooper 309! Harbel (fr. July) Baldwin 6619! Nekabozu (Oct.) Baldwin 9959! Kolahun (Nov.) Baldwin 10142! **iv. C.:** Sassandra Port Chev. 17916! Leeuwenberg 2233! Assinie Chev. 17873! 17884! **Ghana:** Essiama (Nov.) Vigne FH 1475! Aburi Brown 683! Kumasi (fr. Jan.) Irvine 40! Abotia Hills F.R., Ho Dist. Enti FH 6876! **Dah.:** Ouidah to Adjounja (Apr.) Chev. 23468! Allada to Niaouli Chev. 23394! **S. Nig.:** Lagos Barter 2182! Dalz. 1051! Oshun River F.R. (fr. May) Chizea FHI 23956! Olokemeji (fr. Nov.) Latilo FHI 8102! Ibadan (fl. May, fr. Jan.) Keay FHI 16209! Meikle 966!

Also in **Cameroun** and (?) **Gabon**.

8. **Canthium mannii** *Hiern* in F.T.A. 3: 143 (1877).

APD: Synonym of Keetia mannii (Hiern) Bridson

Canthium nervosum *Hiern* in F.T.A. 3: 143 (1877); Aubrév. Fl. For. Soud.-Guin. 484.

Plectronia flaviflora *K. Schum. & K. Krause* (1907).

Climbing shrub up to 20 ft. high; flowers white; **beside streams in forest**.

Guin.: R. Koumi Pobéguin 1630! Mamou Pobéguin 1622! Kissi Chev. 20759! **S. L.:** Bagroo R. (Apr.) Mann 814! Makunde (Apr.) Sc. Elliot 5695! Njala (Apr.) Deighton 4743! Tabor (Apr.) Deighton 3723! **S. Nig.:** Shasha F.R., Ijebu-Ode (fl. & fr. Apr.) Keay FHI 16098! Orle F.R., Benin (fr. Aug.) Onochie FHI 33287! Carter's Peak, Idanre (Jan.) Brenan & Keay 8690! Ikpan, Calabar (fr. July) Ujor FHI 31635! **[Br.] Cam.:** Tiko, Victoria (Feb.) Maitland 974! Johann-Albrechtshöhe (= Kumba) Staudt 511!

Also in **Cameroun**, and **Ubangi-Shari**.

9. **Canthium orthacanthum** (*Mildbr.*) *Robyns* in Bull. Jard. Bot. Brux. 11: 334 (1928); Aké Assi Contrib. 1: 154 (excl. syn. *C. thonningii* and *Plectronia spinosa*).

APD: Synonym of Vangueriella orthacantha (Mildbr.) Bridson & Verdc.

A spiny shrub; **in moist forest**.

iv. C.: Banco Forest Aké Assi IA 5318; 5325.

Also in **Cameroun** and **Congo**.

10. **Canthium setosum** *Hiern* in F.T.A. 3: 141 (1877).

APD: Synonym of Keetia hispida (Benth.) Bridson

Plectronia macrophylla *K. Schum.* (1899).

A climbing shrub, sometimes up to 50 ft. high; flowers white, fragrant; **at edge of forest**.

S. L.: Yonibana (Nov.) Thomas 4733! Mabonto (Oct.) Thomas 3576! 3606! **Lib.:** Dukwia R. (fr. Apr.) Cooper 389! Bushrod Isl. (fr. Aug.) Baldwin 13092! Beiden, Boporo Dist. (fr. Nov.) Baldwin 10271! Bobei Mt., Sanokwele Dist. (fr. Sept.) Baldwin 9632! **Ghana:** Kibbi to Potroase (fr. Oct.) Glover 9! Owabi (fl. & fr. Dec.) Lyon 2630! **S. Nig.:** Benin (Nov., Dec.) Brenan 8390! Ajayi FHI 26925! Buea Deistel 628! **F. Po:** Musola (Jan.) Guinea 242! 978! 979!

Also in **Ubangi-Shari** and **Gabon**.

11. **Canthium rubrinerve** (*K. Krause*) *Hepper* in Kew Bull. 16: 157 (1962). *APD acc*

Electronia rubrinervis *K. Krause* (1917).

Canthium favosum *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 113 (1931).

Canthium setosum of F.W.T.A., ed. 1, 2: 113, partly (syn. *Electronia rubrinervis* *K. Krause*), not of Hiern.

A climber; in forest.

S. Nig.: Oban Talbot 1284! **[Br.] Cam.:** Victoria (Oct.) Mildbr. 10564! 10585! Barombi (fr. Feb.) Binuyo & Daramola FHI 35533!

Also in **Cameroun**.

12. **Canthium inaequilaterum** *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 115 (1931).

APD: *Synonym of Keetia inaequilatera* (*Hutch. & Dalziel*) *Bridson*

A glabrous climbing shrub.

S. Nig.: Oban Talbot 277!

13. **Canthium multiflorum** (*Schum. & Thonn.*) *Hiern* in F.T.A. 3: 144 (1877).

APD: *Synonym of Psydrax parviflora* (*Afzel.*) *Bridson subsp. parviflora*

APD: *Synonym of Keetia multiflora* (*Schumach. & Thonn.*) *Bridson*

Psychotria multiflora *Schum. & Thonn.* (1827).

Canthium afzelianum *Hiern* in F.T.A. 3: 142 (1877); F.W.T.A., ed. 1, 2: 113; Aubrév. Fl. For. Soud.-Guin. 483; Berhaut Fl. Sén. 105.

Canthium kitsoni *S. Moore* in J. Bot. 48: 220 (1910).

Canthium heudelotii *Hiern* in F.T.A. 3: 139 (1877); F.W.T.A., ed. 1, 2: 114; Berhaut Fl. Sén. 101.

A more or less straggling shrub with whitish flowers.

Mali: Kita (July) Duong 353! 521! **Guin.:** Heudelot 653! Pita Pobéguin 2050! **S. L.:** Kumrabai (Dec.) Thomas 6944! 7068! Kukuna, Scarcies R. (fl. & fr. Jan.) Sc. Elliot 4503! 4685! Irvine 277! Rose Innes GC 30344! **Dah.:** Atacora Mts. (June) Chev. 2399! 24128!

Also In **Cameroun**, **Gabon**, **Ubangi-Shari** and **Sudan**.

14. **Canthium pobeguini** *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 115 (1931).

APD: *Synonym of Multidentia pobeguini* (*Hutch. & Dalziel*) *Bridson*

A shrub or tree to 20 ft. high with dark reddish branchlets and leaves paler beneath.

Guin.: Kouroussa (Apr., May) Pobéguin 229! 240! **Ghana:** N. Scarp F.R., Mpraeso Dist. (fr. May) Enti FH 7162!

[Note: this may be a small-leaved form of *C. crassum* Hiern (in F.T.A. 3: 145 (1877); Aubrév. Fl. For. Soud.-Guin. 484, t. 107, 1, 2) known from Ubangi-Shari, Sudan and other parts of Africa-F.N.H.].

15. **Canthium arnoldianum** (*De Wild. & Th. Dur.*) *Hepper* in Kew Bull. 16: 156 (1962).

APD: *Synonym of Psydrax arnoldiana* (*De Wild. & T. Durand*) *Bridson*

Electronia arnoldiana *De Wild. & Th. Dur.* (1900).

Canthium tekbe *Aubrév. & Pellegr.* in Bull. Soc. Bot. Fr. 83: 37, fig. 1 (1936); Aubrév. Fl. For. C. Iv., ed. 2, 3: 306, t. 385.

Canthium anomocarpum of F.W.T.A., ed. 1, 2: 113, partly (Chev. B22333), not of DC.

A tree up to 80 ft. high; in forest.

Iv. C.: Yapo (fr. Oct.) Chev. B22333! Djibi F.R. Aubrév. 1362! Abidjan Aubrév. 1363! Banco F.R. Aubrév. 1371! **S. Nig.:** Ekiadolor F.R., Benin Wardrop FHI 293!

Also in **Cameroun** and **Congo**.

16. **Canthium vulgare** (*K. Schum.*) *Bullock* in Kew Bull. 1932: 374.

APD: Synonym of Psydrax parviflora subsp. chapmanii Bridson

APD: Synonym of Psydrax parviflora (Afzel.) Bridson subsp. parviflora

Electronia vulgaris K. Schum. in Pflanzenw. Ost-Afr. C: 386 (1895).

Canthium glabriflorum of F.W.T.A., ed. 1, 2: 115, partly (Chev. 23843), not of Hiern.

Canthium horizontale of Chev. Bot. 329, (Chev. 23743), not of Schum. & Thonn.

Tree 20-100 ft. high or sometimes a shrub, bark rough, slash brown with grey spots turning greenish; flowers creamy-yellow or greenish-white, with an unpleasant smell; **beside rivers**.

Sen.: Basse Casamance (fr. Sept.) Adam 18038! **Port. G.:** Granja, Catio (June) Esp. Santo 2087! **Guin.:** Kouroussa (June) Pobéguin 704! Dalaba (fr. Sept.) Chev.! Forécariah (June) Jac.-Fél. 1672! **S. L.:** Heddle's Farm, Freetown (May) Deighton 1199! Loma Mts. (fr. Sept.) Jaeger 1396! **Iv. C.:** Daloa to Oumé Aubrév. 1257! **Ghana:** Awura F.R., Ejura (fr. June) Enti FH 6708! Kade, Oda Dist. (fr. Dec.) Enti FH 6852! Bana Hill, Krobo (Apr.) Irvine 2895! Mampong (Apr.) Vigne FH 1928! **Dah.:** Savalou (May) Chev. 23743! **N. Nig.:** Gindiri, Jos Plateau (Oct.) Hepper 1109! **S. Nig.:** Olokemeji F.R. (May) Okeke & Adebusuyi FHI 28299! Owo F.R. (May) Jones FHI 3611! **[Br.] Cam.:** Bamenda to Kentu, 1,500 ft. (June) Maitland 1721!

Widespread in tropical Africa.

[Note: Esp. Santo 2041 & 2052 from Portuguese Guinea have the calyx slightly and minutely pubescent like *C. vulgare* but leaves setose above like some forms of *C. subcordatum* DC.]

17. **Canthium subcordatum** DC. Prod. 4: 473 (1830); F.T.A. 3: 141; Aubrév. Fl. For. Soud.-Guin. 480; Fl. For. C. Iv., ed. 2, 3: 306, t. 366B.

APD: Synonym of Psydrax subcordata (DC.) Bridson

Canthium glabriflorum Hiern in F.T.A. 3: 140 (1877); Chev. Bot. 329.

Electronia glabriflora (Hiern) K. Schum. (1892).

A small or medium-size tree about 30 ft. or up to 80 ft. high with horizontal branches near the crown, slash whitish, buttresses at the base; flowers white, heavily scented; **in the more open parts of high forests**.

Gam.: Albreda Leprieur! **Guin.:** Mt. Benna, Kindia (Dec.) Jac.-Fél. 2120! Labé Chev. 12347! 12353! Dalaba (fl. Sept., fr. Mar.) Chev. A! Langdale- Brown, 2609! **S. Eket Talbot 3041!

Also in **Cameroun**, **Angola** and **S. Tomé**.

18. **Canthium dunlapii** Hutch. & Dalz. F.W.T.A., ed. 1, 2: 115 (1931).

APD: Synonym of Psydrax dunlapii (Hutch. & Dalziel) Bridson

A medium-sized tree; flowers white; **in upland forest**.

[Br.] Cam.: Cam. Mt. (Dec., Jan., Mar., Apr.) Dunlap 93! Maitland 795! Brenan 9553! Hutch. & Metcalfe 10! Bamenda (fl. Mar., fr. Jan.) Johnstone 264/32! Daramola FHI 40530! **F. Po:** Moka, 4,000-6,000 ft. (fl. Jan., Feb., fr. Sept.) Exell 810! 851! Wrigley 572!

19. **Canthium scabrosum** Bullock in Kew Bull. 1932: 367.

APD: Synonym of Keetia gueinzii (Sond.) Bridson

Climbing shrub; flowers whitish.

[Br.] Cam.: S. Bakundu F.R., Kumba Dist. (Mar.) Onochie FHI 30862! Binuyo & Daramola FHI 35612!

20. **Canthium palma** (K. Schum.) Good in J. Bot. 64, Suppl. 2: 22 (1926).

APD: Synonym of Psydrax palma (K. Schum.) Bridson

Electronia palma K. Schum. (1899).

P. oddoni De Wild. (1907).

Small tree with spreading branches; **beside rivers**.

S. Nig.: Sapoba Kennedy 2240! 2329! A. F. Ross 237! Ikom (July) Catterall 19! Mackay 15! Afi River F.R., Ikom Jones & Onochie FHI 18717! Eket Dist. Talbot 3069!

Also in **Cameroun**, **Gabon** and **Congo**.

21. **Canthium rubens** Hiern in F.T.A. 3: 142 (1877).

APD: Synonym of Keetia molundensis (K. Krause) Bridson var. molundensis

APD: Synonym of Keetia rubens (Hiern) Bridson

A climbing shrub up to 20 ft. high, rusty-pubescent on the young branchlets, becoming glabrous.

Guin.: Diaguissa (Oct.) Jac.-Fél. 2061! Mali (Jan.) Roberty 16566! **S. L.:** Bagroo R. (Apr.) Mann 818! Berria (? = Gberia Fotombu) (fr. Mar.) Sc. Elliot 5416! Gberia Fotombu (fr. Sept.) Small 386! **Ghana:** Krokosua F.R., Kwakrom (Feb.) Cansdale FH 3986!

[The Guinée specimens may be specifically distinct from true C. rubens.]

22. **Canthium** sp. **B. APD acc**

A climbing shrub about 10 ft. high, branchlets and nerves of leaves rusty-pubescent;

Ghana: Princes (fl. bud Jan.) Darko 790! **N. Nig.:** Omo (formerly part of Shasha) F.R. (Feb.) Jones & Onochie FHI 17584!

It may prove to be a form of the next.

23. **Canthium venosum** (Oliv.) Hiern in F.T.A. 3: 144 (1877), incl. var. pubescens Hiern; Aubrév. Fl. For. Soud.-Guin. 483, t. 107, 4; Berhaut Fl. Sén. 102.

APD: Synonym of Keetia venosa (Oliv.) Bridson

Electronia venosum Oliv. in Trans. Linn. Soc. 29: 85, t. 49 (1873).

Canthium barteri Hiern in F.T.A. 3: 143 (1871).

Canthium heudelotii of F.W.T.A., ed. 1, 2: 116, partly (Sc. Elliot 5434), not of Hiern.

Straggling shrub or small tree up to 20 ft. high with rough square scaly bark, slash reddish brown; flowers whitish; **in savanna woodland and beside streams**.

Sen.: Berhaut 1858. **Mali:** Oualia, Kati (fr. Dec.) Chev. 103! **Port. G.:** Prabis, Bissau (fr. Feb.) Esp. Santo 1804! **Guin.:** Kouroussa (July) Pobéguin 282! Also in **Cameroun**, **Ubangi-Shari**, **Congo**, **Angola**, **Sudan** and E. Africa to N. Rhodesia.

24. **Canthium zanzibaricum** Klotzsch in Peters Reise Mossamb. Bot. 291 (1861); F.T.A. 3: 138; Bullock l.c. 373.

APD: Synonym of Keetia venosa (Oliv.) Bridson

APD: Synonym of Keetia zanzibarica subsp. cornelioides (De Wild.) Bridson

APD: Synonym of Keetia zanzibarica (Klotzsch) Bridson

Canthium cornelia of F.W.T.A., ed. 1, 2: 115, partly (Kitson 679), not of Cham. & Schlecht.

Straggling shrub 10-30 ft. high; flowers white.

S. L.: Kambaia (Oct.) Small 471! Mabonto (Oct.) Thomas 3539! Mafombo (Sept.) Deighton 3058! **Ghana:** Black Volta R. (fl. & fr. Mar.) Kitson 679! [**Br.**] **Cam.:** Bafachu, Bamenda Johnstone 261! Bamenda (fr. May) Vjor FHI 30363!

Also in **Sudan**, **Uganda**, **Kenya**, **Tanganyika**, **Zanzibar** and **Angola**.

25. Canthium gueinzii Sond. in Linnaea 23: 54 (1850); Bullock in Kew Bull. 1932: 368; Hepper in Kew Bull. 16: 157 (1962).

APD: Synonym of Keetia gueinzii (Sond.) Bridson

APD: Synonym of Keetia venosa (Oliv.) Bridson

Canthium venosissimum Hutch. & Dalz. F.W.T.A., ed. 1, 2: 115 (1931), partly (Vigne FH 1336).

A shrub with white flowers.

Ghana: Kumasi (Sept.) Vigne FH 1336! [**Br.**] **Cam.:** Buea, 3,000 ft. (fr. Jan.) Maitland 194! Bamenda Nkwe (Aug.) Ujor FHI 29987! Lakom, 6,000 ft., Bamenda (Apr.) Maitland 1658! Nkambe, 6,000 ft. (Feb.) Sepper 1897!

Also in E. Africa.

26. Canthium manense Aubrév. & Pellegr. in Bull. Soc. Bot. Fr. 83: 38 (1936); Aubrév. Fl. For. C. Iv., ed. 2, 3: 306, t. 366A.

APD: Synonym of Psydrax manensis (Aubrév. & Pellegr.) Bridson

Small tree, with horizontal branches.

Iv. C.: Man to Danané (Mar.) Aubrév. 1099! Ferkessédougou (Apr.) Aubrév. 2310.

27. Canthium cornelia Cham. & Schlecht. in Linnaea 4: 14 (1829); F.T.A. 4: 140; F.W.T.A., ed. 1, 2: 115, partly; Aubrév. Fl. For. Soud.-Guin. 483; Berhaut Fl. Sén. 102.

APD: Synonym of Keetia cornelia (Cham. & Schltdl.) Bridson

Canthium ruminatum Baill. (1878).

Canthium heudelotii of F.W.T.A., ed. 1, 2: 115 partly (Heudelot 191), not of Hiern.

Straggling shrub; flowers greenish-yellow; in moist thickets in northern savanna.

Sen.: Sieber 21! Roger 37! Leprieux! Heudelot 101 (= 191)! Ouassadou Berhaut 1537! Niokolo-Koba (fr. Nov.) Adam 17192! **Cam.:** Genieri (July) Fox 138! Hayes 555! **Mali:** Kita Duong 543! Elliot 5296! **Ghana:** Suguri (Apr.) Pomeroy 1234! Saboba (Mar.) Hepper & Morton A3118! Tumu (Mar.) Morton GC 8837! Kumbungu (May) Kitson 677! 717! **Niger:** Diapaga Chev. 24392. Also in Cameroun and Ubangi-Shari (fide Aubrév. l.c.).

57. RYTIGYNIA

Blume Mus. Bot. Lugd. Bat. 1: 178 (1850); Robyns in Bull. Jard. Bot. Brux. 11: 132 (1928).

- 1** Leaves covered all over the lower surface by a fine whitish tomentellous indumentum, ovate-elliptic, narrowly rounded at base, 7-10 cm. long, 3-4.5 cm. broad, with about 5 pairs of lateral nerves; petioles 3 mm. long; flowers axillary, solitary or paired; pedicels 4-5 mm. long; corolla-tube 3-3.5 mm. long, lobes appendiculate; fruit 6-7 mm. diam. *L. argentea*

Leaves from densely tomentose to glabrous, not whitish tomentellous, beneath: **2**

- 2 Flowers in short branched cymes, rather numerous; branchlets glabrous or pubescent; leaves subacute at base, obtusely acuminate at apex, broadly elliptic, 8-12 cm. long, 3-5 cm. broad, thin and membranous, bright green when dry, with 6-7 pairs of lateral nerves; pedicels nearly 1 cm. long; branchlets villous at the nodes within the stipules; corolla-tube 3-4 mm. long [2. membranacea](#)
- Flowers fasciculate on a short simple peduncle, few or subsolitary: **3**
- 3 Peduncle longer than the pedicels; flowers in pairs: **4**
- Peduncle much shorter than the pedicels: **5**
- 4 Branchlets glabrous, lenticellate; leaves broadly acuminate at apex, ovate-elliptic, 5-6 cm. long, 2-3 cm. broad, with about 6 pairs of lateral nerves often with tufts of hairs in their axils, otherwise glabrous; pedicels about 5 mm. long, glabrous; bracts subulate; corolla-tube 3-5 mm. long, lobes slightly apiculate; fruits obliquely ellipsoid, 1 cm. long [3. senegalensis](#)
- Branchlets thinly tomentose; leaves broadly acuminate at apex, ovate-lanceolate, 3-5-6 cm. long, 1-2-5 cm. broad, discolorous, thinly pubescent beneath; pedicels 2 mm. long, tomentose; corolla-tube 2 mm. long, lobes acutely apiculate [4. rhamnoides](#)
- 5 Pedicels of flowers at least 7 mm. long, in fruit up to 2-5 cm. long; flowers paired; branchlets glabrous; leaves oblong-elliptic, acuminate to caudate, rounded at base, 5-8 cm. long, 2-3-5 cm. broad, paler beneath, with repeatedly looped lateral nerves, glabrous; bracts ovate-apiculate; calyx denticulate; corolla-tube 5 mm. long [5. rubra](#)
- Pedicels of flowers up to 5 mm. long (up to 1 cm. long in fruit in some species); inflorescences 1-several flowered: **6**
- 6 Flower-buds long-apiculate at apex; corolla-lobes 5; 1-3 flowers at nodes: **7**
- Flower-buds at most shortly mucronate at apex, glabrous outside (except rarely in Nos. 8 & 13); corolla-lobes 4-5: **8**
- 7 Leaves densely pale tomentose beneath, shortly acuminate at apex, rounded at base, oblong-elliptic, 3-6 cm. long, 1-5-2-5 cm. broad; corolla densely pubescent outside [6. leonensis](#)
- Leaves setose-pilose beneath, broadly acuminate at apex, rounded at base, ovate to elliptic, 4-8 cm. long, 2-4 cm. broad; corolla-lobes sparsely setose outside [7. nigerica](#)
- 8 Young branchlets glabrous or only slightly pubescent; leaves glabrous beneath or slightly pubescent on the midrib: **9**
- Young branchlets densely pubescent: **12**
- 9 Flowers at nodes on the new-growth branchlets; corolla-lobes 4-5: **10**
- Flowers on one-year-old (or previous season's) branchlets; corolla-lobes 5: **11**
- 10 Corolla-lobes 3 mm. long and half as long as the tube; flowers 2-several in short stout peduncle; calyx-teeth acute, distinct; ovary 2-celled [8. affinis](#)
- Corolla-lobes 4 as long as the tube; flowers several in subsessile clusters; calyx very shortly toothed; ovary 4-celled [9. liberica](#)
- 11 Corolla 8-10 mm. long, tube about 2-5 mm. diam; leaves long acuminate at apex; upland shrub [10. neglecta](#)
- Corolla about 5 mm. long, tube about 1-5 mm. diam.; leaves acuminate, rounded to subacute at base, elliptic to ovate-elliptic, 5-10 cm. long, 3-5 cm. broad, with tufts of short hairs in the axils of the 5 pairs of lateral nerves [11. umbellulata](#)
- 12 Leaves rather densely puberulous beneath, less so above, elliptic to ovate, rather long-acuminate at apex, rounded at base, 4-6 cm. long, 1-5-3 cm. broad; flowers mostly in the axils of leaves on one-year-old branchlets [12. laurentii](#)
- Leaves slightly pubescent on nerves beneath and on upper surface, oblong-elliptic; more or less rounded at base, rather long-acuminate at apex, 5-9(-11) cm. long, 2-3-5(-5) cm. broad; flowers in the axils of leaves on the young branchlets [13. canthioides](#)

1. *Rytigynia argentea* (Wernham) Robyns in Bull. Jard. Bot. Brux. 11: 205 (1928). *APD acc*

Vangueria argentea Wernham in Cat. Talb. 49 (1913).

A shrub, with rusty-pubescent branchlets, leaves silvery-grey beneath and small single or paired axillary flowers.

S. Nig.: Oban Talbot 215!

2. *Rytigynia membranacea* (Hiern) Robyns l.c. 217 (1928). *APD acc*

Vangueria membranacea Hiern in F.T.A. 3: 151 (1877).

Rytigynia viridissima (Wernham) Robyns l.c. 213 (1928).

Canthium viridissimum Wernham (1914).

A shrub or small tree, mostly glabrous, with small yellow flowers in subumbellate cymes.

S. Nig.: Sapoba Kennedy 2553! Eket Dist. Talbot 3121! Calabar Thomson 114! [**Br.**] **Cam.:** R. Kindong, S. Bakundu, Kumba Dist. (Jan.) Binuyo & Daramola FHI 35494!

3. *Rytigynia senegalensis* *Blume* in Mus. Bot. Lugd. Bat. 1: 179 (1850); Robyns l.c. 163, figs. 19 & 20; F.W. Andr. Fl. Pl. A.-E. Sud. 2: 462; Berhaut Fl. Sén. 102. *APD acc*

Vangueria senegalensis (*Blume*) *Hiern* in F.T.A. 3: 149 (1877); Chev. Bot. 330.

V. euonymoides *Schweinf. ex Hiern* in F.T.A. 3: 150 (1877); Chev. Bot. 830.

A glabrous shrub with slender branchlets, more or less scrambling, with elegant foliage; flowers white or greenish, paired on slender axillary peduncles, with reflexed petals; **moist shady places in savanna.**

Sen.: Leprieur! Park 255! Berhaut 645! **Mali:** Bafing Lécard 82! Kita (July) Duong 544! **Guin.:** Kaba to Haut Mamou Chev. 12711. Kouroussa Pobéguin 269; 697. **Lib.:** Grand Bassa Dinklage 2035. **Iv. C.:** Yaou to Ahiamé Chev. 17698. Byanounan to Soubiré Chev. 17744. **Ghana:** Kumbungu (fl. & fr. May) Kitson 678! Similar to *R. canthioides*.

8. *Rytigynia affinis* (*Robyns*) *Hepper* in Kew Bull. 17: 171 (1963).

APD: *Synonym of Pyrostria affinis* (*Robyns*) *Bridson*

Dinocanthium affine *Robyns* in Bull. Jard. Bot. Brux. 17: 94 (1943).

D. bequaertii *Robyns* l.c. 95 (1943).

Canthium affine (*Robyns*) *Hepper* in Kew Bull. 16: 338 (1962).

A climbing shrub with greenish-yellow, sweet-scented flowers.

Ghana: Donkolo, near Bibiani (Feb.) Darko 854! Atewa Range F.R. (Feb.) Vigne FH 4330!

Also in **Congo**.

9. *Rytigynia liberica* *Robyns* l.c. 182 (1928). *APD acc*

Rytigynia claviflora of F.W.T.A., ed. 1, 2: 111, partly (syn. *R. liberica* Robyns; Whyte) not of Robyns.

A shrub.

Lib.: Kakatown Whyte! Suen, Montserrado (Nov.) Baldwin 10484!

10. *Rytigynia neglecta* (*Hiern*) *Robyns* l.c. 183 (1928). *APD acc*

Canthium neglectum *Hiern* in F.T.A. 3: 183 (1877).

Rytigynia rubra of F.W.T.A., ed. 1, 2: 111, partly (Maitland 648), not of Robyns.

Scrambling shrub or small understorey tree about 15 ft. high; flowers greenish-white; in montane forest.

[**Br.**] **Cam.:** below Musaka, about 5,000 ft., Cam. Mt. (Apr., May) Maitland 648! Hutch. & Metcalfe 30! Bamenda: Mbakakeka Mt., 7,800 ft. (fr. July) Lightbody FHI 30112! Lakom, 6,000 ft. (May) Maitland 1359! L, Oku, 7,200 ft. (Jan.) Keay & Lightbody FHI 28490!

Also in **Sudan**, **Ethiopia**, **Uganda**, **Kenya**, **Tanganyika** and **Congo**.

11. *Rytigynia umbellulata* (*Hiern*) *Robyns* l.c. 184 (1928). *APD acc*

Vangueria umbellulata *Hiern* in F.T.A. 3: 150 (1877).

V. canthioides of K. Schum. in Schlechter W.-Afr. Kautschuk Exped. 320 (1901), partly (Schlechter 12322).

V. concolor *Hiern* in F.T.A. 8: 160, partly (Barter 3418).

Scrambling or erect shrub or small tree up to 15 ft. high; flowers pale greenish or yellowish; fruits reddish; in secondary forest.

Port. G.: Catio (fr. July) Esp. Santo 2135! **S. L.:** Sugar Loaf Mt. (Apr.) Sc. Elliot 5780! Mt. Aureol (fr. June) Deighton 2717! Messina (Apr.) Deighton 3699! **Ghana:** Axim (Feb.) Irvine 2273! [Note: Jac.-Fél. 907, Adam 12077 and Harley 1156 are intermediate between this species and *R. nigerica*: they also possess pubescent corolla and calyx.]

Rytigynia gracilipetiolata (*De Wild.*) *Robyns* in Bull. Jard. Bot. Brux. 11: 176 (1928); Berhaut Fl. Sén. 102; Aké Assi Contrib. 1: 153. *APD acc*

Sen.: Sangalkam Berhaut 1625. *iv. C.*: Adiopodoumé Aké Assi IA 5298; 5299.

58. GLOBULOSTYLIS

Wernham in Cat. Talb. 49, t. 9 (1913).

- 1 Branchlets glabrous; leaves oblong-elliptic, subabruptly acuminate, subacute at base, with 5-7 pairs of lateral nerves, glabrous; tertiary nerves few and distant; calyx-lobes ovate, leafy, about 8 mm. long, nearly enclosing the corolla:.....[2](#)
- 2 Corolla sharply keeled in bud, pilose on keels, tailed at apex; calyx-lobes ciliate; flowers axillary, few; leaves up to 15 cm. long and 6 cm. broad; petioles 5-10 mm. long [1. talbotii](#)
Corolla neither pilose on keels nor tailed at apex; calyx-lobes not ciliate; flowers subumbellate on a short peduncle; leaves up to 12 cm. long; petioles 2-4 mm. long [2. minor](#)

1. *Globulostylis talbotii* *Wernham* in Cat. Talb. 49, t. 9 (1913). *APD acc*

An almost glabrous shrub.

S. Nig.: Oban Talbot 2051!

2. *Globulostylis minor* *Wernham* l.c. 50 (1913). *APD acc*

S. Nig.: Oban Talbot 247!

59. VANGUERIA

Juss.—F.T.A. 3: 146, partly; *Robyns* in Bull. Jard. Bot. Brux. 11: 273 (1928).

- 1 Inflorescence glabrous or nearly so; flowers sessile or subsessile; corolla villous at the throat, tube 3-4 mm. long, lobes ovate, acute; leaves deciduous, ovate-oblong, narrowed at the base, gradually acuminate, 7-15 cm. long, 3.5-7 cm. broad, with 8-12 pairs of lateral nerves, glabrous or finely pubescent; fruit stalked, globose, slightly ribbed, 1.5-2.5 cm. diam., mostly 5-seeded [1. venosa](#)
Inflorescence pilose; flowers pedicellate; corolla long-villous at the throat, tube 3 mm. long, lobes ovate, obtuse, pilose outside; leaves ovate, rounded at the base, rather obtuse at the apex, 3-5 cm. long, 1.5-3 cm. broad, with 5-7 pairs of lateral nerves; fruit globose, subsessile, about 1 cm. diam., slightly pubescent, 5-seeded [2. kerstingii](#)

1. *Vangueria venosa* *Hochst. ex Del.* in Ferret & Galinier Voy. Abyss. 3: 140 (1847); *Robyns* in Bull. Jard. Bot. Brux. 11: 290.

APD: *Synonym of Vangueria madagascariensis* *J.F. Gmel. var. madagascariensis*

Vangueria edulis of F.T.A. 3: 148, excl. var., not of Vahl.

A shrub or small tree glabrous in most parts; flowers greenish in branched cymes usually on the young leafy shoots.

Mali: Kita Duong 489! *Ghana*: Aburi Gardens (cult., fl. & fr. May) Irvine 3036! *N. Nig.*: Sanga River F.R., Jemaa Dist. (May) E. W. Jones 50! *S. Nig.*: Aboh Barter 362! Ida Barter 1250!

Also in *Sudan*, *Ethiopia* and *Uganda*.

2. *Vangueria kerstingii* *Robyns* l.c. 305 (1928). *APD acc*

A shrub with red-brown striate branchlets flaking with age; flowers in short pilose cymes.

Togo Rep.: Basari Kersting A620!

[Probably only a densely pubescent form of *V. venosa*.]

Vangueria sp. A.

A glabrous shrub; fruit globose, about 1 1/2 in. across; flowers not known.

S. L.: Thomas 1378! Mabum (ft. Aug.) Thomas 1645! **Lib.:** Wanau (fr. July) Harley 2041!

60. CRATERISPERMUM

Benth.-F.T.A. 3: 160.

- | | | |
|---|---|--------------------------------|
| 1 | Inflorescences sessile or nearly so in axils: | 2 |
| | Inflorescences pedunculate, markedly supra-axillary: | 3 |
| 2 | Bracts long-aristate up to 8 mm. long; leaves broadly oblong-elliptic, broadly acuminate at apex, cuneate at base, 15-20 cm. long, 6-9 cm. broad, laxly reticulate beneath, with about 7 pairs of lateral nerves | 1. aristatum |
| | Bracts small, about 2 mm. long; leaves elliptic to oblanceolate, shortly acuminate at apex, cuneate at base, 5-8 cm. long, 2-3-5 cm. broad, finely reticulate beneath | 2. sp. A |
| 3 | Stipules early caducous; fruits with a pedicel up to 7 mm. long on the peduncle; leaves oblong or oblong-elliptic, shortly cuneate at base, caudate-acuminate at apex, 8-14 cm. long, 2.5-4.5 cm. broad, finely reticulate on both sides; calyx denticulate | 3. caudatum |
| | Stipules more or less persistent; leaves yellow-green: | 4 |
| 4 | Leaves closely and strongly reticulate beneath, coriaceous, acute or obtuse and very shortly and abruptly acuminate at apex, 10-20 cm. long, 4-9 cm. broad; calyx cupular, truncate; fruits shortly pedicellate 4. laurinum | |
| | Leaves laxly reticulate beneath, hardly coriaceous, distinctly acuminate at apex, cuneate at base, elongate oblong-obovate, 7-15 cm. long, 3-6 cm. broad; calyx denticulate; fruits subsessile | 5. cerinanthum |

1. *Craterispermum aristatum* Wernham in Cat. Talb. 51 (1913). *APD acc*

A glabrous shrub with large leaves; flowers congested in the axils or slightly supra-axillary.

S. Nig.: Oban Talbot 251!

2. *Craterispermum* sp. A. *APD acc*

Probably a shrub, with yellowish leaves; further material required.

Lib.: Greenville, Sinoe (Mar.) Baldwin 11572!

[This may be a depauperate specimen of *C. cerinanthum* Hiern.]

3. *Craterispermum caudatum* Hutch. in Kew Bull. 1920: 23. *APD acc*

Craterispermum montanum of K. Schum. in Engl. Bot. Jahrb. 23: 460, partly (Sc. Elliot 4987), not of Hiern.

Craterispermum gracile A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 2: 116 (1931); Chev. Bot. 332, name only; Aubrév. Fl. For. C. Iv., ed. 2, 3: 310, t. 367.

A small tree about 15 ft. high, with green, glabrous branchlets; flowers white, fruits white, yellow or purple; **understorey tree in forest.**

S. L.: Likuru, Talla Hills (Feb.) Sc. Elliot 4987! Njala (ft. May) Deighton 5763! Faiama (Jan.) Deighton 3870! Dia (fr. Apr.) Deighton 3206! Bandajuma (May) Aylmer 78! **Lib.:** Gbanga (fl. & fr. Also in [Congo](#).

[Some specimens from S. Nigeria (FHI 17233; 17352; Catterall s.n.) and from [Br.] Cameroons (FHI 35620) show papillose stems when dry and faint venation: they may be distinct.-F.N.H.]

61. MORINDA

Linn.-F.T.A. 3: 191.

- 1 Climbing shrubs; peduncles terminal or terminating short lateral branchlets, never leaf-opposed; flowers 6-7-merous: **2**
- Trees or shrubs, much-branched; peduncles leaf-opposed and often also terminal; flowers mostly 5-merous: **3**
- 2 Peduncles in pairs; corolla-tube elongated, slender, (3-)4-8 cm. long, densely villous or pubescent in the throat; calyx undulate; leaves oblong-elliptic or obovate-elliptic, shortly cuneate at the base, acuminate, 6-12 cm. long, 2-7 cm. broad, glabrous, with 5-6 pairs of lateral nerves; ovary glabrous; fruit turgid (not lobed), 2-3 cm. diam., horned by the persistent calyces [1. longiflora](#)
- Peduncles solitary; corolla-tube short and stout in bud, up to 3 cm. long, glabrous in the throat; calyx-tube truncate, 4 mm. long; leaves elliptic or oblong-elliptic, shortly cuneate at the base, shortly and obtusely acuminate, 6-15 cm. long, 3-8 cm. broad, glabrous, with about 6 pairs of lateral nerves; ovary mostly puberulous; fruit lobulate, 4 cm. diam. [2. morindoides](#)
- 3 Branchlets slender, more or less terete; stipules large and foliaceous, soon falling off; peduncles usually 3 together, elongated and slender; flower-buds slender; leaves broadly elliptic to broadly ovate, more or less acuminate, rounded to broadly cuneate at the base, 8-16 cm. long, 4-8 cm. broad, often dark-purplish when dry, glabrous beneath, with 6-9 pairs of lateral nerves; heads globose [3. lucida](#)
- Branchlets stout, quadrangular; stipules small and persistent; peduncles stout; flower-buds stout; leaves broadly elliptic, triangular at the apex, up to 20 cm. long and 12 cm. broad, glabrous, dark when dry; fruit mostly subturgid, transversely ellipsoid or globose [4. geminata](#)

1. *Morinda longiflora* G. Don Gen. Syst. 3: 545 (1834); F.T.A. 3: 192; Hutch. in Kew Bull. 1916: 9; Aubrév. Fl. For. Soud.-Guin. 485, t. 108, 1-3. *APD acc*

A glabrous climbing shrub; flowers white, fragrant; fruits yellow composed, of connate berries; [in secondary forest](#).

65. CHASSALIA

Comm. ex Poir. in Lam. Encycl. Méth. Bot., Suppl. 2: 450 (1812).

Psychotria of F.T.A. 3: 193, partly (sect. Chasalia).

- 1 Inflorescences subsessile, congested, unbranched except in fruit; leaves glabrous: **2**
 Inflorescences pedunculate, branched and sometimes very lax: **6**
- 2 Corolla 2 cm. long, the tube slightly curved; calyx denticulate; flowers in several congested whorls; leaves elongate-oblongate, about 25 cm. long, 4-6 cm. broad, with about 15 pairs of lateral nerves [1. elongata](#)
 Corolla up to 1 cm. long: **3**
- 3 Climbing shrub; corolla curved [11. zenkeri](#)
 Undershrubs; corolla straight; fruits round: **4**
- 4 Fruiting pedicels thick and fleshy, about 3 mm. diam.; leaves elliptic, rounded to cuneate at base, acuminate, 10-19 cm. long, 4-8 cm. broad, with about 11 pairs of lateral nerves, venation prominent; petioles up to 3 cm. long [2. corallifera](#)
 Fruiting pedicels not thickened; leaves obovate-elliptic, rather long-cuneate at base, acuminate, 8-14 cm. long, 3.5-6 cm. broad, with about 7 pairs of lateral nerves, venation obscure; petioles 1-2 cm. long: **5**
- 5 Stems with a very narrow longitudinal ridge from the stipules on each side [3. subherbacea](#)
 Stems terete [4. subnuda](#)
- 6 Inflorescences minutely tomentose; flowers subsessile: **7**
 Inflorescences glabrous: **10**
- 7 Midrib minutely tomentose beneath, leaves broadly oblanceolate, shortly subcordate at base, abruptly acuminate, 8-31 cm. long, 4-9 cm. broad, with 11-13 pairs of lateral nerves; internodes usually short; inflorescence terminal, with peduncle about 5 cm. long, shortly branched above [5. ischnophylla](#)
 Midrib glabrous beneath: **8**
- 8 Corolla-lobes keeled, tube about 5 mm. long, straight; inflorescences branched spreading panicles, 3-7 cm. diam., with numerous flowers; leaves elliptic to oblong-elliptic, cuneate at base, long-acuminate, 8-14 cm. long, 3.5-8 cm. broad, with about 11 pairs of closely arched lateral nerves [6. cristata](#)
 Corolla-lobes not keeled: **9**
- 9 Fruits spherical, smooth; inflorescences shortly branched, about 2 cm. long, few-flowered [7. kolly](#)
 Fruits ovoid, angular (at least when dry); inflorescences lax and spreading, more or less 6 cm. long and diam. [8. afzelii](#)
- 10 Flowers subsessile; shrubs; corolla keeled: **11**
 Flowers pedicellate; climbers; corolla not keeled: **12**
- 11 Corolla straight, the small lobes keeled; (other characters as above) [6. cristata](#)
 Corolla curved, at least 1 cm. long, expanded above and keeled; inflorescences about 2 cm. long; [young] leaves elliptic, cuneate at base, rather long-acuminate, 6-8 cm. long, 2-3 cm. broad [9. sp. nr. umbraticola](#)
- 12 Pedicels 2-3 mm. long: **13**
 Pedicels 7-13 mm. long; inflorescences lax, about 6 cm. long, few-flowered; corolla sharply curved at base, 1-5 cm. long; leaves elliptic to oblong-elliptic, cuneate to rounded at base, caudate at apex, 8-15 cm. long, 2.5-8 cm. broad [12. cupularis](#)
- 13 Inflorescences lax and spreading panicles about 6 cm. long and diam.; corolla about 9 mm. long, nearly straight; fruits ovoid, angular (when dry); leaves oblong, cuneate at base, long-acuminate, 8-14 cm. long, 3-4.5 cm. broad [10. laxiflora](#)
 Inflorescences 2-3 cm. long, very shortly branched; corolla about 11 mm. long, curved; leaves elliptic, caudate at apex, cuneate at base, 9-17 cm. long, 3-8 cm. broad [11. zenkeri](#)

1. *Chassalia elongata* *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 127 (1931). *APD acc*

A shrub with rather long leaves; flowers yellow with the inflorescence rhachis red-purple tinged.

Lib.: Dukwai R., Monrovia (Oct., Nov.) Cooper 33!

[Rosevear 63/20A from S. Nigeria, has smaller flowers and leaves. It appears to be closely related to this sp. and to *C. simplex* K. Krause (1920) in Cameroun.]

2. *Chassalia corallifera* (*A. Chev. ex De Wild.*) *Hepper* in Kew Bull. 16: 329 (1962). *APD acc*

Psychotria corallifera *A. Chev. ex De Wild.* in Pl. Bequaert. 2: 354 (1924).

An undershrub 1-3 ft. high; flowers white; fruits deep violet on fleshy coral-pink pedicels; **in forest.**

S. L.: Thomas 3857! **Lib.:** Gbanga (fr. Sept.) Linder 566! Zolopla, Sanokwele Dist. (fr. Sept.) Baldwin 9463! Ganta (fr. Sept.) Harley 659! Baldwin 12520! Gletown, Tchien Dist. (fr. 8. *Chassalia afzelii* (Hiern) K. Schum. in Engl. Bot. Jahrb. 23: 469 (1897). *APD acc*

Psychotria afzelii Hiern in F.T.A. 3: 205 (1877); Chev. Bot. 339.

Chassalia laxiflora Benth. (1849), partly (Don).

A straggling shrub or tree up to 30 ft. high; flowers white with yellow centre; **in forest**.

Port. G.: Catio (Aug.) Esp. Santo 2177, partly! **Guin.:** Kindia Chev. 13004; 13125. Diaguissa to Timbo Chev. 13447. **S. L.:** Afzelius! Don! Hastings (Sept.) Melville & Hooker 429! No. 2. 9. *Chassalia* sp. nr. *umbraticola* Vatke in Oestr. Bot. Zeitschr. 25: 230 (1875). *APD acc*

A shrub about 3 ft. high; flowers white; **in secondary upland forest**.

[Br.] Cam.: Bamenda-Nkwe (Apr.) Ujor FHI 30027! Bafut-Ngemba F.R. (May) Daramola FHI 41068!

[Very similar to plants widely spread in E. Africa which are named *C. umbraticola* Vatke, *C. discolor* K. Schum. and *C. albiflora* K. Krause. Further work is required to elucidate this complex.]

10. *Chassalia laxiflora* Benth. in Fl. Nigrit. 416 (1849), partly (Ansell). *APD acc*

Psychotria ansellii Hiern in F.T.A. 3: 214 (1877), partly (Ansell).

Scrambling shrub; flowers white or pinkish with yellow throat, and the inflorescence-rhachis often purple.

Lib.: Monrovia Farmar 348! Whyte! Congotown (Mar.) Barker 1224! Ganta (Sept.) Baldwin 9301! Grand Bassa Ansell! **Iv. C.:** Azaguié (Sept.) Chev. 22280! 22281!

11. *Chassalia zenkeri* K. Schum. & K. Krause in Engl. Bot. Jahrb. 39: 565 (1907). *APD acc*

Psychotria ansellii Hiern in F.T.A. 3: 214 (1877), partly (Thomson 105);

Chassalia laxiflora of F.W.T.A., ed. 1, 2: 127, partly (Thomson 106), not of Benth.

A climber; flowers waxy, crimson and yellow; **in forest**.

S. Nig.: Shakwa, Obudu (May) Latilo FHI 30929! Degema Dist. Talbot 3821! Eket Dist. Talbot 3056! Calabar Thomson 105!

Also in **Cameroun**.

12. *Chassalia cupularis* Hutch. & Dalz. F.W.T.A., ed. 1, 2: 127 (1931). *APD acc*

A glabrous climbing shrub; flowers scarlet, yellow inside; **in forest**.

S. Nig.: Oban (fr. Feb.) Talbot 233! Onochie FHI 36256x! Afi River F.R., Ikom (fl. & fr. Dec.) Keay FHI 28253!

Chassalia garrettii K. Schum. & K. Krause in Engl. Bot. Jahrb. 39: 564 (1907).

W. Africa.: without locality (Oct. 1893) Garret.

Apparently close to *C. laxiflora* Benth. Besides the above, several species at present under *Psychotria* may belong to *Chassalia*, e.g. *P. pteropetala* K. Schum.

66. PSYCHOTRIA

Linn.—F.T.A. 3: 193. Nom. cons.

Grumilea Gaertn.—F.T.A. 3: 215; F.W.T.A., ed. 1, 2: 216.

- 1 Bracts and bracteoles conspicuous and persistent; inflorescences either small pilose and congested, or spreading (to p. 194): 2
 Bracts and bracteoles inconspicuous: 19
- 2 Inflorescences more or less globose or congested, subsessile: 3
 Inflorescences more or less pyramidal branched cymes or rarely fairly long-pedunculate clusters: 6
- 3 Ascending undershrub with prostrate rooting stems; flowers very few, apical, calyx-lobes linear; sheathing stipules drawn out into 2 filiform lobes, about 10 mm. long, on each side, pilose; leaves ovate, acute at apex, rounded or subcordate at base, about 6 cm. long and 3 cm. broad, pilose at least beneath [1. brenanii](#)
 Erect undershrubs: 4
- 4 Leaves glabrous or pubescent on the nerves and midrib, lateral nerves about 15, close, lamina oblanceolate to ovate, acuminate, cuneate to rounded at base, 10-17 cm. long, 3-6 cm. broad; stems more or less glabrous but nodes pilose; inflorescence usually 1 globose head (rarely 3 heads on a short common peduncle), 1.5-2 cm. diam.; calyx-lobes linear, pilose on the margins; fruits ellipsoid, 1 cm. long [2. globosa](#)
 Leaves pilose all over the lower surface; lateral nerves 8-10 on each side of midrib: 5
- 5 Petioles (5-)10-17(-40) mm. long, slender, pilose; leaves thinly pilose above, more densely beneath, oblanceolate to ovate, long-cuneate base, 8-17 cm. long, 3.5-6.5 cm. broad; inflorescence globose, solitary, 1-2 cm. diam.; calyx-lobes linear, 3 mm. long, pilose on the margins; fruits ellipsoid, 1 cm. long [3. nigerica](#)
 Petioles 5 mm. long, stout, densely pilose; leaves glabrous above, densely pilose beneath, oblanceolate, caudate at apex, cuneate at base, 7-9 cm. long, 2.5-3 cm. broad; inflorescence congested, 8 mm. diam.; calyx-lobes acute, 1.5 mm. long, densely pilose; fruits spherical, 6 mm. diam. [4. sp. A](#)
- 6 Branchlets tomentose or pubescent all round: 7
 Branchlets glabrous or only with longitudinal stripes of hairs: 12
- 7 Ascending or creeping undershrubs: 8
 Erect small shrubs: 9
- 8 Leaves gradually acutely acuminate, oblong-elliptic about 10 cm. long and 3-4 cm. broad, reddish-brown when dry, rather thin; internodes not very short; inflorescence small with rather small bracts; fruits about 1 cm. diam. when fleshy, drying ribbed and about 5 mm. long [5. reptans](#)
 Leaves rounded to subacute at apex, oblong-elliptic, 5-7 cm. long, 2-3 cm. broad, shortly pubescent on midrib and nerves beneath; internodes short with stipules often overlapping; inflorescence very small on peduncle about 3 cm. long [6. kitsonii](#)
- 9 Midrib pubescent above; stems and peduncles rusty-pilose: 10
 Midrib glabrous above: 11
- 10 Leaves not bullate, with 12-15 nerves on each side of midrib, acuminate, cuneate to rounded at base, 10-12 cm. long, 5-6 cm. broad, rusty-pilose on both sides; inflorescences small, up to 6 cm. long, flowers few, not in distinct heads; calyx-lobes 2-3 mm. long, pilose [7. coeruleo-violacea](#)
 Leaves bullate with about 20 nerves on each side of midrib, acuminate, more or less cuneate at base, 9-13 cm. long, 3.5-7 cm. broad, rusty-pilose beneath; inflorescences up to 13 cm. long, flowers in distinct heads; bracteoles broad, 3-toothed; calyx-lobes about 1 mm. long, pilose [8. rufipilis var. rufipilis](#)
- 11 Leaves bullate, midrib beneath and peduncles rusty-pilose; (see also below) [8a. rufipilis var. konkourensis](#)
 Leaves not bullate; midrib beneath and peduncles pubescent; lamina obovate to obovate-elliptic; broadly acuminate, cuneate at base, 10-20 cm. long, 5-10 cm. broad, with about 20 lateral nerves on each side of midrib conspicuously looped near margin; inflorescences pedunculate and branched, with small heads; fruits ribbed when dry, about 8 mm. long [9. vogeliana](#)
- 12 Midrib above pilose with spreading hairs; leaves bullate, midrib impressed above [8a. rufipilis var. konkourensis](#)
 Midrib above glabrous or with a few hairs: 13
- 13 Leaves not coriaceous; inflorescences lax, reflexed or erect: 14
 Leaves coriaceous; lateral nerves 15-20 on each side of midrib, looped near margin: 17

- 14 Stipules shortly acuminate; inflorescences reflexed later: 15
 Stipules long-acuminate, 1.2-1.5 cm. long:..... 16
- 15 Bracts entire or very slightly toothed, 1-1.5 cm. long; inflorescences lax, flowers few [10. latistipula](#)
 Bracts 3-lobed, 6 mm. long; inflorescences lax with flowers in small tiglit heads [11. subglabra](#)
- 16 Inflorescences reflexed; leaves oblanceolate to obovate, acuminate, cuneate at base, 12-22 cm. long, 5-7 cm. broad, glabrous [12. strictistipula](#)
 Inflorescences not reflexed; leaves elliptic to ovate-elliptic, acuminate, cuneate at base, 7-16 cm. long, 2.5-4 cm. broad, shortly pubescent to glabrescent beneath [13. obscura](#)
- 17 Midrib beneath entirely glabrous, leaves obovate, acuminate, cuneate at base, 12-21 cm. long, 5-8 cm. broad; inflorescences long-pedunculate, peduncle 8-15 cm. long with usually 3 distinct heads at apex, more or less glabrous [14. bidentata](#)
 Midrib beneath minutely or rusty-pubescent:..... 18
- 18 Leaves with midrib minutely pubescent beneath, lamina oblanceolate to obovate, acuminate, cuneate at base, 15-21 cm. long, 6-7 cm. broad; inflorescence pyramidal on a peduncle about 4 cm. long, rather close and not divided into distinct heads [15. maliensis](#)
 Leaves with midrib rusty-pubescent beneath; peduncle up to 10 cm. long; inflorescences formed of a number of distinct small heads [9. vogeliana](#)
- 19 Leaves with numerous bacterial nodules showing as black or pellucid dots (round or sometimes irregular) on the leaves beneath: 20
 Leaves without black dots beneath:..... 32
- 20 Flowers 5-merous:..... 21
 Flowers 4-merous:..... 25
- 21 Peduncles partly flattened and 2-winged; branchlets glabrous; inflorescences very lax, about 12 cm. long; pedicels about 4 mm. long; calyx truncate; stipules deeply lobed into 2 broad twisted and reflexed lobes, nearly glabrous; leaves elliptic, acuminate, cuneate and unequal sided at base, 11-15 cm. long, 4-6 cm. broad, glabrous [16. ceratalabastron](#)
 Peduncles not flattened or winged, filiform; branchlets pubescent; stipules acuminate into 2 subulate lobes; inflorescences 2-3 cm. long, very few-flowered; peduncle and pedicels filiform: 22
- 22 Branchlets with opposite longitudinal stripes of pubescence; leaves obovate-oblanceolate, rather long-acuminate, 5-8 cm. long, 1.5-3 cm. broad, with about 8 pairs of lateral nerves; petiole 5 mm. long, strigose above [17. bifaria](#)
 Branchlets pubescent all round:..... 23
- 23 Corolla-lobes ovate-triangular:..... 24
 Corolla-lobes narrow, horn-like; (for other characters see below) [21. humilis](#)
- 24 Leaves with about 8 pairs of lateral nerves, obovate to obovate-oblong, rather long-acuminate, cuneate at base, 5-10 cm. long, 2-4.5 cm. broad, glabrous; inflorescences very slender 2-6 cm. long, branched, rather few flowered [18. mannii](#)
 Leaves with about 15 pairs of lateral nerves, oblanceolate, acute to shortly acuminate, long-cuneate to a slightly rounded base, 12-23 cm. long, 3.5-8 cm. broad, slightly pubescent; flowers rather clustered at the end of the 3-7 cm. long peduncle [19. konguensis](#)
- 25 Midrib pubescent beneath: 26
 Midrib glabrous beneath:..... 27
- 26 Leaves subcordate to rounded at base, acuminate, oblong-lanceolate, 9-20 cm. long, 3.5-7 cm. broad; erect shrub; corolla with ovate-triangular lobes [20. brachyanthoides](#)
 Leaves cuneate to rounded at base; corolla-lobes narrow and horn-like; (for other characters see below) [21. humilis](#)
- 27 Corolla-lobes narrow and horn-like, very small: 28
 Corolla-lobes ovate-triangular, shrubs of undershrubs : 29
- 28 Leaves acutely acuminate, cuneate at base into slender petiole 1-2 cm. long, lamina elliptic to obovate, 5-7 cm. long, 2-3-5 cm. broad, glabrous; inflorescence 1-5 cm. long with few, rather clustered flowers; undershrub [22. cornuta](#)
 Leaves acute to slightly acuminate, rounded to cuneate at base, ovate-elliptic, 3-6(-10) cm. long, 1.5-3(-6) cm. broad, pubescent or glabrous; inflorescences few-flowered 1(-6) cm. long; more or less herbaceous [21. humilis](#)
- 29 Branchlets pubescent all round; leaves with about 8 nerves on each side of midrib; (for other characters see above) [18. mannii](#)
 Branchlets, inflorescences and leaves glabrous; stipules more or less pubescent; drying brownish; bacterial

- nodules small and in irregular clusters: 30
- 30 Branchlets terete, without longitudinal ridges: 31
- Branchlets with 2 longitudinal ridges; leaves with about 15 lateral nerves on each side of midrib, oblanceolate to oblong-elliptic, 13-20 cm. long, 4.5-9 cm. broad, abruptly and obtusely acuminate, cuneate at base; drying green with bacterial nodules appearing as distinct black dots; inflorescences 3-8 cm. long, well-branched; peduncle shorter than or equal to the flowering part of the inflorescence; corolla 2 mm. long ... [25. leptophylla](#)
- 31 Leaves with about 9 or fewer nerves each side of midrib, oblong-elliptic, 5-12 cm. long, 2.5-4.5 cm. broad, long-acuminate, cuneate at base; inflorescences very lax and few-flowered; peduncle filiform, 2-4 cm. long; corolla 4 mm. long [23. linderi](#)
- Leaves with about 13 nerves on each side of midrib, obovate to oblanceolate, 10-17 cm. long, 3-7 cm. broad, more or less acuminate, cuneate at base; inflorescences 5-9 cm. long, well-branched; peduncle about 3 cm. long, longer than flowering part of inflorescence; corolla 2 mm. long [24. brachyantha](#)
- 32 Midrib beneath with linear black bacterial nodules (several mm. long) at irregular intervals on each side: 33
- Midrib without linear nodules: 36
- 33 Leaf margins strongly undulate, acute at each end, narrowly elliptic-lanceolate, 7-11 cm. long, 1.5-3 cm. broad, with about 7 nerves on each side of midrib; branchlets with 2 conspicuous ridges; stipules deeply divided into 2 reflexed setae 2 mm. long; inflorescences terminal with peduncle 1-2 cm. long, few flowered and rather congested at apex [26. recurva](#)
- Leaf margins not undulate; stems terete; stipules bilobed at apex: 34
- 34 Leaves with 4-5(-7) nerves on each side of midrib, linear-elliptic to lanceolate-elliptic, acute, narrowly cuneate at base, 5-14 cm. long, 1-5 cm. broad; inflorescences pedunculate, branched above, reflexed in fruit . [27. talbotii](#)
- Leaves with 7-11 nerves on each side of midrib; inflorescences branched-paniculate: 35
- 35 Apex of leaves acute or obtuse, not acuminate, lanceolate-elliptic, 4-13 cm. long, 1-4.5 cm. broad; petioles up to 2 cm. long; in savanna [28. huae](#)
- Apex of leaves acuminate, very variable in shape, lanceolate-elliptic to broadly ovate-elliptic, 8-15(-20) cm. long, 2-6(-10) cm. broad; petioles 1-5 cm. long; usually in forest [29. calva](#)
- 36 Endosperm not ruminant: 37
- Endosperm ruminant: 66
- 37 Inflorescences sessile, unbranched, congested: 38
- Inflorescences pedunculate (capitate or branched) : 44
- 38 Ascending undershrub with prostrate rooting stems; (for other characters see above) [1. brenanii](#)
- Shrubs with erect stems: 39
- 39 Calyx-lobes broadly ovate 1-2 mm. long; branchlets without thick soft bark, terete; (for other characters see below) [30. subobliqua](#)
- Calyx-lobes shortly triangular or calyx truncate: 40
- 40 Petioles 2-6 cm. long: 41
- Petioles up to 1 cm. long; leaves elliptic, acuminate, cuneate at base, 7-15 cm. long, 2.5-7 cm. broad; branchlets with thick cracking bark: 43
- 41 Stipules about 15 mm. long, broadly ovate, ferruginous, caducous; calyx truncate; (for other characters see below) [31. dorotheae](#)
- Stipules about 5 mm. long, thick, straw-coloured: 42
- 42 Leaves elliptic, 17-20 cm. long, 8-10 cm. broad, minutely pubescent beneath; petioles up to 6 cm. long; calyx distinctly lobed [32. obanensis](#)
- Leaves oblong-oblanceolate, narrowly cuneate at base, 22-31 cm. long, 4-7.5 cm. broad, glabrous; petioles up to 8 cm. long; calyx obscurely lobed [33. longituba](#)
- 43 Branchlets with 2 longitudinal ridges; leaves glabrous beneath; corolla 4-lobed, about 3 mm. long [34. lophoclada](#)
- Branchlets terete; leaves minutely pubescent beneath; corolla 5-lobed, about 6 mm. long [35. insidens](#)
- 44 Peduncles pilose, pubescent or puberulous: 45
- Peduncles glabrous: 49
- 45 Indumentum of peduncle conspicuously pilose to puberulous; inflorescences capitate: 46
- Indumentum of peduncle very short and dense (lens needed) : 48
- 46 Leaves glabrous beneath, obovate, 10-15 cm. long, 4.5-7 cm. broad; stems glabrous; stipules and peduncles densely pilose with purple-brown hairs; peduncles 2-3 cm. long with a capitate inflorescence at apex; calyx-lobes ovate, 2 mm. long; fruits ellipsoid, 9 mm. long [36. globiceps](#)
- Leaves beneath, stipules and stems puberulous: 47

- 47 Leaves oblanceolate, cuneate at base, 12-19 cm. long, 4.5-7 cm. broad, glabrous above [37. liberica](#)
 Leaves ovate to ovate-elliptic, rounded to broadly cuneate at base, 4-7 cm. long, 2.5-5 cm. broad, puberulous above [38. sp. nr. tarambassica](#)
- 48 Inflorescences capitate; (for other characters see above) [31. dorotheae](#)
 Inflorescences branched; leaves elliptic, 8-14 cm. long, 3-5 cm. broad, nearly glabrous; flowers 4(-5)-merous; indumentum of inflorescences black [39. nigrescens](#)
- 49 Calyx-teeth acute, distinct, ovate, 1-2 mm. long, often reflexed: 50
 Calyx-teeth obtuse, short, or calyx truncate: 51
- 50 Inflorescences branched and paniculate, (1-)3 cm. diam.; branchlets with 2 longitudinal ridges, bark becoming thick, pale yellow and cracking; stipules thick; leaves oblanceolate to elliptic, acutely acuminate, cuneate at base, 7-17 cm. long, 3-5.5 cm. broad [40. sp. nr. abrupta](#)
 Inflorescences capitate, 1 cm. diam. on peduncle up to 3 cm. long; branchlets terete, bark thin; stipules membranaceous; leaves elliptic, acuminate, cuneate at base, 9-13 cm. long, 3-5 cm. broad [30. subobliqua](#)
- 51 Branchlets with thick outer bark, cracking and often breaking off, usually with 2 longitudinal ridges; corolla 5-merous: 52
 Branchlets with thin bark, mainly terete: 53
- 52 Style pubescent; hairs deep in throat of corolla; leaves broadly elliptic, rather long-acuminate, cuneate at base, 5-11 cm. long, 3-6 cm. broad, with 5-6 nerves on each side of midrib [41. abrupta](#)
 Style glabrous; hairs exerted from throat of corolla; leaves oblong-oblanceolate, acuminate, cuneate at base, 8-15 cm. long, 3-4.5 cm. broad, with 7-9 nerves on each side of midrib [42. sciadephora](#)
- 53 Flowers 4-merous: 54
 Flowers 5-merous: 55
- 54 Leaves obovate to oblanceolate, 10-17 cm. long, 3-7 cm. broad, with about 13 nerves on each side of midrib; (for other characters see above) [24. brachyantha](#)
 Leaves linear-lanceolate, 5-8.5 cm. long, 1-2.5 cm. broad, with 8-9 nerves on each side of midrib [43. adafoana](#)
- 55 Branchlets and stipules puberulous; leaves broadly lanceolate, acute, 7-10 cm. long, 2-3 cm. broad, with 6-7 nerves on each side of midrib; inflorescences few-flowered, shortly pedunculate, flowers subsessile [44. albicaulis](#)
 Branchlets and stipules glabrous: 56
- 56 Stipules divided to the base into 2 subulate lobes about 4 mm. long; branchlets longitudinally 2 ridges; leaves oblong to oblong-lanceolate, 3-8 cm. long, 1-3.5 cm. broad, with 4-5 nerves on each side of midrib [45. pleuroneura](#)
 Stipule-lobes not subulate from the base: 57
- 57 Leaves narrowly obovate to elongate-oblanceolate or oblong, cuneate at base: 58
 Leaves broadly ovate, shortly cuneate at base: 60
- 58 Inflorescence-branches small and rather few-flowered, 2-2.5 cm. diam. : 59
 Inflorescences rather large and spreading, 4-8 cm. diam.; corolla-tube 2 mm. diam.; leaves oblong-elliptic, acuminate, cuneate at base, with 10-12 pairs of lateral nerves; petiole 4-6 cm. long [48. malchairei](#)
- 59 Leaves narrowly obovate to elongate-oblanceolate, acutely acuminate, 10-20 cm. long, 3-7 cm. broad, with 12-14 pairs of lateral nerves; petiole 2 cm. long; flowers small and narrow [46. potanthera](#)
 Leaves oblong, shortly cuneate and unequal-sided at the base, 16 cm. long, 4-6 cm. broad, abruptly acuminate, with about 10 pairs of lateral nerves spreading at a right angle; petiole 6-7 cm. long [47. viticoides](#)
- 60 Inflorescences long-pedunculate, peduncle 3-11 cm. long with or without a pair of small leaves at the first branches; leaves broadly elliptic, obtusely pointed at apex, subdecurent on the petiole, 12-16 cm. long, 6-10 cm. broad, glabrous; lateral nerves about 10 pairs; veins conspicuous; corolla 7 mm. long [49. dalzielii](#)
 Inflorescences shortly pedunculate, peduncle about 2 cm. long: 61
- 61 Veins very conspicuous between the 7-11 nerves on each side of midrib: 62
 Veins invisible or nearly so: 64
- 62 Nerves about 7 on each side of midrib, lamina elliptic, very shortly acuminate, 14-18 cm. long, 6-9 cm. broad; inflorescences about 3 cm. long [50. piolampra](#)
 Nerves 10-11 on each side of midrib: 63
- 63 Leaves elliptic, very shortly acuminate, about 25 cm. long and 12 cm. broad, with a very stout midrib ribbed beneath; petiole 4 cm. long; inflorescence nearly sessile; corolla 7 mm. long, densely hairy within the throat [51. arborea](#)
 Leaves obovate-elliptic, broadly acuminate, about 30 cm. long and 14 cm. broad, with a stout smooth midrib beneath; petiole 5 cm. long; inflorescence subsessile, few-flowered; corolla over 1 cm. long, thick, densely

- hairy within the throat [52. *crassicalyx*](#)
- 64** Cymes 6-10 cm. diam. with many spreading branches and numerous flowers; peduncle about 2 cm. long; leaves ovate-elliptic, obtuse at apex, about 30 cm. long and 12 cm. broad, with 12-14 pairs of lateral nerves; petiole 3-4 cm. long; fruits 8 mm. long [53. *limba*](#)
- Cymes 2-3 cm. diam. with few branches and few flowers: **65**
- 65** Lobes of corolla not winged, corolla-tube thick, 5 mm. long; leaves broadly oblong-elliptic, very shortly pointed, very abruptly cuneate at base, 16-25 cm. long, 6-10 cm. broad, with 12-14 pairs of lateral nerves; petiole 1.5-2 cm. long [54. *rowlandii*](#)
- Lobes of corolla winged, corolla-tube slender, 5 mm. long; leaves elliptic, acuminate, cuneate at base, 6-14 cm. long, 3-6 cm. broad, with about 8 pairs of lateral nerves; petiole 1-2 cm. long [55. *pteropetala*](#)
- 66** Inflorescences branched-paniculate: **67**
- Inflorescences clustered on a peduncle or sessile or shortly branched: **73**
- 67** Calyx deeply lobed, lobes 2-3 mm. long, acutely deltoid; corolla about 9 mm. diam., conspicuously hairy in the throat; fruits about 1 cm. long; inflorescences bracteolate; leaves obovate-elliptic, acuminate, subcordate to cuneate at base, 8-14 cm. long, 3-7 cm. broad, with about 11 pairs of lateral nerves; petioles up to 2 cm. long [56. *elongato-sepala*](#)
- Calyx-teeth up to 1 mm. long or obscure: **68**
- 68** Leaves closely reticulate beneath, coriaceous, oblong-elliptic, abruptly and shortly acuminate, more or less rounded at base, about 12 cm. long and 5 cm. broad with about 12 lateral nerves on each side, often drying yellow-green; calyx shortly toothed; stipules membranous, apex irregular and obscurely bilobed, about 1 cm. long and nearly as broad, early caducous [57. *succulenta*](#)
- Leaves laxly reticulate beneath, hardly coriaceous, not drying yellow-green; calyx subtruncate: **69**
- 69** Lateral nerves 8-14 on each side of midrib, strongly looped near margin: **70**
- Lateral nerves 6-7 on each side of midrib, slightly looped near margin, lamina ovate-elliptic, acuminate, cuneate at base, 8-12 cm. long, 3-8 cm. broad; petioles 1-3 cm. long; corolla appearing inflated [62. *djumaensis*](#)
- 70** Inflorescences laxly branched, up to 14 cm. long (including petiole) and 11 cm. broad; corolla-tube about 1.5 mm. diam.; fruits about 3 mm. diam. : **71**
- Inflorescences up to 6 cm. long and broad; corolla-tube 2-3 mm. diam.; leaves broadly elliptic, abruptly acuminate, cuneate at base, 9-13 cm. long, 4.5-7 cm. broad [61. *chalconeura*](#)
- 71** Leaves with 8-11 lateral nerves on each side and ant-holes (dermatia) localised towards the apex, lamina oblong-elliptic, up to 17 cm. long and 7 cm. broad, shiny above and with raised tertiary venation [58. *venosa*](#)
- Leaves with about 15 lateral nerves on each side and ant-holes (dermatia) in many of their axils, lamina obovate to oblong-elliptic, 8-17 cm. long, 4-8 cm. broad, dull above: **72**
- 72** Inflorescences usually glabrous; young branchlets more or less pubescent; leaves drying purplish-brown, usually pubescent [59. *articulata*](#)
- Inflorescences usually puberulous; young branchlets usually glabrous; leaves drying dull brown, usually glabrous [60. *guineensis*](#)
- 73** Inflorescences sessile, densely clustered, terminal; leaves variable in shape from narrowly obovate to suborbicular, obtuse at apex, 10-20 cm. long, 4-14 cm. broad, glabrous; fruits ellipsoid, strongly ribbed, about 1 cm. long and 8 mm. broad, with calyx persistent at apex [63. *psychotrioides*](#)
- Inflorescences pedunculate or shortly branched: **74**
- 74** Midrib pilose or puberulous beneath: **75**
- Midrib glabrous beneath (or sometimes minutely puberulous in No. 66) : **76**
- 75** Midrib pilose beneath; (other characters as above) [56. *elongato-sepala*](#)
- Midrib puberulous beneath; leaves ovate-elliptic, acuminate, cuneate at base, 10-15 cm. long, with about 15 pairs of lateral nerves; branchlets puberulous; inflorescences with several short branches; fruits spherical, 6 mm. diam., smooth [64. *fernandopoensis*](#)
- 76** Calyx subtruncate; leaves ovate-elliptic to obovate, shortly acuminate, cuneate at base, 10-25 cm. long, 4-9 cm. broad; stipules about 3 mm. long, glabrous or slightly pubescent, ant-holes usually absent from nerve axils beneath; petioles 1-2(-3) cm. long; inflorescences shortly branched, sometimes shortly pedunculate, 3-4 cm. diam.; fruits about 1 cm. long, not ribbed [65. *gabonica*](#)
- Calyx shortly 5-lobed; leaves usually with ant-holes in the axils of the nerves beneath [66. *brassii*](#)

APD: Synonym of Psychotria minuta E.M.A. Petit

Geophila pilosa A. Chev. Bot. 346, partly (Chev. 19222 bis), name only.

A creeping herb with wiry hispid stems; flowers white.

IV. C.: Aké Assi 4863! Mid. Sassandra to Mid. Cavally (fr. July) Chev. 19222 bis! **S. Nig.:** Shasha F.R., Ijebu (Mar.) Richards 3219! Okomu F.R., Benin (Dec., Jan.) Brenan 8416! 8621! 8761!

Also in **Cameroun**.

2. *Psychotria globosa* Hiern in F.T.A. 3: 208 (1877). *APD acc*

Psychotria ionantha K. Schum. (1903).

Uragoga hexamera K. Schum. (1899)-F.W.T.A., ed. 1, 2: 128.

Cephaëlis hexamera (K. Schum.) Wernham (1919).

Undershrub 1-3 ft. high, decumbent and rooting at the base; flowers white; **in forest**.

S. Nig.: Okomu F.R. (Nov., Jan., Feb.) Onochie FHI 40298! Brenan 8429! 9063! Oban Talbot! Kwa Falls (Mar.) Brenan 9244! [**Br.**] **Cam.:** Preuss 1159! Amba Bay (Feb.) Mann 1330!

Also in **Cameroun**.

[Mann 1330, the type of this species. is described as a shrub 3 ft. high; all the other specimens cited are decumbent and rooting at the base.]

3. *Psychotria nigerica* Hepper in Kew Bull. 16: 337(1962).

APD: Synonym of Psychotria globosa var. ciliata (Hiern) E.M.A. Petit

Trichostachys talbotii Wernham Cat. Talb. 55 (1913); F.W.T.A., ed. 1, 2: 126, not *Psychotria talbotii* Wernham l.c. 54 (1913).

A more or less simple-stemmed erect undershrub about 2 ft. high; flowers whitish; **in forest**.

S. Nig.: Degema Talbot 3361! Oban (fr. Jan., Apr.) Talbot 1041! 1368! Ejiofor FHI 21885! Onochie & Latilo FHI 36123x! An River F.R., Ogoja (fr. May) Jones & Onochie FHI 14146! 15. *Psychotria maliensis* *Schnell* in Mém. I.F.A.N. 50: 76, photo. 14, figs. 5, 6 (1967).

APD: Synonym of Psychotria multinervis De Wild.

A rather robust shrub 6-10 ft. high; flowers white; in forest beside streams.

Guin.: Mali (Sept.) Schnell 7041! 7159! s.n.! Pita (Mar.) Adam 11654!

16. **Psychotria ceratalabastron** *K. Schum.* in Engl. Bot. Jahrb. 33: 362 (1903). *APD acc*

APD: Synonym of Psychotria alatipes Wernham

Psychotria alatipes *Wernham* in Cat. Talb. 53 (1913).

A shrub about 5 ft. high; flowers white; in forest.

S. Nig.: Oban Talbot 241! Eket Talbot! Okarara (May) Ujor FHI 30152! **[Br.] Cam.:** Victoria to Bimbia Preuss 1271. Kebo Conrau 211.

17. **Psychotria bifaria** *Hiern* in F.T.A. 3: 198 (1877). *APD acc*

A shrub 2-3 ft. high; flowers white; in forest.

[Br.] Cam.: Buea, 2,500 ft. (Mar.) Maitland 541! Rio del Rey Johnston! **F. Po:** (June) Mann 419!

Also in **Cameroun**.

18. **Psychotria mannii** *Hiern* in F.T.A. 3: 197 (1877). *APD acc*

APD: Synonym of Psychotria camerunensis E.M.A. Petit

A shrub 2-5 ft. high, branching near the base with a spreading habit; flowers white; in deep shade in forest.

S. Nig.: Okomu F.R., Benin (fl. & fr. Jan.) Brenan 8759! Afi River F.R., Ogoja (fr. May) Jones & Onochie FHI 18743! Oban Talbot 2043! **[Br.] Cam.:** S. Bakundu F.R., Kumba (Jan., Mar.) Daramola FHI 35504! Brenan 9269!

Also in **Gabon**.

19. **Psychotria konguensis** *Hiern* in F.T.A. 3: 200 (1877). *APD acc*

A shrub 2-3 ft. high.

[Br.] Cam.: S. Bakundu F.R., Kumba (fr. Sept.) Akua FHI 15178! Bombe, Kumba (Apr.) Daramola FHI 29811!

Also in **Cameroun**, **Gabon** and **Cabinda**.

20. **Psychotria brachyanthoides** *De Wild.* Pl. Bequaert. 2: 337 (1924). *APD acc*

Psychotria brachyantha of Chev. Bot. 340, not of Hiern.

Shrub or small tree with white flowers.

Iv. C.: Makouguié Chev. 17108! Apouassou to Soubiré (Mar.) Chev. 17801!

21. **Psychotria humilis** *Hiern* in F.T.A. 3: 198 (1877). *APD acc*

APD: Synonym of Psychotria eminiana (Kuntze) E.M.A. Petit var. eminiana

A creeping herb with rooting stems just below the soil and erect leafy shoots up to 1 ft. high, leaves very dark green with a white margin; flowers white, fruits scarlet; in forest.

S. Nig.: Okomu F.R., Benin (Dec.) Brenan 8392! 8417! 8618! Usonigbe F.R., Sapoba (Nov.) Keay FHI 25624! Meikle 629! Oban Talbot 362!

Also in **Gabon**.

[Note: Brenan 8392 & 8518 are ascending and have leaves and inflorescences larger than the others cited; the plants may be pilose or almost glabrous; very near *P. cornuta*.]

22. **Psychotria cornuta** *Hiern* in F.T.A. 3: 198 (1877).

APD: Synonym of Psychotria humilis var. cornuta (Hiern) E.M.A. Petit

An ascending undershrub about 1 ft. high; flowers few and rather congested.

F. Po: Mann 1429!

23. Psychotria linderi Hepper in Kew Bull. 16: 335, fig. 1, 2 (1962). *APD acc*

A shrub about 3 ft. high; flowers white in pendent delicate panicles; **in forest**.

Guin.: Ziam, Macenta (Aug.) Adam 5969! 6054! **S. L.:** Mabonto (fr. July) Deighton 3259! **Lib.:** Gbanga (Sept.) Linder 649! Bobei Mt., Sanokwele (fr. Sept.) Baldwin 9580! Ganta (fr. Dec.) Harley 791! Bilimu (fr. Sept.) Harley 1532!

24. Psychotria brachyantha Hiern in F.T.A. 3: 196 (1877). *APD acc*

APD: Synonym of Psychotria brachyanthoides De Wild.

Psychotria aledjoensis De Wild. l.c. 328 (1924), incl. var. glabra De Wild. l.c. 330 (1924); F.W.T.A., ed. 1, 2: 125.

A shrub about 6 ft. high; flowers greenish-yellow.

Guin.: Yagedou, Boola (Mar.) Chev. 20929! Aledjo (Oct.) Chev. 27047! **Iv. C.:** Amitioro (fr. Nov.) Aké Assi 5452! Banco (July) de Wilde 131! **Ghana:** Banka (Mar.) Vigne FH 1884! L. Po:** Mann 1423!

25. Psychotria leptophylla Hiern in F.T.A. 3: 200 (1877); Hepper in Kew Bull. 16: 334. *APD acc*

Pavetta ? tenuifolia Benth. (1849), not *Psychotria tenuifolia* Sw. (1788).

Psychotria setacea Hiern in F.T.A. 3: 197 (1877); F.W.T.A., ed. 1, 2: 124.

A shrub 2-8 ft. high; fruits shining red; **in forest**.

S. Nig.: Oban Talbot 2002! 2024! **[Br.] Cam.:** Victoria (Apr.) Maitland 1166! Buea (fl. & fr. Jan., Feb., ft. May) Mann 1191! Dalz. 8208! Dunlap 21! Maitland 704! S. Bakundu F.R., Kumba (Apr.) Daramola FHI 29830! **F. Po:** (fl. & fr. Nov.) T. Vogel 167! Guinea 2618!

Also in **Cameroun**.

26. Psychotria recurva Hiern in F.T.A. 3: 206 (1877). *APD acc*

Psychotria potamogetonoides Wernham (1917).

Psychotria bicarinata Mildbr., name only.

Psychotria talbotii of F.W.T.A., ed. 1, 2: 124, partly (syn. and Talbot 3817), not of Wernham.

A glabrous shrub 4-5 ft. high, the narrow leaves with crinkled margins.

S. Nig.: Degema Talbot 3817! **F. Po:** Mann 1430! Bogogo Mildbr. 6825.

27. Psychotria talbotii Wernham in Cat. Talb. 54 (1913); F.W.T.A., ed. 1, 2: 124, partly (excl. syn. and Talbot 3817); Brenan in Kew Bull. 5: 222. *APD acc*

APD: Synonym of Psychotria calva Hiern

Small shrub 2-5 ft. high, often well-branched; flowers white, fruits and pedicels deep red; **in forest**.

S. Nig.: Idanre, Akure Div. (fl. & fr. Jan., fl. Apr.) Brenan 8641! 8651! 8679! Symington FHI 3360! Oban Talbot 1054! Kwa Falls (Mar., Apr.) Brenan 9244! Ejiofor FHI 21882! Akampa Estate, Calabar (fl. & fr. Mar.) Latilo FHI 41346! **[Br.] Cam.:** Rio de Rey Johnston!

28. Psychotria huae De Wild. Pl. Bequaert. 2: 372 (1924).

APD: Synonym of Psychotria calva Hiern

Psychotria williamsii Hutch & Dalz. F.W.T.A., ed. 1, 2: 124 (1931).

Psychotria kolly of Chev. Bot. 341, partly, not of Schum. & Thonn.

Shrub; flowers white or yellowish, fragrant; **in savanna woodland**.

Guin.: Ditinn to Diaguissa Chev. 12660! 12675! **Ghana:** Johnson 143! Ejura (fl. & fr. Apr.) Williams 228! Ampoti to Adumasia, Afram Plains (May) Kitson! Opro River F.R. (Apr.) Keay FHI 37591! **N. Nig.:** Vom, Jos Plateau Dent Young 123!

29. *Psychotria calva* **Hiern** in F.T.A. 3: 199 (1877); Berhant Fl. Sén. 106. *APD acc*

Psychotria umbellata **Schum. & Thonn.** (1827), not of Vell. (1825).

Pavetta ? laevis **Benth.** (1849), not *Psychotria laevis* DC. (1830).

Grumilea micrantha **Hiern** in F.T.A. 3: 217 (1877); Chev. Bot. 343.

Psychotria micrantha var. *floribunda* **A. Chev.** Bot. 343, name only.

Psychotria floribunda **De Wild.** l.c. 366 (1924).

Psychotria porto-novensis **De Wild.** l.c. 405 (1924).

Psychotria warneckei of F.W.T.A., ed. 1, 2: 125, partly (Chev. 20937), not of K. Schum. & K. Krause.

An erect shrub 2-6 ft. high, or higher when straggling, with leaves very variable in width; flowers whitish, fruits red; **beside streams in forest.**

Sen.: "gallery forests" Berhaut 1670. **Port. G.:** Brene, Bissau (fr. Jan.) Esp. Santo 1694! **Guin.:** Boola to Moribadou (Mar.) Chev. 20937! Fouta Djallon Chev. 12833! Farana (Mar.) Sc. Elliot 5261! **S. L.:** Kundala (fr. Mar.) E. Macdonald 21! Musaia (Apr.) Deighton 5423! Pejehun Thomas 8253! Makump (May) Deighton 1722! Mange (Apr.) Hepper 2617! **Lib.:** Monrovia Whyte! Sinoe Basin Whyte! **Iv. C.:** Tabou to Bériby Chev. 19951! Agniéby Chev. 17200! Sanvi Chev. 17817! Assinie Chev. 17888! **Ghana:** Cape Coast (Mar.) Hall 1064! Aburi (May) Hughes 823! Afram Plains (May) Kitson 1123! Banda, Wenchi Dist. (fr. Dec.) Morton GC 25080! **S. Nig.:** Lagos Barter 2204! 3245! Obu Thomas 493! Sapoba (Feb.) Onochie FHI 31946! Okomu F.R., Benin (Mar.) Brenan 9181! Shasha F.R. (May) Richards 3468! **[Br.] Cam.:** Bafut-Ngemba F.R., Bamenda (June) Lightbody FHI 26327! **F. Po:** T. Vogel 190! Bahia Venus (fr. Dec.) Guinea 238!

[A complex aggregate is included here. *P. hallei* Aké Assi & Bouton in Bull. Jard. Bot. Brux. 30: 393, t. 12 (1960), from Ivory Coast (Aké Assi 4404!) may also belong to the aggregate-F.N.H.]

30. *Psychotria subobliqua* **Hiern** in F.T.A. 3: 206 (1877). *APD acc*

Psychotria refractiloba **K. Schum.** (1899).

Psychotria caduciflora **De Wild.** Pl. Bequaert. 2: 346 (1924).

Psychotria copeensis **De Wild.** l.c. 353 (1924).

Psychotria yabaensis **De Wild.** l.c. 440 (1924).

Psychotria anetoclada of Chev. Bot. 339, (incl. var. *angustifolia*), names only, not of Hiern.

A nearly glabrous shrub a few feet high; flowers pale green or whitish, soon falling off; **in forest.**

Guin.: Boula, Macenta (Apr.) Adam 12040! **Iv. C.:** Tébo, Mid. Cavally (July) Chev. 19412! Anyama (Feb.) Chev. 20098! Mt. Copé, Grabo Dist. (July) Chev. 19677! **Ghana:** Fomena (Apr.) Adams 2490! S. Fomangsu F.R. (Apr.) Adams 2657! Atewa Range F.R. (Jan.) de Wit & Morton A2935! **S. Nig.:** Ikorodu (Mar.) Schlechter 12305! Oban (Mar.) Richards 5185! **[Br.] Cam.:** Victoria (Mar., Apr.) Maitland 701! 1142! **F. Po:** Mann 1421!

Also in **Cameroun**, **S. Tomé** and **Principe**.

31. *Psychotria dorotheae* **Wernham** in Cat. Talb. 53 (1913). *APD acc*

A shrub about 6-12 ft. high; flowers white; fruits red; **in forest.**

Lib.: Du R. (fr. July) Linder 93! Bobei Mt., Sanokwele Dist. (fr. Sept.) Baldwin 9629! **Iv. C.:** Tiapleu (fr. May) Aké Assi! **Ghana:** Princes Town (Mar.) Morton GC 6623! **S. Nig.:** Oban F.R. (Feb.) Onochie & Latilo FHI 36312! Akamkpa, Calabar (fl. & fr. Mar.) Latilo FHI 38096! Oban Talbot 1561!

32. *Psychotria obanensis* **Wernham** in Cat. Talb. 53 (1913).

APD: *Synonym of Chazaliella obanensis (Wernham) E.M.A. Petit & Verdc.*

A shrub with rather large, long-petiolate leaves; flowers densely clustered in 1 to 3 subsessile heads.

S. Nig.: Oban Talbot 244!

33. *Psychotria longituba* **A. Chev. ex De Wild.** Pl. Bequaert. 2: 382 (1924); Chev. Bot. 342; Hepper in Kew Bull. 16: 337 (1962). *APD acc*

Psychotria capitellata **A. Chev. ex De Wild.** l.c. 348 (1924); Chev. Bot. 340, name only, not of DC. (1830), nor Benth. & Hook. f. (1873).

A shrub up to 5 ft. high, with long, rather narrow leaves; fruits red, angular when dry.

Lib.: Kulo (fr. Mar.) Baldwin 11409! Jaurazon (fr. Mar.) Baldwin 11477! **Iv. C.:** Grabo, Cavally (fl. & fr. July) Chev. 19618! 19779! s.n.! Malamalasso (fr. Mar.) Chev. 17541!

34. *Psychotria lophoclada* Hiern in F.T.A. 3: 197 (1877).

APD: Synonym of Chazaliella lophoclada (Hiern) E.M.A. Petit & Verdc.

A stiffly branched glabrous undershrub 1-2 ft. high with pale yellowish branchlets; flowers yellowish, small and crowded in sessile heads, fruits red; **in forest**.

S. L.: Don! Sugar Loaf Mt. (May, Dec., fr. Nov.) Sc. Elliot 3959! Tindall 63! Deighton 5621! **Lib.:** Bobei Mt., Sanokwele (fr. Sept.) Baldwin 9568! Ganta (May) Barley 1174! Bilima (fl. & fr. Feb.) Harley 1775! Gbanga Linder 565 I **Iv. C.:** Béyo (Dec.) Leeuwenberg 2221! Nimba Mts. Schnell 3553!

35. *Psychotria insidens* Hiern in F.T.A. 3: 208 (1877).

APD: Synonym of Chazaliella insidens (Hiern) E.M.A. Petit & Verdc.

Undershrub 1-3 ft. high; flowers white or yellow; **in forest**.

S. Nig.: Omo F.R., Ijebu (Apr.) Onochie FHI 15522! Shasha F.R., Ijebu (Apr.) Ross 204! Oban (Mar.) Richards 5184! **F. Po:** Mann 310!

36. *Psychotria globiceps* K. Schum. in Engl. Bot. Jahrb. 28: 93 (1899). *APD acc*

Psychotria avakubiensis De Wild. Pl. Bequaert. 6: 74 (1932).

A slender shrub 2 ft. high; flowers white; **in forest**.

[Br.] Cam.: Victoria Schlechter 12374! S. Bakundu F.R., Kumba (fr. Jan., Mar.) Binuyo & Daramola FHI 35453! Brenan 9481!

Also in **Cameroun** and **Congo**.

37. *Psychotria liberica* Hepper in Kew Bull. 16: 335, fig. 1, 1 (1962). *APD acc*

An undershrub; **in forest**.

Lib.: Ganta (fl. Sept., fr. Oct.) Harley 710! 1912! Baldwin 12515! Duo (fr. Mar.) Baldwin 11344!

[Note: Aké Assi 3185 (Ivory Coast) and Brenan 9294 ([Br.] Cameroons) are related to this species and to *P. globiceps*, but appear to be distinct from them and from each other-F.N.H.]

38. *Psychotria* sp. nr. *tarambassica* Bremek. in J. Bot. 71: 280 (1933). *APD acc*

A compact shrub about 4 ft. high; flowers whitish; **in upland savanna**.

[Br.] Cam.: Vogel Peak, Adamawa (Dec.) Hepper 1539!

[This specimen lacks bacterial dots on the leaves which are typical of *P. tarambassica* in E. Africa.]

39. *Psychotria nigrescens* De Wild. Pl. Bequaert. 2: 393 (1924).

APD: Synonym of Psychotria albicaulis Scott-Elliot

A shrub about 2 ft. high, with small white flowers.

Guin.: Boola to Moribadou (Mar.) Chev. 20938! 20940! Bérézia (Feb.) Chev. 20777! **S. L.:** Bunumbu to Sembehun, Male R. (Apr.) Deighton 3937! **Lib.:** Gbau (fr. Sept.) Baldwin. 9455! Kitoma (Mar.) Adam 16753! 16764! 16769! **Iv. C.:** Taï (Mar.) Leeuwenberg 3034!

40. *Psychotria* sp. nr. *abrupta* Hiern in F.T.A. 3: 205 (1877). *APD acc*

An undershrub about 1 ft. high, or a shrub up to 15 ft. high; **in moist forest**.

Lib.: Dukwai R. (fl. & fr. July) Cooper 163! 360! Du R. (July) Linder 108! Duo (Mar.) Baldwin 11335!

[These plants belong to a complex of species that appears to be widespread in tropical Africa; further elucidation is necessary.]

41. **Psychotria abrupta** *Hiern* in F.T.A. 3: 205 (1877).

APD: Synonym of Chazaliella abrupta (Hiern) E.M.A. Petit & Verdc.

APD: Synonym of Chazaliella domatiicola (De Wild.) E.M.A. Petit & Verdc.

A small tree or shrub; flowers white; **beside streams in forest.**

Ghana: Adiembra, Ashanti (Feb.) Andoh FH 4287! **[Br.] Cam.:** S. Bakundu F.R., Kumba (Mar.) Brenan 9277!

Also in **Cameroun**, **Kenya**, **Tanganyika**, **N. Rhodesia** and **Mozambique**.

42. **Psychotria sciadephora** *Hiern* in F.T.A. 3: 202 (1877).

APD: Synonym of Chazaliella sciadephora (Hiern) E.M.A. Petit & Verdc.

Psychotria brevistipulata *De Wild.* l.c. 341 (1924).

Psychotria albifaux *K. Schum. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 125 (1931).

A shrub up to 10 ft. high, the leaves and inflorescence turning blackish on drying; flowers whitish or brown in bud; **in forest.**

Guin.: Nzo to Sokonante (Mar.) Chev. 21081! near Mt. Benna Schnell 7671! **S. L.:** Roruks (fr. July) Deighton 4676! Kasewe Hills F.R. (June) Deighton 5827! **Lib.:** Jaurazon (fr. Mar.) Baldwin 11448! Vahon (fr. Nov.) Baldwin 10234! Ganta (fl. Apr., fr. July, Sept.) Harley 913! 1226! **iv. C.:** Tonkoui Mt. (fr. Aug.) Schnell 6335! Sakonanta to Samphea Chev. **Ghana:** Bibiani (Apr.) Darko 865! Mpraeso Scarp (Apr.) Morton A695! **S. Nig.:** Okomu F.R. (Jan.) Brenan. 8784! 8841! Sapoba Kennedy 1773! Usonigbe F.R., Benin (fl. Feb., fr. Sept.) Onochie FHI 27697! 34282! Akure F.R. (fr. Oct., Nov.) Keay FHI 25549! Ejiofor FHI 24608! Ojo to Nyenekosum, Calabar (fr. June) Ujor FHI 27998! **[Br.] Cam.:** Amba Bay (Jan.) Mann 729! Victoria (fr. Oct.) Maitland 741! Banga (Mar.) Brenan 9281! Cam. Mt., 4,000 ft. (Feb.) Mann 1192!

Also in **Cameroun**.

[Note: the specimens from Guinée to Ghana have slightly smaller flowers than true *P. sciadephora* Hiern, and they have been distinguished as *P. brevistipulata* De Wild.-F.N.H.]

43. **Psychotria adrafoana** *K. Schum.* in Engl. Bot. Jahrb. 28: 90 (1899). *APD acc*

APD: Synonym of Psychotria ivorensis De Wild.

Psychotria ivorensis *De Wild.* Pl. Bequaert. 2: 375 (1924).

Psychotria recurva of Chev. Bot. 342, not of Hiern.

A low-branched shrub, nearly glabrous; flowers small, white in small shortly pedunculate cymes.

iv. C.: Abradines, Lower Comoé (Mar.) Chev. 17569! Assinie (Apr.) Chev. 17879! **Ghana:** Adrafo (Nov.) Krause 55.

44. **Psychotria albicaulis** *Sc. Elliot* in J. linn. Soc. 30: 83 (1894). *APD acc*

An undershrub, slightly hairy on the young branchlets; **in forest beside rivers.**

Guin.: Erimakuna to Farana Sc. Elliot 5312! S. L. Musaia to Falaba (Mar.) Sc. Elliot 5124!

45. **Psychotria pleuroneura** *K. Schum.* in Engl. Bot. Jahrb. 33: 368 (1903).

APD: Synonym of Chassalia pleuroneura (K. Schum.) O. Lachenaud

An undershrub; **in forest.**

[Br.] Cam.: Johann-Albrechtshöhe (= Kumba) (Apr.) Staudt 218!

46. **Psychotria potanthera** *Wernham* in Cat. Talb. 54 (1913). *APD acc*

A glabrous shrub with pithy branchlets; flowers narrow and whitish in short lax cymes.

S. Nig.: Oban Talbot 240!

47. **Psychotria viticoides** *Wernham* in Cat. Talb. 54 (1913). *APD acc*

A shrub with rather larger flowers than the last.

S. Nig.: Oban Talbot 2080!

48. **Psychotria malchairei** *De Wild.* Pl. Bequaert. 2: 386 (1924).

APD: Synonym of Psychotria martinetugei Cheek

A shrub 6-8 ft. high; flowers rather large, white; in forest.

Ghana: Burton! **S. Nig.:** Shasha F.R., Ijebu Prov. (Apr., May) Ross 205! 265! Richards 3381! **F. Po:** Moka (Sept.) Melville 658!

Also in **Congo**.

[The W. African specimens have smaller flowers and fewer lateral nerves. The fruits appear to be galled frequently.]

49. **Psychotria dalzielii** *Hutch.* in F.W.T.A., ed. 1, 2: 125 (1931).

APD: Synonym of Psychotria eminiana (Kuntze) E.M.A. Petit var. eminiana

A perennial herb or small shrub; flowers yellow; in savanna woodland.

N. Nig.: Mando F.R., Zaria Prov. (Aug.) Keay FHI 28004! Abinsi (Aug.) Dalz. 643!

50. **Psychotria piolampra** *K. Schum.* in Engl. Bot. Jahrb. 28: 97 (1899). *APD acc*

A glabrous undershrub about 2 ft. high; flowers white with orange calyx; in forest.

[**Br.**] **Cam.:** Johann-Albrechtshöhe (=Kumba) Staudt 738! Mamfe (Mar.) Richards 5223!

51. **Psychotria arborea** *Hiern* in F.T.A. 3: 202 (1877). *APD acc*

A small tree, nearly glabrous with large leaves; flowers white in a short branching terminal cyme.

S. Nig.: Calabar Thomson 106!

52. **Psychotria crassicalyx** *K. Krause* in Engl. Bot. Jahrb. 57: 46 (1921). *APD acc*

Erect shrub with stout branchlets shortly pilose when young; flowers white; in forest.

F. Po: above Basilé, 1,800-2,450 ft. (Nov.) Mildbr. 7124.

(This specimen was seen for ed. 1.)

53. **Psychotria limba** *Sc. Elliot* in J. Linn. Soc. 30: 83 (1894). *APD acc*

A shrub with large leaves; beside streams and in forest.

Guin.: Nimba Mts. (fr. Sept.) Schnell 3666! **S. L.:** Kahreni to Port Loko (Apr.) Sc. Elliot 5815! Mabonto (fr. Oct.) Thomas 3566! Yonibana (fr. Nov.) Thomas 4919! Lumbaraya (fl. & fr. Feb.) Sc. Elliot 4947! Lomaburu, Talla (Feb.) Sc. Elliot 5023! **Lib.:** Bobei Mt., Sanokwele (fr. Sept.) Baldwin 9575!

54. **Psychotria rowlandii** *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 124 (1931).

APD: Synonym of Psychotria gabonica Hiern

A nearly glabrous shrub with fairly large leaves and flowers in stoutish terminal cymes. Fruits are required to ascertain whether this species has ruminant endosperm.

S. Nig.: Lagos Rowland! Emege, Brass Dist. (Jan.) Akpata FHI 3943! Omo (formerly part Shasha) F.R. (Mar., Apr.) Jones & Onochie FHI 16083! 17307!

55. *Psychotria pteropetala* *K. Schum.* in Engl. Bot. Jahrb. 33: 369 (1903).

APD: *Synonym of Chassalia pteropetala (K. Schum.) Cheek*

A small shrub.

[*Br.*] *Cam.*: Barombi Preuss 1201! *F. Po.*: Mann 310!

[See note on p. 193 at end of *Chassalia* spp.]

56. *Psychotria elongato-sepala* (*Hiern*) *Petit* in Bull. Jard. Bot. Brux. 33: ined. (1963). *APD acc*

Grumilea elongato-sepala *De Wild.* Pl. Bequaert. 2: 457 (1924).

G. rufo-pilosa *De Wild.* l.c. 478 (1924).

G. glabrifolia *De Wild.* l.c. 460 (1924).

G. puberulosa *De Wild.* l.c. 468 (1924).

Psychotria vogeliana of Chev. Bot. 345, partly, not of Benth.

A climber with pilose branches; flowers greenish-white; fruits pink.

Guin.: Farana Sc. Elliot 5346! 5381! Pela, Nzérékoré (fr. Sept.) Baldwin 13322! *Lib.*: Ganta (Feb., Apr.) Harley 832! 1401! Sanokwele (fr. Sept.) Baldwin 9639! Zeahtown, Tchien Dist. (Aug.) Baldwin 6954! *Iv. C.*: Mt. Nienkué, Cavally (July) Chev. 19442! 19444! Soubré to Yaou (Mar.) Chev. 17697! Mt. Kouan to Danané (Apr.) Chev. 21274! Taï Hallé 518! Alépé (Mar.) Chev.! Yapo (fr. Jan.) Aké Assi 3423! *S. Nig.*: Omo (formerly part of Shasha) F.R. (fl. & fr. Apr.) Jones & Onochie FHI 17363! (not quite typical).

[Note: The plants described as *Grumilea elongato-sepala*, *G. glabrifolia*, *G. puberulosa* and *G. rufopilosa* by De Wildeman are very variable in indumentum and in the shape of the calyx-lobes, but there does not appear to be more than one species involved.-F.N.H.]

57. *Psychotria succulenta* (*Hiern*) *Petit* l.c. (1963). *APD acc*

Grumilea succulenta *Hiern* in F.T.A. 3: 216 (1877); Hepper in Kew Bull. 16: 465 (1963).

A glabrous shrub or small tree up to 30 ft. high, with coriaceous reticulate-veined leaves; flowers white, fruits yellow turning red; **beside upland streams.**

[*Br.*] *Cam.*: Bamenda-Nkwe (Feb.) Daramola FHI 40468! Bansa (fl. & fr. Jan.) Keay FHI 28454 i Lightbody FHI 26296! Ngel Nyaki, Mambila Plateau (fr. Jan.) Latilo & Daramola FHI 34398! Bellel, Mambila Plateau (fl. & fr. Jan.) Hepper 1961!

Also in **Cameroun**, **Sudan**, **Uganda**, **Tanganyika** and **N. Rhodesia**.

58. *Psychotria venosa* (*Hiern*) *Petit* l.c. (1963). *APD acc*

Grumilea venosa *Hiern* in F.T.A. 3: 217 (1877); Chev. Bot. 344; Aubrév. Fl. For. C. Iv., ed. 2, 3: 311, t. 368.

A shrub or small tree with shining foliage; flowers white, in spreading panicle cymes.

S. Nig.: Oban Talbot 235! 2040! *F. Po.*: Mann 31! 254! 1440!

Also in **Cameroun**, **Gabon** and **Congo**.

59. *Psychotria articulata* (*Hiern*) *Petit* l.c. (1963). *APD acc*

Grumilea articulata *Hiern* in F.T.A. 3: 218 (1877).

A shrub or small tree about 20 ft. high with rounded crown and young branchlets sometimes pubescent; flowers white; **in swamp forest.**

S. Nig.: Lagos Moloney! Epe Barter 3259! Okomu F.R., Benin (Jan., Feb.) Brenan 9184!

Also in **Cameroun**.

60. *Psychotria guineensis* *Petit* l.c. (1963). *APD acc*

Grumilea ivorensis *De Wild.* in Bull. Jard. Bot. Brux. 90: 38 (1923), not *Psychotria ivorensis*.

G. venosa of F.W.T.A., ed. 1, 2: 126, partly (Chev. 16315) not of Hiern.

Small tree or shrub up to 25 ft. high; flowers white.

Iv. C.: Assinie (Apr.) Chev. 16315! 17861! Banco Aubrév. 1370! Abidjan (Feb.) Aubrév. 888! **Ghana:** Sekondi to Axim (Feb., Mar.) Irvine 2339b! 2404! **S. Nig.:** Sapoba (Feb.) Onochie FHI 27682! Umudike, Umuahia (June) Oseni FHI 18307! Cross R. Johnston! N. of Calabar (Feb.) Mcleod! **[Br.] Cam.:** Batibo (May) Johnstone!

Also in **Cameroun**.

61. Psychotria chalconeura (K. Schum.) Petit l.c. (1963). *APD acc*

Grumilea chalconeura K. Schum. (1903).

A shrub; in forest.

[Br.] Cam.: Lakom, Bamenda (fl. & fr. May) Maitland 1744!

Also In **Cameroun**.

62. Psychotria djumaensis De Wild. Miss. E. Laurent 1: 349 (1906), not of De Wild. (1907). *APD acc*

APD: Synonym of Chazaliella wildemaniana (T. Durand ex De Wild.) E.M.A. Petit & Verdc.

Grumilea albiflora De Wild. in Bull. Jard. Bot. Brux. 9: 25 (1923); Pl. Bequaert. 2: 450.

Climber on tree; flowers white or yellow; fruits yellow.

S. L.: Bumbuna (fr. Oct.) Thomas 3406! 36731 **Lib.:** Bahtown, Tchien Dist. (Aug.) Baldwin 9014!? Ganta (fl. & fr. May, fr. Sept.) Harley 1178! Baldwin 9317! **N. Nig.:** Thornewill 119!

Also in **Congo**.

[The identity of these specimens with the Congo species is at present tentative.]

63. Psychotria psychotrioides (DC.) Roberty in Bull. I.F.A.N. 16: 62 (1954). *APD acc*

APD: Synonym of Psychotria rufipilis De Wild.

Grumilea psychotrioides DC. (1830)-F.T.A. 3: 216; Chev.Bot. 344; F.W.T.A., ed. 1, 2: 126; Berhaut Fl.Sén.106.

Uragoga tumbaensis De Wild. (1936), French desc.

A glabrous shrub or small tree, 4-20 ft. high with shining leathery leaves; flowers white, fruits red; beside streams in savanna.

Sen.: Itou Perrottet & Leprieur! Niayes Chev. 2012. Sangalkam Berhaut 1032! **Mali:** Sikasso (May) Chev. 798! **Port. G.:** Prabis, Bissau (fr. Feb.) Esp. Santo 1834! Gabu (June) Esp. |----------|--|---------------------------------------|
| 1 | Peduncles very long, 40-400 cm. long; ovary 3-4 locular: | 2 |
| | Peduncles up to 15 cm. long or absent; ovary 2-locular: | 3 |
| 2 | Leaves with 9-12 nerves on each side of midrib, broadly obovate, 15-26 cm. long, 8-14 cm. broad, cuneate at base, shortly acuminate or mucronate at apex, glabrous; petioles 2-5 cm. long; stipules ovate, 1-1.5 cm. long, acute, glabrous; inflorescences axillary; peduncle up to 45 cm. long; flowers in 2-3 involucre close heads; involucre bracts glabrous | <i>1. mannii</i> |
| | Leaves with 15-19 (-22) nerves on each side of the midrib, oblong-obovate about 30 cm. long and 11 cm. broad, long-cuneate at base, shortly acuminate, glabrous; petioles 2-3 cm. long; stipules ovate, 2-4 cm. long, bifid, glabrous; peduncle up to 400 cm. long; flowers in 3-5 involucre heads with 1 head sometimes up to 20 cm. beyond the remainder; involucre bracts pubescent | <i>2. densinervia</i> |
| 3 | Inflorescence heads with peduncles (2-) 5 cm. or more long (3. peduncularis aggregate): | 4 |
| | Inflorescence heads sessile or nearly so (peduncle up to 1 cm. long): | 13 |
| 4 | Peduncles pubescent: | 5 |
| | Peduncles glabrous: | 11 |

- 5 Peduncles pubescent all round:6
 Peduncles with hairs in 2 lines on opposite sides:9
- 6 Leaves shortly pubescent beneath, at least on the nerves[3b. peduncularis var. suaveolens](#)
 Leaves glabrous beneath:7
- 7 Calyx-teeth 3-4 mm. long, distinct[3c. peduncularis var. A](#)
 Calyx-teeth 1 mm. long, acute or very short and rather obscure:8
- 8 Calyx-teeth pubescent[3d. peduncularis var. palmatorum](#)
 Calyx-teeth glabrous[3e. peduncularis var. B](#)
- 9 Involucral bracts free or deeply lobed; peduncles solitary (and occasionally 3-headed at apex in No. 3a):10
 Involucral bracts entire; peduncles grouped in 3's[3h. peduncularis var. ivorensis](#)
- 10 Calyx-teeth pubescent[3a. peduncularis var. peduncularis](#)
 Calyx-teeth glabrous[3f. peduncularis var. guineensis](#)
- 11 Involucral bracts free or deeply lobed[3g. peduncularis var. hypsophila](#)
 Involucral bracts entire:12
- 12 Heads in groups of 3 (rarely 2), terminal[3h. peduncularis var. ivorensis](#)
 Heads solitary[3i. peduncularis var. tabouensis](#)
- 13 Involucral bracts more or less free:14
 Involucral bracts united; leaves glabrous (rarely pilose in No. 10) on both sides:17
- 14 Leaves on both sides and stems pilose with reddish hairs; stipules fused, tubular, about 1 cm. long; leaves ovate, 3-5 cm. long, 2-3 cm. broad, with about U nerves on each side of midrib; inflorescences terminal or axillary, enclosed by imbricated bracts about 8 mm. long; calyx-lobes linear, 3 mm. long, pilose; peduncle 1 cm. long [4. manganotii](#)
 Leaves glabrous above, glabrous or shortly tomentose beneath; stipules free:15
- 15 Leaves shortly tomentose on the nerves beneath, ovate-elliptic, 8-11 cm. long, 4-6 cm. broad, with about 13 nerves on each side of midrib looped near margin; petioles up to 1 cm. long; inflorescences subsessile, imbricated bracts broad, about 1 cm. long; calyx-lobes triangular, 1-5 mm. long [5. schnellii](#)
 Leaves glabrous on both sides:16
- 16 Petioles 3-4 mm. long; leaves oblanceolate, cuneate at base, shortly acuminate at apex, 28-35 cm. long, 7-11.5 cm. broad, with 25-30 nerves on each side of midrib looped near margin; inflorescences stout with numerous imbricated bracts 1.5-3 cm. long (head may contain 3 inflorescences) [6. yapoensis](#)
 Petioles about 1 cm. long; leaves obovate to elliptic, cuneate or slightly rounded at base, more or less shortly acuminate at apex, 8-15 cm. long, 3-8 cm. broad, with 11-16 nerves on each side of midrib looped near margin; inflorescences similar to the last but smaller [7. ombrophila](#)
- 17 Involucre 6-15 mm. long, 6-40 mm. diam., not bilobed:18
 Involucre (3-) 4-5 cm. long, 5-8 cm. diam., bilobed; leaves obovate-elliptic rather long-cuneate at base, broadly and shortly acuminate at apex, about 15 cm. long and 7 cm. broad, with about 18 nerves on each side of midrib [10. baurita](#)
- 18 Petioles less than 1 cm. long; leaves obovate-elliptic, 6-8 cm. long, 2.5-3.5 cm. broad, with about 12 nerves on each side of midrib looped near margin; inflorescence sessile, involucre about 6 mm. long; calyx subtruncate [8. abouabouensis](#)
 Petioles 4-5 cm. long; leaves broadly obovate to oblanceolate, 18-26 cm. long, 7-11 cm. broad, with about 20 nerves on each side of midrib looped near margin; inflorescences subsessile, involucre about 1.5 cm. long, 2-4 cm. diam.; calyx distinctly toothed [9. spathacea](#)

1. *Cephaëlis mannii* (Hook f.) Hiern in F.T.A. 3: 226 (1877).

APD: *Synonym of Psychotria camptopus Verdc.*

Camptopus mannii Hook. f. (1869)—K. Krause in Notizbl. Bot. Gart. Berl. No. 68: 40 (=384) (1920).

Uragoga mannii (Hook. f.) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 127 (1931); Schnell in Bull. I.F.A.N. 25: 123 (1953).

U. peduncularis of F.W.T.A., ed. 1, 2: 127, partly (syn. *Camptopus mannii* Hook. f.), not of (Salisb.) K. Schum.

A shrub or small tree 6-15 ft. high; flowers white in pendulous heads with red involucre.

S. Nig.: Talbot 154! Calabar Hewan! Obudu, 5,500ft. (Aug.) Stone 76! [**Br.**] **Cam.:** Cam. Mt. Lehmach 21. Deistel 147! 453. Winkler 1262. Dikume Barue to Madie (Jan.) Smith FHI 10230! Nyanga, Kumba (Feb.) Jeme FHI 12003! Bamenda to Nkewe (Apr.) Ujor FHI 30028! **F. Po:** 2,000 ft. Mann 312!

Also in **Cameroun** and **Congo**.

2. **Cephaëlis densinervia** (*K. Krause*) *Hepper* in *Kew Bull.* 16: 153 (1962).

APD: Synonym of Psychotria densinervia (K. Krause) Verdc.

Camptopus densinervius *K. Krause* in *Notizbl. Bot. Gart. Berl.* No. 68: 42 (=386) (1920).

Small tree about 20 ft. high; flowers yellow, clustered at the end of a peduncle 10 ft. or more long which reaches to, or near to, the ground; **in forest**.

[**Br.**] **Cam.:** Mungo Ndaw, near R. Loh, Kumba Div. (Oct.) Dundas FHI 15324!

Also in **Cameroun**.

3. **Cephaëlis peduncularis** *Salisb.* *Parad. Lond.* t. 99 (1808); *F.T.A.* 3: 223; *Hepper* in *Kew Bull.* 16: 154 (1962).

Uragoga peduncularis (*Salisb.*) *K. Schum.* (1891)-*F.W.T.A.*, ed. 1, 2: 127.

? **U. thorbeckei** *K. Krause* (1912), type destroyed.

A shrub about 3 ft. high; flowers white; **in forest**.

Very variable.

Cephaëlis peduncularis *Salisb.*

APD: Synonym of Psychotria peduncularis var. rufonyassana Verdc.

APD: Synonym of Psychotria peduncularis var. nyassana (K. Krause) Verdc.

APD: Synonym of Psychotria peduncularis (Salisb.) Steyerem.

3a. **Cephaëlis peduncularis var. peduncularis** *APD acc*

Cephaëlis debauxii *De Wild.* (1936), name only; *Schnell* in *Bull. I.F.A.N.* 25: 114.

Uragoga guerzeensis *Schnell* l.c. 112 (1953), incl. f. *puberula* *Schnell* and f. *saouroana* *Schnell*.

Cephaëlis guerzeensis (*Schnell*) *Schnell* in *Mém. I.F.A.N.* 50: 57 (1957).

A shrub 2-6 ft. high; flowers white; **in forest**.

Sen.: Kombo country Heudelot 33! **Gam.:** Ingram! **Port. G.:** Fancati (fr. Jan.) d'Orey 115! **Guin.:** Conakry Debeaux! Nimba Mts. (fr. Aug.) *Schnell* 5174! 6595! **S. L.:** Fundombaia (fr. [*C. castaneo-pilosa* Aké Assi (in Bull. Jard. Bot. Brux. 31: 314, t. 2 (1961)) appears to be only a form of this with pilose leaves.]

68. GEOPHILA

D. Don-F.T.A. 3: 220.

- 1 Flowers 1 (-3), subsessile or with a peduncle up to 2 cm. long; calyx-lobes subulate, 2-3 mm. long, often reflexed; corolla 1-5 cm. long; leaves broadly ovate, reniform to suborbicular and deeply cordate at base, 1-5 cm. long, glabrous; petioles 1-5 cm. long, pubescent [1. repens](#)
Flowers several together, subsessile or pedunculate and conspicuously bracteate: **2**
- 2 Inflorescences without conspicuous leafy bracts, subsessile: **3**
Inflorescences subtended by leafy bracts or with a cupular involucre: **5**
- 3 Leaves hirsute (at least on the midrib above), ovate to ovate-oblong, cordate, 2-5 cm. long, 1-4 cm. broad; petiole 0.5-3.5 cm. long, hirsute; stems prostrate, rooting at nodes and internodes; stipules deeply divided .. [2. hirsuta](#)
Leaves glabrous above: **4**
- 4 Leaves shortly and sparingly tomentose on the nerves beneath, ovate, deeply cordate at base, 7-8 cm. long, 3-5 cm. broad; petiole 1-3 cm. long, appressed-pubescent; stems prostrate and ascending; stipules bilobed to base [3. liberica](#)
Leaves usually densely pubescent on the nerves beneath often accentuating the reticulate venation, oblong or obovate to oblanceolate, usually rounded at each end or subcordate at base, 4-10 cm. long, 1.5-4 cm. broad [4. neurodictyon](#)
- 5 Inflorescences subtended by leafy ovate bracts: **6**
Inflorescences surrounded by a cupular involucre about 1 cm. diam., toothed and pubescent on margin; leaves orbicular to ovate, obtuse at apex, cordate to cuneate at base, 4.5-6 (-10) cm. long, 3-6 cm. broad, more or less pubescent on both surfaces; petiole 1-2 (-4) cm. long, pubescent [7. rotundifolia](#)
- 6 Stipules entire; involucre bracts glabrous; flowers without bracteoles; inflorescences long-pedunculate, peduncles 2-7 cm. long, glabrous; leaves ovate-deltoid, deeply cordate at base, subacute at apex, 2-5 cm. long, 1.5-4.5 cm. broad; petioles slender, densely pubescent on the sides towards apex [5. obvallata](#)
Stipules bifid; involucre bracts pubescent; flowers with linear bracteoles; inflorescences usually shortly pedunculate, peduncles up to 3 cm. long, pubescent; leaves ovate, cordate at base, subacute at apex, 3-6 cm. long, 2-5.5 cm. broad; petioles pubescent all round [6. afzelii](#)

1. *Geophila repens* (Linn.) I. M. Johnston in Sargentia 8: 281 (1949); Brenan in Mem. N.Y. Bot. Gard. 8: 453 (1954). *APD acc*

75. OLDENLANDIA

Linn.-F.T.A. 3: 51, partly; Bremek. in Verb. K. Nederl. Akad. Wetensch., Afd. Natuurk., sect. 2, 48: 20 (1952).

- 1 Flowers congested in terminal and axillary heads:2
- Flowers not congested, often long-pedicellate, solitary in axils or in terminal and axillary panicles:5
- 2 Leaves elliptic or ovate-elliptic, 3-5-nerved at base, 1.5-2.5 cm. long, 5-13 mm. broad, minutely setulose along midrib above; ovary and calyx-lobes pubescent; prostrate trailing herb1. *goreensis*
- Leaves linear; usually erect, not trailing:3
- 3 Leaves thin, glabrous or slightly scabrid; stipular sheath shortly fimbriate; flowers shortly pedicellate:4
- Leaves thickened, midrib conspicuous beneath, scabrid with short aculeate hairs; stipular sheath long-fimbriate3. *sclerophylla*
- 4 Calyx-lobes 42. *capensis* var. *capensis*
- Calyx-lobes more than 4 and up to 82a. *capensis* var. *pleiosepala*
- 5 Leaves ovate; stems square:6
- Leaves linear to lanceolate;7
- 6 Calyx glabrous; leaves 1.5-3 cm. long, 7-15 mm. broad, with 4-5 pairs of nerves, glabrous; petiole 2-7 mm. long; inflorescences terminal, lax4. *chevalieri*
- Calyx hispid; leaves 2-3 cm. long, 7-17 mm. broad, with much smaller bracteate leaves, setulose above, subglabrous beneath; petiole 2-5 mm. long; flowers axillary and terminal, a few together, shortly pedicellate5.

echinulosa

- 7 Pedicels and/or peduncle about 2 mm. long:8
 Pedicels much longer than 2 mm.:9
- 8 Leaves thin (for other characters see above) [2. capensis var. capensis](#)
 Leaves thickened (for other characters see above) [3. sclerophylla](#)
- 9 Flowers with distinct peduncle, pedicels forming 2(-4)-flowered umbels:10
 Flowers solitary or paniculate:12
- 10 Leaves narrowly linear or filiform, less than 1 mm. broad, 1-4 cm. long; seed testa with straight-walled cells ..[6. linearis](#)
 Leaves linear or linear-lanceolate, 2-7 mm. broad; seed testa with wavy-walled cells:11
- 11 Style glabrous; common herb; corolla about as long as calyx [7. corymbosa](#)
 Style hairy; uncommon herb [12a. caespitosa var. lanceolata](#)
- 12 Capsule 3-3.5 mm. diam., externally with 2 obvious loculi apparent:13
 Capsule 1-2(-2.5) mm. diam., spherical:14
- 13 Leaves narrowly lanceolate, 2-6 cm. long, 2-7 mm. broad; stems square, nearly glabrous, more or less prostrate with long branches; flowers axillary; pedicels 1-1.5 cm. long [8. lancifolia](#)
 Leaves narrowly linear, about 5 cm. long, 1-2 mm. broad; stems subterete scabrid, erect, profusely branched; flowers axillary or more or less paniculate; pedicels 1.5-3 cm. long [10. rhabdina](#)
- 14 Flowers in mainly terminal panicles; corolla-tube about 3 mm. long, lobes 2 mm. long; leaves lanceolate, 2-4.5 cm. long, 6-16 mm. broad, setulose [9. affinis](#)
 Flowers axillary, solitary or paired without a peduncle; corolla 1-2 mm. long:15
- 15 Leaves narrowly linear, 1.5-4 cm. long, 1-2 mm. broad; diffusely branched erect herb, common; seed testa cell-walls straight [11. herbacea](#)
 Leaves oblong, 5-10 mm. long, 1-2 mm. broad; small decumbent or erect herb, rare; seed testa cell-walls wavy [12. caespitosa var. caespitosa](#)

Oldenlandia callitrichoides Griseb.

A West Indian species with slender prostrate stems and orbicular leaves about 2 mm. diam. has been recorded from Njala, Sierra Leone. As it does not belong to *Oldenlandia* in the strict sense (see Bremek. l.c. 269) it has recently been transferred to *Hedyotis* (*H. callitrichoides* (Griseb.) W. H. Lewis in *Rhodora* 63: 222 (1961)).

1. Oldenlandia goreensis (DC.) Summerh. in Kew Bull. 1928: 392; Bremek. l.c. 48: 192; Berhaut Fl. Sén. 78. *APD acc*

Hedyotis goreensis DC. (1830).

Oldenlandia trinervia of F.T.A. 3: 63; of Chev. Bot. 313; not of Retz.

Prostrate herb with slender stems up to 18 in. long, with bright green leaves drying yellowish; flowers white with mauve corolla-lobes, or pink; **in moist, muddy places.**

Sen.: Berhaut 1049; 4737. Kounoum, Cape Verde Perrottet 484! Dakar Boivin 405! **Gam.:** Albreda Leprieur! Kombo country Heudelot 72. **Mali:** Dendéla Chev. 633! Sikasso Chev. 789. **Port. Widespread in tropical and S. Africa, also in Cape Verde Islands, Socotra and **Egypt** and in tropical Asia.

Oldenlandia caespitosa (Benth.) Hiern

APD: Synonym of Oldenlandia corymbosa var. *caespitosa* (Benth.) Verdc.

12. **Oldenlandia caespitosa** var. **caespitosa** -in F.T.A. 3: 61 (1877); Bremek. l.c. 262. *APD acc*

Oldenlandia herbacea (?) var. *caespitosa* Benth. (1849).

Oldenlandia parva Trochain in Bull. Mus. Hist. Nat., sér. 2, 4: 604, fig. 1 (1932).

A small herb.

Sen.: Cape Verde Perrottet 387. Ziguinchor Trochain 1536! **Lib.:** Cape Palmas T. Vogel 51! **S. Nig.:** Ikom (fl. & fr. Jan.) Rosevear 10/31! Eket Dist. Talbot!

Also in **Cameroun**, **Congo**, **Angola**, **N. and S. Rhodesia**, **Mozambique**, **Kenya**, **Uganda** and **Tanganyika**.

12a. **Oldenlandia caespitosa** var. **lanceolata** Bremek. l.c. 264 (1952).

APD: Synonym of Oldenlandia corymbosa L. var. *corymbosa*

A straggling herb having the appearance of *O. corymbosa*.

S. Nig.: Aguku Dist. Thomas 1003!

Also in **Cameroun** and **N. Rhodesia**.

76. LELYA

Bremek. in Verh. K. Nederl. Akad. Wetensch., Afd. Natuurk., sect. 2, 48: 181 (1952).

- 1 Perennial herb with decumbent branches about 10 cm. long, shortly pubescent; leaves elliptic-lanceolate or lanceolate, with 2-3 lateral nerves on each side, acute at each end, 5-14 mm. long, 3-5-5 mm. broad, glabrous above, pubescent beneath; flowers in terminal clusters of 2 or 3, or solitary in axils, subsessile; calyx-tube 0-4 mm. long, lobes 4, oblong, about 2 mm. long; corolla-tube about 2 mm. long, lobes 4, 3-5 mm. long; fruit with a thick woody wall and solid conical beak [osteocarpa](#)

Lelya osteocarpa Bremek. l.c. 181 (1952). *APD acc*

A small herb decumbent and forming a small mat; flowers white; **on bare soil, appearing after fires.**

N. Nig.: Jos Plateau (Jan.) Lely P96! P663! Naraguta, 4,000 ft. (May) Lely 249! Heipang (fl. & fr. Apr.) Keay & Wimbush FHI 37612!

Also in **Congo**, **N. Rhodesia** and **Tanganyika**.

77. PENTODON

Hochst.-Bremek. in Verh. K. Nederl. Akad. Wetensch., Afd. Natuurk., sect. 2, 48: 175 (1952).

- 1 Decumbent herb, somewhat fleshy; leaves sessile, linear-lanceolate to lanceolate, rounded to cuneate at base, subacute at apex, 3-6 cm. long, 1-2 cm. broad, glabrous; panicles axillary, 6-17 cm. long; pedicels about 1 cm. long; calyx with very short fine teeth; corolla 2-3 mm. long [pentandrus](#)

Pentodon pentandrus (*Schum. & Thonn.*) *Vatke* in Oest. Bot. Zeit. 25: 231 (1875); Bremek. l.c. 176 (as *P. pentander*). *APD acc*

Hedyotis pentandra *Schum. & Thonn.* (1827).

Oldenlandia macrophylla *DC.* (1830)-*F.T.A.* 3: 63; Chev. Bot. 312; *F.W.T.A.*, ed. 1, 2: 132; *Berhaut Fl. Sén.* 77.

A straggling half-succulent herb, stems often tinged purplish; flowers white, pinkish or blue; in wet, muddy places.

Sen.: Leprieur. *Berhaut* 837. **Gam.:** Kuntaur Ruxton 106! 124! **Port. G.:** Pussubé (June) Esp. Santo 1181! Bafatá (Aug.) Esp. Santo 3280! **Guin.:** Nzérékoré (Oct.) Baldwin 9727! R. 84. PENTAS

APD: Synonym of Phyllopentas (Verdc.) Kårehed & B. Bremer

Benth.-F.T.A. 3: 45; Verdcourt in Bull. Jard. Bot. Brux. 23: 237 (1953).

- 1 Corolla-tube 35-80 mm. long, pubescent, lobes 6-11 mm. long; inflorescences densely capitate; leaves lanceolate, subsessile, acute, 6-9 cm. long, 2-3 cm. broad, minutely pubescent above and on the 7-8 nerves beneath [1a. *decora* var. *triangularis*](#)
Corolla-tube 4-13 mm. long:2
- 2 Inflorescences densely capitate, 1.3-2.5 cm. diam., sessile and subtended by 2 leafy bracts; corolla-tube about 5 mm. long, finely pubescent; leaves lanceolate, ovate-lanceolate or oblong-lanceolate, subsessile, acute, 4.5-11.5 cm. long, 1.3-2 cm. broad, reticulate beneath [2. *purpurea*](#)
Inflorescences more or less lax, often spreading, not sessile:3
- 3 Corolla-tube 9-13 mm. long; calyx-lobes about 8 mm. long, subequal, subulate; leaves ovate-elliptic, acute, 8-15 cm. long, 3-6.3 cm. broad, nerves ferrugineous beneath; distinctly petiolate [5a. *schimperiana* subsp. *occidentalis*](#)
Corolla-tube 4-5 mm. long; calyx-lobes not subulate, unequal, usually with one lobe extended:4
- 4 Tufted herb appearing after fires; leaves obtuse or subacute at apex, oblong-lanceolate, 2.5-8 cm. long, 4-20 mm. broad, subsessile, with about 6 nerves on each side; calyx-lobes oblong, up to 2.5 mm. long, subequal [4. *arvensis*](#)
Tall half-woody herbs; leaves acuminate or acute, lanceolate, with about 10 nerves on each side:5
- 5 Calyx and corolla outside subglabrous; leaves petiolate, 3-15 cm. long, 1.2-5 cm. broad, with rather thin texture [6a. *pubiflora* subsp. *bamendensis*](#)
Calyx and corolla outside densely and minutely puberulous; leaves sessile, 4-10 cm. long, 1-2.5 cm. broad, with rather thick texture [3. *nervosa*](#)

1. ***Pentas decora* S. Moore** in J. Bot. 48: 219 (1910); Verdc. in Bull. Jard. Bot. Brux. 23: 287 (1953). *APD acc*

Widespread in tropical Africa, also in Mascarene Islands, tropical Asia and tropical America.

Diodia arenosa DC. Prod. 4: 564 (1830).

Tentatively referred to that species in Fl. Nigrit. 423 and F.T.A. 3: 231.? S. L.: Don (not traced).

87. BORRERIA

APD: *Synonym of Spermacoce* L.

G.F.W. Mey. Prim. Fl. Esseq. 79 (1818), nom. cons.

Spermacoce of F.T.A. 3: 233, not of Linn.

Octodon Thonn.-F.T.A. 3: 241; F.W.T.A., ed. 1, 2: 135; Hepper in Kew Bull. 14: 260 (1960).

- 1 Stems pilose or densely pubescent (hairs not merely in vertical lines):.....2
Stems glabrous or hairy on the angles (in No. 7 sometimes pilose below the stipular sheath):..... 11
- 2 Leaves with a very thick nerve along the margin, lamina linear, 3-5 cm. long, 4-6 mm. broad, sharply acute at apex, glabrous, lacking visible lateral nerves; stipules pubescent outside, with several filiform segments 6-10 mm. long; flowers in congested terminal or subterminal heads, surrounded by numerous long leaves [1. radiata](#)
Leaves without a thick marginal nerve:.....3
- 3 Corolla very large, 3-5 cm. long, lobes and tube above sparsely pilose; stems densely pilose; leaves lanceolate, 3-9 cm. long, 8-18 mm. broad, with about 6 lateral nerves on each side of and almost parallel to the midrib, deeply impressed above and prominent beneath; scabrid and pubescent, sessile; calyx-lobes about 5 mm. long [14. macrantha](#) var. [macrantha](#)
Corolla up to 1 cm. long:.....4
- 4 Stems narrowly 4-winged, shortly pubescent; leaves ovate to obovate, 3-4.5 cm. long, 1.5-2.5 cm. broad, shortly pubescent on both sides, subsessile; flowers in axillary clusters; calyx-lobes 1 mm. long; corolla 3 mm. long [2. latifolia](#)
Stems terete or 4-angled, not winged:.....5
- 5 Perennial herbs, straggling, or tufted and ascending; corolla 1 cm. long:6
Annual herbs more or less erect:.....8
- 6 Leaves broadly ovate, 2-5 cm. long, 1.5-2.5 cm. broad, with 5-6 pairs of lateral nerves, more or less rounded at base and acuminate at apex, shortly petiolate; stipule segments filiform, 9-11 mm. long; flowers few in axils [17a. princeae](#) var. [pubescens](#)

- Leaves lanceolate or linear-lanceolate:.....7
- 7 Leaves pubescent above not harshly scabrid, lanceolate, 2-6 cm. long, 8-25 mm. broad, with 3-4 pairs of lateral nerves, cuneate at base, acute at apex, shortly petiolate; stipule segments filiform, 5 mm. long; flowers in terminal or subterminal clusters[3. saxicola](#)
- Leaves harshly scabrid above, linear to linear-lanceolate; (for other characters see below)[6. stachydea var. stachydea](#)
- 8 Calyx-lobes about 1 mm. long; flowers numerous in spherical, terminal and axillary heads; corolla 3 mm. long; fruits 1.5-2 mm. long, densely pubescent above; leaves linear 2-5 cm. long, 3-8 mm. long, scabrid above; stems sparsely pilose[4. filiformis](#)
- Calyx-lobes and fruits 2-5 mm. long:.....9
- 9 Leaves pubescent above, not harshly scabrid; (for other characters see above)[3. saxicola](#)
- Leaves harshly scabrid above, linear to linear-lanceolate, 3-9 cm. long, 5-16 mm. broad:10
- 10 Bracteate leaves narrowed at base; fruits 3 mm. long; calyx-lobes 3 mm. long[5. scabra](#)
- Bracteate leaves broadened at base, subtending most flowers of each inflorescence or at least reduced to a broad bract with a short leafy part; inflorescence in fruit very distended; fruits 4-5 mm. long; calyx-lobes 4 mm. long[6. stachydea var. stachydea](#)
- 11 Flowers small and numerous, often in globose heads, with corolla up to 3 mm. long; calyx-lobes 0.5-1 mm. long; fruits 1-3 mm. long:.....12
- Flowers rather few and corolla 4-50 mm. long; calyx-lobes 3-5 mm. long; fruits 2-5 mm. long:21
- 12 Stems square, hairy or ciliate on the angles; stipular sheaths pubescent:13
- Stems obscurely angled, glabrous; stipular sheaths glabrous or scabrid:.....15
- 13 Leaves linear-lanceolate, 3-7 cm. long, 2-15 mm. broad, slightly pubescent on both sides and scabrid above; inflorescences in fruit up to 2 cm. diam.; fruits 2-3 mm. long; filiform bracteoles between flowers few:14
- Leaves ovate to ovate-lanceolate, 1.5-3 cm. long, 5-12 mm. broad, glabrous and smooth on both sides, midrib more or less pubescent beneath; inflorescences in fruit up to 5 mm. diam.; fruits 1 mm. long[8. ocymoides](#)
- 14 Main stem stout; leaves 4-15 mm. broad[7. chaetocephala var. chaetocephala](#)
- Main stem slender; leaves 2-4 mm. broad[7a. chaetocephala var. minor](#)
- 15 Terminal inflorescence globose, 1-1.5 cm. diam., usually with 2 leafy bracts about 1 cm. long reflexed beneath; leaves oblanceolate, 3-5 cm. long, 5-10 mm. broad, glabrous, with faint lateral nerves[9. verticillata](#)
- Terminal inflorescence, if any, overtopped by leafy bracts:16
- 16 Perennial herbs:.....17
- Annual herbs with main stems and lateral branches; usually lowland plants:18
- 17 Inflorescences mainly terminal about 1 cm. diam., hard, with the flowers almost obscured by numerous filiform bracteoles; (for other characters see below)[13. octodon](#)
- Inflorescences numerous, at most nodes, about 7 mm. diam. in fruit, with few bracteoles; fruits glabrous; stems slender, branching near the base, 30-60 cm. long; leaves linear to linear-lanceolate, 1-4 cm. long, 3-10 mm. broad; upland plant[10. natalensis](#)
- 18 Inflorescences with numerous filiform bracteoles between, and the same length as, the flowers:19
- Inflorescences with few bracteoles between, and much shorter than, the flowers; calyx-lobes minute; fruits glabrous, 2 mm. long; leaves linear (3-) 5-9 cm. long, 4-7 mm. broad, glabrous, scabrid above ...[15. paludosa](#)
- 19 Calyx-lobes acute, lanceolate, about 1 mm. long; fruits more or less pubescent at apex, 1 mm. long; leaves linear, 2-4 cm. long, 3-6 mm. broad, glabrous minutely scabrid above[11. pusilla](#)
- Calyx-lobes obtuse, minute:20
- 20 Stipular sheath glabrous; leaves filiform, 4-7 cm. long[12. filifolia](#)
- Stipular sheath pubescent; leaves linear or linear-lanceolate, 6-10 cm. long[13. octodon](#)
- 21 Corolla very large, 4-5 cm. long; whole plant glabrous; leaves lanceolate, 6-8 cm. long, 1.5-2 cm. broad, with scabrid margins; calyx-lobes about 5 mm. long[14a. macrantha var. glabra](#)
- Corolla 4-15 mm. long:22
- 22 Leaves linear-lanceolate; plants glabrous or nearly so:23
- Leaves ovate to ovate-lanceolate, 2-5 cm. long, 1-2 cm. broad, more or less hairy above and on the nerves beneath:24
- 23 Calyx-lobes denticulate or hispid on margins, 3-5 mm. long; fruits 2-3 (-5) mm. long; leaves 4-9 cm. long, 3-10 (-21) mm. broad, scabrid above; bracteate leaves more or less reflexed; corolla 7-15 mm. long .[16. compressa](#)
- Calyx-lobes entire and glabrous, 3 mm. long; fruits 5 mm. long; leaves 3-5.5 cm. long, 3-10 mm. broad, smooth above; bracteate leaves erect, broad at base[6a. stachydea var. phyllocephala](#)

- 24** Stipular sheaths longer than broad, (5-) 7-9 mm. long, with filiform segments rather longer; calyx-lobes 4 mm. long; leaves ovate to ovate-lanceolate, shortly acuminate, slightly scabrid near margins above, with about 6 pairs of lateral nerves deeply impressed above; short petiole adnate to stipular sheath [17. princeae var. princeae](#)

Stipular sheaths broader than long, 2-3 mm. long, obscure when in fruit, with filiform segments about 2 mm. long; calyx-lobes 1.5 mm. long; leaves ovate, long-acuminate, smooth above, with about 5 pairs of lateral nerves hardly impressed above; petiole rather long [18. intricans](#)

1. *Borreria radiata* DC. Prod. 4: 542 (1830); F.W. Andr. Fl. Pl. A.-E. Sud. 2: 427; Berhaut Fl. Sén. 79.

*APD: Synonym of *Spermacoce radiata* (DC.) Hiern*

Spermacoce radiata (DC.) Sieber ex Hiern in F.T.A. 3: 237 (1877); Chev. Bot. 349.

An erect hispid herb half-woody below, stems often reddish-purple, about 1 ft. high; flowers very small, white or mauve, with leaves radiating from the congested terminal heads; [in savanna](#).

Sen.: Heudelot 416! Sieber 8! Berhaut 435. **Gam.:** Hayes 572! Saunders 89! **Mali:** Timbuktu Chev. 1307! Koulikoro Chev. 2117! Ségou Chev. 2811! **Ghana:** Dutukpene (Dec.) Adams 4651! Extends east to the [Sudan](#) and [Uganda](#).

2. *Borreria latifolia* (Aubl.) K. Schum. in Mart. Fl. Bras. 6, 6: 61 (1888).

*APD: Synonym of *Spermacoce latifolia* Aubl.*

Spermacoce latifolia Aubl. (1775).

Straggling herb with square slightly winged stems 1-2 ft. long, leaves and stems yellow-green; flowers blue or pink; [introduced weed](#).

S. L.: Newton (fl. & fr. Sept.) Deighton 4879! 6001! **Lib.:** Ganta Harley 2171! Kitoma Adam 16552! **Iv. C.:** Adiopodoumé (fl. & fr. Oct.) Leeuwenberg 1702! **Ghana:** Kumasi (fl. & fr. Sept., Nov.) Darko 346! 473!

A native of tropical S. America.

3. *Borreria saxicola* K. Schum. in Engl. Bot. Jahrb. 28: 112(1899).

*APD: Synonym of *Spermacoce spermacocina* (K. Schum.) Bridson & Puff*

Herb with ascending or hanging, tufted stems 1-2 ft. long; flowers white; [in rock crevices](#).

N. Nig.: Wana, Jos Plateau (Sept.) Hepburn 127! Naraguta (Aug.) Lely 491! Dogon Kurmi, Jemaa (Aug.) Killick 36! Gawu Hills, Niger Prov. (Aug.) Onochie FHI 35929! **[Br.] Cam.:** Bafut-Ngemba F.R., 6,000 ft., Bamenda (Sept., Oct.) Lightbody FHI 26254! 26260! Binka, 6,500 ft., Nkambe Div. (Sept.) Savory UCI 378! Vogel Peak, 4,700 ft., Adamawa (Nov.) Hepper 1349!

Also in [Cameroun](#).

4. *Borreria filiformis* (Hiern) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 135 (1931).

*APD: Synonym of *Spermacoce filiformis* Hiern*

Spermacoce filiformis Hiern in F.T.A. 3: 234 (1877).

Erect annual herb with pilose stems 6-18 in. high, often tinged pink or purple; flowers white; [in crevices of rock out-crops](#).

N. Nig.: Nupe Barter 1720! Gwari Hills, Niger Prov. (Aug.) Onochie FHI 35911! Kufena, Zaria (Aug.) Keay FHI 28020! Naraguta (Aug.) Lely 503! **S. Nig.:** Fashola to Oyo (fr. Oct.) Onochie FHI 34923! Ado Rock, Oyo (Oct.) Keay & Savory FHI 25445!

5. *Borreria scabra* (Schum. & Thonn.) K. Schum. in Pflanzenw. Ost.-Afr. C: 385 (1895).

*APD: Synonym of *Spermacoce senensis* (Klotzsch) Hiern*

*APD: Synonym of *Spermacoce ruelliae* DC.*

Diodia scabra Schum. & Thonn. (1827).

Spermacoce ruelliae DC. (1830)-F.T.A. 3: 238.

Borreria ruelliae (DC.) K. Schum. ex H. Thoms (1909)-F.W.T.A., ed. 1, 2: 135; Chev. Bot. 349; F.W. Andr. Fl. Pl. A.-E. Sud. 2: 428; Berhaut Fl. Sén. 80.

Borreria stachydea of F.W.T.A., ed. 1, 2: 135, partly (Chev. 22285); Chev. Bot. 349 not of (DC.) Hutch. & Dalz.

Erect herb with or without branches, scabrid and coarsely pubescent about 1 ft. high; flowers white, sometimes pink; **a weed**.

Sen.: Berhaut 1137. Galam Heudelot 278! **Mali:** fide Chev. I.c. Dioura (Aug.) Davey 28! **Port. G.:** Gabu (Oct.) Esp. Santo 3494! **Guin.:** Pobéguin 342! Nzérékoré Baldwin 9735! **S. Also in **Sudan**.

6a. *Borreria stachydea* var. *phyllocephala* (DC.) Hepper in Kew Bull. 14: 256 (1960).

*APD: Synonym of *Spermacoce stachydea* var. *phyllocephala* (DC.) J.-P. Lebrun & Stork*

Spermacoce phyllocephala DC. Prod. 4: 553 (1830).

Borreria galeopsidis of Berhaut Fl. Sén. 79, not *Spermacoce galeopsidis* DC.

A glabrous variety.

Sen.: Walo country (fr. Sept.) Perrottet! Kouma (Oct.-Dec.) Perrottet (?)! Perrottet & Leprieur (photo)! Senegal R. Bose! Tivaouane (fr. Oct.) Trochain 854!

Borreria chaetocephala (DC.) Hepper

*APD: Synonym of *Spermacoce chaetocephala* DC.*

7. *Borreria chaetocephala* var. *chaetocephala* -in Kew Bull. 14: 256 (1960). *APD acc*

Spermacoce chaetocephala DC. Prod. 4: 554 (1830).

S. hebecarpa var. *major* Schweinf. ex Hiern in F.T.A. 3: 237 (1877).

Borreria stachydea of F.W.T.A., ed. 1, 2: 135, partly (Dalz. 165).

Borreria ruelliae of F.W.T.A., ed. 1, 2: 135, partly (Chev. 24959), not of (DC.) K. Schum.

Borreria compacta of Berhaut Fl. Sén. 79, not of (Hochst.) K. Schum.

An erect annual herb with a rather stout stem, slightly branched, about 1 ft. high; **in savanna**.

Sen.: Tambacounda (fr. Dec.) Adam 17336! Dihone (fr. Apr.) Berhaut 1461! **Mali:** Sansanding (Sept.) Chev. 24959! Ansongo (fr. Sept.) Hagerup 383! **N. Nig.:** Katagum Dalz. 165! Sokoto (Sept.) Dalz. 399!

Also in **Cameroun** and **Sudan**.

7a. **Borreria chaetocephala var. minor** Hepper l.c. (1960).

APD: Synonym of Spermacoce chaetocephala var. minor (Hepper) Puff

Borreria hebecarpa Hochst. ex A. Rich. Tent. Fl. Abyss. 1: 347 (1848); F.T.A. 3: 326; F.W. Andr. Fl. Pl. A.-E. Sud. 2: 427.

A slender erect annual up to 18 in. high; flowers pink.

N. Nig.: Nupe Barter 1259!

Also in **Uganda** and **Sudan**.

8. **Borreria ocymoides (Burm. f.) DC.** Prod. 4: 544 (1830). *APD acc*

Spermacoce ocymoides Burm. f. (1768).

Borreria ramisparsa DC. (1830)-F.T.A. 3: 238; F.W.T.A., ed. 1, 2: 135; Chev. Bot. 349; Berhaut Fl. Sén. 79.

Tardavel ocymoides (Burm. f.) Hiern (1898).

A weak herb, erect or decumbent, 6-9 in. high; flowers very small, white; **wayside weed**.

Sen.: Heudelot 558! Berhaut 1125; 4559. **Guin.:** Conakry (Oct.) Adam 12580! Fouta Djalon (Oct.) Adam 12748! Bilima Chev. 15041! **S. L.:** Freetown (Sept.) Hepper 910! Rokupr (Sept.) Jordan 559! Tilde Filani (May) Lely 228! **S. Nig.:** Badagry (Aug.) Onochie FHI 33478! Ibadan (Jan.) Onochie FHI 8184! Port Harcourt (June) Maitland B!

Also in **Gabon**, **S. Tomé**, **Congo**, **Angola**, **Sudan** and **Madagascar**.

10. **Borreria natalensis (Hochst.) K. Schum. ex S. Moore** in J. Linn. Soc. 40: 103 (1911).

APD: Synonym of Spermacoce natalensis Hochst.

Spermacoce natalensis Hochst. (1844).

S. stricta of F.T.A. 3: 236, partly (in syn.), not of Linn. f.

Straggling or more or less erect perennial herb with yellow-green branched stems 1-2 ft. long; flowers white, tinged mauve; wayside weed.

[Br.] Cam.: Bamenda: Bafut-Ngamba F.R., 6,000 ft. Hepper 2143! Onochie FHI 34861! Bambui Pedder 29! Basenako Maitland 1672! Nguroje, Mambila Plateau (Jan.) Hepper 1760!

Widespread in tropical Africa.

11. *Borreria pusilla* (Wall.) DC. Prod. 4: 543 (1830); F.W. Andr. Fl. Pl. A.-E. Sud. 2: 427.

APD: *Synonym of Spermacoce pusilla* Wall.

Spermacoce pusilla Wall. (1820).

S. stricta Linn. f. (1781)-F.T.A. 3: 236; Chev. Bot. 349.

Borreria stricta of F.W.T.A., ed. 1, 2: 135; Berhaut Fl. Sén. 79, not of G. F. W. Mey. (1818).

Borreria hebecarpa of F.W.T.A., ed. 1, 2: 135, partly (Linder 1498), not of Hochst. ex A. Rich.

Small erect herb more or less branched, 6-16 in. high; flowers whitish; in sandy places.

Sen.: Roger! Niokolo-Koha Berhaut 1558. Guin.: Mt. Loura, Fouta Djallon (Sept.) Schnell 7135! S. L.: Lumley (Oct.) Deighton 1788! Bonthe Isl. (Nov.) Deighton 2295! Gberia Fotombu (Oct.) Small 292! 865! Kolahun (Oct.) Glanville 14! Lib.: Duport (Nov.) Linder 1498! N. Nig.: Vom Dent Young 127! S. Nig.: Sobo Plain, Warri Prov. (Sept.) Butler-Cole 23!

Throughout tropical Africa and in tropical Asia.

[A closely related species seems to have been introduced into our area (Freetown Deighton 231; Ibadan Onochie FHI 3316; Victoria Maitland 51). They match unnamed specimens from Zanzibar and E. Tanganyika, and others from India where they are regarded as "*Spermacoce stricta* Linn. f.". The correct name is at present in some doubt-F.N.H.]

12. *Borreria filifolia* (Schum. & Thonn.) K. Schum. in E. & P. Pflanzenfam. 4, 4: 144 (1891).

APD: *Synonym of Spermacoce filifolia* (Schumach. & Thonn.) J.-P. Lebrun & Stork

Octodon filifolium Schum. & Thonn. in Beskr. Guin. Pl. 74 (1827); F.T.A. 3: 241; F.W.T.A., ed. 1, 2: 136; Chev. Bot. 349; F.W. Andr. Fl. Pl. A.-E. Sud. 2: 448.

Erect slender glabrous herb, simple or branched, 1-2 ft. high or sometimes a few inches high; flowers white, the corolla-lobes sometimes purple; amongst grass in moist places.

Sen.: Heudelot 249! Mali: San (fl. & fr. Sept.) Chev. 2114! Ansongo (fl. & fr. Sept.) Hagerup 389! Dioura (Sept.) Davey 85! Bamako (Sept.) Waterlot 1390! Port. G.: Pitche to Burumtuma (July) Esp. Also in [Ethiopia](#).

2. ***Galium thunbergianum* Eckl. & Zeyh. Enum. 369 (1837); Hedberg in Sym. Bot. Upsal. 15, 1: 178, 329 (1957).**

Galium bialbrae *Hiern* in F.T.A. 3: 245 (1877).

Scrambling, erect or ascending herb up to 3 ft. high; flowers yellowish; [in rocky montane grassland](#).

[Br.] **Cam.:** Cam. Mt., 7,000-12,000 ft. (fl. & fr. Nov., Jan., Apr.) Mann 1284! 2001! Maitland 1265! Brenan 9560! **F. Po:** summit of Clarence Peak (Pico de S. Isabel), 9,348 ft. (fl. & fr. Dec., Mar.) Mann 605! Guinea 2813!

Also on other tropical African mountains, and in S. Africa.

DIPSACACEAE

Perennial or annual herbs. Leaves opposite or verticillate, entire or pinnately divided; stipules absent. Flowers hermaphrodite, zygomorphic, often crowded into heads with an involucre of leafy bracts. Calyx epigynous, cupular or divided into pappus-like segments. Corolla gamopetalous, lobes imbricate. Stamens usually 4, rarely 2-3, alternate with the corolla-lobes and inserted usually towards the bottom of the tube; anthers 2-celled, opening lengthwise. Ovary inferior, 1-celled; style slender; ovule solitary, pendulous from the top. Seeds with large straight embryo in scanty endosperm.

- 1 Prickly herb; calyx limb cup-shaped [1. *Dipsacus*](#)
Herb without prickles; calyx with 5 setose teeth [2. *Succisa*](#)

1. DIPSACUS

Linn.-F.T.A. 3: 249.

- 1 A prickly perennial herb; stems stout, hollow, more or less ridged and with recurved prickles; leaves lanceolate, up to 35 cm. long, more or less pubescent above, prickly on the midrib beneath, dentate, lower leaves petiolate, upper leaves sessile and auriculate; inflorescences globose about 4 cm. diam. with acute deflexed involucre bracts about 1.5 cm. long; bracts of the receptacle equal to or exceeding the flowers [pinnatifidus](#)

***Dipsacus pinnatifidus* Steud. ex A. Rich. Tent. Fl. Abyss. 1: 367 (1848); Hedberg in Sym. Bot. Upsal. 15: 183 (1957). APD acc**

APD: Synonym of Dipsacus narcisseanus Lawalrée

A stout erect perennial herb up to 5 ft. high, with prickly stems and midribs; flowers white, in prickly, long-pedunculate heads; **in montane grassland**.

[Br.] Cam.: ridge above L. Oku, 7,700 ft., Bamenda Dist. (Jan.) Keay & Lightbody FHI 28515!

Also in the mountains of eastern Africa.

2. SUCCISA

Haller Hist. Stirp. Helv. 1: 87 (1768).

Scabiosa Linn.-F.T.A. 3: 251, partly; F.W.T.A., ed. 1, 2: 137.

- 1 A perennial herb; stems sparingly leafy, pubescent; leaves lanceolate, subacute, gradually narrowed into the winged petiole, 10-12 cm. long, 2-4 cm. broad, entire, pilose above, glabrous or pilose only on the midrib beneath; flowers in pedunculate heads; bracts narrowly lanceolate, about 1 cm. long, densely setose-pilose; bracts of the receptacle shorter than the flowers; corolla pubescent outside *trichotocephala*

Succisa trichotocephala Baksay in Ann. Mus. Nat. Hungar., n. ser. 2: 249 (1952). *APD acc*

Scabiosa succisa Linn. (1753)-F.T.A. 3: 252; F.W.T.A., ed. 1, 2: 137.

Erect sparingly branched herb up to 4 ft. high from a perennial stock; flowers white or pale mauve; **in montane grassland**.

COMPOSITAE

Herbs, shrubs or rarely small trees or climbers. Leaves alternate or opposite, simple or variously divided; stipules absent. Flowers (florets) crowded into heads (capitula) surrounded by an involucre of one or more series of free or connate bracts; sometimes the heads compound with the capitula few- or single-flowered; receptacle paleate, setose, pitted or naked, usually convex, sometimes elongated or concave. Florets of one or two kinds in each capitulum, hermaphrodite, unisexual or neuter, rarely dioecious, the outer ones often ligulate (ray-florets), the inner ones tubular (disk-florets), or all tubular, or all ligulate. Calyx epigynous, reduced to a pappus of persistent or caducous hairs, bristles or scales, or absent. Corolla sympetalous, 4-5-fid (actinomorphic disk-florets), filiform, ligulate or rarely bilabiate (zygomorphic ray-florets). Stamens 5, rarely 4, epipetalous; filaments free; anthers connate into a tube, rarely free, 2-locular, opening lengthwise, often appendaged at the apex and tailed at the base. Ovary inferior, 1-locular, 1-ovuled; style of the hermaphrodite or female florets mostly 2-fid, the style-arms smooth, papillose or hairy, tapered, rounded, deltoid or truncate, with or without a terminal appendage. Ovule erect from the base. Fruit (achene) sessile, sometimes beaked. Seed without endosperm; embryo straight with plano-convex cotyledons.

A highly advanced, easily recognised family with world-wide distribution.

KEY TO THE TRIBES.

- 1 Florets not all ligulate; sap usually clear: **2**
 Florets all ligulate and hermaphrodite; sap usually milky **13. CICHORIEAE**

-
- 2 Florets of two kinds in each capitulum, the outer usually ligulate or filiform and female or neuter, the inner tubular and hermaphrodite, or the capitula unisexual:3
 Florets all of one kind, all tubular and hermaphrodite:13
- 3 Capitula bisexual:4
 Capitula unisexual; leaves deeply pinnately divided; male capitula in a terminal raceme; female capitula axillary, clustered6. [AMBROSIEAE](#)
- 4 Receptacle with paleae subtending the florets:5
 Receptacle without paleae; leaves mostly alternate:8
- 5 Leaves opposite1. [HELIANTHEAE](#)
 Leaves alternate:6
- 6 Anther-base obtuse or shortly mucronate:7
 Anther-base sagittate, tailed; outer florets ligulate5. [INULEAE](#)
- 7 Outer florets ligulate2. [HELIANTHEAE](#)
 Outer florets eligulate4. [ASTEREAE](#)
- 8 Involucral bracts in one main series, sometimes with an outer series of smaller ones at the base (calculus) ...2. [SENECIONEAE](#)
 Involucral bracts in two or more series:9
- 9 Anther-base not tailed:10
 Anther-base tailed or sagittate; style-arms of the hermaphrodite florets club-shaped or obtuse, smooth (see Fig. 255):12
- 10 Involucral bracts in two series; leaves pinnately divided, or small and entire or toothed; style-arms of the hermaphrodite florets truncate or obtuse3. [ANTHEMIDEAE](#)
 Involucral bracts usually in several series:11
- 11 Style-arms of the hermaphrodite florets with a lanceolate or deltoid tip (see Fig. 253); leaves various4. [ASTEREAE](#)
 Style-arms of the hermaphrodite florets narrowly linear, papillose; leaves subentire5. [INULEAE](#)
- 12 Style of both types of floret divided5. [INULEAE](#)
 Style of the sterile florets entire; sap milky; leaf-margin spiny11. [ARCTOTIDEAE](#)
- 13 Leaves opposite:14
 Leaves alternate:17
- 14 Receptacle paleaceous1. [HELIANTHEAE](#)
 Receptacle not paleaceous:15
- 15 Florets yellow10. [HELENIEAE](#)
 Florets not yellow:16
- 16 Style-arms tapering, minutely hairy all over7. [VERNONIEAE](#)
 Style-arms obtuse or clavate, usually glabrous8. [EUPATORIEAE](#)
- 17 Involucral bracts in a single main series2. [SENECIONEAE](#)
 Involucral bracts in 2-several series:18
- 18 Style-arms tapering, minutely hairy all over7. [VERNONIEAE](#)
 Style-arms truncate, obtuse or clavate:19
- 19 Anther-base rounded, not tailed8. [EUPATORIEAE](#)
 Anther-base sagittate, usually tailed at the base:20
- 20 Receptacle naked in simple capitula, or if heads compound capitula with 3 or more florets:21
 Receptacle setose, or if naked capitula 1-flowered in globose compound heads; involucral bracts spinous12. [CYNAREAE](#)
- 21 Style-arms clavate without an apical appendage5. [INULEAE](#)
 Style-arms obtuse or broadened at the tip with a short glandular appendage; anther-base tails very long9. [MUTISIEAE](#)

I.—Tribe **HELIANTHEAE**

- 1 Paleae of the receptacle flat or nearly so, not folded around the achenes:2
 Paleae of the receptacle concave or folded around the achenes:8

- 2 Involucral bracts free, the outer herbaceous, the inner merging into the paleae of the receptacle; leaves simple: **3**
 Inner involucral bracts connate at the base, the outer fewer and usually smaller; leaves mostly divided: **6**
- 3 Achenes of two kinds, the outer flat, pectinate-winged, the inner angular, crowned with 2-3 bristles [1. *Synedrella*](#)
 Achenes all more or less alike, angled: **4**
- 4 Pappus present; low weedy herbs; ligules about 5, white or cream: **5**
 Pappus absent; tall herbs; corolla-tube densely pubescent especially at the base; ligules yellow [4. *Guizotia*](#)
- 5 Pappus paleaceous [2. *Galinsoga*](#)
 Pappus of spreading alternately long and short pennately plumose bristles [3. *Tridax*](#)
- 6 Leaves opposite; erect herbs mostly with conspicuous flower-heads: **7**
 Leaves alternate; pappus absent; low herb with small flower-heads [7. *Chrysanthellum*](#)
- 7 Achenes flat or concavo-convex with or without lateral wings; aristae 2, antrorsely barbellate or smooth, or absent [5. *Coreopsis*](#)
 Achenes angled, several-ribbed, wingless; aristae 2-4, retrorsely barbellate [6. *Bidens*](#)
- 8 Inner involucral bracts not embracing the outermost achenes: **9**
 Inner involucral bracts embracing the fertile ray-achenes: **18**
- 9 Leaves alternate, ovate; flower-heads terminal; involucral bracts leafy; achenes smooth without a pappus [8. *Sclerocarpus*](#)
 Leaves opposite: **10**
- 10 Ligulate florets absent: **11**
 Ligulate florets present: **12**
- 11 Achenes compressed; capitula long-pedunculate, erect; florets white [9. *Spilanthes*](#)
 Achenes 4-angled; capitula very short-pedunculate, at length nodding; florets yellow [10. *Eleutheranthera*](#)
- 12 Pappus forming a small cup or annulus with or without bristles: **13**
 Pappus composed of separate bristles or reduced to teeth, not united into a cup or annulus: **15**
- 13 Ray-florets fertile (with style and stigmas and producing mature achenes); outer achenes more or less triquetrous: **14**
 Ray-florets sterile (although style and stigmas rarely present); all achenes more or less alike, bilaterally convex or obscurely 4-angled [13. *Aspilula*](#)
- 14 Ligules conspicuous, yellow; leaves lobulate; petioles short; capitula long-pedunculate; achenes tuberculate with caducous aristae [11. *Wedelia*](#)
 Ligules small, white; leaves simple; petioles slender; capitula subsessile or shortly pedunculate; achenes minutely transversely rugulose with persistent barbellate aristae [12. *Blainvillea*](#)
- 15 Achenes thick or angular, not compressed: **16**
 Achenes compressed: **17**
- 16 Scales of the receptacle numerous and conspicuous, broad; flower-heads fairly large; stem often grooved and appressed-strigose [14. *Melanthera*](#)
 Scales of the receptacle few and narrow; ray-florets numerous, white, with narrow ligules [15. *Eclipta*](#)
- 17 Achenes winged [16. *Verbesina*](#)
 Achenes often marginate but not winged [9. *Spilanthes*](#)
- 18 Flower-heads axillary, sessile or subsessile: **19**
 Flower-heads paniculate; achenes curved, glabrous; ray-florets uniseriate; involucral bracts glandular [19. *Sigesbeckia*](#)
- 19 Achenes armed with hooked spinules; ray-florets in one series [17. *Acanthospermum*](#)
 Achenes not spinose, with a pappus; ray-florets in several series [18. *Enydra*](#)

II.-Tribe SENECEONEAE

- 1 Involucral bracts connate, the free tips shortly triangular; capitula discoid [20. *Bafutia*](#)
 Involucral bracts free to the base at least in fruit; capitula discoid or radiate: **2**
- 2 Shrubby climbers; leaves rather fleshy, broadly rounded, repand-dentate, with a crooked petiole-base; capitula discoid, heterogamous; florets long-tubular below, campanulate distally [21. *Mikaniopsis*](#)
 Herbs, herbaceous climbers, shrubs or small trees: **3**
- 3 Plants succulent; flowering shoots leafless or with reduced leaves; capitula discoid; calyculus absent but peduncles bracteolate often close to the involucre [22. *Kleinia*](#)

	Plants not or hardly succulent; flowering shoots leafy:	4
4	Style-arms long-tapered, flexuous; capitula discoid	23. Gynura
	Style-arms truncate or obtuse, with or without a terminal appendage:	5
5	Ray-florets absent:	6
	Ray-florets present	26. Senecio
6	Calyculus absent	24. Emilia
	Calyculus present:	7
7	Style-arms with a short or long awl-shaped appendage	25. Crassocephalum
	Style-arms not appendaged	26. Senecio

III.-Tribe ANTHEMIDEAE

1	Capitula heterogamous, discoid, the outer florets female in several series; corolla of the hermaphrodite florets 4-toothed; pappus absent:	2
2	Leaves pinnatifid or pinnatisect; capitula shortly stalked	27. Cotula
	Leaves entire, subentire or toothed; capitula sessile	28. Centipeda

IV.-Tribe ASTEREAE

1	Pappus well-developed, setaceous:	2
	Pappus poorly developed or absent:	6
2	Ligulate florets present though sometimes small:	3
	Ligulate florets absent; herbs:	5
3	Shrubs or climbers	29. Microglossa
	Herbs;	4
4	Ligule narrow, dull yellow or greenish; biennial or perennial herbs	30. Erigeron
	Ligule oblong, bright yellow; annual herb; lower leaves opposite	31. Felicia
5	Style of the hermaphrodite florets 2-lobed; achenes flattened; florets dull or pale yellow	32. Conyza
	Style of the hermaphrodite florets entire or emarginate; achenes terete; florets purplish	33. Adelostigma
6	Receptacle paleaceous, flat; pappus minutely setiform	34. Ceruana
	Receptacle naked, convex to columnar:	7
7	Pappus absent; florets greenish or mauve	35. Dichrocephala
	Pappus present; florets yellow:	8
8	Pappus of a few minutely hooked caducous setae	36. Microtrichia
	Pappus of minute curved subspathaceous teeth	37. Grangea

V.-Tribe c

1	Capitula separate, not crowded into compound heads:	2
	Capitula crowded into globose or hemispherical compound heads:	19
2	Receptacle with paleae subtending the florets; ray-florets ligulate:	3
	Receptacle without paleae:	5
3	Involucre at length subglobose, hard; branches dichotomous, broadly winged; leaves subentire	38. Geigeria
	Involucre hemispherical; branches not winged; leaves crenately toothed or pinnately divided:	4
4	Pappus uniform of scales as long as the ovary; leaves sessile; low undershrub	39. Bubonium
	Pappus usually unequal of jagged short scales with or without intermediate bristles; leaves petiolate; erect or bushy herbs	40. Anisopappus
5	Female (outer) florets ligulate:	6
	Female florets filiform or tubular, or all florets hermaphrodite and tubular:	9
6	Pappus an inconspicuous ring; achenes barrel-shaped, strongly ribbed	41. Mollera
	Pappus of at least the inner series setaceous;	7
7	Outer pappus present:	8
	Outer pappus absent	44. Vicoa
8	Outer pappus very short, paleaceous, connate at the base into a cup	42. Pulicaria
	Outer pappus setaceous	43. Inula

9	Pappus absent; style terete, undivided or minutely emarginate; stem narrowly winged	45. <i>Epaltes</i>
	Pappus present:.....	10
10	Style-arms of the hermaphrodite florets filiform or broadened and rounded at the apex, not truncate:	11
	Style-arms of the hermaphrodite florets truncate; herbs usually with woolly stems and leaves, especially when young; involucre bracts often thin, scarious, hyaline or coloured:	18
11	Shrubs or undershrubs; involucre bracts ovate	46. <i>Pluchea</i>
	Herbs:	12
12	Anther-base tailed:	13
	Anther-base not tailed:	17
13	Outer florets tubular:	14
	Outer florets filiform:	16
14	Pappus uniform, setaceous:	15
	Pappus 2-seriate, the outer short, multifid, the inner longer, plumose; annual herb	47. <i>Pegolettia</i>
15	Perennial herbs	43. <i>Inula</i>
	Annual herb	44. <i>Vicoa</i>
16	Pappus bristles 5-15	48. <i>Porphyrostemma</i>
	Pappus bristles numerous	49. <i>Blumea</i>
17	Pappus bristles 5-10	50. <i>Nicolasia</i>
	Pappus bristles numerous	51. <i>Laggera</i>
18	Plants perennial	52. <i>Helichrysum</i>
	Plants annual	53. <i>Gnaphalium</i>
19	Herbs; achenes subterete or slightly compressed; pappus absent	54. <i>Sphaeranthus</i>
	Scrambling shrub with a thorn at the base of the petiole of each leaf; achenes of the female florets winged; pappus of few stiff bristles	55. <i>Blepharispernum</i>

VI.-Tribe AMBROSIEAE

1	Capitula monoecious, rather small in racemes; female capitula 1-flowered in axillary clusters; bushy aromatic herb	56. <i>Ambrosia</i>
---	--	-------------------------------------

VII.-Tribe VERNONIEAE

1	Capitula few-flowered in glomerules subtended by leafy bracts; pappus bristly	57. <i>Elephantopus</i>
	Capitula 1- to many-flowered, not tightly clustered:	2
2	Pappus present:.....	3
	Pappus absent:	9
3	Pappus more or less persistent:.....	4
	Pappus early caducous, uniform:	8
4	Pappus cupular or coroniform:	5
	Pappus segments free:	6
5	Flower-heads sessile in the leaf-axils; tubular pappus obscurely toothed	58. <i>Strachium</i>
	Flower-heads small in lax terminal corymbs; pappus coroniform, pectinately toothed	59. <i>Triplotaxis</i>
6	Flower-heads large, solitary, terminal, much-overtopped by the elongated upper leaves; pappus-setae numerous in many series	60. <i>Aedesia</i>
	Flower-heads not much-overtopped by elongated upper leaves; pappus-setae in 2 to few series:.....	7
7	Inner involucre bracts connate; outer pappus of scales, inner pappus of 3-5 longer barbellate bristles; low spreading herb	61. <i>Herderia</i>
	Involucre bracts free; pappus uniform or if outer paleaceous, inner of numerous bristles; erect herbs, shrubs or trees	62. <i>Vernonia</i>
8	Achenes obovate, 4-7-ribbed; leaves mostly opposite or verticillate	63. <i>Erlangea</i>
	Achenes linear-oblong, closely 10-ribbed; leaves alternate	64. <i>Centratherum</i>
9	Achenes broadly truncate at the apex	65. <i>Ethulia</i>
	Achenes rounded at the apex	66. <i>Gutenbergia</i>

VIII.-Tribe EUPATORIEAE

- 1 Pappus-setae numerous; anther-connective produced at the apex:2
 Pappus-setae 5 or fewer; leaves opposite:3
- 2 Herbs or shrubs; involucre bracts several to numerous; leaves opposite or alternate [67. Eupatorium](#)
 Climbers; involucre bracts 4-5 [68. Mikania](#)
- 3 Pappus gland-tipped, adhesive; apex of the anther truncate or minutely apiculate [69. Adenostemma](#)
 Pappus of 5 attenuated scales, not gland-tipped; apex of the anther with an ovate appendage [70. Ageratum](#)

IX.-Tribe MUTISIEAE

- 1 Caulescent branched herbs:2
 Acaulescent scapigerous herb with a solitary capitulum [73. Gerbera](#)
- 2 Involucre bracts about 8-seriate, not pungent-pointed; florets bright red [71. Pleiotaxis](#)
 Involucre bracts in 5-6 series, rigid, pungent-pointed [72. Dicoma](#)

X.-Tribe HELENIEAE

- 1 Capitula homogamous; involucre bracts in few series, rather large; anthers appendaged at the apex, not tailed at the base; style arms obtuse [74. Hypericophyllum](#)

XI.-Tribe ARCTOTIDEAE

- 1 Capitula heterogamous, radiate; involucre bracts connate at the base, spinous; achenes villous; pappus of denticulate obtuse paleae in several rows [75. Berkheya](#)

XII.-Tribe CYNAREAE

- 1 Capitula 1-flowered, crowded into globose heads [76. Echinops](#)
 Capitula many-flowered, not crowded into regular globose heads:2
- 2 Pappus-setae connate into a ring at the base and deciduous together; setae barbellate [77. Carduus](#)
 Pappus-setae more or less connate, persistent, paleaceous at the base, plumose above [78. Atractylis](#)
 Pappus-setae free or absent [79. Centaurea](#)

XIII.-Tribe CICHORIEAE

- 1 Pappus-setae plumose [80. Picris](#)
 Pappus-setae smooth or barbellate:2
- 2 Achenes beaked:3
 Achenes not beaked; pappus mostly white:4
- 3 Achenes compressed, ribbed or smooth, usually reddish or blackish-purple, glabrous, or if terete greyish and minutely tuberculate; pappus white; involucre bracts not setulose [81. Lactuca](#)
 Achenes fusiform, many-ribbed, yellowish-brown, tapered into the beak, finely spiculate; pappus buff; involucre bracts setulose [82. Crepis](#)
- 4 Involucre bracts without or with only narrow scarious margins; achenes oblong-terete or more or less flattened, few or many-ribbed, rough or smooth [83. Sonchus](#)
 Involucre bracts with broad scarious margins; achenes fusiform, few-ribbed, rough [84. Launaea](#)

1. SYNEDRELLA Gaertn.-Benth. & Hook. f. Gen. Pl. 2: 383.

- 1 Stems erect, appressed-pubescent; leaves opposite, ovate, cuneate at base, up to 8 cm. long and 5 cm. broad, finely crenate-serrate, shortly appressed-setulose on both surfaces; petiole winged, bristly-ciliate; flower-heads crowded and subsessile in the leaf axils; involucre bracts herbaceous, broadly oblong-lanceolate, finely nervose, 8-10 mm. long, inner at length glumaceous; ligulate florets 3-5, ligules short; outer achenes flat with pectinate wings, inner 2-3-sided, scabrid, crowned with 2 or 3 aristae [nodiflora](#)

Synedrella nodiflora Gaertn. Fruct. et Sem. Pl. 2: 456, t. 171 (1791); F.T.A. 3: 386, in obs.; Chev. Bot. 372. *APD acc*

Blainvillea gayana of Chev. Bot. 389, partly (Chev. 18639), not of Cass.

A branched, usually annual herb, half-woody below, a few inches to 4 ft. or more high, with narrow oblong clustered flower-heads and small golden-yellow ray-florets.

2. GALINSOGA

Ruiz & Pav.-Benth. & Hook. f. Gen. Pl. 2: 390; Adams in J.W. Afr. Sci. Assoc. 3: 113 (1957).

- 1 Stems glabrous or nearly so; peduncle-hairs short, appressed-ascending, mixed with shortly stalked spreading glands; leaves ovate, subentire; receptacle-scales trifid; achene-paleae about as long as the body of the achene, longer than the corolla of the disk florets [1. *parviflora*](#)

Stems and peduncles hispid with long spreading hairs and long-stalked glands; leaves broadly ovate, serrate-crenate; receptacle-scales simple or shortly laciniate; achene-paleae about half the length of the body of the achene, shorter than the corolla of the disk florets [2. *ciliata*](#)

1. *Galinsoga parviflora* Cav. Icon. 3: 41, t. 281 (1794). *APD acc*

An annual **weed** up to 18 in. high with white ray and yellow disk florets in rather small heads.

[Br.] Cam.: Cam. Mt., 3,200-6,000 ft. (Jan., Mar., Apr.) Dunlap 119! Brenan 9587! Boughey GC 7031! Bamenda, 5,000 ft. (Jan., Mar.) Migeod 291! Morton K66!

Native of S. America and introduced into several localities in tropical Africa, mainly at medium elevations, in, for example, **Sudan**, Congo and S. Tomé.

2. *Galinsoga ciliata* (Raf.) Blake in Rhodora 24: 35 (1922); Lousley in Watsonia 1: 240 (1950).

APD: *Synonym of Galinsoga quadriradiata Ruiz & Pav.*

Adventina ciliata Raf. (1836).

An annual **weed** like the last up to about 1 ft. high and distinctly more hairy.

[Br.] Cam.: Cam. Mt., 3,000-7,500 ft. (Nov.-Apr.) Dunlap 118! Migeod 9! Dalz. 8228! Maitland 309! Brenan 9263! Akpala GC 10495! Morton GC 7094! Bambui, Bamenda, 6,300 ft. (Dec.) Adams GC 11208! Mambila Plateau, 4,600 ft. (Jan.) Hepper 1653!

Native of S. America.

3. TRIDAX

Linn.-Benth. & Hook. f. Gen. Pl. 2: 392.

- 1 Annual (or perennial when mown) hispid herb with trailing stems branching low from a tap root, sometimes rooting from the lower nodes; leaves opposite, up to 7 cm. long and 3 cm. broad, ovate-rhomboid, coarsely serrate-dentate, soft, cuneate at the base to a slender petiole 1-2 cm. long; flowering branches ascending; capitula solitary on slender peduncles up to 20 cm. long; involucre bracts in 2 series, 3-5 mm. long, the outer broadly ovate, the inner oblong, apiculate, green, shortly setulose; receptacle-scales glumaceous, linear, striate, acutely apiculate, glabrous except at the tip, persistent; ligulate florets female (4-)5(-7) in each head, limb about 5 mm. long and 4 mm. broad, usually 3-dentate, spreading horizontally, with the style-arms rolled in the mouth of the slender pubescent corolla tube; disk florets tubular, hermaphrodite, the tube linear, 5 mm. long with 5 slightly spreading pubescent lobes; achenes grey-silky, 2 mm. long; pappus-setae slightly longer of about 20 alternately long and short pennately plumose bristles, at length spreading [procumbens](#)

Tridax procumbens Linn. Sp. Pl. 900 (1753); Hutch. in Kew Bull. 1921: 381; Trochain Mém. I.F.A.N. 2: 385 (1940); Berhaut Fl. Sén. 70. *APD acc*

A low herb with weak trailing branches and long-stalked flower-heads about 1/2 in. long; ray-florets cream-coloured, drying yellow; disk-florets yellow, often tinged reddish; **common in waste places throughout the area, but apparently of quite recent introduction.**

Sen.: Hann (Oct.) Roberty 15039! **S. L.:** Freetown (Sept., Oct.) Deighton 2144! Hepper 917! Njala (June) Deighton 6071! Roruks (July) Deighton 2505! **Iv. C.:** Adiopodoumé (Oct.) McClintock 145!

Native to central America, now spread to many warm countries.

4. GUIZOTIA

Cass.-F.T.A. 3: 384. Nom. cons.

- 1 Outer involucre bracts linear to lanceolate, usually longer than the inner and leafy; stems, upper surfaces of leaves, peduncles and involucre bracts mostly scabrid-setulose; leaves opposite, lanceolate, 6-18 cm. long, 2-5 cm. broad, serrate-crenate, sessile, auriculate, sometimes perfoliate; ray-florets with a broad several-nerved limb; corolla-tube densely pubescent especially at base; achenes glabrous, quadrangular [1. *scabra*](#)
- Outer involucre bracts ovate or broadly lanceolate, hardly longer than the inner, not leafy; stems glabrescent; leaves minutely scabrid above with prominent veins beneath, serrulate to subentire; peduncles and involucre bracts pubescent; (other characters as above) [2. *abyssinica*](#)

1. *Guizotia scabra* (Vis.) Chiov. in Ann. Ist. Bot. Roma 8: 184 (1904). *APD acc*

Veslingia scabra Vis. (1840).

Guizotia schultzei Hochst. ex Sch. Bip. (1848)-F.T.A. 3: 385; F.W.T.A., ed. 1, 2: 141.

An erect harshly pubescent soft-wooded herb 1-6 ft. high with bright yellow florets in numerous heads 1 in. or more across; ligules of ray-florets 3-4-fid at the tip.

N. Nig.: Jos Plateau (Jan., July, Sept., Oct.) Lely 413! P113! P704! Summerhayes 49! Jos (Sept., Dec.) Lely 589! Hepper 1160! Monod 9665! Birnin Gwari (Mar.) Meikle 1382! Kontagora (Nov.) Dalz. 194! Vogel Peak, 3,800 ft., Adamawa (Nov.) Hepper 1339!

Extends to **Sudan**, **Ethiopia**, Eritrea, Congo, **Uganda**, **Kenya**, **Tanganyika**, N. Rhodesia and Nyasaland.

2. *Guizotia abyssinica* (Linn. f.) Cass. in Dict. Sci. Nat. 59: 248 (1829); F.T.A. 3: 384; Adams in J. W. Afr. Sci. Assoc. 3: 114 (1957). *APD acc*

Polymnia abyssinica Linn. f. (1781).

A nearly glabrous shrubby herb up to about 4 ft. high with numerous heads of bright yellow flowers 1-1 1/2 in. across.

[Br.] Cam.: Gashaka, Adamawa (Dec.) Latilo & Daramola FHI 28966!

From **Ethiopia** to Nyasaland sporadically, and also in India and as a casual in Europe.

5. COREOPSIS

Linn.-F.T.A. 3: 387; Sherff in Publ. Field Mus. 11: 6 (1936).

- 1 Achenes with at least some outer ones in each capitulum broadly and distinctly winged; annual herbs: [2](#)
- Achenes not or very narrowly or indistinctly winged: [3](#)
- 2 Leaves typically 3-partite, segments linear, serrate with mucronate teeth; outer involucre bracts linear, inner

- broadly lanceolate, acuminate, with scarious margins; winged achenes suborbicular about 12 mm. long and 8 mm. broad; capitula up to 7 cm. diam [1. borianiana](#)
- Leaves typically simple, elliptic-lanceolate, coarsely toothed or rarely 3-lobed, irregularly serrate-crenate; capitula as above but smaller; winged achenes oblong or scutelliform, 6-7 mm. long, 3-5 mm. broad [2. barteri](#)
- 3** Aristae present: **4**
- Aristae absent; achenes convex with a marked midrib on the inner surface, glabrous, black, 2.5-3.5 mm. long, 1.5 mm. broad, not ciliate; leaves up to about 5 cm. long, with short oblong apiculate segments 2-3 mm. broad; annual herb [7. occidentalis](#)
- 4** Involucral bracts broadly lanceolate in 2-3 series, about 1.5 cm. long and up to 8 mm. broad; ligules 1 cm. or more broad; achenes flat, oblong, antorsely scabrid on both surfaces, stiffly ciliate on the margin, with 2 short divergent aristae smooth or sparingly antorsely barbellate [3. asperata](#)
- Involucral bracts not as above, smaller: **5**
- 5** Segments of leaves linear, very long, remotely serrate, rarely as much as 5 mm. broad; outer involucral bracts linear, as long as or longer than the inner; inner involucral bracts ovate-lanceolate, 5 mm. long, glabrous; achenes 3 mm. long, scabrid; perennial herb [4. camporum](#)
- Segments of leaves ovate, serrately cut, 1 cm. or more broad; achenes 3-6 mm. long: **6**
- 6** Ligules about 2 cm. long, conspicuous; capitulum in flower 3.5-4 cm. diam.; achenes glabrous except for ciliate wing-margin: **7**
- Ligules 7-8 mm. long; capitulum in flower not exceeding 2 cm. diam.; achenes pubescent [6. setigera](#)
- 7** Stems and leaves glabrous [5. monticola var. monticola](#)
- Stems, leaves and outer involucral bracts pilose [5a. monticola var. pilosa](#)
- 1. Coreopsis borianiana** Sch. Bip. in Verh. Zool.-Bot. Ges. Wien 18: 684 (1868); Sherff in Publ. Field Mus. 11: 394.

APD: Synonym of Bidens borianiana (Sch. Bip. ex Schweinf. & Asch.) Cufod.

Coreopsis guineensis Oliv. & Hiern in F.T.A. 3: 390 (1877); Chev. Bot. 372, partly (excl. specimens from Guinée and Sierra Leone); F.W.T.A., ed. 1, 2: 143, partly (excl. syn.C. camporum Hutch. & Lely 383); Berhaut Fl. Sén. 11, 70, 85.

Coreopsis togensis Sherff in Bot. Gaz. 76: 87 (1923).

A nearly glabrous erect branched annual herb up to about 6 ft. high with golden-yellow flower-heads 2-3 in. across.

Also in **Cameroun.**

Coreopsis monticola (Hook. f.) Oliv. & Hiern

APD: Synonym of Bidens mannii T.G.J. Rayner

5. **Coreopsis monticola** var. **monticola** in F.T.A. 3: 390 (1877); Sherff in Publ. Field Mus. 11: 372. *APD acc*

Verbesina monticola Hook. f. (1864).

A shrubby almost glabrous herb 3 ft. or more high; young stems and leaves reddish; ray-florets pale yellow; heads 2-3 in. across in flower; **in mountain grassland**

[Br.] Cam.: Cam. Mt., 5,000-9,000 ft. (Nov.-Jan., Apr.) Mann 1219! 1922! Johnston 26! Maitland 1191! Brenan 9558! Boughey GC 12511!

6. **Coreopsis monticola** var. **pilosa** Hutch. & Dalz. F.W.T.A., ed. 1, 2: 143 (1931); Sherff l.c. 373.

APD: Synonym of Bidens mannii T.G.J. Rayner

[Br.] Cam.: Cam. Mt., 7,000-10,000 ft. (Nov., Jan., Apr.) Migeod 211! Dunlap 204! Maitland 450! Irvine 1452! Morton GC 7074! Kumbo (Oct.) Tamajong FHI 23493! Mba Kokeka Mt., 6,500 ft. (Jan.) Keay FHI 28390! Bafut-Ngamba F.R. (Aug.) Ujor FHI 29975! Santa Mt. (Dec.) Boughey GC 11027!

[Note: Intermediates between vars. *monticola* and *pilosa* are represented by the following specimens: -Bamenda, 7,000 ft. (Feb., Mar.) Migeod 489! Morton K139! These have slightly smaller capitula and the young parts only are pubescent-C. D. A.]

6. **Coreopsis setigera** Sch. Bip. in Walp. Rep. 6: 163 (1846).

APD: Synonym of Bidens setigera (Sch. Bip. ex Walp.) Sherff subsp. setigera

Bidens setigera (Sch. Bip.) Sherff in Bot. Gaz. 90: 390 (1930); Publ. Field Mus. 16: 627, t. 188.

An annual herb 2-3 ft. high with yellow flowers about 3/4 in. across; growing on rocks.

N. Nig.: Jos Plateau (Sept.) Lely P736!

Also in **Ethiopia.**

[Note: The West African plant is generally puberulous; Ethiopian plants are almost glabrous.]

7. *Coreopsis occidentalis* (Hutch. & Dalz.) C.D. Adams in J.W. Afr. Sci. Assoc. 6: 149 (1961).

APD: *Synonym of Bidens occidentalis* (Hutch. & Dalziel) Mesfin

Microlecanium occidentale Hutch. & Dalz. F.W.T.A., ed. 1, 2: 143 (1931), partly (Chev. 18296).

An erect annual herb up to about 1 ft. high with yellow flower-heads 1 in. across; in hill grassland.

Guin.: Irébéléya to Timbo, 2,000 ft. (Sept.) Chev. 18296! Mali (Sept.) Schnell 7060! [Br.] Cam.: Bafut-Ngamba F.R., 5,000-6,000 ft. (Oct.-Nov.) Lightbody FHI 26275!

6. BIDENS

Linn.-F.T.A. 3: 392; Sherff in Publ. Field Mus. 16 (1937).

- 1 Ray-florets present:2
Ray-florets absent; leaves pinnatifid, mostly alternate; inner involucre bracts 3, 8-9 mm. long; outer 2 or 3, 1.5-2.5 mm. long; achenes narrow, slightly compressed, 8-9 mm. long, pilose, biaristate4. *minuta*
- 2 Outer involucre bracts ovate to lanceolate or linear, shorter than the inner:.....3
Outer involucre bracts linear-spathulate, up to 2 cm. long, much longer than the inner; leaves bipinnatifid, thinly pilose; leaflet-margin deeply serrate; peduncle with a single bracteole below the involucre, similar to an outer involucre bract3. *bitemata*
- 3 Ligules yellow, often rather short and few; leaves bipinnatisect, usually pubescent at least towards the base of the petiole; leaflet-margin crenate-serrate; peduncle ebracteate1. *bipinnata*
Ligules white, usually conspicuous; leaves pinnate (rarely simple), glabrescent; leaflet-margin regularly serrate2. *pilosa*

1. *Bidens bipinnata* Linn. Sp. Pl. 832 (1753); F.T.A. 3: 393; Chev. Bot. 373, partly (Guinée specimens); Sherff in Publ. Field Mus. 16: 366, t. 89. APD acc

APD: *Synonym of Cosmos bipinnatus* Cav.

An erect, sometimes bushy annual herb 1-4 ft. high, nearly glabrous or pubescent on the stems and leaves when young; ray-florets yellow, few or rarely absent.

Guin.: fide Chev. l.c. S. L.: Musaia (Dec.) Deighton 4508! Ghana: Nwereme, Ashanti (Dec.) Adams 5268! Sunyani (Dec.) Adams 5351! N. Nig.: Neill's Valley, Naraguta (June) Lely 267! Kadaura Lely 600! Kachia to Kaduna (Dec.) Meikle 316!

Widespread in warm countries.

2. *Bidens pilosa* Linn. Sp. Pl. 832 (1753); F.T.A. 3: 392; Chev. Bot. 373; Sherff l.c. 412, t. 99 & 102; Berhaut Fl. Sén. 11, 27, 48; Schnell in Ic. Pl. Afr. I.F.A.N. 5: t. 99. APD acc

Bidens abortiva Schum. & Thonn. (1827).

An erect annual herb with yellow disk-florets and white ray-florets; fruits strongly adherent; a common weed of disturbed ground.

Sen.: fide Berhaut l.c. Mali: Kita Massif (Oct.) Jaeger! Port. G.: Brandao to Fulacunda (Oct.) Esp. Santo 2208! Gabu (Oct.) Esp. Santo 3553! Guin.: (July) Collenette 72! Diaguissa (Apr.) 3. **Bidens biternata** (Lour.) Merrill & Sherff in Bot. Gaz. 88: 293 (1929); Sherff in Publ. Field Mus. 16: 388, t. 99. *Coreopsis biternata* Lour. (1780). *B. bipinnata* of Chev. Bot. 373, partly (Chev. 21959), not of Linn. *APD acc*

An annual weedy herb with yellow flowers.

Iv. C.: R. Béré to Dialokoro, Mankono (June) Chev. 21959! **Ghana:** Cape Coast (Nov.) Morgan GC 17363! **N. Nig.:** Naraguta (June) Lely 276!

A tropical weed, also reported from **Ethiopia** and from **Sudan** to **Angola**.

4. **Bidens minuta** De Miré & Gillet in J. Agric. Trop. 3: 703, fig. 3 (1956).

APD: *Synonym of Glossocardia bosvallia* (L. f.) DC.

A therophyte only a few inches high with rayless flower-heads nearly 1/2 in. long.

Niger: Mt. Baguesane, Aïr, 4,000 ft. (Nov.) De Miré & Gillet MN3-30.

7. CHRYSANTHELLUM

Rich.-F.T.A. 3: 394.

- 1 A low herb with branches radiating from the stem-base; leaves alternate, deeply pinnatisect, up to about 5 cm. long including the subamplexicaul petiole, segments oblong-lanceolate, subacute, apiculate; flower-heads small, numerous, pedunculate; involucre bracts 1-2-seriate, about 4 mm. long, obtuse, with scarious margins; ligulate florets usually 8-12 with very short ligules; receptacle-scales linear, persistent; achenes compressed, oblong, mostly winged with a thick straw-coloured slightly hairy margin, emarginate or truncate at the apex *americanum*

Chrysanthellum americanum (Linn.) Vatke in Abh. Nat. Brem. 9: 122 (1885); F.W.T.A., ed. 1, 2: 608; Berhaut Fl. Sén. 173.

APD: *Synonym of Chrysanthellum indicum var. afroamericanum*

Anthemis americana Linn. (1753).

Chrysanthellum procumbens Pers. (1807)-F.T.A. 3: 395; Chev. Bot. 373; F.W.T.A., ed. 1, 2: 143.

A faintly aromatic branching annual herb, usually less than 1 ft. high. with yellow disk-florets and paler very small rays; a common weed of roadsides and waste places.

Sen.: fide Berhaut l.c. Niokolo-Koba (Oct.) Adam 15583! **Gam.:** Hayes 575! **Mali:** Bamako (Jan., Nov.) Chev. 199! Jaeger! **S. L.:** Kabala (July) Glanville 265! Musaia (Oct., Dec.) 9. SPILANTHES

APD: Synonym of Acmella Rich.

Jacq. Enum. Pl. Carib. 8 (1760); F.T.A. 3: 383 (as of Linn.); Adams in Webbia 12: 325 (1956).

- 1 Ligulate florets absent; disk-florets white; achenes ribbed, biaristate, 2-8-3 mm. long; capitula up to 1 cm. long and 9 mm. broad on long stout peduncles; leaves oblong-ovate, subentire, up to 5 cm. long and 2 cm. broad. [1. *costata*](#)
Ligulate florets present; disk-florets yellow or orange; achenes unribbed, 1-8-2 mm. long:2
- 2 Stem suberect, rooting only from the lower nodes; leaves lanceolate; peduncles elongated, slender, exceeding the upper leaves; capitula ovoid, about 6 mm. long; achenes ciliate on the margins, shortly biaristate. [2. *uliginosa*](#)
Stem creeping, rooting from the nodes; leaves ovate; achenes not ciliate, scarcely aristate:3
- 3 Peduncles shorter than the leaves; ligules not or hardly exceeding the involucre; leaves subentire or remotely and shallowly serrate-dentate, up to 4 cm. long including the petiole; glabrescent; achenes sparsely pubescent along distinct margins [3. *filicaulis*](#)
Peduncles about twice as long as the leaves; ligules usually exceeding the involucre; leaves distinctly serrate-dentate, up to 8 cm. long including the petiole, sparsely pubescent; achenes almost glabrous, without thickened margins. [4. *africana*](#)

1. *Spilanthes costata* *Benth.* in Fl. Nigrit. 436 (1849); Adams in Webbia 12: 329. *APD acc*

Spilanthes acmella of Chev. Bot. 372, partly (Chev. 20051), not of Murr.

Spilanthes acmella of F.W.T.A., ed. 1, 2: 147, partly (T. Vogel 41), not of Linn.

A glabrescent fleshy decumbent herb with greenish-white disk-florets; mostly near the sea.

Lib.: Cape Palmas (July) T. Vogel 41! **Iv. C.:** Tabou, Cavally basin (Aug.) Chev. 20051! Adiopodoumé (July) Boughey GC 14575! **Ghana:** Cape Coast (July) T. Vogel 34! Half Assini (Feb.) Morton A1633!

2. *Spilanthes uliginosa* *Sw.* Prod. 110 (1788); Adams l.c. 328.

APD: Synonym of Acmella uliginosa (Sw.) Cass.

Spilanthes acmella of Chev. Bot. 372, partly (Chev. 2082; 12140), not of Murr.

Spilanthes acmella of F.W.T.A., ed. 1, 2: 146, partly (Sc. Elliot 3881; Barter; Whyte), not of Linn.

An annual herb a few inches to nearly 1 ft. high with erect branches; disk-florets yellow and ray-florets pale yellow or white; **in swampy or low-lying ground.**

Sen.: Mangacounda, Casamance (Jan.) Chev. 2082! Santamba (Oct.) Monod 8530! **Port. G.:** Bafata (Nov.) Esp. Santo 2833! **Guin.:** Conakry (Feb., Apr.) Maclaud! Chev. 12140! Martine 57! **S. Also in **S. Tomé** and **Principe**.

4. *Spilanthus africana* DC. Prod. 5: 623 (1836).

APD: Synonym of Acmella caulirhiza Delile

APD: Synonym of Spilanthus mauritiana (A. Rich. ex Pers.) DC.

Like the last but more hairy and more robust with the flower-heads on longer peduncles.

[Br.] Cam.: Cam. Mt., 4,400 ft. (Apr.) Maitland 1130! Bafut-Ngamba F.R., Bamenda (Jan., Feb.) Keay & Lightbody FHI 28369! Hepper 2098! Lakom, 6,000 ft. (Apr.) Maitland 1655! Ndu, 5,900 ft. (Feb.) Hepper & Charter 1947!

Extending to Natal.

10. ELEUTHERANTHERA

Poit. ex Bosc-Lawalrée in Bull. Jard. Bot. Brux. 17: 55 (1943).

- 1 An erect branched annual herb; stems ribbed, pubescent; leaves opposite, ovate, 3-5(-10) cm. long, 1-2(-4) cm. broad, narrowed to a slender petiole about 5 mm. long, serrate-crenate, obtusely pointed, thinly pilose on both surfaces, minutely glandular; capitula on slender axillary peduncles hardly exceeding 1 cm. in length; outer involucre bracts 6-8 mm. long, longer than the inner, oblong and rounded at apex; ray-florets almost always absent; disk-florets 4-5-merous; receptacle-scales persistent, ciliate; achenes 4-angled, tuberculate, glabrescent, without pappus [ruderalis](#)

Eleutheranthera ruderalis (Sw.) Sch. Bip. in Bot. Zeit. 24: 165 (1866); Meikle in Kew Bull. 8: 118 (1953). *APD acc*

Melampodium? *rudera* Sw. (1806).

Eleutheranthera ovata Poit. ex Steud. (1840)-Berhaut Fl. Sén. 68.

A weedy, thinly hispid annual herb up to about 2 ft. high with small golden-yellow shortly stalked axillary flower-heads nodding in fruit; **in wet areas mostly near the sea; flowering more frequently during the rains.**

Sen.: Ouassadou Berhaut 1267. **Guin.:** Conakry (Apr.) Martine 52! Moussaya (Nov.) Schnell 2091! Gangan (Apr.) Adam 11942! **S. L.:** Thomas 8293! 9885! 10438! Freetown (July, Aug., Sept.) Deighton 2020: Hepper 911! Melville & Hooker 104! Roruks (July) Deighton 3257! **Lib.:** Delafosse (see note below). Monrovia (May, June) Barker 1318! Baldwin 5882! Cape Palmas (Apr.) Todd 37! Siatown (Dec.) Adam 16365! **Ghana:** Axim (Mar., Apr., June, Dec.) Morton GC 6574! A419! 2223! 2458! Cape Coast (Aug.) Hall 572! Dunkwa (Feb.) Whiting 12! **S. Nig.:** Lagos (July) Dalz. 1352! **[Br.] Cam.:** Victoria (Sept.) Boughey X1199! X1294! **F. Po:** S. Isabel (Jan.) Boughey GC 10972!

In the American, Asian and Australasian tropics, and apparently now spreading in Africa.

[Note: According to Berhaut (in litt.) the collection by Delafosse, which I have not seen, was made in 1897 and is probably the earliest record for this species in our area-C. D. A.].

11. WEDELIA

Jacq.-Adams in Webbia 12: 229 (1956). Nom. cons.

- 1 Stems procumbent, rooting at the nodes; leaves opposite, about 4 cm. long and 3 cm. broad, trilobed, broadly cuneate in the lower half, lobes broadly triangular, dentate, sparingly setulose on the nerves; petiole up to 5 mm. long, sparingly setulose; flower-heads axillary, solitary on long peduncles; involucre bracts leafy, sparingly setulose; ray-florets spreading, fertile; achenes irregularly ovoid, warted, minutely puberulous in the upper part, with short early-caducous aristae *trilobata*

Wedelia trilobata (Linn.) Hitchc. in Rep. Missouri Bot. Gard. 4: 99 (1893).

APD: Synonym of Sphagneticola trilobata (L.) Pruski

Silphium trilobatum Linn. (1759).

Wedelia carnosa Pers. (1807).

A prostrate weedy herb with yellow flower-heads up to 1 in. across.

Guin.: Conakry (? Apr.) Martine 55! **S. L.:** Freetown (May, Sept.) Deighton 1186! Hepper 912! Makump (Aug.) Deighton 1380! Njala, introduced from Freetown (June) Deighton 6070!

Introduced from tropical America.

[Note: No other species of *Wedelia* is known to occur in W. Africa (see *Aspilia africana*); those listed in F.T.A. 3: 376-377 for other parts of Africa may, when revised, prove to belong also to *Aspilia* or other genera-C. D. A.]

12. BLAINVILLEA

Cass.-F.T.A. 3: 374; Adams in *Webbia* 12: 229 (1956).

- 1 An erect hirsute annual herb with striate angular stems and branches; leaves opposite or alternate above, broadly ovate, acuminate, very shortly cuneate and 3-nerved at base, 5-12 cm. long, 3-6 cm. broad, thin, shortly pilose on the nerves and veins, shallowly crenate-serrate; petiole slender, pilose; flower-heads pedunculate at the ends of the shoots, or axillary; peduncles variable, up to 4 cm. long; capitula oblong in flower, hemispherical in fruit, about 1 cm. long; outer involucre bracts lanceolate, acute, thin, striate-hairy outside, inner glabrous; ligules of outer female florets about 1 mm. long, white; achenes blackish, sharply angled, the outer 3-angled with 3 persistent but fragile barbellate aristae, the inner 2- or 3-angled, longer than the outer, with 2 aristae, all transversely rugulose, truncate at apex *gayana*

Blainvillea gayana Cass. in Dict. Sci. Nat. 47: 90 (1827); F.T.A. 3: 375; Chev. Bot. 369 partly (Chev. 24864); Berhaut Fl. Sén. 69, 70. *APD acc*

An erect hairy annual 1-3 ft. high with white flower-heads about 1/2 in. long; a weed of open ground in semi-arid regions.

Sen.: Heudelot 248! M'Bidjem Perrottet 50! Dakar Vermoesen 1013! Kaolak (Sept.) Berhaut 411 bis! Ngazobil Berthollet 23! Niokolo-Koba (Oct.) Adam 15798! **Gam.:** Albreda Perrottet. **Mali:** Macina (Sept.) Chev. 24864! Labézanga Hagerup 449! Bore (Sept.) Demange 38/1959! **Niger:** Niamey (Oct.) Hagerup 511! **N. Nig.:** Katagum Dalz. 168!

Also in **Cape Verde Islands**, **Ethiopia** and **Arabia**.

13. ASPILIA

Thouars-F.T.A. 3: 378; Adams in *Webbia* 12: 230 (1956). *APD acc*

- 1 Ligules of the ray-florets yellow (cream to orange): 2
Ligules of the ray-florets white, violet or purple: 15

-
- 2 Ray-florets pale yellow or cream:3
 Ray-florets yellow to orange:5
- 3 Ligules pale sulphur-yellow; densely hispid erect herbs of mostly perennial habit; receptacle-scales appendaged and hairy at apex; achene-aristae absent:.....4
 Ligules cream; sparsely setulose straggling-branched annual herb; receptacle-scales obtuse, glabrous; achene-aristae very short and inconspicuous[11. *helianthoides*](#)
- 4 Capitula mostly involucre by the upper leaves; stem-leaves lanceolate; achenes not more than 5 mm. long; appendage of the receptacle-scale not exceeding 1.5 mm. long[1. *rudis* subsp. *rudis*](#)
 Capitula distinctly pedunculate; stem-leaves ovate; achenes 6 mm. or more long; appendage of the receptacle-scale up to 4 mm. long[1a. *rudis* subsp. *fontinaloides*](#)
- 5 Leaves ovate to lanceolate with a pair of distinct lateral nerves arising near the base:6
 Leaves linear to linear- or elliptic-lanceolate, without a pair of distinct lateral veins arising near the base; annual herbs:..... 11
- 6 Leaves sessile or subsessile:7
 Leaves petiolate; peduncles 4-10 cm. long; involucre bracts erect or spreading, as long as or longer than the disk-florets; indumentum of short whitish appressed or spreading hairs:.....8
- 7 Capitula distinctly pedunculate; leaves ovate to ovate-lanceolate, acuminate; involucre bracts recurved at apex; indumentum coarse [2. *spenceriana*](#)
 Capitula subsessile or shortly pedunculate; leaves lanceolate, acute; involucre bracts erect, acute; indumentum very fine with copious short appressed hairs [3. *chevalieri*](#)
- 8 Leaves ovate to ovate-lanceolate:9
 Leaves lanceolate; hairs on peduncles spreading[4d. *africana* var. *guineensis*](#)
- 9 Hairs on peduncles spreading; rudimentary styles in ray-florets few or absent:..... 10
 Hairs on peduncles appressed-ascending; rudimentary styles usually present in most of the ray-florets[4c. *africana* var. *ambigua*](#)
- 10 Capitula 2 cm. or more in diam. (in flower); ray-florets 10 or more; leaves up to about 10 cm. long and 5 cm. broad[4a. *africana* var. *africana*](#)
 Capitula about 1.5 cm. diam.; ray-florets 5-6; leaves up to 6 cm. long and 2 cm. broad, mostly much smaller [4b. *africana* var. *minor*](#)
- 11 Receptacle-scales shortly spiculate or triangular-tipped; central disk-florets fertile; outer involucre bracts as long as the ray-florets or longer; leaves subsessile:..... 12
 Receptacle-scales (at least of the disk-florets) with a terminal appendage 1.5-3 mm. long; central disk-florets mostly sterile; outer involucre bracts rarely exceeding the rays:..... 13
- 12 Leaves narrowly oblong-lanceolate; low much-branched herb; internodes 3-4 cm. long; peduncles 1.5-6 cm. long [5. *bracteosa*](#)
 Leaves linear-lanceolate to linear; tall straggling herb; internodes up to about 15 cm. long; peduncles up to 10 cm. long [6. *paludosa*](#)
- 13 Outer involucre bracts mostly longer than the inner, acute or triangular-tipped: 14
 Outer involucre bracts shorter than the inner, obtuse; leaves tapered to a rather broad base, subsessile; pappus-aristae very short, curved; stems hispid[9. *angustifolia*](#)
- 14 Leaves tapered to the base; pappus-aristae 2(-3), up to 1.5 mm. long, unequal; stems and leaves scabrid with short appressed hairs [7. *mortonii*](#)
 Leaves abruptly narrowed at the base; pappus-aristae very short or absent; stems and leaves hispid, the hairs on the midrib below spreading [8. *linearifolia*](#)
- 15 Capitula more or less clustered and sessile; leaves linear-lanceolate, often pandurate towards the base; stems rough with spreading curved hairs: 16
 Capitula pedunculate: 17
- 16 Ray-florets purple[10. *kotschy* var. *kotschy*](#)
 Ray-florets white[10a. *kotschy* var. *alba*](#)
- 17 Involucre bracts in 2-4 rows, the outer mostly as long as or longer than the inner, with pointed tips; leaves ovate to ovate-lanceolate or rarely lanceolate: 18
 Involucre bracts in 4-5 rows, the outer much shorter than the inner, with spatulate obtuse or rounded tips; leaves lanceolate to linear-lanceolate; peduncles slender with appressed hairs [12. *bussei*](#)
- 18 Flower-heads large, 2 cm. or more in diam.; leaves ovate, 5-12 cm. long, 1.5-4.5 cm. broad, shortly petiolate, more or less rounded at base, acute at apex, coarsely serrate with a thick texture; stems often purplish, with stiff rather sparse spreading or ascending hairs; peduncles up to 9 cm. long, with spreading hairs; pappus-aristae

very short or absent; ligules about 8, white or cream [11a. *helianthoides* subsp. *helianthoides*](#)

Flower-heads less than 1.5 cm. diam.; leaves ovate to lanceolate, acute, remotely serrate or subentire; peduncles short or long, with numerous spreading or ascending hairs; pappus-aristae short or long or rarely absent; ligules 5-8, white, violet or purplish: **19**

- 19** Leaves ovate to ovate-lanceolate, remotely serrate or subentire, of thin texture; peduncles short; pappus-aristae 2, unequal, rarely absent; outer involucral bracts acute: **20**

Leaves lanceolate to linear-lanceolate, remotely serrate, of firm texture; peduncles variable in length, with ascending hairs; pappus-aristae 1.5-2 mm. long, more or less persistent; outer involucral bracts slender, linear, obtuse [11d. *helianthoides* subsp. *papposa*](#)

- 20** Hairs on peduncles spreading; pappus-aristae very short and caducous, or absent; leaves distinctly petiolate, cuneate at base [11b. *helianthoides* subsp. *ciliata*](#)

Hairs on peduncles more or less ascending; pappus-aristae up to 2.5 mm. long, unequal, more or less persistent; leaves shortly petiolate [11c. *helianthoides* subsp. *prieuriana*](#)

Aspilia rudis Oliv. & Hiern

- 1. *Aspilia rudis* subsp. *rudis***-in F.T.A. 3: 380 (1877); Chev. Bot. 371, partly; F.W.T.A., ed. 1, 2: 145 (excl. syn.; Chev. 27174; Irvine 887); Adams in Webbia 12: 233. *APD acc*

A coarse erect, often perennial hispid herb about 3 ft. high, with pale yellow or almost white flowers; **in savanna grassland or woodland.**

Mali: Baguineda, Bamako (Aug.) Roberty 2580! **Guin.:** Yagadou (Mar.) Chev. 20932! **Ghana:** Banda Hills F.R., Ashanti (Dec.) Morton GC 25186! **N. Nig.:** Nupe Barter 1292! Biu, 2,500 ft., Bornu (Aug.) Noble 3! Yola (July) Dalz. 30! Abinsi (Oct.) Dalz. 653! Benue R. Talbot!

Also in **Principe**.

- 1a. *Aspilia rudis* subsp. *fontinaloides*** *C. D. Adams* in Webbia 12: 233 (1956). *APD acc*

Aspilia rudis of Chev. Bot. 371, partly (Chev. 23992).

A robust erect coarsely hispid herb up to 4 ft. high with pale yellow flowers; leaves rather broad and sometimes in whorls of 3 or 4; **in savanna.**

Guin.: Kinkou (June) Adam 14671! **Ghana:** Afram Plains (May) Morton GC 7250! Nsawkaw, Ashanti (fr. Dec.) Adams 3153! Aframso, Ashanti (July) Darko 919! Ejura Scarp (Dec.) Morton GC 9599! **Dah.:** Kouandé, Atacora Mts. (June) Chev. 23992!

- 2. *Aspilia spenceriana* Muschl.** in Engl. Bot. Jahrb. 50, Suppl.: 334 (1914); Adams l.c. 234.

APD: *Synonym of Aspilia rudis* Oliv. & Hiern subsp. *rudis*

Aspilia baoulensis A. Chev. Bot. 370, name only.

Aspilia rudis of F.W.T.A., ed. 1, 2: 145, partly (Chev. 22174), not of Oliv. & Hiern.

Aspilia helianthoides of Chev. Bot. 370, partly (Chev. 24496), not of Oliv. & Hiern.

An erect herb with stalked heads nodding in fruit, with the outer involucral bracts recurved; florets pale yellow; **in savanna.**

Iv. C.: Kangoroma Mt. (July) Chev. 22174! **Ghana:** Kete Krachi Graf Zech 92. Kpeve Westwood GC 5578! Ejura Scarp (Dec.) Morton A2564! **Niger:** Diapaga to Fada, Gourma (July) Chev. 24496!

- 3. *Aspilia chevalieri* O. Hoffm. & Muschl.** in Mém. Soc. Bot. Fr. 2, 8: 115 (1910); Chev. Bot. 370; Adams l.c. 234 (excl. Roberty 2968). *APD acc*

An erect yellow-flowered herb up to 2 ft. high; stems and leaves covered with a fine whitish indumentum.

Mali: Bamako (Jan.) Chev. 202 bis! Nyamina to Koulikoro (Oct.) Chev. 2027! **Guin.:** Farana (Mar.) Sc. Elliot 5371! **S. L.:** Buyabuya, Scarcies (Feb.) Sc. Elliot 4268! Loma Mts., 4,000 ft. (Nov.) Jaeger 480!

Aspilia kotschy (Sch. Bip.) Oliv. *APD acc*

10. *Aspilia kotschy* var. *kotschy* in Trans. Linn. Soc. 29: 98 (1873); F.T.A. 3: 381; Adams l.c. 241; Berhaut Fl. Sén. 70. *APD acc*

Dipterotheca kotschy Sch. Bip. (1842).

Aspilia kotschyana of Chev. Bot. 371.

An erect hispid herb up to 4 ft. high with clustered purple or brownish-red flowers.

Sen.: Diohine Berhaut 2269! **Mali:** San (Sept.) Chev. 2081! Ségou (Jan., Nov.) Roberty 2737! 3174! **N. Nig.:** Attah (Sept.) T. Vogel! Aboh Barter 338! Zungeru (Aug.) Dalz. 198! Fodama (Dec.) Moiser 164! Jos Plateau (Aug.) Lely P557! Bornu Parsons! [**Br.**] **Cam.:** Gurum, Adamawa (Nov.) Hepper 1288!

Extends from Sudan through E. Africa to Angola.

10a. *Aspilia kotschy* var. *alba* Berhaut in Bull. Soc. Bot. Fr. 101: 375 (1954); Fl. Sén. 70. *APD acc*

Aspilia sp. aff. *kotschyana* of Chev. Bot. 371.

A herb similar to the last, with white flowers.

Sen.: Bargny Berhaut 1726; 4778. **Mali:** Yatenga-Nord (Aug.) Chev. 24805! **N. Nig.:** Katagum (Sept.) Dalz. 167!

11. *Aspilia helianthoides* (Schum. & Thonn.) Oliv. & Hiern in F.T.A. 3: 381 (1877); Chev. Bot. 370, partly; Berhaut Fl. Sén. 69, 70. *APD acc*

Coronocarpus helianthoides Schum. & Thonn. (1827).

Annual herbs with white or cream-coloured ligulate florets, sometimes turning purplish on drying; widespread and variable.

The following subspecies occur in our area.

11a. *Aspilia helianthoides* subsp. *helianthoides*-Adams l.c. 244. *APD acc*

A robust herb with white or cream ligules; **in savanna and hill grassland**.

Guin.: Bambaya, Upper Niger (Oct.) Jaeger 4! Kouroussa Brossart in Hb. Chev. 15701! **S. L.:** Yalamba (Jan.) Jaeger 3949!
Ghana: Thonning! Accra (Aug.) T. Vogel 27! Menji to Sampa, Ashanti (Dec.) Morton A2612! Togo Plateau F.R. (Oct.)

14. MELANTHERA*Rohr*-F.T.A. 3: 381.

- 1** Scales of the receptacle elongated into long stiff barbellate setae, the outer ones pectinate-ciliate; leaves petiolate, ovate-triangular, 4·5-7 cm. long, about 3 cm. broad, pilose on both surfaces; peduncles slender; involucre bracts lanceolate, hispid-setulose outside [1. gambica](#)
- Scales of the receptacle rather abruptly acuminate or triangular at apex: **2**
- 2** Leaves petiolate: **3**
- Leaves sessile or subsessile: **6**
- 3** Stems, petioles and veins of the leaves beneath densely fulvous-pilose with matted hairs 3-4 mm. long; leaves broadly ovate, truncate-subcordate, crenate-dentate, acuminate, up to 15 cm. long and 10 cm. broad; capitula 1·5-2 cm. broad; involucre bracts lanceolate, 1 cm. long, shortly setose outside with bulbous-based hairs; achenes obovate, glabrous with 2 unequal caducous bristles [2. felicis](#)
- Stems, petioles and leaf-veins shortly hispid to minutely scabrid-setulose: **4**
- 4** Receptacle-scales acutely long-acuminate; leaves acute or acuminate at apex: **5**
- Receptacle-scales triangular at apex; leaves oblong to ovate-elliptic, shortly cuneate at base, not acuminate, 4-8 cm. long, 2-4 cm. broad, closely scabrid-setulose on both surfaces, prominently 3-nerved above the base; petiole 0·5-1·5 cm. long; capitula rather numerous; involucre bracts densely setulose with short appressed whitish hairs; achenes quadrangular; pappus of few caducous bristles [5. elliptica](#)
- 5** Leaf-bases abruptly and broadly cuneate; lamina 8-15 cm. long, 3-10 cm. broad, rhomboid, coarsely dentate in the upper half; petiole about 1·5 cm. long; achenes obovate, glabrous, minutely rugulose; pappus of 1 or 2 very short caducous bristles [3. rhombifolia](#)
- Leaf-bases various, usually truncate to subcordate but rarely rounded and shortly cuneate or subhastate, margin crenate-serrate to subentire; petiole slender 2-4 cm. long; capitula rather few on long slender peduncles; achenes broad at apex, pitted, coronate, quadrangular or slightly flattened; pappus of several short caducous bristles [4. scandens](#)
- 6** Leaves oblong-lanceolate, rounded at base, 6-8 cm. long, 1·5-2·5 cm. broad, scabrid-setulose on both surfaces, shortly crenate-serrate; involucre bracts in 2-3 series, ovate, obtuse, not exceeding 6 mm. long, in heads about 1 cm. diam. in fruit; achenes oblong-obovate, bilateral, rounded above, glabrous, with few minute caducous bristles [6. abyssinica](#)
- Leaves linear, tapered to base, 4-10 cm. long, 0·5-1 cm. broad, minutely scabridulous on both surfaces, subentire; involucre bracts in 2 series, ovate-lanceolate, acuminate, 1-1·5 cm. long, 3-5 mm. broad, in heads 2-2·5 cm. broad in fruit on rather long peduncles; achenes as above but sparsely pubescent [7. elegans](#)

1. Melanthera gambica *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 146 (1931); Berhaut Fl. Sén. 70. *APD acc*

A hispid slender-stemmed perennial herb 1-2 ft. high, often branching near the ground; flower-heads 3/4-1 in. across; ligules yellow; pappus-bristles early caducous.

Sen.: Kaolak (Aug.) Berhaut 2143! Niokolo (Oct.) Adam 15546! **Gam.:** Hayes 586! Kuntaur Ruxton 50! Genieri (July) Fox 142! **Port. G.:** Pirada, Gabu (June) Esp. Santo 3032!

Also in **Mauritania**.

2. Melanthera felicis *C.D. Adams* in J.W. Afr. Sci. Assoc. ined. (1963). *APD acc*

A robust herb with a thick deeply grooved very hairy stem up to 5 ft. high; florets yellow in heads about 3/4 in. across.

Guin.: Faranah (Oct.) Jac.-Fél. 1868!

3. Melanthera rhombifolia *O. Hoffm. & Muschl.* in Mém. Soc. Bot. Fr. 2, 8: 117 (1910); Chev. Bot. 372. *APD acc*

Melanthera elliptica of F.W.T.A., ed. 1, 2: 146, partly (Chev. 999), not of O. Hoffm.

An erect perennial herb 1-2 ft. high with much-branched stems; leaves rather large, finely scabrid, sharply serrate; flower-heads up to 1 in. across with bright orange-yellow rays.

Mali: Tiédiana (June) Chev. 999! Kita Massif (July) Jaeger 1! 3! **Iv. C.:** Tonkoui (Dec.) Roberty 15827! **Ghana:** Han to Lawra (May) Morton GC 7601! Gambaga Scarp (Apr., Sept.) Morton GC 9003! Hall 740! **N. Nig.:** Mando F.R., Birnin Gwari, Zaria (June) Keay FHI 25825! 25840!

4. **Melanthera scandens** (*Schum. & Thonn.*) *Roberty* in Bull. I.F.A.N. 16: 68 (Jan. 1954); *Brenan* in Mem. N.Y. Bot. Gard. 8: 480 (Feb. 1954). *APD acc*

Buphthalmum scandens *Schum. & Thonn.* (1827).

Melanthera brownei (*DC.*) *Sch. Bip.* (1844)-F.T.A. 3: 382; Chev. Bot. 371; F.W.T.A., ed. 1, 2: 146, partly (excl. syn. *M. djalensis*); Trochain Mém. I.F.A.N. 2: 378; Guinea in Ann. Jard. Bot. Madrid 10: 304, t. 331.

Lipotriche brownei *DC.* (1836).

A branched scabrid herb usually scrambling or scandent with rather broad leaves and orange radiate flower-heads about 1 in. across.

Sen.: fide Trochain l.c. **Guin.:** Kouroussa (July) Pobéguin 329! Kouria (Oct.) Caille in Hb. Chev. 15024! Source of R. Niger (Oct.) Jaeger 99! Bafing (Oct.) Adam 12654! **S. Common throughout the tropics.

16. VERBESINA

Linn.-Benth & Hook. f. Gen. Pl. 2: 379.

- 1** Stems pubescent; leaves ovate-triangular, petiolate, about 7 cm. long, dentate, whitish beneath with short appressed hairs; flower-heads about 4 cm. diam. on long peduncles; involucre bracts linear, 1 cm. long; ligules deeply lobed at apex; achenes obovate, pilose, with a broad white wing; pappus-bristles 2, smooth *encelioides*

Verbesina encelioides (Cav.) A. Gray in Bot. Calif. I: 350 (1876); Berhaut Fl. Sén. 167. *APD acc*

Ximenesia encelioides Cav. Ic. 2: 60, t. 178 (1793); F.T.A. 3: 383.

An annual herb with yellow flower-heads; **probably escaped from cultivation.**

Sen.: Perrottet. Etesse!

Introduced from tropical America; also in the **Sudan.**

17. ACANTHOSPERMUM

Schrank-Benth. & Hook. f. Gen. Pl. 2: 349. APD acc

- 1** Leaves petiolate; achenes obliquely elliptic, about 8-ribbed, sulcate, with lateral hooked spinules only *1. brasilum*
Leaves sessile or the lower shortly petiolate; achenes triangular with numerous lateral hooked spinules and two large straight or hooked erect apical spines *2. hispidum*

1. **Acanthospermum brasiliun** *Schrank* Pl. Rar. Hort. Monac. 2: 63 (1822).

APD: Synonym of Acanthospermum australe (Loefl.) Kuntze

An erect annual weed, about 1 ft. high, with yellow flowers.

Ghana: Cape Coast (July) Morgan GC 17335!

Also in tropical America

2. **Acanthospermum hispidum** *DC.* Prod. 5: 522 (1836); Berhaut Fl. Sén. 68. *APD acc*

Acanthospermum humile of Chev. Bot. 388, not of DC.

A bushy annual weed about 12-18 in. high with small sessile flower-heads; florets pale greenish-yellow; achenes 5-10, spreading widely in fruit.

Sen.: Kaolak Chev. 47! Dakar (May) Baldwin 5730! **Gam.:** Kudang (Jan.) Dalz. 8121! **Mali:** Saninkoura, Ségou (Aug., Oct., Nov.) Roberty 56! 448! 2867! Kabala, Bamako (July) Roberty 2446! **Port. Native of tropical America and now widely spread.

18. **ENYDRA**

Lour.-F.T.A. 3: 372.

- 1 Stems elongated, rooting in the lower part, glabrous; leaves opposite, sessile, linear or linear-lanceolate, 5-12 cm. long, up to 2 cm. broad, subauriculate at base, entire or distantly serrate, finely puberulous and minutely glandular beneath; flower-heads few, axillary, sessile, about 1 cm. diam.; involucre bracts 3-4, broad, leafy; receptacle with ribbed paleae closely sheathing the florets; achenes oblong, without a pappus *fluctuans*

Enydra fluctuans *Lour.* Fl. Cochinch. 511 (1790); F.T.A. 3: 372; Berhaut Fl. Sén. 73, 89, 92. *APD acc*

APD: Synonym of Enydra radicans (Willd.) Lack

A perennial spreading herb of swampy ground, especially in coastal areas; florets white or yellowish-white in sessile heads 1/4-1/2 in. across.

Sen.: fide Berhaut l.c. **Ghana:** Adabraka, Accra (July) Irvine 739! Prampram (Jan.) Robertson 72! Accra Plains (Jan., Dec.) Morton GC 6323! Adams 3615! Sekondi to Axim (Mar.) Irvine 2403! **S. Nig.:** Calabar (Feb.) Mann 2320! **F. Po:** (June, Nov.) T. Vogel 218! Barter! Mann 428!

Widespread in the tropics.

19. **SIGESBECKIA**

Linn.-F.T.A. 3: 371.

- 1 Outer involucre bracts usually 5, very narrowly elongate-spathulate, 0.5-1 cm. long, with numerous stalked glands; leaves opposite, the lower with a long, winged petiole, lamina triangular-rhomboid, up to 12 cm. long and 5 cm. broad, crenate-dentate, thinly hispid on both surfaces, the undersurfaces with shining sessile glands; ray-florets few with very short deeply divided ligules; disk-florets with corolla 1.5 mm. long, broadly campanulate in the upper half; achenes almost enclosed by the adherent-glandular receptacle-scales, curved-pyriform, striate and minutely transversely rugulose, glabrous; pappus absent *1. orientalis*

Outer involucre bracts ovate to oblong, 3-4 mm. long with occasionally a few sessile glands but without stalked glands; leaves as above but remotely serrate and with a few sessile glands below or glands lacking; florets and achenes as above; receptacle-scales glabrous or with a few sessile glands *2. abyssinica*

1. **Sigesbeckia orientalis** *Linn.* Sp. Pl. 900 (1753); F.T.A. 3: 372. *APD acc*

An erect branched annual glandular herb about 3 ft. high with minute yellow ray- and disk-florets in heads 1/2 in. across, including the spreading outer involucre; [a weed](#).

[Br.] Cam.: Bamenda, 4,000-5,800 ft. (Apr.-June) Maitland 1390! Morton K280!

Throughout tropical Africa on higher ground and generally in tropical and subtropical regions.

2. *Sigesbeckia abyssinica* (Sch. Bip.) Oliv. & Hiern in F.T.A. 3: 372 (1877); Robyns Fl. Sperm. Pare. Nat. Alb. 2: 519, t. 47.

APD: *Synonym of Micractis bojeri* DC.

Limnogenetion abyssinicum Sch. Bip. (1846).

A diffusely branched herb like the last but much less glandular in all its parts; florets yellow in heads 1/4 in. broad; [in damp mountain grassland](#).

[Br.] Cam.: Mba Kokeka Mt., 7,400 ft., Bamenda (Jan.) Keay & Lightbody FHI 28395!

Also in [Congo](#), [Ethiopia](#), [Kenya](#), [Uganda](#), [Tanganyika](#) and [Nyasaland](#).

20. BAFUTIA

C. D. Adams in Kew Bull. 15: 439 (1962). *APD acc*

- Slender-branched erect glabrous herb; leaves mostly basal or on the lower part of the stem, linear-oblongate, narrowed to the half-amplexicaul base, up to 5 cm. long and 1 cm. broad; flower-heads numerous, solitary at the ends of slender peduncles, 1-2 cm. long; involucre campanulate about 4 mm. long with 8 short triangular teeth minutely puberulous at the tips; florets all hermaphrodite, about 20, with slender exerted corollas; achenes about 2 mm. long shallowly ribbed or smooth; pappus of five or six short minutely plumose caducous setae [tenuicaulis](#)

Bafutia tenuicaulis C.D. Adams l.c., fig. 1 (1962). *APD acc*

An annual herb up to about 1 ft. high with pinkish-purple florets in numerous flower-heads less than 1/4 in. long, forming a diffuse corymb; [in mountain grassland](#).

[Br.] Cam.: Bafut-Ngemba F.R., 5,000-6,000 ft., Bamenda (Sept.-Nov.) Lightbody FHI 26264! Ujor FHI 30216!

21. MIKANIOPSIS

Milne-Redhead in Exell Suppl. Cat. S. Tomé 27 (1956).

- Involucral bracts of the inner series about 8, 5-6 mm. long, obtusely narrowed at apex, rounded dorsally, much exceeded by the florets and pappus in flower; capitula in rounded clusters in axillary branched inflorescences 15-25 cm. long; stems greyish-woolly-tomentose; leaves rounded to openly cordate at base, acuminate, repand-dentate, up to about 10 cm. long and 8 cm. broad [1. paniculata](#)
- Involucral bracts of the inner series about 12, about 1 cm. long, long-acute, flat, slightly exceeded by the florets and hardly by the pappus in flower; stems glabrescent, striate: [2](#)
- Inflorescences slender, 10-15 cm. long, with long-pedunculate capitula irregularly scattered along the glabrescent axis; leaves rather fleshy, shortly petiolate, rounded at the base, shallowly repand-dentate, acuminate, up to 6 cm. long and 5 cm. broad [2. tedliei](#)
- Inflorescences congested, up to about 8 cm. long with capitula more or less contiguous on short lateral branches; axis and branches grey-pubescent; leaves thick and [3. maitlandii](#)

1. *Mikaniopsis paniculata* Milne-Redhead in Exell Suppl. Cat. S. Tomé 28, fig. 1 (1956). *APD acc*

APD: *Synonym of Mikaniopsis usambarensis* (Muschl.) Milne-Redh.

APD: *Synonym of Mikaniopsis troupinii* Lisowski

A shrubby climber to about 20 ft. with numerous pale yellow flowers.

S. Nig.: Ikwette Plateau, 5,200 ft., Ogoja (Dec.) Savory & Keay FHI 25238!

Also in **S. Tomé**.

2. **Mikaniopsis tedliei** (*Oliv. & Hiern*) *C.D. Adams* in J.W. Afr. Sci. Assoc. 6: 153 (1961). *APD acc*

APD: Synonym of Mikaniopsis usambarensis (Muschl.) Milne-Redh.

Senecio tedliei *Oliv. & Hiern* in F.T.A. 3: 420 (1877).

Gynura tedliei (*Oliv. & Hiern*) *S. Moore ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 608 (1936).

A shrubby climber like the last.

Ghana: Tedlie! Hemang, Pra R. (Sept.) Chipp 572! Pra Suhein F.R. Morton A3681! [**Br.**] **Cam.:** Cam. Mt.: Litoka, 3,000-4,000 ft. (Apr.) Maitland 1122! 1311! Mann's Springs, 7,400 ft. (Dec.) Boughey GC 10590! Morton K870!

3. **Mikaniopsis maitlandii** *C.D. Adams* in J.W. Afr. Sci. Assoc. 6: 152 (1961). *APD acc*

A shrubby climber with purplish stems, glossy leaves and dull yellow florets in clustered flower-heads about 1/2 in. long.

[**Br.**] **Cam.:** Cam. Mt.: Ukele, 7,300-7,600 ft. (Feb.) Maitland 1001! Mann's Springs, 7,400 ft. (Mar.) Brenan 9513!

22. KLEINIA

Mill. Gard. Dict. Abridg., ed. 4 (1754).

- 1 Capitula 1-3, rarely more numerous, up to 4 cm. broad; inflorescence subscapose, terminating an erect leafy or bracteate stem from a tuberous rootstock; leaves towards the base of the flowering shoot or on a separate shoot, obovate-lanceolate, long-tapered to a sessile base, dentate or denticulate in the upper half or subentire, 8-15 cm. long, 3-5(-8) cm. broad, glabrous, apiculate; involucre bracts 12-16, about 2 cm. long and up to 0.5 cm. broad with scarious margins; whole plant glabrous except for a minute tuft of hairs at the tip of each involucre bract; bracteoles lanceolate; achenes glabrous or sparsely pubescent; pappus-setae up to about 2 cm. long, smooth or minutely plumose, white or pale buff [1. abyssinica](#)

Capitula 20 or more, oblong, less than 1 cm. broad, shortly pedunculate in rounded umbelliform clusters at the ends of short leafless branches; peduncles about 1 cm. long, with small subulate bracteoles not forming a distinct calyculus; leaves (when present) rhomboid-elliptic, obtuse, up to about 10 cm. long and 5 cm. broad, long-cuneate at base into a petiole; involucre bracts about 10, up to 1.5 cm. long, oblong-lanceolate with narrow scarious margins and a minute tuft of hairs at the tip; achenes ribbed, glabrous; pappus-setae minutely barbellate, white; a succulent shrub with deciduous leaves [2. cliffordiana](#)

1. **Kleinia abyssinica** (*A. Rich.*) *A. Berger* in Monatsschr. Kakt. 15: 11 (1905). *APD acc*

Notonia abyssinica *A. Rich.* (1848)- F.T.A. 3: 407.

N. dalzielii *Hutch.* in F.W.T.A., ed. 1, 2: 149 (1931).

A glaucous succulent herb with erect stems up to 18 in. high from a tuberous rootstock; florets deep purplish-red in a few large heads with pale involucre.

Guin.: Mali (June) Adam 14449! **N. Nig.:** Gimi, Katagum (Feb.) Dalz. 351! **S. Nig.:** Igboho, Oyo (Feb.) Keay FHI 23438! 23448!

Also in **Ubangi-Shari**, **Sudan**, **Ethiopia**, **Uganda**, **Kenya** and **Tanganyika**.

2. **Kleinia cliffordiana** (*Hutch.*) *C.D. Adams* in J.W. Afr. Sci. Assoc. 6: 150 (1961). *APD acc*

Senecio cliffordianus *Hutch.* in Kew Bull. 1921: 250; F.W.T.A., ed. 1, 2: 151.

A glaucous succulent shrub up to 8 ft. high, leafless at flowering time, with numerous clustered flower-heads about 3/4 in. long in terminal umbelliform corymbs; involucre pale green; florets white; amongst rocks.

Mali: Summit of Ouari Tondo, near Hombori Jaeger 5482! Guimel, Douentza (fl. & fr. Oct.) Jaeger 5518! **N. Nig.:** Zaria to Kaduna (Dec.) Meikle 836! Jos Plateau (Jan., Nov.) Lely P103! Hill 14! Batten-Poole 104! Vom Dent Young 161! Naraguta (Dec.) Coombe 30! Ropp to Mongu (Apr.) Morton K405!

23. GYNURA

Cass.-F.T.A. 3: 401, partly. *Nom. cons.*

- 1 Climbing robust herb with striate glabrescent stems; leaves elliptic, acute, shortly cuneate at base, shortly petiolate, 4-10 cm. long, 2-5 cm. broad, subentire or remotely toothed, with about 5 pairs of lateral nerves, thinly pubescent; inflorescences of few capitula on short lateral branches; capitula with several narrow calycular bracts; involucre bracts about 15, glabrous or nearly so, 1-5 cm. long *1. sarmentosa*

Erect or straggling herb with pubescent grooved stems; leaves lanceolate to obovate in plan, the lower broadly petiolate, the upper sessile, coarsely dentate to deeply pinnatifid, up to about 15 cm. long and 7 cm. broad, the segments remotely toothed, crisped-pubescent on both surfaces; capitula several in a terminal corymbose inflorescence, each with several calycular bracts; involucre bracts 12-14, pubescent, 1-1.3 cm. long, with broad scarious margins *2. miniata*

1. *Gynura sarmentosa* (Blume) DC. *Prod.* 6: 298 (1838).

APD: Synonym of Gynura procumbens (Lour.) Merr.

Cacalia sarmentosa Blume (1826).

Gynura buntingii S. Moore (1916).

Senecio baoulensis A. Chev. in *Mém. Soc. Bot. Fr.* 2, 8: 260 (1917); Chev. Bot. 375, not *Crassocephalum baoulense* (A. Chev.) Milne-Redhead (1951).

A wide-spreading robust glabrous herbaceous climber with rather fleshy leaves; leaves often purple beneath on young plants; florets greenish-yellow in heads 3/4 in. long; pappus white; **in forest margins and thickets.**

S. L.: Freetown (Oct.) Deighton 240! **Lib.:** Begwai (Sept.) Bunting 122! Zinkor (Apr.) Dinklaga 3035! Duport (Oct.) Barker 1438! Diebla, Webo (July) Baldwin 6368! Grand Bassa (Mar.) Baldwin 11236! **iv. C.:** Toumodi, Baoulé-Sud (Aug.) Chev. 22395! **Ghana:** Akwapim (Oct.) Johnson 823! Aburi Scarp, 1,000 ft. (Nov.) Adams 1914! Volta River F.R. (Nov.) Morton GC 6071! Ajena (Nov.) Morton GC 9456! **S. Nig.:** Lagos (July) Dalz. 1410! Olokemeji F.R. (July) Keay FHI 22414!

Also in tropical Asia, from where it has possibly been introduced into our area.

2. *Gynura miniata* Welw. *Apont.* 586 (1858); *F.T.A.* 3: 403; Adams in *J.W. Afr. Sci. Assoc.* 3: 114 (1957).

APD: Synonym of Gynura pseudochina (L.) DC.

Crassocephalum miniatum (Welw.) Hiern (1898).

Gynura amplexicaulis of F.W.T.A., ed. 1, 2: 148, partly, (Dalz. 656, Migeod 481), not of Oliv. & Hiern Note 1.

(?) *Gynura* sp. Bally in *J.E. Afr. & Uganda Nat. Hist. Soc.* 18: 124, t. 20, fig. 4 (1945) Note 2.

A perennial rather succulent herb with straggling leafy stems 2-4 ft. high from a mass of hard tubers; stems and leaves pale green, crisped-pubescent; leaves very variable, the lowest usually being deeply pinnatifid, but the upper often only toothed; florets orange-brown or rarely yellow in rather broad heads up to 3/4 in. long; **in rocky hill grassland or planted near villages for medicinal purposes.**

Guin.: Mali, 5,000 ft. (June) Adam 14500! Note 2 **S. L.:** Bintumane Peak, 6,400 ft. (Jan., Aug.) T. S. Jones 103! Jaeger 982! **N. Nig.:** Abinsi (June) Dalz. 656! Kakangi, Zaria (July) Keay FHI 25947! **[Br.] Cam.:** Bamenda Dist., 5,000-6,000 ft. (Feb.-May) Maitland 1416! Migeod 481! Ejiofor FHI 30079! Ujor FHI 30095! Morton K193! Hepper 2066! Mambila Plateau, 4,800 ft., Adamawa (Jan.) Hepper 1801!

Also recorded from **Kenya**, **Tanganyika** and **Angola**.

[Note 1: The type of *G. amplexicaulis* Oliv. & Hiern (Schweinfurth 3770 from Sudan) superficially resembles *Crassocephalum picridifolium* (DC.) S. Moore, but has the style-arms of *Gynura*-C. D. A.]

[Note 2: Adam 14500 and the plant described by Bally (Coryndon Museum 6799) have yellow florets and more divided leaves than is typical of this species-C. D. A.J.]

24. EMILIA

Cass.-F.T.A. 3: 405.

- 1 Upper leaves ovate, minutely pubescent beneath; involuclral bracts distinctly shorter than the florets:2
 Upper leaves lanceolate, sparsely setulose beneath; involuclral bracts nearly as long as the florets, about 8; florets
 mauve, rarely white [3. *sonchifolia*](#)
- 2 Leaves repand-dentate; involuclral bracts about 15; florets orange-yellow [1. *coccinea*](#)
 Leaves dentate; involuclral bracts about 10; florets pale yellow; styles pink [2. *praetermissa*](#)

1. *Emilia coccinea* (Sims) G. Don in Sweet Hort. Brit., ed. 3, 382 (1839). *APD acc*

APD: *Synonym of Emilia lisowskiana C. Jeffrey*

Cacalia coccinea Sims (1802).

Emilia sagittata DC. (1838)-F.T.A. 3: 405; Chev. Bot. 374; F.W.T.A., ed. 1, 2: 149.

A straggling glaucous sparingly pubescent herb with weak stems up to about 3 ft. long; leaves often purple beneath; florets deep yellow in long-stalked heads about 1/2 in. long; [a weed along roadsides and in clearings in forest country.](#)

Guin.: Labé (Mar.) Chev. 12366! Nzérékoré to Macenta (Oct.) Baldwin 9745! Macenta, 2,000-2,500 ft. (Oct.) Baldwin. 9841! Gangan (Apr.) Adam 11927! Nimba Mts. (Sept.) Schnell 3532! **S. Guinea 396! Moka, 4,000-6,000 ft. (Dec-Jan.) Boughey 12! Exell 805! Pico de S. Isabel (Dec.) Boughey 10804a!

Also in Sudan, Congo and S. Tomé.

5. **Crassocephalum picridifolium** (*DC.*) *S. Moore* in J. Bot. 50: 212 (1912). *APD acc*

Senecio picridifolius *DC.* (1838)-F.T.A. 3: 413; Chev. Bot. 375, partly (Chev. 222, 635).

Gynura amplexicaulis of F.W.T.A., ed. 1, 2: 148, partly (excl. Dalz. 656; Migeod 481), not of Oliv. & Hiern (see note 1 under *Gynura miniata*).

G. gracilis of F.W.T.A., ed. 1, 2: 148, partly (Chev. 222; 635), not of Hutch. & Dalz.

A scrambling or erect herb up to 2 ft. high in damp open ground, with usually several flower-heads over 1/2 in. long; florets golden-yellow.

Gam.: Brown-Lester 40! Mali: Sicoro (Jan.) Chev. 222! Dendéla (Mar.) Chev. 635! Port.G.: Brene, Bissau (Jan.) Esp. Santo 1697! S. L.: (July) Glanville 264! Falaba (Mar.) Sc. Elliot 5143! Kaballa (Sept.) Thomas 2198! N. Nig.: Sokoto (Sept.) Dalz. 406! Matyoro (Oct.) Thornewill 130! Vom (Jan.) Dent Young 157! Bokkos, 4,000 ft. (Dec.) Coombe 76! Maiduguri Kennedy 2949! F. Po: summit of the Peak, 9,200 ft. (Dec., Feb.) Boughey GC 10839! Guinea 2738.

Also in Mauritania and extending to Sudan, Congo and Angola.

[This species has a strong superficial resemblance to *Gynura amplexicaulis* Oliv. & Hiern, in which the style-arms are uniformly tapered.]

6. **Crassocephalum gracile** (*Hook.f.*) *Milne-Redhead ex Guinea* in Anal. Jard. Bot. Madrid 10,1: 307 (1951). *APD acc*

Gynura vitellina var. *gracilis* *Hook.f.* in J. Linn. Soc. 7: 202 (1864).

G. gracilis *Hook.f. ex Hutch. & Dalz.* F.W.T.A., ed 1, 2: 147, 148, (1931) partly (excl. Chev. 222; 635).

Senecio picridifolius of Chev. Bot. 375, partly, not of DC.

An erect or straggling herb up to 3 ft. high with orange-yellow florets in heads 1/2-3/4 in. across; leaves sessile, narrowed to the base; in mountain grassland.

Guin.: fide Chev. l.c. Timbi-Madina (Mar.) Adam 11702! Timbi (June) Adam 14652! [Br.] Cam.: Cam. Mt., 6,000-9,000 ft. (Dec., Jan., Apr., May) Mann 1317! Johnston 35! Maitland 650! 847! 955! Morton GC 6945! Litoka, 4,500 ft. (Apr.) Maitland 1073! Mann's Springs, 7,200-8,700 ft. (Dec., Mar.) Boughey GC 10608! 12583! A628b! Brenan 9374! F. Po: Musola (Jan.) Guinea 1369!

7. **Crassocephalum vitellinum** (*Benth.*) *S. Moore* in J. Bot. 50: 212 (1912). *APD acc*

Gynura vitellina *Benth.* (1849)-F.T.A. 3: 402; F.W.T.A., ed. 1, 2: 148, partly (T. Vogel 188; Mann 38; Barter; Maitland 307; Migeod 455).

A weak straggling herb 2-3 ft. high with deep yellow to orange florets in heads 1/2-3/4 in. across; in grassy clearings in mountain areas.

S. Nig.: Koloishe Mt., 5,000 ft., Obudu (Dec.) Savory & Keay FHI 25068! Ikvette Plateau, 5,200 ft., Obudu (Dec.) Savory & Keay FHI 25237! [Br.] Cam.: Cam. Mt., 3,000-4,000 ft. (Nov.-Mar.) Akpabla GC 10494! Boughey GC 7017! Maitland 307! Mildbr. 10213! Migeod 58! Bamenda, 5,000 ft. (Feb.) Migeod 455! Bamenda to Santa (Mar.) Morton K36! Bamenda to Bambui (Jan.) Keay FHI 28332! Generally distributed in the mountains of tropical Africa.

8. **Crassocephalum bougheyianum** *C.D. Adams* in J.W. Afr. Sci. Assoc. 3: 111 (1957). *APD acc*

Gynura vitellina of F.T.A. 3: 402; F.W.T.A., ed. 1, 2: 148, partly (Mann 610; 1931; Dunlap 33; 85; Maitland 478; Migeod 234; Mildbraed 10807), not of Benth. (1849).

Crassocephalum vitellinum of Guinea in Anal. Jard. Bot. Madrid. 10: 305 (1951), not of (Benth.) S. Moore.

A straggling herb up to 8 ft. or more high with glabrescent stems and involucre bracts, and yellow florets in heads 1 in. across; **in grassy clearings in upper margins of mountain forest.**

[Br.] Cam.: Cam. Mt., 5,000-7,000 ft. (Nov.-Jan.) Mann 1931! Dunlap 33! 85! Irvine 1461a! Musake, 5,000-6,000 ft. (Nov., Dec., Mar., Apr.) Migeod 234! Mildbr. 10807! Maitland 478! Hutch. S Metcalfe 17! Thorold 36! Mann's Springs, 6,000-7,500 ft. (Dec., Mar., Apr.) Adams GC 11729! Boughey GC 11646! Brenan 9514! Morton GC 7079! **F. Po:** Pico de S. Isabel, 8,500 ft. (Dec., Mar.) Mann 610! Guinea 2884; 2885!

9. *Crassocephalum guineense* C.D. Adams in J. W. Afr. Sci. Assoc. ined. (1963). *APD acc*

Lactuca tenerrima of Chev. Bot. 379, partly (Chev. 18291; 18449), not of Pourret (1788).

Emilia guineensis of F.W.T.A., ed. 1, 2: 149, partly (Chev. 18291; 18448), not of Hutch. & Dalz. (1931).

Senecio perrottetii of F.W.T.A., ed. 1, 2: 161, partly (Thomas 3090; Deighton 1252; 1253), not of DC. (1838).

A slender erect annual herb 1-2 ft. high with reddish-purple, blue, mauve, pink or white florets in heads about 1/4 in. long; **in grassy places on rock-outcrops.**

Guin.: Fouta Djallon, 3,000-4,000 ft. (Sept., Oct.) Chev. 18291! 18449! 18559! 18820! Boumalol (Oct.) Adam 12670! Mt. Bilima, 3,000 ft., Mamou (Sept.) Jac.-Fél. 1830! **S. L.:** Bumban, 1,000 ft. 10. *Crassocephalum bauchiense* (Hutch.) Milne-Redhead in Kew Bull. 5: 376 (1951). *APD acc*

Gynura bauchiensis Hutch. F.W.T.A. ed. 1, 2: 608 (1936).

G. caerulea Hutch. & Dalz. F.W.T.A., ed. 1, 2: 147, 148 (1931), not *G. caerulea* of O. Hoffm. (1893).

An erect bushy annual herb about 1 ft. high with bright blue florets in numerous heads 1/3 in. long; **in rough open ground.**

N. Nig.: Vom, 3,000-4,500 ft. Dent Young 158! Jos Plateau Batten-Poole 165! **[Br.] Cam.:** Bambui, Bamenda, 6,300 ft. (Dec.) Adams GC 11239!

11. *Crassocephalum libericum* S. Moore in J. Bot. 54: 282 (1916). *APD acc*

Gynura liberica (S. Moore) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 148 (1931).

A prostrate nearly glabrous herb with ascending slender branches, shortly petiolate leaves and pink florets in heads 1/3 in. long.

Lib.: Begwai (Oct.) Bunting 142!

[This obscure plant may be merely a depauperate form of *C. rubens*-C. D. A.]

12. *Crassocephalum rubens* (Juss. ex Jacq.) S. Moore in J. Bot. 50: 212 (1912). *APD acc*

Senecio rubens Juss. ex Jacq. (1777).

S. cernuus Linn. f. (1781).

Cacalia uniflora Schum. & Thonn. (1827).

Gynura cernua Benth. (1849)-F.T.A. 3: 402; Chev. Bot. 374, partly (excl. Chev. 22399); F.W.T.A., ed. 1, 2: 148.

An erect branched herb with heads 1/2-2/3 in. long on rather long peduncles drooping in flower, erect in fruit; florets usually bright purple, but occasionally white, pink or blue; **a common weed of disturbed ground.**

Mali: Guéla fide Chev. l.c. **Guin.:** Diomandou (Apr.) Adam 12070! Macenta, 2,000-2,500 ft. (Oct.) Baldwin, 9762! **S. L.:** Leicester Peak (Dec.) Sc. Elliot 3879! Kasokora (Aug.) Deighton 1257! Stone 41! **[Br.] Cam.:** Bamenda, 4,500-6,000 ft. (Jan, Mar., Apr.) Migeod 447! Maitland 1466! Morton K77!

Bafut-Ngamba F.R., 5,000-6,000 ft. (Aug., Oct.-Nov.) Lightbody FHI 26269! Tamajong FHI 26892! Bambui, 6,300 ft. (Dec.) Boughey GC 10421! Mambila Plateau, 4,600 ft. (Jan.) Hepper 1682! 1681!

Widespread in warm countries.

13. *Crassocephalum sarcobasis* (Boj. ex DC.) S. Moore in J. Bot. 50: 211 (1912).

APD: Synonym of *Crassocephalum rubens* var. *sarcobasis* (DC.) C. Jeffrey & Beentje

Senecio sarcobasis Boj. ex DC. (1838).

An annual herb about 1 ft. high with mauve to deep pink or magenta florets; **in hilly districts**.

N. Nig.: Vom Dent Young 156! **[Br.] Cam.:** Lakom, Bamenda, 6,000 ft. (Apr.) Maitland 1482! Belo, Bamenda, 4,500 ft. (Apr.) Maitland 1769! Kishong, 6,700 ft. (Jan.) Keay & Russell FHI 28446! Bambui, 6,300 ft. (Dec.) Boughey GC 10420! Santa, 5,700 ft. (Mar.) Morton K103!

Throughout tropical Africa and in **Madagascar**.

[This species comes near to *C. rubens* in the W. African area, but the heads are always smaller, more numerous and, according to Milne-Redhead, do not nod in flower or fruit. This last character may also serve to distinguish this species from *C. crepidioides*, with which it has been united (e.g. Robyns, 1947)-C.D.A.].

14. *Crassocephalum baoulense* (Hutch. & Dalz.) Milne-Redhead in Kew Bull. 5: 377 (1951); Adams in J.W. Afr. Sci. Assoc. 2: 62 (1956). *APD acc*

Gynura baoulensis Hutch. & Dalz. F.W.T.A., ed. 1, 2: 148 (1931).

G. cernua of Chev. Bot. 374, partly (Chev. 22399), not of Benth.

An annual herb 2-3 ft. high with pilose stems; florets bright purple; **in low-lying savanna grassland**.

Iv. C.: Toumodi to Dimbokro, Baoulé-Sud (Aug.) Chev. B22259! Touminiané to Angouakoukrou (Aug.) Chev. 22399! **Ghana:** Afram Plains (Jan.) Irvine 612! Opro F.R., Ashanti (Jan.) Andoh FH 2403! 15. *Crassocephalum togoense* C.D. Adams in J.W. Afr. Sci. Assoc. 1: 27 (1954). *APD acc*

Gynura crepidioides of F.W.T.A., ed. 1, 2: 148, partly (Millen 51).

An erect annual herb 2-3 ft. high; florets mauve; **in savanna**.

Ghana: Amedzofe (Nov.) Morton GC 9428! 9429! A2299! **N. Nig.:** Kogigiri, Jos, 4,100 ft. (Oct.) Hepper 1055! **S. Nig.:** Lagos Millen 51! Olokemeji F.R. (Aug., Oct.) Keay FHI 25387! Hepper 934! Ibadan (Oct.) Keay FHI 25435! Ilora junction, Oyo (Sept.) Keay FHI 28035!

26. SENECIO

Linn.-F.T.A. 3: 408.

- | | | |
|----------|--|-----------------------|
| 1 | Annual herbs; capitula cymose-corymbose, rather small; florets yellow; | 2 |
| | Perennial herbs; ray-florets mostly present: | 4 |
| 2 | Ray-florets absent; leaves linear, subentire, 2-6 cm. long; involucre campanulate, calyculate, 3-4 mm. long, glabrous, on peduncles up to 1 cm. long; stems and leaves glabrous; achenes minutely setulose on the ribs, glabrescent; achene-setae conspicuously zig-zag and barbellate, caducous | 1. schimperi |
| | Ray-florets present; achenes shortly pubescent on the ribs; involucre 5-6 mm. long: | 3 |
| 3 | Calculus absent; capitula oblong on slender peduncles; leaves spatulate, repanddentate, slightly setulose, up to 4 cm. long | 2. abyssinicus |
| | Calculus present; capitula campanulate, more or less clustered on peduncles up to 1 cm. long; leaves lanceolate, pinnatifid or irregularly lobed, up to 10 cm. long and 3 cm. broad, glabrous | 3. perrottetii |
| 4 | Leaves entire, sessile, glabrous or glabrescent: | 5 |
| | Leaves toothed or lobed: | 6 |
| 5 | Capitula solitary on naked peduncles 10-15 cm. long; leaves linear-lanceolate, narrowed to base, 2-4 cm. long, up to 8 mm. broad, at first thinly villous, glabrescent, with 3-5 ascending nerves; involucre bracts 1-5 cm. long; achenes pubescent | 4. baberka |

Capitula several, corymbose, calyculate; leaves ovate to obovate, rounded at base, up to 8 cm. long and 1-3 cm. broad, glabrous, with pinnate nerves; involuoral bracts 8-10 mm. long; achenes glabrous [6. ruwenzoriensis](#)

- 6 Stem-leaves broad and auriculate at base; involuclal bracts 1 cm. long, woolly or pubescent; capitula numerous, corymbose; achenes glabrous: [7](#)

Stem-leaves at most narrowly rounded at base, sessile; lower leaves oblanceolate, stalked; achenes pubescent: [8](#)

- 7 Leaves oblong, up to 15 cm. long and 4 cm. broad, coarsely and doubly dentate or lobulate, obtuse, apiculate, pubescent beneath [6. clarenceanus](#)

Leaves broadly oblanceolate, up to 20 cm. long and 6 cm. broad, closely denticulate, with numerous faint lateral nerves, acuminate, woolly-tomentose with white hairs beneath or rarely glabrescent [7. burtonii](#)

- 8 Leaf-margins regularly minutely denticulate; stems and involuclal bracts glabrous or nearly so; capitula few, with involuclres 10-12 mm. long [8. lelyi](#)

Leaf-margins irregularly and coarsely crenate-dentate, remotely denticulate; stems and involuclal bracts pubescent; capitula numerous with involuclres 7-9 mm. long [9. hochstetteri](#)

1. **Senecio schimperi** *Sch.Bip. ex A. Rich.* Tent. Fl. Abyss. 1: 435 (1848); F.T.A. 3: 412. *APD acc*

APD: Synonym of Emilia guineensis Hutch. & Dalziel

Lactuca tenerrima of Chev. Bot. 379, partly (Chev. 14702; 18458), not of Pourret.

Emilia guineensis *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 149, partly (Chev. 14702; 18458).

A slender annual herb with yellow tubular florets in heads less than 1/4 in. broad.

Guin.: Bouria (Nov.) Caille in Hb. Chev. 14702! Timbo to Ditinn (Sept.) Chev. 18458! Mt. Loursa, 3,000 ft., Dabola (Sept.) Jaeger 4913! Dalaba (Sept.) Schnell 6838! Madina Tossékéré, 3,500 ft. (Oct.) Adam 12531!

Also in **Ethiopia**, **Eritrea** and **Congo**.

2. **Senecio abyssinicus** *Sch.Bip. ex A. Rich.* l.c. 438 (1848); F.T.A. 3: 410.

APD: Synonym of Emilia abyssinica (Sch. Bip. ex A. Rich.) C. Jeffrey var. abyssinica

An annual herb a few inches to 18 in. high with striate glabrous or sparsely pilose stems, and yellow ray- and disk-florets in narrow heads 1/4 in. long.

N. Nig.: Ilorin (Dec.) Clarke 26a! Keay FHI 37293! Jos Plateau (Jan., Oct.) Lely P31! Batten-Poole 109! Jog (Oct.) Hepper 1003! Naraguta Lely 32! Vom Dent Young 159! **S. Nig.:** Lagos Dodd 433! Ogun R. Millen 121! **[Br.] Cam.:** Bamenda, 5,000 ft. (Jan.) Migeod 293! Kumbo (June, Dec.) Boughey GC 17486! Gregory 131! Lus, Nkambe Div. (Feb.) Hepper 1862!

Widespread in central and east tropical Africa.

3. **Senecio perrottetii** *DC.* Prod. 6: 343 (1838); F.T.A. 8: 412; F.W.T.A., ed. 1, 2: 151, partly (excl. records from Sierra Leone); Berhaut Fl. Sen. 171. *APD acc*

An annual herb with glabrous leafy stems 1-2 ft. high; ray- and disk-florets yellow in campanulate flower-heads about 1/4 in. long; [along sandy riverbanks and as a weed of cultivation in northerly districts.](#)

Sen.: (Jan.) Perrottet! Roger! Adam! Richard Tol (Feb., May) Döllinger 65! Roberty 16842! **Mali:** Fafa rapids, Gao (Mar.) De Wailly 5357! Fetodie, near Dogo (Jan.) Davey 078!

4. **Senecio baberka** *Hutch.* in Kew Bull. 1913: 180.

APD: Synonym of Emilia baberka (Hutch.) C. Jeffrey

Senecio fallax *Mattf.* (1924).

Stems leafy, from a few inches to about 1 ft. high, [appearing after grass fires](#) from a perennial woody stock; florets bright yellow in solitary heads 1/2-2/3 in. long.

N. Nig.: Jos Plateau (Dec., Jan.) Lely P37! Ropp (Dec.) Coombe 53! Miango to Jos (Dec.) Coombe 92! Naraguta Lely 59! Jos (Mar., Apr.) Hill 13! Mortom K356! Vom, 4,000 ft. (Feb., Apr.) Dent Young 160! McClintock 208! Morton, K396! Zaria (Feb., Mar.) Dalz. 390! Milne-Redhead 5041! Anara F.R., Zaria (Nov.) Keay FHI 21683! Birnin Gwari (Feb.) Daggash FHI 31417!

Also in [Cameroun](#) and [Sudan](#).

5. *Senecio ruwenzoriensis* *S. Moore* in J. Linn. Soc. 35: 355 (1902). *APD acc*

Senecio thorbeckei *Mattf.* (1924).

A perennial herb with rather fleshy glaucous stems and leaves, 1-2 ft. high, drying black; ray- and disk-florets yellow in heads 1/3 in. long; [in montane grassland](#).

[**Br.**] **Cam.:** Bamenda Dist., 6,000-7,500 ft. (Dec., Feb., Mar-May) Maitland 1367! Ujor FHI 30012! Adams GC 11206! Morton. K23! Bafut-Ngemba F.R. Ujor FHI 30098! Onochie FHI 34867! Richards 5329! Hepper 2157!

Also in [Congo](#), [Uganda](#), [Kenya](#) and [Tanganyika](#).

6. *Senecio clarenceanus* *Hook. f.* in J. Linn. Soc. 6:14 (1862); F.T.A. 3: 418.

APD: *Synonym of Senecio purpureus L.*

An erect or low bushy perennial herb from a few inches to about 5 ft. high with ribbed steins and reddish-purple, mauve or pink florets in numerous flower-heads 1/3 in. long; [in montane grassland](#).

[**Br.**] **Cam.:** Cam. Mt., 7,600 ft. to the summit (Dec.-Apr.) Mann 1237! 1923! Deistel 561! Dundas FHI 13913! Maitland 815! 972! 1284! Keay FHI 28690! Irvine 1464! Boughey GC 12501! Morton GC 6900! **F. Po:** Summit of the peak (Feb., Mar.) Mann 609! Guinea 2758!

Also in [Congo](#).

7. *Senecio burtonii* *Hook. f.* in J. Linn. Soc. 7: 202 (1864); F.T.A. 3: 416. *APD acc*

A robust herb up to about 4 ft. high with grooved stems and leathery leaves; stems usually greyish-white and leaves variably so beneath; flower-heads numerous about 1/2 in. long with conspicuous yellow rays; [in montane grassland](#).

[**Br.**] **Cam.:** Cam. Mt., 7,000-12,000 ft. (Nov.-Apr.) Mann 1246! 1929! Deistel 613! Maitland 844! 920! Brenan 9386! Keay FHI 28629! Irvine 1471! Boughey GC 10656! Morton GC 6862! 8. *Senecio lelyi* *Hutch.* in Kew Bull. 1921: 382; F.W.T.A., ed. 1, 2: 151, partly (Lely 356). *APD acc*

Senecio graciliserra *Mattf.* (1924).

An erect almost glabrous perennial herb with slender grooved stems up to about 2 ft. high from a woody stock; ray-florets yellow in rather few heads 1/2-2/3. long.

Ghana: Kyilinga, 2,000 ft., Trans-Volta Togo (Apr.) Hall 1451! **N. Nig.:** Jos Plateau (May) Lely P278! Hephram to Ropp, 4,600 ft. (July) Lely 356! Fusa Jarawa, 3,200 ft. (June) Summerhayes 61! [**Br.**] **Cam.:** Bamenda Dist., 5,000 ft. (Mar.-May) Maitland 1431! 1544! Morton K146!

Also in [Cameroun](#).

[Note: *S. lygodes* Hiern is very near to *S. lelyi*, but has glabrous achenes and a tendency for the stem-leaf bases to be decurrent; it occurs in Sudan, Congo, Rhodesia, Nyasaland and Angola-C. D. A.]

9. *Senecio hochstetteri* *Sch.Bip. ex A. Rich.* Tent. Fl. Abyss. 1: 435 (1848); F.T.A. 3: 414. *APD acc*

Senecio lelyi of F.W.T.A. ed. 1, 2: 151, partly (Lely 364; P89; Migeod 364; 479), not of Hutch.

An erect, pubescent perennial herb like the last with more numerous flower-heads 1/4-1/3 in. long and pale yellow or white ray-florets.

Guin.: Kinkon (June) Adam 14673! **N. Nig.:** Jos Plateau (Aug.) Lely P565! Naraguta (Jan.) Lely P89! Hephram to Ropp (July) Lely 364! [**Br.**] **Cam.:** Bamenda Dist., 5,000-6,000 ft. Hepper 1796 1 Also in Ethiopia, Congo, Kenya, Uganda and Tanganyika.

De Miré and Gillet report *S. wronopifolius* Desf. from Air, Niger (J. Agric. Trop. 3: 710 (1956)).

27. COTULA*Linn.-F.T.A. 3: 397*

- 1 A small herb with woolly or sparsely hairy stems and leaves, the latter deeply pinnately divided, acute; flower-heads very small and numerous, shortly stalked, 4-5 mm. diam.; involucre bracts 2-seriate, oblong, with thin scarious margins; achenes narrowly winged; receptacle nearly flat and prominently tuberculate after the fall of the flowers [anthemoides](#)

Cotula anthemoides *Linn. Sp. Pl. 891 (1753); F.T.A. 3: 397; Berhaut Fl. Sén. 171. APD acc*

A spreading or prostrate herb with branches a few inches long, with small spherical yellow flower-heads scarcely 1/4 in. diam.

Sen.: Perrottet. fide Berhaut l.c.

Common in the warmer parts of the Old World.

28. CENTIPEDA*Lour. Fl. Cochinch. 492 (1790); Benth. & Hook. f. Gen. Pl. 2: 430.*

- 1 An annual herb with numerous spreading prostrate slender leafy branches; leaves alternate, obovate-oblong, 5-12 mm. long, subentire or with few teeth; capitula globose, solitary, axillary, subsessile, 3-5 mm. broad; involucre bracts in two series, spreading in fruit; receptacle naked; achenes 4-angled, the angles with simple hairs [minima](#)

Centipeda minima (*Linn.*) *A. Br. & Aschers. Ind. Sem. Hort. Berol. 1867, App. 6 (1868); Merrill in Trans. Amer. Phil. Soc., n. ser. 241: 392 (1935). APD acc*

Artemisia minima *Linn. (1753).*

A low weedy herb with small yellow flower-heads.

Lib.: Robertsfield (Aug. 1960) Aké Assi 5542!

This is the first record for West Africa of a common Asian plant; also reported from Australia, Pacific islands and Madagascar.

29. MICROGLOSSA*DC.-F.T.A. 3: 308.*

- 1 Petioles distinct, 1 cm. or more long; leaves ovate to broadly lanceolate: **2**
 Petioles not exceeding 5 mm. long, or leaves sessile; leaves narrowly elliptic to linear-oblongate, acute or shortly acuminate; achenes pubescent: **4**
- 2 Leaves ovate, rounded or broadly cuneate at base, acutely acuminate, 6-10 cm. long, 3-5 cm. broad, more or less pubescent on both surfaces, glabrescent above; achenes ribbed, pubescent; pappus pale or reddish: **3**
 Leaves lanceolate, cuneate at base, long-tailed-acuminate, entire, 5-8 cm. long, 1.5-2.5 cm. broad, thinly puberulous on the nerves beneath; inflorescence laxly branched [3. caudata](#)
- 3 Flower-heads densely crowded in terminal corymbs; leaves coarsely serrate-dentate [1. densiflora](#)
 Flower-heads in laxly branched terminal corymbs; leaves entire or nearly so [2. pyrifolia](#)
- 4 Outer involucre bracts ovate; leaves glabrous or nearly so, with long-subulate tips, 5-8 cm. long, 1.5-2.5 cm. broad, very thin; flower-heads rather few, terminal or terminating short lateral branches: **5**
 Outer involucre bracts linear; leaves pubescent beneath, acute, lanceolate, narrowed to the base, sessile, shallowly serrate-dentate, 5-8 cm. long, 1-1.5 cm. broad, scabrid above; flower-heads pedunculate, numerous in a terminal corymbose inflorescence [5. angolensis](#)
- 5 Leaves rather abruptly narrowed at the base, entire or subentire; branchlets glabrescent [4a. afzelii var. afzelii](#)
 Leaves tapered to a slender petiole, serrate in at least the upper half; branchlets puberulous [4b. afzelii var. serratifolia](#)

1. *Microglossa densiflora* Hook. f. in J. Linn. Soc. 7: 200(1864); F.T.A. 3: 308; Guinea In Anal. Jard. Bot. Madrid 10: 313 (1951). *APD acc*

A climbing shrub up to 25 ft. high with white ligulate and yellow disk florets In heads 1/6 in. long densely clustered in rounded terminal corymbs.

[Br.] Cam.: Cam. Mt., 3,000-9,000 ft. (Dec.-Mar.) Mann 1320! 1327! 1915! Kalbreyer 123! Dunlap 201! Maitland 244! 503! 513! Keay FHI 28641! Boughey GC 6809! Morton GC 7100! Bamenda, 6,500 ft. Widespread in warm countries.

31. FELICIA

Cass. in Bull. Sci. Soc. Philom. Paris 1818: 165; Dict. Sci. Nat. 16: 314. Nom. cons.

- 1 Stems erect, branched, leafy; leaves opposite below, alternate above, linear-lanceolate, 1-5 cm. long, 2-5 mm. broad; stems and leaves thinly pubescent; peduncles slender 2-7 cm. long; involuoral bracts in 3 series the outer shorter, the inner up to 7 mm. long, linear, with a narrow dark median nerve and broad scarious margins, abruptly acuminate, mucronate, glabrescent; receptacle papillose, 4-5 mm. diam.; outer florets shortly ligulate, inner filiform, minutely 5-lobed; style-arms tapered; achenes 1 mm. long, elliptic, flattened, minutely puberulous, greyish-buff; pappus-setae slender, white, caducous [homochroma](#)

Felicia homochroma S. Moore in J. Bot. 59; 229 (1921).

APD: *Synonym of Felicia boehmii* O. Hoffm.

A slender erect annual herb 1/2 ft. high; short ray- and disk-florets bright yellow in slender-stalked heads about 1/2 in. across.

N. Nig.: Naraguta F.R., Jos (Nov.) Keay FHI 37207! **[Br.] Cam.:** Vogel Peak 3,800 ft., Adamawa (Nov.) Hepper 1429!

Also in **Congo**, **Tanganyika**, **Nyasaland** and **N. Rhodesia**.

Felicia richardii Vatke is reported by De Miré and Gillet from Air, Niger (J. Agric. Trop. 3: 707 (1956)).

32. CONYZA

Less.-F.T-A. 3: 311. Nom. cons.

- 1 Herbs or undershrubs, erect or scandent, usually 1 m. or more high; capitula numerous (more than 20) on slender peduncles in terminal branched inflorescences; stems leafy; leaves distinctly serrate or serrulate but not divided: 2
- Herbs rarely reaching 1 m. high, often scapose or tufted from a short stock: 4
- 2 Stems and leaves glabrous; lower stem-leaves petiolate, elliptic, serrate, upper sessile subauriculate linear-lanceolate, serrulate; involuclral bracts oblong, acute, 3-4 mm. long, glabrous; peduncles slender; achenes glabrous. [L. persicifolia](#)
- Stems and leaves pubescent; upper stem-leaves gradually narrowed to a clasping base; involuclral bracts lanceolate, thinly pubescent in the mid-line; achenes minutely puberulous: 3
- 3 Capitula about 5 mm. diam. in flower; scrambling or weakly erect herb; leaf-base auricled; stem and leaves thinly pubescent; leaves glabrescent above, shortly setulose on the veins beneath [2. steudelii](#)
- Capitula 6-8 mm. diam. in flower; erect robust herb; leaf-bases not auricled; stem densely setulose-pubescent [3. gigantea](#)
- 4 Leaves pinnately divided; leaves and stems villous-pilose; involuclral bracts linear, slender; annual herbs: 5
- Leaves entire or subentire, often serrate but not divided; stems and leaves more or less pubescent, rarely glabrescent; mostly perennial herbs: 6

- 5 Uppermost stem-leaves subentire, linear; inflorescence spreading [4. *aegyptiaca* var. *aegyptiaca*](#)
 Uppermost stem-leaves pinnatifid, divided into narrow lobes; inflorescence contracted [4a. *aegyptiaca* var. *lineariloba*](#)
- 6 Stems usually 5-30 cm. high; leaves mostly in a basal rosette, broadly oblanceolate, serrate; capitula about 1 cm. diam., clustered at the apex of an almost leafless scape [5. *subscaposa*](#)
 Stems usually 30-60 cm. high; leaves scattered along the flowering stems, linear to linear-oblanceolate: [7](#)
- 7 Flower-heads 6-12 mm. diam.; stem-leaves more than 3 cm. long; stems more leafy below than above: [8](#)
 Flower-heads 6 mm. or less diam.; stem-leaves less than 3 cm. long; stems leafy only in the upper part at flowering time: [10](#)
- 8 Capitula in a dense terminal cluster; outer involucre bracts obtuse, purplish [6. *clarenceana*](#)
 Capitula borne on branches in the axils of the upper leaves: [9](#)
- 9 Involucre bracts purplish, acute; flower-heads 9-12 mm. diam.; stems sparsely setulose, glabrescent; leaf-margins at first ciliate [7. *theodori*](#)
 Involucre bracts green, obtuse; flower-heads 6-8 mm. diam.; stems appressed-pilose [8. *gouanii*](#)
- 10 Capitula numerous, 3-4 mm. diam. in rounded clusters; leaves oblanceolate, toothed near apex, about 2 cm. long and 4-5 mm. broad; stem indistinctly striate when dry; pubescent [9. *stricta*](#)
 Capitula few, 5-6 mm. diam.; leaves linear, about 2 mm. broad; stem deeply grooved when dry, glabrescent [10. *spartioides*](#)

1. *Conyza persicifolia* (Benth.) Oliv. & Hiern in F.T.A. 3: 312 (1877); Chev. Bot. 363.

APD: Synonym of *Conyza attenuata* DC.

Erigeron persicaefolius Benth. (1849).

Eschenbachia persicifolia (Benth.) Exell Cat. S. Tomé 224 (1944).

An erect glabrous annual herb 2-6 ft. high; lower leaves stalked; upper leaves clasping the stem but hardly auricled.; flower-heads small and numerous with pale yellow florets; **a weedy plant of open ground.**

Guin.: fide Chev. l.c. **S. L.:** Koflu (Jan.) Sc. Elliot 4610! Kurusu (Apr.) Sc. Elliot 5649! **Iv. C.:** Droupleu to Zouanlé, Upper Sassandra (May) Chev. 21453! Also in **Ethiopia**, **Sudan**, **Congo**, **Kenya**, **Uganda**, **Tanganyika** and **Rhodesia**.

6. ***Conyza clarenceana* (Hook. f.) Oliv. & Hiern** in F.T.A. 3: 316 (1877). *APD acc*

Vernonia clarenceana Hook. f. (1862).

An erect slightly branched sparsely pubescent perennial herb with sterna up to 2 ft. high, narrow clasping leaves and a terminal cluster of flower-heads; florets yellow; involuclral bracts rich purple.

F. Po: Clarence Peak, 8,500 ft. (Dec.) Mann 599! Guinea 2898. Boughey GC 17383! Pico Serrano (Dec., Jan.) Guinea 1969! Monod 10480!

7. ***Conyza theodori* R.E. Fries** in Acta Hort. Berg. 9: 122, t. 1, fig. 1 (1928).

APD: Synonym of Conyza clarenceana (Hook. f.) Oliv. & Hiern

A perennial herb with reddish stems 12-18 in. high; flower-heads in small clusters in a branched terminal inflorescence; florets yellow; involucre bracts long-pointed, purplish; **in upland grasslands**.

[Br.] Cam.: Cam. Mt., 4,400 ft. (Apr.) Maitland 1098a! Lakom, 6,000 ft. (Apr.-May) Maitland 1378! 1480! 1493! Kumbo, 5,000 ft. (Feb.) Hepper 2698!

Also in **Ethiopia**, **Congo** and **Kenya**.

8. **Conyza gouanii** (Linn.) Willd. Sp. Pl., ed. 4, 3: 1928 (1803); F.T.A. 3: 316 (incl. syn. *C. gnaphalioides* Sch. Bip. (1848), but not of H.B.K. (1820)).

APD: *Synonym of Erigeron gouanii* L.

Erigeron gouani Linn. (1771).

A perennial herb like the last with shorter greenish involucre bracts forming smaller heads; stems often purple; **in upland grasslands**.

S. Nig.: Ata R., Obudu (Dec.) Keay & Savory FHI 25011! [Br.] Cam.: Cam. Mt., 4,000 ft. (Apr.) Maitland 1098! Bamenda, 6,000 ft. (Mar.) Morton K16! Bamenda to Ndop, 5,000-5,400 ft. (Dec.) Adams GC 11279! Boughey GC 10454! 11372! Bambui, Bamenda, 6,500 ft. (Dec.) Boughey GC 10846!1

Also in **Canary Islands**, **Ethiopia**, **Tanganyika** and **Rhodesia**.

9. **Conyza stricta** Willd. Sp. Pl., ed. 4, 3: 1922 (1803); F.T.A. 3: 318.

APD: *Synonym of Erigeron trilobus* (Decne.) Boiss.

An annual herb 1-3 ft. high often with several ascending branches from the main stem, white-pubescent with hooked hairs; flower-heads about 1/6 in. across; florets yellow; pappus deciduous in one piece.

Guin.: Mali Peak, 5,000 ft. (Jan.) Chev.! Mt. Loura, 5,000 ft. (June) Adam 14515! N. Nig.: Jos Plateau Lely 860! Gindiri, 3,500 ft., Jos Plateau (Oct.) Hepper 1102!

Throughout tropical Africa.

10. **Conyza spartioides** O. Hoffm. in Engl. Bot. Jahrb. 20: 224 (1894).

APD: *Synonym of Nidorella spartioides* (O. Hoffm.) Cronquist

Nidorella spartioides (O. Hoffm.) Cronquist in Bull. Jard. Bot. Brux. 22: 310 (1952).

N. stricta O. Hoffm. (1901).

A perennial herb 1-2 ft. high with slender flexuous, sometimes almost leafless, branches from a woody stock; flower-heads rather few in terminal clusters; florets yellow; involucre bracts green.

[Br.] Cam.: Fang, Bamenda, 3,000-5,000 ft. (Apr.) Maitland 1472! Bafut-Ngamba F.R., 7,200 ft. (Feb., Mar.) Hepper 2119! Morton K41! Santa Mt., 8,500 ft., Bamenda (Apr.) Morton K313!

Also in **Kenya**, **Uganda**, **Tanganyika**, **Angola** and **Rhodesia**.

33. ADELOSTIGMA

Steetz-F.T.A. 3: 320. APD acc

- 1 Erect annual, sparingly branched in the upper part; stems thinly pilose, glabrescent; leaves linear in outline, deeply pinnately partite, up to about 5 cm. long, with linear segments about 5 mm. long, glabrescent; flower-heads terminal, surrounded closely by the upper leaves, 1.5-2 cm. diam.; involucre bracts about 3-seriate, linear, about 1 cm. long, silky-pubescent; outer florets with a filiform corolla, inner narrowly campanulate; achenes pubescent; pappus-bristles smooth, pale buff [senegalense](#)

Adelostigma senegalense Benth. in Hook. Ic. Pl. 12: t. 1144 (1873); F.T.A. 3: 320: Chev. Bot. 364. APD acc

An erect annual herb a few inches to 18 in. or more high with soft, thick whitish roots and slightly angled sterna; florets mauve or bluish-purple in thistle-like heads; **in damp grassy flats.**

Guin.: Fouta Djallon Heudelot 677! Timbo to Ditinn (Sept.) Chev. 18462! 18513! Bouria (Sov.) Chev. 14963! Bilima (Sept.) Chev. 15039! Mali (Sept.) Schnell 7057! Timbi Adam 12846! **S. Widely spread through tropical Africa and Asia.

38. GEIGERIA

Griessel.-F.T.A. 3: 367; Merxmüller in Mitt. Bot. Staatss. Munchen 1, 7: 239 (1953).

- 1 An erect divaricately branched glabrous annual herb with broadly winged stems; leaves opposite, sessile and decurrent, oval-oblong, subacute, mucronate, entire or minutely denticulate, 2-8 cm. long, 0.5-2.5 cm. broad, glandular; flower-heads campanulate, about 0.5 cm. long, sessile in the forks of branches, 10-12-flowered; involucre bracts rigid in a few series, oval-oblong, spine-tipped, thinly puberulous, glandular; receptacle with numerous slender setaceous paleae; ray-florets in a single series, ligulate; disk-florets tubular; scales of pappus aristate, hyaline [alata](#)

Geigeria alata (DC.) Oliv. & Hiern in F.T.A. 3: 368 (1877); F.W. Andr. FL. Pl. Sudan 3: 31, fig. 5. *APD acc*

Diplostemma alatum DC. (1838).

A herb up to about 1 ft. high with a 3-winged stem; leaves of two sorts occur at each node, two with decurrent bases and one without; flower-heads about 1/6 in. long with the tips of the outer involucre bracts spreading and leafy; florets yellow; [a weed of semi-desert.](#)

Mali: Niamey-Niama, near Boré (Nov.) Demange 33/1957! **Niger:** Air De Miré & Gillet. Zinder (Dec.) Vaillant 792! Kolo Vaillant 864!

Also in **Mauritania, Cameroun, Sudan, Egypt, Somaliland, Arabia, Ethiopia, Eritrea, Kenya, Angola** and **S.W. Africa.**

39. BUBONIUM

APD: Synonym of Asteriscus Mill.

Hill Veg. Syst. 2: 74 (1761).

- 1 Shrubby up to 50 cm. high; branches rigid, whitish, thinly velvety; leaves pinnately lobed or toothed, up to 5 cm. long, sessile, amplexicaul, viscid-pubescent; involucre rounded, terminal and subsessile in the branch-axils, the outer bracts foliaceous, mucronate or apiculate, the inner ovate, puberulous; receptacle with palea; ray-florets short, 2-3-toothed, yellow; disk-florets tubular, acutely 5-lobed; achenes costate, hairy on the ribs, the outer somewhat compressed, the inner terete; pappus-scales scarious, dissected at the apex, equalling the ovary [graveolens](#)

Bubonium graveolens (Forsk.) Maire in Bull. Soc. Hist. Nat. Afr. Nord. 27: 233 (1936); De Miré & Gillet in J. Agric. Trop. 3: 706.

APD: Synonym of Asteriscus graveolens (Forssk.) Less.

Buphthalmum graveolens Forsk. (1775).

Odontospermum graveolens (Forsk.) Sch. Bip. (1844)-F.T.A. 3: 370.

A tough bushy herb up to about 18 in. high with yellow florets in heads 1/3-1/2 in. across.

Niger: Air fide De Miré & Gillet l.c.

Extends from Mauritania through **Sudan** to **Egypt** and **Arabia.**

40. ANISOPAPPUS

Hook. & Arn.-F.T.A. 3: 369. APD acc

- 1 Pappus a single row of jagged scales; leaves ovate to triangular-lanceolate, truncate or subcordate at base, crenate, 4-7 cm. long, 2-3 cm. broad, slightly scabrid above, puberulous beneath; petiole slender, up to 2 cm. long; flower-heads several, usually 4-8, rarely 1; involucre bracts about 3-seriate, up to 8 mm. long, scabridulous; exerted ligules longer than the involucre [1. africanus](#)
- Pappus a row of jagged scales with intermediate bristles: **2**
- 2 Intermediate pappus-bristles about twice as long as the jagged scales; leaves very variable from shortly triangular to lanceolate, crenate and often distinctly lobed towards the base, cuneate to cordate, up to 8 cm. long and 2-5 cm. broad, slightly scabrid; petiole slender; flower-heads 1-6, usually 4 or 5; involucre bracts grey-puberulous outside; exerted ligules about equal to the involucre [2. dalzielii](#)
- Intermediate pappus-bristles about equal in length to the jagged scales; leaves ovate to suborbicular, up to 3 cm. long and broad, cordate with a blunt tip and rounded basal lobes, densely scabridulous above, puberulous beneath; petiole 0.5-1 cm. long; flower-heads 1-4; involucre bracts densely puberulous, green, the lower recurved; exerted ligules exceeding the involucre [3. suborbicularis](#)

1. *Anisopappus africanus* (Hook. f.) Oliv. & Hiern in F.T.A. 3: 369 (1877).

APD: Synonym of Anisopappus chinensis subsp. africanus (Hook. f.) S. Ortiz & Paiva

Telekia africana Hook. f. (1864).

A robust herb up to 4 ft. high with striate pubescent pithy stems and yellow flower-heads about 1 in. across; [in savanna woodland or montane grassland](#).

Ghana: Ejura, Ashanti (Dec.-Jan.) Morton GC 9529! A1529! Techiman to Nkoranza (Dec.) Morton A1154! **S. Nig.:** Mt. Koloishe, 5,000-5,400 ft., Ogoja (Aug.) Stone 49! **[Br.] Cam.:** Cam. Also in [Uganda](#) and **N. Rhodesia**.

3. *Anisopappus suborbicularis* Hutch. & B. L. Burtt in Rev. Zool. & Bot. Afr. 23: 41 (1932).

APD: Synonym of Anisopappus chinensis var. buchwaldii

Anisopappus africanus of F.W.T.A., ed. 1, 2: 156, partly (Migeod 453).

A straggling or erect bushy herb up to 3 ft. high with bright yellow flowers; [in montane grassland](#).

[Br.] Cam.: Bamenda, 6,000 ft. (Jan.) Migeod 453! Nchan, Bamenda, 5,000 ft. (June) Maitland 1741! Kumbo to Oku, 6,000 ft. (Feb.) Hepper 2006! Mambila Plateau, 4,900 ft., Adamawa (Jan.) Hepper 1709!

Also in [Congo](#).

41. MOLLERA

APD: Synonym of Calostephane Benth.

O. Hoffm. in E. & P. Pflanzenfam. 4, 5: 205 (1890); Bol. Soc. Brot. 10: 174 (1892).

- 1 Stem narrowly winged from the decurrent leaf-bases; lower leaves opposite, upper alternate, oblanceolate, 1-3.5 cm. long, 3-6 mm. broad, remotely serrate-crenate towards the apex, minutely scabrid; peduncles setulose 1-2 cm. long; involucre bracts in 2 series, narrowly ovate, acuminate, scabridulous, 3-4 mm. long, the tips reflexed at maturity; outer ligulate florets prominent with the tube exerted from the involucre, 2-3-toothed; achenes barrel-shaped, strongly 8-10-ribbed, minutely glandular between the ribs; pappus a minute inconspicuous ring [angolensis](#)

Mollera angolensis *O. Hoffm.* l.c. (1890).

APD: Synonym of Calostephane angolensis (O. Hoffm.) Anderb.

Mollera punctulata *Hiern* Cat. Welw. 1: 569 (1898).

An annual herb up to about 1 ft. high with yellow ray- and disk-florets in heads 1/4-1/2 in. diam.; a weed of fields and open ground.

N. Nig.: Jos Plateau (Aug.) Lely P588! Bukuru to Hephram, 4,300 ft. (July) Lely 346! Ropp to Mongu (Apr.) Morton K363! Anara F.R., Zaria (Oct.) Keay FHI 20142! Naraguta racecourse (Nov.) Keay FHI 37205!

Also in [Angola](#).

42. PULICARIA

Gaertn.-F.T.A. 3: 363.

- 1 Involucral bracts in 4-5 rows; capitula numerous; achenes dark brown, oblong, sulcate, glabrous; pappus 2-seriate, outer of short scales, inner of 10-12 slender setae, plumose towards the tips, the two series caducous together; leaves rather small, oblong, with usually strongly crisped involute margins [1. crispa](#)
- Involucral bracts in 2-3 rows; capitula usually rather few; achenes pale buff, smooth, shallowly grooved, glabrescent; pappus 2-seriate, outer of short scales, inner of 12-15 slender setae, minutely barbellate along their entire length and slightly broader towards the tips, the inner series caducous, the outer persistent; leaves oblanceolate, sinuate-margined, usually flat [2. undulata](#)

1. **Pulicaria crispa** (*Forsk.*) *Oliv.* in Trans. Linn. Soc. 29: 96 (1873); *F.T.A.* 3: 366; Chev. Bot. 366; Hagerup in Biol. Medd. 9, 4: 57; Berhaut Fl. Sén. 172; F. W. Andr. Fl. Pl. Sudan 3: 46, fig. 8.

APD: Synonym of Pulicaria undulata (L.) C.A. Mey. subsp. undulata

Aster crispus *Forsk.* (1775).

An annual herb with decumbent branches spreading and ascending to 1 or 2 ft. high; stems and leaves silvery, but sometimes glabrescent; flower-heads 1/4-1/2 in. across with light yellow ray and disk florets; an aromatic weed of fields and arid country.

Sen.: Richard Tol (Feb.) Roberty 16858! **Mali:** Bamako (Jan.) Chev. 197! Timbuktu (July) Hagerup 168! Bendofo, Kita (July) Jaeger 6! **Ghana:** Zuarungu (Nov.) Akpabla 428! Yendi (Dec.) Also in **Mauritania**, **Egypt**, **Sudan** and **Arabia**.

[De Miré and Gillet in J. Agric. Trop. 3: 709, 710 (1956) report *P. arabica* C-oss. subsp. *inuloides* Maire and *P. volkonskyana* Maire from Air, Niger.)

43. INULA

Linn.-F.T.A. 3: 357.

- 1 Flower-heads numerous, up to 1 cm. long; stems closely ribbed, becoming nearly glabrous; radical leaves elongate-lanceolate:.....**2**
 Flower-heads 2-5 or rarely solitary, up to 5 cm. diam.; stems densely clothed with silky hairs; radical leaves broadly oblong, dentate, up to 30 cm. long and 15 cm. broad, scabrid above, densely silky-villous beneath, with petioles up to 20 cm. long; upper stem-leaves sessile, amplexicaul; involucre bracts 6-7-seriate, the outer silky-pubescent**3. klingii**
- 2 Capitula crowded into rather broad corymbs; peduncles slender, 1 cm. long; involucre bracts about 4-seriate, lanceolate, pubescent, nearly 1 cm. long; stem-leaves sessile, ovate-lanceolate, mucronate, auriculate at base, up to 25 cm. long and 8 cm. broad, pilose-pustulate above, woolly beneath, denticulate**1. mannii**
 Capitula in tight terminal clusters; peduncles with gland-tipped hairs; involucre bracts about 3-seriate, linear, up to 0.5 cm. long; stem-leaves rather small, scabrid above, scabridulous on the veins beneath, otherwise glabrous, shallowly dentate**2. subscaposa**

1. *Inula mannii* (Hook. f.) Oliv. & Hiern in F.T.A. 3: 358 (1877). *APD acc*

Vernonia? mannii Hook. f. (1884).

A stout soft-stemmed herb 2-10 ft. high, with rather large leaves pale-tomentose beneath and campanulate flower-heads nearly 1/2 in. long in dense corymbs; florets yellow.

[Br.] Cam.: Cam. Mt., 6,700-7,500 ft. (Dec.-Feb.) Mann. 1314! 1933! Maitland 975! 1004! Bamenda, 7,400-8,200 ft. (Dec.) Boughey GC 10771! 11008!

Also in **Ethiopia** and **Congo**.

2. *Inula subscaposa* S. Moore in J. Linn. Soc. 35: 341 (1902). *APD acc*

An erect perennial herb with slender stems 3-4 ft. high arising from a silky-hairy stock; ray- and disk-florets yellow in flower-heads about 1/3 in. long.

[Br.] Cam.: Bamenda Dist., 4,000-6,000 ft. (May-June) Maitland 1451! 1457! 1683! 1684! Gembu, 5,000 ft., Mambila Plateau, Adamawa (Jan.) Hepper 1819!

Also in **Rhodesia** and **Nyasaland**.

3. *Inula klingii* O. Hoffm. in Engl. Bot. Jahrb. 24: 472 (1898). *APD acc*

A perennial herb with an erect stout stem 1-6 ft. high; inner involucre bracts dull yellow; disk-florets yellow.

Guin.: Mali, 4,500 ft. (Sept.) Schnell 7096! Pita (Oct.) Jac.-Fél. 1965! Adam 12546! **Togo Rep.:** Bismarckburg Kling 153! **N. Nig.:** Jagindi, Jemaa Div. (Nov.) Keay & Onochie FHI 21715! Naraguta, 4,000 ft. (Oct.) Hepper 1010! **[Br.] Cam.:** Wum crater lake, Bamenda (Apr.) Morton K295!

Also in [Congo](#) and [Angola](#).

[This species is very near to *I. shirensis* Oliv. (1882). *I. klingii* is described as rayless; *I. shirensis* as rayed. Further field observations are needed to establish the variability of this character-C. D. A.]

44. VICOA

Cass.-F.T.A. 3: 361.

- 1 Stem leafy, sparsely pubescent, glabrescent, brownish when dry; leaves linear-lanceolate, sessile, auriculate, acute, 5-8 cm. long, 0.8-1.5 cm. broad, denticulate, scabridulous on both surfaces; flower-heads at the ends of long branches; peduncles slender; involucre bracts 3-4-seriate, linear, acute, up to 7 mm. long, glandular outside; florets all tubular (outer ligulate in Asian species); achenes very small, pubescent at least in the upper part; pappus-bristles few, almost smooth, white [leptoclada](#)

Vicoa leptoclada (*Webb*) *Dandy* in F.W. Andr. Fl. Pl. Sudan 3: 62 (1956).

APD: *Synonym of Pentanema indicum* (L.) Y. Ling

Inula leptoclada *Webb* (1849).

Vicoa indica of F.W.T.A., ed. 1, 2: 608 and of *Berhaut* Fl. Sén. 172, not of DC.

Inula indica of Chev. Bot. 366, not of Linn.

Vicoa auriculata of F.T.A. 3: 362 and of F.W.T.A., ed. 1, 2: 157, not of Cass.

An erect annual herb 1-4 ft. high; leaves dark green above, paler beneath; florets yellow; a weed of cultivated ground and open places mostly outside the high-forest areas.

Sen.: Thiès (Dec.) Chev. 2033! Kaolak (Nov.) *Berhaut* 1169! **Gam.:** Boteler! Brown-Lester 21! Kudang (Jan.) Dalz. 8032! Genieri (Feb.) Fox 45! **Mali:** Koulouba (Nov.) Jaeger 19! Widespread in tropical Africa.

45. EPALTES

Cass.-F.T.A. 3: 331.

- 1 A small much-branched herb with a narrowly winged stem and alternate lanceolate leaves 2-4 cm. long and about 6(-10) mm. broad, remotely and shortly serrate, scabridulous; capitula 3-4 mm. long in flower, campanulate, on peduncles not exceeding 5 mm. long in terminal umbelliform clusters; involucre bracts in several series, ovate, acuminate, pubescent; outer florets female, inner hermaphrodite, all tubular; achenes oblong; pappus absent [alata](#)

Epaltes alata (*Sond.*) *Steetz* in *Peters Reise Mossamb. Bot.* 452 (1864).

APD: *Synonym of Litogyne gariepina* (DC.) *Anderb.*

Ethulia alata *Sond.* (1850).

A bushy herb usually about 1 ft. high with mauve florets in small clustered flower-heads.

Mali: Boré (Aug., Nov.) Demange 35! **Niger:** Zinder (Oct.) Hagerup 582! Dakoro (Dec.) Vaillant 854!

Also in [Sudan](#), [Ubangi-Shari](#), [Tanganyika](#), [Rhodesia](#), [Nyasaland](#) and [S.W. Africa](#).

46. PLUCHEA

Cass.-F.T.A. 3: 327.

- 1 Leaves oblong to oblong-ovate, sessile and auriculate at base and sometimes decurrent on the stem with toothed wings, rounded at apex, 4-7 cm. long, 1.5-3 cm. broad, repanddentate, rather densely pubescent and minutely glandular; flower-heads several in a spreading terminal corymb; involucre bracts about 5-seriate, ovate to lanceolate, thinly pubescent, straw-coloured [1. ovalis](#)

Leaves lanceolate to elliptic-ob lanceolate, sessile but not auriculate at base, not decurrent, obtuse, apiculate, entire, 4-5 cm. long, up to 1 cm. broad, prominently nerved, softly appressed-tomentellous; flower-heads crowded on short terminal branches, shortly pedunculate; involucre bracts about 5-seriate, ovate-rounded, pubescent, purplish [2. lanceolata](#)

1. **Pluchea ovalis** (*Pers.*) *DC.* *Prod.* 5: 450 (1836); *F.T.A. 3: 328*; *Fl. Sperm. Parc Nat. Alb. 2: 483, t. 45*; *Berhaut Fl. Sén. 146, 170. APD acc*

Baccharis ovalis Pers. (1807).

Pluchea dioscoridis of Chev. *Bot.* 365, not of *DC.*

An aromatic glandular shrub 4-5 ft. high with pale grey-green stems and leaves; florets yellowish-white or pale mauve in heads 1/4 in. broad.

Sen.: Sieber 61! M'Bidjem (Dec.) Chev. 2037! Dakar (Jan.) Hagerup 771! **Mali:** Cotaga, Niger R. (July) Chev. 1159! Timbuktu (July) Chev. **Ghana:** Achimota (May, Nov., Dec.) Milne-Redhead 5088! Akpabla 1804! Morton A2834! Ada (June) Morton GC 9262! Weija (Nov.) Morton A63! **Togo Rep.:** Lomé Warnecke 223! 312!

Also in **Mauritania**, **Sudan**, **Congo**, **Kenya**, **Uganda**, **Tanganyika**, **Angola** and the **Cape Verde Islands**.

2. **Pluchea lanceolata** (*DC.*) *Oliv. & Hiern* in *F.T.A. 3: 329* (1877); *Berhaut Pl. Sén. 204. APD acc*

APD: *Synonym of Pluchea lanceolata (DC.) C.B. Clarke*

Berthelotia lanceolata DC. (1836).

A small shrub covered with a fine grey indumentum with clusters of flower-heads about 1/4 in. broad at the tips of striate leafy twigs; florets pink.

Sen.: Perrottet! Heudelot 400! Fann rocks, Dakar (Feb.) Adam 11087! Toumba (July) Chev. 4082!

47. PEGOLETTIA

Cass.-F.T.A. 3: 360.

- 1 Stems pubescent, ribbed; leaves linear, 1-3 cm. long, up to 5 mm. broad, entire or slightly toothed, densely crisped-setulose, glandular-punctate on both surfaces; flower-heads numerous, terminal on bracteate branches 4-7 cm. long, 4-6 mm. broad in flower and up to 1 cm. broad in fruit, campanulate with 2-seriate pubescent involucre bracts 1 cm. long, the outer linear, the inner lanceolate; florets all tubular; achenes closely ribbed, thinly pubescent, 5 mm. long; pappus 2-seriate, the outer short, multifid, the inner longer plumose [senegalensis](#)

- Pegolettia senegalensis** *Cass.* *Dict. Sci. Nat.* 38: 232 (1826); *F.T.A. 3: 361*; *Berhaut Fl. Sén. 204. APD acc*

A branched aromatic annual herb, woody below, up to about 1 ft. high with yellow florets turning purplish, in heads 1/2 in. long.

Sen.: Roger 86! Sor Isl. Brunner 187! **Niger:** Aïr De Miré & Gillet. **N. Nig.:** Kuka (Feb.) E. Vogel 60! Kalkala, Bornu, Golding 68!

Extends in northerly latitudes from Mauritania eastwards to central **Sudan**, **Arabia** and western India; also in **Angola** and the drier parts of south tropical Africa.

48. PORPHYROSTEMMA

Grant ex Benth.-F.T.A. 3: 367.

- 1 An annual herb; stems appressed-pilose; leaves sessile, linear, up to 12 cm. long and 1 cm. broad, thinly hispid, glabrescent; capitula corymbose, few, shortly pedunculate, about 2 cm. diam.; involucre rounded at base, with numerous linear, very acute shortly pilose bracts up to 1.5 cm. long in about 4 series; peduncles villous; corolla-limb pubescent; achenes thinly pubescent; pappus-bristles 10-15, uniform, barbellate [chevalieri](#)

Porphyrostemma chevalieri (*O. Hoffm.*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 158 (1931); Berhaut Fl. Sén. 204. *APD acc*

Porphyrostemma grantii var. **chevalieri** *O. Hoffm.* in Mém. Soc. Bot. Fr. 2, 8: 41 (1908); Chev. Bot. 367.

A herb from a few inches to 2 ft. high with pink florets in solitary flower-heads 3/4-1 in. across, terminal on the branches; **a weed of sandy soil in arid districts.**

Sen.: Sinédone (Jan.) Chev. 2091! Kaolak (Oct.) Berhaut 3374! **Port. G.:** Bissoram (Oct.) Esp. Santo 2409! Suzana (Nov.) Esp. Santo 3680! **Ghana:** Navrongo (Nov.) Akpabla 387! Burufo, near Lawra (Dec.) Adams & Akvabla GC 4445! **N. Nig.:** Sokoto Lely 144! Jos Plateau (Oct.-Dec.) Lely P840! Keay FHI 21024! Coombe 70! Yola (Nov.) Hepper 1193!

Also in **N. Rhodesia**.

[Except by the greater number of pappus-bristles this species is hardly to be distinguished from *P. grantii* Benth. ex Oliv. and *P. cuanzense* O. Hoffm., which together extend the range to Tanganyika and Angola-C. D. A.].

49. BLUMEA

DC.-F.T.A. 3: 322. Nom. cons.

- 1 Leaf-bases decurrent forming wings on the stem: **2**
 Leaf-bases not decurrent; stems without wings: **4**
- 2 Stem-wings entire, long; whole plant densely whitish tomentose; leaves entire, linear [1. gariepina](#)
 Stem-wings short, interrupted, stipuliform; leaves dentate or lobed: **3**
- 3 Peduncles 2-3 cm. long; inflorescence spreading; glandular hairs long-stalked, few or absent; glands colourless or yellow; stems often violet-tinged [2. aurita](#) var. [aurita](#)
 Peduncles 1-1.5 cm. long; inflorescence compact; glandular hairs short-stalked, numerous; glands brown; stems always green [2a. aurita](#) var. [foliolosa](#)
- 4 Capitula about 1 cm. diam. on peduncles 1-1.5 cm. long; branches of the inflorescence with numerous bracts: **5**
 Capitula about 0.5 cm. diam.; peduncles mostly short; inflorescences dense with capitula clustered; leaves not divided, denticulate; florets pink to pale purple: **6**
- 5 Leaves dentate; inflorescence compact; florets pink or mauve [2a. aurita](#) var. [foliolosa](#)
 Leaves deeply divided, doubly dentate with acutely pointed mucronate lobes, thin; inflorescence diffuse; florets yellow or orange-yellow [3. laciniata](#)
- 6 Lower leaves long-petiolate; capitula on slender peduncles; glands few, pale; leaves glabrescent [4. mollis](#)
 Lower leaves narrowed to the base but not distinctly petiolate; capitula subsessile in terminal and lateral bracteate clusters; glands numerous, long-stalked, brown; leaves and stems densely villous [5. perrottetiana](#)

1. **Blumea gariepina** *DC.* Prod. 5: 448 (1836); De Miré & Gillet in J. Agric. Trop. 3: 706.

APD: *Synonym of Laggera decurrens (Vahl) Hepper & J.R.I. Wood*

A densely silky bushy herb or undershrub about 2 ft. high, with stalked flower-heads about 1/3 in. long.

Niger: Air vide De Miré & Gillet l.c.

Also in **Sudan** and south tropical Africa.

Blumea aurita (*Linn. f.*) *DC.*

APD: *Synonym of Pseudoconyza viscosa (Mill.) D'Arcy*

2. **Blumea aurita** var. **aurita** in Wight Contrib. Bot. Ind. 16 (1834); *DC.* Prod. 5: 449; *F.T.A. 3: 322*; Chev. Bot. 364. *APD acc*

Conyza aurita Linn. f. (1781).

C. senegalensis Willd. (1803)-F.T.A. 3: 314, partly (Don), excluding var. β .

An erect glandular aromatic densely silky-hairy herb 2-3 ft. high forming a basal rosette of leaves at first; inflorescence spreading; florets vary from greenish-yellow or white to pale mauve or pink; **a common weed in drier areas.**

Sen.: Dakar (Apr., May) Jaeger! Baldwin 5703! Bandia (Feb.) Berhaut 5349! **Gam.:** Don! **Mali:** Bamako (Jan.) Chev. 194! Dogo (Apr.) Davey 571! 572! **Guin.:** Kouroussa (Dec.) Pobéguin 609! **S. Throughout tropical Africa.

[Small, often perennial, forms of this species are found in upland pastures, for example King 184b and Hepper 1912, cited above. These may be separable as *B. dregeanoides* Sch. Bip. or *B. solidaginoides* (Poir.) DC.]

50. NICOLASIA

S. Moore in J. Bot. 38: 458 (1900); Merxmüller in Mitt. Bot. Staatss. München, 2, 11, 1 (1954).

- 1 An erect herb with spreading branches, 20-50 cm. high; stem and leaves with scattered glandular hairs; leaves linear-oblongate, entire, decurrent at the base into a narrow stem-wing, the midrib prominent on both surfaces; capitula with the outer florets female, the inner hermaphrodite, all tubular, 10-15 mm. long; involucre bracts imbricate in several series, narrow, the inner more or less scarious, the outer shorter; peduncles slender; receptacle naked; style arms 2, linear, mostly distinct but sometimes appressed; anther-base shortly lobed, not tailed; achenes slightly flattened; pappus-setae 5-10, stiff [stenoptera](#)

Nicolasia stenoptera (*O. Hoffm.*) Merxm. l.c. 9/10: 402 (1964). *APD acc*

Laggera stenoptera *O. Hoffm.* in Bull. Herb. Boiss. 1: 76 (1893).

An annual herb with pinkish-white florets in red-tinged involucre; **by streams in rocky hill country.**

[Br.] Cam.: Vogel Peak, 4,000 ft., Adamawa (Dec.) Hepper 1554! Mambila Plateau, 4,600 ft. (Jan.) Hepper 1650!

Also in **S.W. Africa** and **S. Rhodesia**.

51. LAGGERA

Sch. Bip. ex Benth.-F.T.A. 3: 323.

- 1 Stem-wings toothed, at least in the upper part; inflorescence paniculate, spreading or contracted; capitula numerous on short or long slender peduncles [1. pterodonta](#)
Stem-wings entire: **2**
- 2 Capitula few, usually less than 12; perennial herbs with shoots arising from a woody stock: **3**
Capitula numerous, usually more than 20 in a spreading paniculate inflorescence; annual or short-lived perennial herbs, rarely woody at base; flower-heads up to 1.5 cm. diam., but usually smaller: **4**
- 3 Flower-heads sessile or subsessile, terminal or axillary, 2-3 cm. diam [2. braunii](#)
Flower-heads borne at the ends of short winged branches, about 1.5 cm. diam.; involucre bracts uniformly puberulous, the outer reflexed [3. oloptera](#)
- 4 Stem-leaves linear or narrowly oblong-elliptic, up to 20 cm. long; inflorescence-leaves linear; leaves sparsely pubescent or glabrous beneath, scabrid above; veins prominent; stem-wings 4-6 mm. broad, scabrid; peduncles up to 3 cm. long; capitula 1-1.5 cm. diam.; middle involucre bracts pubescent in the mid-line and towards the apex outside; stems often reddish [4. heudelotii](#)
Stem-leaves broadly oblong to elliptic, rarely exceeding 15 cm. in length; inflorescence-leaves oblong to elliptic; leaves pubescent to tomentose beneath: **5**
- 5 Capitula 1 cm. or more diam.; robust herbs: **6**
Capitula 5-7 mm. diam.; nodding slender herb; leaves oblong, rounded at apex, whitish-puberulous with conspicuously articulated crisped hairs and yellow glands beneath, hairs and glands fewer above; stem-wings

about 3 mm. broad; peduncles slender, not exceeding 1.5 cm. long; involucre bracts in about 3 series, the outer reflexed [6. gracilis](#)

- 6 Leaves in the inflorescence elliptic-lanceolate; stem-leaves broadly oblong-elliptic, obtuse; stem and undersurface of leaves puberulous; venation clearly visible; stem-wings about 3 mm. broad; involucre bracts puberulous; whole plant aromatic [5. alata var. alata](#)

Leaves in the inflorescence elliptic; stem-leaves broadly elliptic; stem and under-surface of leaves densely tomentose with crisped yellowish-brown hairs, with the venation scarcely visible; stem-wings 5-6 mm. broad; involucre bracts woolly-tomentose [5a. alata var. montana](#)

1. **Laggera pterodonta** (DC.) Sch. Bip. ex Oliv. in Trans. Linn. Soc. 29: 94 (1873); F.T.A. 3: 324; Chev. Bot. 365.

APD: *Synonym of Blumea crispata* (Vahl) Merxm. var. *crispata*

Blumea pterodonta DC. (1834).

Laggera appendiculata of Adams in J. W. Afr. Sci. Assoc. 3: 115, not of Robyns (1943).

A strongly aromatic glandular weedy herb up to 5 ft. high with purple or greenish florets in numerous flower-heads about 1/2 in. long.

Sen.: Sinédone, Casamance (Jan.) Chev. 2039. **S.L.:** Kabala (Dec.) Deighton 4514! Rokupr (Feb.) Jordan 390! Magbema (Jan.) Jordan 763! Scarcies R., Wallia (Jan.) Sc. 6. **Laggera gracilis** (*O. Hoffm. & Muschl.*) *C.D. Adams* in J. W. Afr. Sci. assoc. 6: 151 (1961).

APD: *Synonym of Blumea adamsii* *J.-P. Lebrun & Stork*

Blumea alata var. gracilis *O. Hoffm. & Muschl.* In Mém. Soc. Bot. Fr. 2, 8c: 113 (1910).

A graceful erect herb 4-5 ft. high with slender branches and peduncles; florets pink in numerous small heads; although glandular, apparently not aromatic.

Guin.: Bambaya (Oct.) Jaeger 829! **S. L.:** Musaia (Dec.) Deighton 4479! **Ghana:** Kintampo, Ashanti (Dec.) Morton A1165! 1194! Banda, Ashanti (Dec.) Morton A1103! **N. Nig.:** Jos, 4,000 ft. (Dec.) Coombe 41 **[Br.] Cam.:** Vogel Peak, Adamawa, (Nov.) Hepper 1399!

Also in **Ubangi-Shari**.

52. HELICHRYSUM

Mill. corr. Pers. Syn. 2: 414 (1807). *Nom. cons.*

- 1 Plant leafy at flowering time:2
 Plant leafless at flowering time, except for two or three reduced leaves on the densely woolly stems, the latter from a rhizome; leaves when present basal, spatulate-elliptic or almost orbicular up to 20 cm. long and 7 cm. broad, mucronate, hairy on both surfaces; petioles slender, up to 10 cm. long; flower-heads 7-10 mm. long and 5-6 mm. broad, several in a terminal cluster; involucre bracts oblong-elliptic, tinged reddish [13. mechowianum](#)
- 2 Leaves small, 1-2 cm. long, at least in the upper part of the plant, linear-oblong to lanceolate, densely tomentose on both surfaces; flower-heads small in rounded clusters:3
 Leaves larger, various, not ericoid:4
- 3 Involucre bracts golden-brown fading to buff, blunt, membranous with frayed margins; capitula about 2 mm. long and 1 mm. broad in flower; leaves woolly-tomentose, often with recurved margins, ericoid ... [1. cymosum](#)
 Involucre bracts silvery-white, subacute, imbricate, glumaceous, entire; capitula 4-5 mm. long and 2 mm. broad; leaves smooth, the margins not recurved but whole leaf folded lengthwise at least when dry [2. glumaceum](#)
- 4 Upper part of shoot leafy with usually several distinct inflorescence branches; basal leaves mostly withered or absent at time of flowering;5
 Upper part of shoot usually simple with few leaves or leafless; basal leaves petiolate; flower-heads up to 4 mm. broad, numerous and tightly clustered in a subglobose very shortly branched terminal inflorescence: 11
- 5 Involucre bracts silvery-white or pinkish, broadly ovate, subacute:6
 Involucre bracts bright lemon-yellow or buff coloured:7
- 6 Flower-heads 1.5-2 cm. broad; leaves numerous, clustered on the stem, lanceolate to ovate-lanceolate, acutely acuminate, up to 12 cm. long and 3 cm. broad, scabrid above, woolly-tomentose beneath [3. mannii](#)
 Flower-heads about 1 cm. broad; leaves few, spread along the stem, obovate to obovate-lanceolate, obtuse, up to 8 cm. long and 2.5 cm. broad, yellowish-woolly-tomentose on both surfaces [4a. antunesii var. latifolium](#)
- 7 Involucre bracts bright lemon-yellow:8
 Involucre bracts buff, acute or acuminate, membranous; flower-heads more or less campanulate, about 3.5 mm. broad; leaves flat, linear-lanceolate; stem not winged [\[see Gnaphalium undulatum\]](#)
- 8 Leaves ovate-lanceolate, broadly subauriculate at base, 6-12 cm. long, 2.5-4 cm. broad, acute, densely woolly-tomentose on both surfaces; leaves on inflorescence branches broad, numerous; flower-heads 2-2.5 cm. across [5. cameroonense](#)
 Leaves linear to linear-lanceolate, less than 2 cm. broad, scabridulous or glabrescent above:9
- 9 Stems not winged; flower-heads 1-1.5 cm. broad; leaves narrowly lanceolate, acutely acuminate, sessile-auriculate, up to 12 cm. long, glabrescent above; leaves on inflorescence branches several, conspicuous [6. foetidum](#)
 Stems narrowly winged; leaves scabridulous above; leaves on inflorescence branches narrow, few or absent: 10
- 10 Capitula 6-7 mm. broad [7. biafranum](#)
 Capitula 1-2.5 mm. broad [8. odoratissimum](#)
- 11 Flower-heads oblong, 4-5 mm. long and 2.5-3 mm. broad; involucre bracts shiny-brown; leaves persistently white-tomentose beneath [9. globosum](#)
 Flower-heads more or less rounded in bud, up to 4 mm. long: 12
- 12 Involucre bracts pale dull yellow, white or white and tinged with purple; leaves persistently greyish-tomentose beneath; stem-leaves acuminate: 13
 Involucre bracts bright rich yellow; at least the lowest leaves glabrescent on both surfaces; stem-leaves acute [12a. nudifolium var. leiopodium](#)
- 13 Stem-leaves woolly above, sessile; lower leaves more or less cordate, acuminate, long-petiolate; involucre bracts acute, dull silvery-white or yellowish, at length spreading [10. albiflorum](#)
 Stem-leaves glabrescent above, very long-pointed, 1/2-amplexicaul; lower leaves with 3-5 conspicuous veins beneath; outer involucre bracts tinged reddish [11. rhodolepis](#)

1. *Helichrysum cymosum* (Linn.) Less. Syn. Gen. Comp. 302 (1832); F.T.A. 3: 353.

APD: *Synonym of Helichrysum forskahlii* (J.F. Gmel.) Hilliard & B.L. Burt var. *forskahlii*

Gnaphalium cymosum Linn. (1763)

Helichrysum cymosum subsp. *fruticosum* Hedberg in Symb. Bot. Upsal. 15, 1: 203, 339 (1957).

Helichrysum fruticosum Vatke (1875)-Moeser in Engl. Bot. Jahrb. 44: 257; F.W.T.A., ed. 1,2: 159; F. W. Andr. Fl. Pl.Sudan 3: 36.

An erect perennial aromatic herb or undershrub, usually woody at the base, from a few inches to 4 ft. high, thinly woolly; with very numerous small golden-brown flower-heads; very variable in leaf-size and spacing and in the shape of capitulum; in montane grassland.

[Br.] Cam.: Cam. Mt., 7,000 ft. to summit (Nov.-Apr.) Mann 1287! 1930! Mildbr. 10835! 10847! Dalz. 8322! Maitland 945! 1000! 1241! Migeod 156! Boughey GC 6969! Morton GC 6870! 7062! Keay FHI 28595! Bamenda Dist., 5,500-8,000 ft. (Feb.) Migeod 341! Savory 398! Morton K99! 206! Adams GC 11094! 11209! Bafut-Ngemba F.R. (Sept., Jan., Feb.) Hepper 2096! Keay & Lightbody FHI 28388! Ejiofor FHI 29381! **F. Po:** summit of the Peak (Dec., Mar.) Mann 284 (partly)! Boughey GC 10981! Guinea 2895.

Also in **Ethiopia**, **Sudan**, **Uganda**, **Kenya**, **Tanganyika**. **Congo**, **Angola** and **Arabia**.

[An extreme form with widely spaced larger leaves, longer more straggling stems and rather larger flower-heads, which may be a plant of shady habitats, is represented by Brenan 9543 and Boughey GC 10644 from Cameroon Mt., Migeod 442 from Bamenda and Hepper 2815 from Mambila Plateau.]

2. *Helichrysum glumaceum* DC. Prod. 6: 197 (1838). *APD acc*

Achyrocline glumacea (DC.) Oliv. & Hiern in F.T.A. 3: 340 (1877), partly; F.W.T.A., ed. 1, 2: 169; Berhaut Fl. Sén. 205.

A. luzuloides of Chev. Bot. 366, not of Vatke.

An annual or perennial bushy herb from a few inches to about 1 ft. high with small whitish-tomentose leaves; flower-heads narrow, pointed, silvery-white; on littoral dunes.

Sen.: Dakar (Jan., Oct.) Chev. 2045! Adam 9176!

Also in **Mauritania**, **Ethiopia**, **Eritrea**, **Socotra**, **Kenya** and **Tanganyika**.

3. *Helichrysum mannii* Hook. f. in J. Linn. Soc. 6: 12 (1862). *APD acc*

A stout herb 1-2 ft. high with a pithy stem, crowded sessile half-amplexicaul leaves, and several clustered silvery-white flower-heads 3/4 in. across; florets cream-coloured to pale yellow.

[Br.] Cam.: Cam. Mt., in grasslands from 8,000 ft. to the summit and in the crater Up (Nov.-Jan., Mar., Apr.) Mann 1937! Johnston 51! Kingsley Dundas FHI 20362! Migeod 194! Maitland 1285! Boughey GC 6989! 12641! **F. Po:** Summit of Clarence Peak (Dec.) Mann 615!

4. *Helichrysum antunesii* Volken & O. Hoffm. in Engl. Bot. Jahrb. 32: 149 (1902).

APD: *Synonym of Helichrysum quartinianum A. Rich.*

4a. *Helichrysum antunesii* var. *latifolium* C.D. Adams in J.W. Afr. Sci. Assoc. 2: 63 (1956).

APD: *Synonym of Helichrysum quartinianum A. Rich.*

A perennial herb with densely yellowish-woolly leaves and stems 2-3 ft. high; flower-heads about 1/3 in. across in several terminal corymbose clusters, pinkish when dry; **in montane grassland**.

[Br.] Cam.: Nchan, Bamenda, 5,000 ft. (May-June) Maitland 1446! 1516! 1709 bis! Bamungo, Bamenda (May) Ujor FHI 30303!

Also in **Angola**.

5. *Helichrysum cameroonense* Hutch. & Dalz. F.W.T.A., ed. 1, 2: 159 (1931). *APD acc*

An aromatic, glandular-viscid stout-stemmed herb up to 4 ft. high with lemon-yellow flower-heads 3/4-1 in. across, florets darker than the involucre bracts.

[Br.] Cam.: Cam. Mt., in grasslands up to about 13,000 ft. (Dec.-Feb., Apr.) Mann 1306! 1932! Mildbr. 10852! Dalz. 8307! Dundas FHI 13917! Hutch. & Metcalfe 59! Maitland 986! Keay FHI 28627! Plumptre 244! Boughey GC 6923! Bafut-Ngemba F.R., 5,000-6,000 ft. (Dec.) Tamajong FHI 22209! Bambul, 7,400 ft. (Dec.) Boughey GC 10770! L. Oku, 7,800 ft. (Jan.) Keay & Lightbody FHI 28511!

6. *Helichrysum foetidum* (Linn.) Moench Meth. Pl. 575 (1794); F.T.A. 3: 352, partly (excl. syn. B. mannii). *APD acc*

Gnaphalium foetidum Linn. (1763).

An erect aromatic branched herb with a pithy stem up to about 5 ft. high; leaves narrow, whitish beneath; flower-heads bright yellow, about 1/2 in. across.

S. Nig.: Calabar Hewan! Koloishe Mt., 6,000 ft., Ogoja (Dec.) Savory & Keay FHI 25095! Ikvette, Ogoja (Dec.) Savory & Keay FHI 25235! **[Br.] Cam.:** Cam. Mt., 5,000-10,000 ft. (Dec.-Apr.) Mann 1916! Also in **Ethiopia**, **Sudan**, **Congo** and **S. Tomé**.

7. **Helichrysum biafranum** *Hook.f.* in J. Linn. Soc. 7: 202(1862); F.T.A. 3: 351. *APD acc*

An erect slender branched herb up to 10 ft. high with narrowly winged stems and numerous bright yellow flower-heads about 1/4 in. broad.

[Br.] Cam.: Cam. Mt., in ravine above Buea, and at edge of forest near Mann's Springs, 7,000 ft. (Dec.) Mann 1934 (partly)! Boughey GC 12656!

8. **Helichrysum odoratissimum** (*Linn.*) *Less.* Syn. Gen. Comp. 301 (1832); Moeser in Engl. Bot. Jahrb. 44: 242 (1910); Hedberg in Symb. Bot. Upsal. 15, 1: 201, 338 (1957). *APD acc*

APD: Synonym of Helichrysum stenopterum DC.

Gnaphalium odoratissimum *Linn.* (1763).

Achyroclim hochstetteri *Sch. Bip. ex A. Rich.* (1848)-F.T.A. 3: 339; F.W.T.A., ed. 1, 2: 159.

A perennial herb with slender white-woolly erect or straggling winged branches 1-5 ft. high; flower-heads pale golden-yellow, very small and numerous in terminal corymbs.

S. Nig.: Ikvette, 5,200 ft., Ogoja (Dec.) Savory & Keay FHI 25228! **[Br.] Cam.:** Cam. Mt., 5,000-9,000 ft. (Dec.-May) Mann 1228! 1934 (partly)! Dalz. 8323! Maitland 660! 9221 970! Brenan 9387! Thorold CM 24! Keay FHI 29631! Boughey GC 11553! Morton GC 6869! Bamenda, 5,000-8,200 ft. (Dec., Jan., Mar.) Migeod 331! Boughey GC 11557! Morton K120! Adams 1516! Mba Kokeka Mt., 7,400 ft. (Jan.) Keay i Lightbody FHI 28394! Kumbo (Feb.) Hepper 1974! Maisamari, 4,600 ft., Mambila Plateau (Jan.) Hepper 1676! **F. Po:** Clarence Peak, 8,500 ft. (Dec.) Mann 607!

Extends from **Ethiopia** through **Sudan** and **Uganda** to Congo, **Angola** and Transvaal.

9. **Helichrysum globosum** *Sch.Bip. ex A. Rich.* Tent. Fl. Abyss. 1: 425 (1848); F.T.A. 3: 364. *APD acc*

A whitish-tomentose perennial herb a few inches to 1 ft. or more high with stiff leaves mostly in a basal rosette; inflorescence scapose, probably elongating during flowering, with numerous pale brown clustered flower-heads and pale yellow florets; **in montane grassland.**

[Br.] Cam.: Cam. Mt., 5,000-10,000 ft. (Nov.-Jan., Mar.) Mann 1912! Johnston 82! Maitland 482! Brenan 9504! 9574! Boughey GC 6806! 12526! Bamenda, 5,000ft. (Jan., June) Migeod 294! Maitland 1613! Ngel Nyaki, 6,400 ft., Mambila Plateau (Jan.) Hepper 1721! **F. Po:** summit of the Peak Mann 284 (partly)! Pico Serrano (Jan.) Guinea 1974! Moka (Dec., Jan.) Guinea 2188. Monod 10499!

Also in **Congo**, **Rhodesia** and **Angola**.

10. **Helichrysum albiflorum** *Moeser* in Engl. Bot. Jahrb. 44: 269 (1910).

APD: Synonym of Helichrysum nudifolium var. oxyphyllum (DC.) Beentje

An erect perennial herb 2-3 ft. high with the stems and the leaves on both surfaces pale greyish-tomentose; flower-heads numerous, about 1/8 in. broad, tightly clustered in a dense terminal corymb, pale silvery-yellow or white.

S. Nig.: Obudu Plateau, 5,500 ft., Ogoja (Aug.) Stone 48! **[Br.] Cam.:** Bamenda Dist., 5,400-7,500 ft. (Dec., Jan., Mar., Apr.) Boughey GC 10467! 11156! 11431! Morton K125! 207! Jakiri (Jan.) Keay FHI 28430! Mayo Binka, 4,000 ft., Nkambe (Feb.) Hepper 1884!

Also in **Congo**, **Uganda** and **Tanganyika**.

11. **Helichrysum rhodolepis** *Bak.* in Kew Bull. 1898: 150.

APD: Synonym of Helichrysum nudifolium var. oxyphyllum (DC.) Beentje

An erect perennial herb with simple whitish-tomentose stems 2-3 ft. high; flower-heads numerous in a dense terminal cluster, about 1/8 in. broad, with the inner involucre bracts silvery and the outer reddish; florets cream-coloured.

[Br.] Cam.: Kuk, 4,000 ft., Bamenda (Apr.) Maitland 1701! Ndop to Kumbo (Dec.) Boughey GC 11167! Crater L., Wum (Apr.) Morton K291!

Also in Cameroun, Sudan, Congo, Uganda, Kenya, Tanganyika and Nyasaland.

12. *Helichrysum nudifolium* (Linn.) Less. Syn. Gen. Comp. 299 (1832). *APD acc*

Gnaphalium nudifolium Linn. (1753).

12a. *Helichrysum nudifolium* var. *leiopodium* (DC.) Moeser l.c. 266 (1910).

APD: Synonym of Helichrysum nudifolium (L.) Less. var. *nudifolium*

Helichrysum leiopodium DC. (1838).

A perennial herb with a rosette of long-stalked strongly veined leaves, variably tomentose below, glabrescent above; flower-heads bright yellow in a dense terminal corymb; in montane grassland.

S. L.: Bintumane Peak, 5,000-6,000 ft. (Jan., May) Glanville 470! Deighton 5094! Loma Mta. (Feb.) Jaeger 4191! [Br.] Cam.: Bamenda Dist., 5,000 ft. Migeod 478! Morton K55! Lakom (Apr.) Maitland 1483! Bansa (Jan.) Keay FHI 28456! Bafut-Ngamba F.R. (Dec., Feb., Apr.) Ujor FHI 30008! Hepper 2156! Boughey GC 11450! Maisamari, 5,000 ft., Mambila Plateau (Jan.) Hepper 2800!

Also in Ethiopia, Congo and extending to Nyasaland and S. Africa.

13. *Helichrysum mechowianum* Klatt in Ann. Nat. Hofmus. Wien 7: 101 (1892). *APD acc*

APD: Synonym of Helichrysum congolanum Schltr. & O. Hoffm.

Helichrysum hoepfnerianum Vatke (1896).

Helichrysum congolanum Schltr. & O. Hoffm. (1903).

A perennial herb with flowering scapes often branched at or below ground level, 3-8 in high, appearing before the leaves; leaves in a rosette; flower-heads about 1/3 in. long, numerous in a dense terminal cyme, rich yellow, often tinged red; in grassland, flowering after fires.

Togo Rep.: Agome (Mar.) Schlechter 12960! N. Nig.: Jos Plateau (Jan.) Lely P21! Jos (Mar.) Hill 11! Vom Dent Young 151! [Br.] Cam.: Ndop to Kumbo (Dec.) Boughey 11160! Kakara, 4,700 ft., Mambila Plateau (Jan.) Hepper 1782!

Also in Cabinda, Congo, Tanganyika, Rhodesia and Angola.

53. GNAPHALIUM

Linn.-F.T.A. 3: 341.

- | | | |
|---|--|--------------------------------|
| 1 | Involucre spreading widely in fruit exposing the receptacle; annual herbs: | 2 |
| | Involucre campanulate in fruit; perennial herb; capitula about 3.5 mm. broad with acute or acuminate buff-coloured involucre bracts; leaves linear-lanceolate, about 6 cm. long, glabrescent above, absent from the lower parts of the shoot at flowering time | 3. undulatum |
| 2 | Capitula in rounded clusters, mostly at the ends of upper branches; receptacle 1.5 mm. diam.; stem usually erect, but occasionally branched low down and spreading from the base; lower leaves spatulate; upper leaves linear-oblongate, up to 8 cm. long | 1. luteo-album |
| | Capitula in elongated clusters at the ends of terminal and numerous lateral ascending branches; receptacle 1 mm diam.; whole plant usually less than 10 cm. high with decumbent branches spreading radially; rosette and stem-leaves spatulate, 2-3 cm. long | 2. indicum |

1. *Gnaphalium luteo-album* Linn. Sp. Pl. 851 (1753); F.T.A. 3: 343; Chev. Bot. 366; Berhaut Fl. Sén. 205.

APD: Synonym of Pseudognaphalium luteoalbum (L.) Hilliard & B.L. Burt

APD: Synonym of Laphangium luteoalbum (L.) Tzvelev

A herb of variable habit, usually annual, with erect or straggling grey-green cottony stems up to 2 ft. high; florets pale dull yellow, involucre bracts silvery, in heads about 1/6 in. across, diffuse or tightly clustered; **in sandy waste places, especially by streams and on riverbanks, or as a weed of farms in hilly districts, or in periodically burnt grassland** (where the plants are often larger and tend to a perennial habit).

Sen.: Dakar (June) Adam 12229! **Mali:** Toguéré de Saredina (May) Davey 95! Dogo (Apr.) Davey 580! Gao (Feb.) de Wailly 5337! **Guin.:** Kaba to Upper Mamou (May) Chev. 13266! Macenta (Mar.) Jac.-Fél. 1593! Kankan (Apr.) Adam 12150! **Ghana:** White Volta R., near Bawku (Apr.) Morton GC 8951! **N. Nig.:** Sokoto (Jan.-Feb.) Dalz. 408! 409! 410! Vom (Apr.) Dent Young 150! Morton. K327! Kano (Mar.) Onyeagocha FHI 7639! Onwudinjoh FHI 22361! Aboh Barter 194! Birnin Gwari (Mar.) Meikle 1334!

[Br.] Cam.: Cam. Mt., Buea, 3,000-3,500 ft. (Nov., Feb.-Apr.) Dalz. 8229! Migeod 110! Maitland 513! Morton K471! Brenan & Jones 9584! Mamfe (Jan.) Lobe Babute FHI 12979! Bamenda Dist., 5,800-6,600 ft. (Dec., Mar., Apr.) Boughey GC 10875! Adams GC 11224! Morton K284! Bama, Dikwa Dist. (Jan.) McClintock 176! **F. Po.:** (Jan.) Guinea 2189. Moka L. (Dec.) Boughey!

Widespread in warm countries.

2. *Gnaphalium indicum* Linn. Sp. Pl. 852 (1753); Chev. Bot. 366.

APD: Synonym of Helichrysum herniarioides DC.

APD: Synonym of Gnaphalium polycaulon Pers.

Gnaphalium niliacum Spreng. (1826)-F.T.A. 3: 344; F.W.T.A., ed. 1,2: 161; Berhaut Fl. Sén. 205.

Gnaphalium spatulatum Lam. (1797)-Berhaut Fl. Sén. 205.

A small spreading herb with numerous silvery-woolly flower-heads crowded in spike-like clusters; florets pale yellow; **on river-sand and in waste places in northern districts.**

Sen.: Perrottet! Roger 34! Niokolo-Koba (Jan.) Roberty 16659! **Mali:** Petal (Feb.) Davey 431! Sangara (Jan.) Chev. 264!

[Br.] Cam.: Bama, Dikwa Dist. (Jan.) McClintock 165!

Widespread in the Old World tropics.

3. *Gnaphalium undulatum* Linn. Sp. Pl. 852 (1753).

APD: Synonym of Pseudognaphalium oligandrum (DC.) Hilliard & B.L. Burt

APD: Synonym of Pseudognaphalium oligandrum (DC.) Hilliard & B.L. Burt

APD: Synonym of Pseudognaphalium undulatum (L.) Hilliard & B.L. Burt

Helichrysum steudelii Sch. Bip. ex A. Rich. (1848).

Gnaphalium steudelii Sch. Bip. ex Hochst. (1841).

A perennial herb with woolly-tomentose glabrescent shoots up to 15 in. high, rather woody at the base; florets dull yellow; **in hill grassland.**

[Br.] Cam.: Santa Mt., 8,500 ft., Bamenda (Apr.) Morton K312! Bamenda to Ndop, 5,000 ft. (Dec.) Adams GC 11283! Nguroje to Kakara, 5,400 ft., Mambila Plateau (Jan.) Hepper 1761!

Also in **Ethiopia, Uganda, Tanganyika, Nyasaland, Rhodesia, Natal** and **Madagascar**. [In the southern localities this species is apparently normally annual.]

54. SPHAERANTHUS

Linn.-F.T.A. 3: 332; Robyns in Kew Bull. 1924: 177-199; Ross-Craig in Hook. Ic. Pl., ser. 5, 6: 1 (1954).

- 1 Stems not winged; common involucre not visible; leaves oblong, mostly about 2 cm. long and 1 cm. broad, auriculate, subentire, densely pilose; heads about 1 cm. diam. [1. *flexuosus*](#)
- Stems winged; leaves decurrent: **2**
- 2 Common involucre conspicuous; stem-wings entire or nearly so; leaves subentire: **3**
- Common involucre not visible; stem-wings sharply toothed; receptacle orbicular; heads 9-13 mm. diam.; leaves linear to oblong-ob lanceolate, subulate-mucronate, up to 10 cm. long and 2 cm. broad, with sharply subulate marginal teeth, woolly [4. *senegalensis*](#)
- 3 Receptacle more or less flat; common bracts enclosing more than half of the inflorescence, broadly obovate, sharply acuminate, pubescent, with a strong midrib; heads 6-8 mm. broad; leaves about 4 cm. long, minutely scabrid and sparsely glandular [2. *angustifolius*](#)
- Receptacle subspherical; common bracts enclosing less than half of the inflorescence, broadly obovate, mucronate, puberulous, without a strong midrib; heads about 10 mm. broad; leaves up to 8 cm. long, glabrescent, punctate-glandular on both surfaces [3. *talbotii*](#)

1. *Sphaeranthus flexuosus* O. Hoffm. in Ann. Mus. Congo, sér. 4, p. x (1903); Ross-Craig in Hook. Ic. Pl., ser. 5, 6: 34, t. 3505B. *APD acc*

Sphaeranthus brounae Robyns (1924)-F.W.T.A., ed. 1, 2: 162.

A much-branched softly tomentose annual herb; flowers purple, in heads 1/4-1/3 in. across.

N. Nig.: Jos Plateau (Jan.) Lely P136! Gajibo, Bornu (Nov.) H. B. Johnston. N99! [**Br.**] **Cam.:** Gwoza, 1,100 ft., Dikwa Div. (Dec.) McClintock 56!

Also In **Sudan** and **Congo**.

2. *Sphaeranthus angustifolius* DC. Prod. 5: 370 (1836); Ross-Craig l.c. 56, t. 3513A. *APD acc*

APD: *Synonym of Sphaeranthus randii* S. Moore var. *randii*

Sphaeranthus nubicus Sch. Bip. ex Oliv. & Hiern in F.T.A. 3: 335 (1877); F.W.T.A., ed. 1, 2: 161.

Sphaeranthus lelyi Robyns (1924).

A glandular-pubescent, erect or diffuse annual herb 1-2 ft. high; flowers pale red in heads about 1/3 in. across.

Sen.: Casamance Perrottet 26. **Mali:** west of Agades Brodie! **Ghana:** White Volta R., Bawku to Bolga-tanga (Apr., Dec.) Morton GC 8961! A1354! **N. Nig.:** Kuka E. Vogel 39! Sokoto Lely 149! **Niger:** Maradi (Dec.) Vaillant 865!

Also in **Sudan**.

3. *Sphaeranthus talbotii* S. Moore in Macleod Chiefs & Cities Centr. Afr. 303 (1912), and in Cat. Talb. 56 (1913); Ross-Crais l.c. 65, t. 3516B.

APD: *Synonym of Sphaeranthus steetzii* Oliv. & Hiern

An annual herb 1-3 ft. high with glabrous, whitish stems; flowers purple in depressed-globose heads about 1/3 in. across.

N. Nig.: Dapchi to Damaturu (Nov.) Noble A19! Bornu (fr. June) Onochie FHI 23380! Birnin Kudu, Kano (Nov.) Onwudinjoh FHI 24022!

Also in **Cameroun**, **Sudan**, **Tanganyika** and **Nyasaland**.

4. *Sphaeranthus senegalensis* DC. Prod. 5: 370 (1836); Ross-Craig l.c. 25, t. 3502B; Berhaut Fl. Sén. 170. *APD acc*

APD: *Synonym of Sphaeranthus angolensis* O. Hoffm.

Sphaeranthus hirtus of F.T.A. 3: 334; Holl. 3: 384; Chev. Bot. 365, not of Willd.

Sphaeranthus lecomteanus O. Hoffm. & Muschl. (1910)-Chev. Bot. 365.

A branched annual herb 1-3 ft. high or half-decumbent; softly whitish-hairy; flower-heads reddish-purple about 1/3-1/2 in. across.

Sen.: Perrottet! Roger! Brunner 113! Farmar 130! Labgehar (Feb.) Roberty 16791! Dakar (May) Baldwin 5702! **Gam.:** Brown- Lester N2! S8! Ozanne! Pirie 31! Basse (Mar.) Told 11! Genieri (Feb.) Fox 55! **Mali:** Sienso, near San (June) Chev. 1042! Bamako (Apr.) Hagerup 26! Koussilé (Mar.) Roberty 17017! **Guin.:** Heudelot 771! **Ghana:** Dedoro-Tankara, near Navrongo (Dec.) Jengre, 3,000 ft., Zaria (Dec.) Coombe 85!

Also in **Mozambique**, **N. Rhodesia** and tropical Asia.

[Note: Morton GC 8796 from Lumbunga, Tamale, Ghana, bears a close resemblance to *S. gazaensis* Bremek., but it may be merely a regrowth on recently burnt-over ground from persistent stocks of *S. senegalensis*-C. D. A.]

55. BLEPHARISPERMUM

Wight ex DC. in *Wight Contrib. Bot. Ind.* 11 (1834); F.T.A. 3: 335.

- 1 A scrambling shrub with finely striate rusty-pubescent branchlets and a persistent deflexed thorn below the insertion of each leaf; leaves alternate, up to about 8 cm. long and 4 cm. broad, ovate to elliptic-lanceolate, rounded or broadly cuneate at base and slightly unequal-sided, acuminate, minutely apiculate, subentire, with about 5 pairs of lateral pubescent nerves; petiole slender, about 1 cm. long; flower-heads compound in a spherical cluster, terminating short, stiff lateral branches; each floret enclosed in a scale, the outer female with 4 corolla-lobes, and a large style with thick tongue-shaped style arms, the inner hermaphrodite or male with 5 corolla-lobes and a style with a minutely bifid apex; achene (formed by outer florets) flat, winged, obcordate-emarginate, ciliate, with about 6 unequal ascending-barbellate pappus-bristles in the sinus[*spinulosum*](#)

Blepharispermum spinulosum *Oliv. & Hiern* in F.T.A. 3: 335 (1877). *APD acc*

A scrambling deciduous shrub with persistent climbing-accessory thorns at the nodes; flowers greenish-white in spherical heads 1/2-3/4 in. across, sweet-scented in thickets of secondary forest.

IV. C.: Morénou, Eterokrou to Tchumkrou (Dec.) Chev. 22517! **Ghana:** Aburi scarp (fl. Nov.-Dec., fr. Feb.) Morton GC 6132! A1610! Adams 1917! Afram R., Mankrong (Apr.) Morton A723!

Also In **Congo** and **Angola**.

56. AMBROSIA

Linn.-F.T.A. 3: 370. *APD acc*

- 1 An annual or short-lived herb; stems pilose with whitish hairs; leaves petiolate, deeply bipinnately divided with lobulate segments, up to about 12 cm. long, softly pubescent; flower-heads unisexual; male involucre cup-shaped with the bracts united and crenately lobed, about 5 mm. diam., in a terminal raceme; male florets with a corolla; female capitula 1-flowered in axillary clusters, the involucre angular in fruit with 4-6 horns; female floret without a corolla; achene obovoid, smooth, without a pappus[*maritima*](#)

Ambrosia maritima *Linn. Sp. Pl.* 988 (1763); F.T.A. 3: 370; Berhaut *Fl. Sén.* 27, 48. *APD acc*

Ambrosia senegalensis *DC.* (1836)-P.T.A. 3: 371; Chev. *Bot.* 368; Trochain *Mem. I.F.A.N.* 2: 364 (1940).

An erect, branched aromatic herb 1-4 ft. high, often woody below and sometimes almost shrubby, with striate stems, more or less hoary; flower-heads small, greenish-yellow forming rather dense spikes; flowering during the rains.

Sen.: Perrottet! **Mali:** San (June) Chev. 1023! Djenné (June) Chev. 1114! Kabarah (Aug.) Chev. 1540! Timbuktu Hagerup 198a! **Ghana:** White Volta R., near Bawku (June) Hepper & Morton A3159! T. M. Harris! **N. Nig.:** Borgu-Barter 837! Bornu E. Vogel 87! Fodama (Nov.) Moiser 205! 244! Jebba (June) Meikle 1280! Onochie FHI 18674! Maiduguri (June) Ujor FHI 21939!

Distributed from the Mediterranean region through **Sudan**, eastern and S. Africa to the Mascarene Islands; also **Principe** and **S. Tomé**. *Vahl* (1792).

An erect branched stiff herb 1-2 ft. or more high, more or less pilose, with small white or mauve florets in narrow oblong heads forming spikes; a weed.

Guin.: Farmar! Gangan (Apr.) Adam 11920! Bambaya, Upper Niger (Jan.) Jaeger 3861! **S. L.:** Freetown (Feb.) Johnston, 61! Leicester Peak (Dec.) Sc. Elliot 3863! Mt. Aureol (Dec.) Dalz. 945! Bo (Jan.) Thomas 7410! Njala (Feb.) Deighton 1925! **Lib.:** Dimeï (Feb.) Barker 1216!

A native of tropical America, introduced into our area and Asia.

2. **Elephantopus mollis** *Kunth* Nov. Gen. & Sp. Pl. 4: 26 (1820); Philipson in J. Bot. 76: 303-304 (1938). *APD acc*

Elephantopus scaber of F.T.A. 3: 299, partly; of Chev. Bot. 359; of F.W.T.A., ed. 1, 2: 170; of Berhaut Fl. Sén. 204, not of Linn.

An erect branched coarsely hairy perennial herb with wrinkled leaves; usually 2-4 ft. high, but exceptionally up to 8 ft.; florets small, white, in bracteate heads up to 3/4 in. across; **in open grassy places in woodlands, savanna, fringing forest, and sometimes cultivated land.**

Extends to **Sudan** and **Angola**, and also in S. Tomé and Príncipe; a tropical American plant also introduced into Asia.

3. **Elephantopus senegalensis** (*Klatt*) *Oliv. & Hiern* in F.T.A. 3: 299 (1877); Chev. Bot. 359; Berhaut Fl. Sén. 204. *APD acc*

Synchodendron senegalense *Klatt* (1873).

An erect perennial herb 1-2 ft. high with hairy striate stems; leaves long, narrow and rather wrinkled; flower-heads in a terminal cluster 1-1 1/2 in. across; **in rocky savanna grassland or woodland, uncommon.**

Sen.: Niokolo-Koba Berhaut 1589! **Guin.:** Heudelot 646! Sambadougou, Faranna (Jan.) Chev. 20545! Fouta Djallon, 5,000 ft. (Sept.) Schnell 7168! **S. L.:** Musaia (Oct.) Also in **Angola**.

58. STRUCHIUM

P. Br. Hist. Jamaic. 312, t. 34 (1756).

Sparganophorus *Crantz* (1766)-F.T.A. 3: 262.

- 1 Stems thinly pubescent; leaves obovate-oblancheolate, acute, narrowed into the winged petiole, 7-15 cm. long, 2.5-6 cm. broad, crenate-serrate, minutely gland-dotted and slightly pubescent beneath; flower-heads sessile, clustered in the leaf axils, 5-7 mm. broad; involucre bracts in several rows, ovate, very acute, pilose, about 5 mm. long; achenes 3-5-angled, glabrous, glandular, crowned by a short tubular obscurely toothed cartilaginous pappus [sparganophora](#)

Struchium sparganophora (*Linn.*) *O. Ktze.* Rev. Gen. Pl. 1: 366 (1891). *APD acc*

Ethulia sparganophora *Linn.* (1763).

Sparganophorus vaillantii *Crantz* (1766)-F.T.A. 3: 262; Chev. Bot. 350; F.W.T.A., ed. 1, 2: 171; Berhaut Fl. Sén. 175.

Struchium africanum *P. Beauv.* Fl. Oware 1: 81, t. 48 (1806).

An erect or decumbent half-succulent herb 1-4 ft. high, with white, mauve or pink florets; **in damp places.**

Sen.: Casamance (Jan.) Chev. 2055. **Mali:** Négala (Jan.) Chev. 164. **Port. G.:** Pessubé, Bissau (Mar.) Esp. Santo 1498! **Guin.:** Heudelot 656! **S. L.:** Mofari, Digisinn (Jan.) Sc. Throughout tropical Africa and also in S. Tomé, Principe, the Mascarene Islands, S.E. Asia and tropical America.

59. TRIPLLOTAXIS

Hutch. in Kew Bull. 1914: 355.

- 1 Stems herbaceous, slender, puberulous; leaves shortly petiolate, ovate or ovate-lanceolate, acute or subacute, 2-6 cm. long, 1-3 cm. broad, serrate-crenulate to sub-entire, crispate-puberulous especially on the nerves; flower-heads very small in lax divaricately branched corymbs; peduncles slender 5-15 mm. long, shortly pubescent; involucre bracts 3-seriate, free, pubescent; achenes turgid, sparingly pilose; pappus cupular, pectinately toothed [stellulifera](#)

Triplotaxis stellulifera (Benth.) Hutch. in Kew Bull. 1914: 356 (1914).

APD: *Synonym of Vernonia stellulifera* (Benth.) C. Jeffrey

Herderia stellulifera Benth. (1849)-F.T.A. 3: 298; Chev. Bot. 358.

An erect or decumbent annual herb 1-2 ft. high with mauve or rarely white florets in flower-heads less than 1/4 in. long; a weed of pathsides and clearings in forest areas.

Also in **Uganda** and through Gabon and Congo to **Angola**; and in **Principe** and **S. Tomé**. See Appendix, p. 421.)

60. AEDESIA

O. Hoffm. in E. & P. Pflanzenfam. Nachtr. 1: 321 (1897), and in Engl. Bot. Jahrb. 24: 467 (1898). *APD acc*

- 1 Leaves lanceolate, rather abruptly acute, about 15 cm. long and 2.5 cm. broad at base, serrulate, glabrous, with about 15 pairs of lateral nerves; flower-head about 5 cm. diam., solitary, closely surrounded and over-topped by the upper leaves; involucre bracts 1-2-seriate, linear-spathulate, 3-4 cm. long, glabrous; achenes ribbed, pubescent; pappus buff, 2.5-3 cm. long [1. glabra](#)
- Leaves very similar to above but much narrower and elongated to a very narrow apex; flower-heads about 3 cm. diam. [2. baumannii](#)

1. **Aedesia glabra** (Klatt) O. Hoffm. in Engl. Bot. Jahrb. 24: 468 (1898); Chev. Bot. 381; Berhaut Fl. Sén. 170. *APD acc*

Bojeria glabra Klatt (1873).

Aedesia latifolia A. Chev. Bot. 381, name only.

A perennial herb with erect simple stems 1-2 ft. high from a stout knotted rootstock; florets purple; in damp grassland.

Sen.: Tombana, Casamance (Feb.) Chev. 3538! **Guin.:** Kouria to Ymbo (July) Chev. 14613 bis! Tonfili to Tagania, Faranna (Jan.) Chev. 20399! **S. L.:** Gonkwi Mt., Talla Plateau (Feb.) Sc. Also in Cameroun.

61. HERDERIA

Cass.-F.T.A. 3: 297, partly (excl. H. stellulifera).

- 1 Stems numerous, procumbent or ascending, variably woolly-pubescent; leaves spatulate-obovate, narrowed to base, rounded or subtruncate at apex and there sparingly dentate, 1-3(-4) cm. long, 5-15 mm. broad, thinly pubescent or villous when young, glandular beneath; flower-heads broadly campanulate, about 6 mm. long and broad; outer involucre bracts leafy, oblanceolate, inner connate to above the middle; florets all tubular; achenes 4-angled, glabrous; pappus-setae in two rows, the outer scale-like, the inner 3-5, longer and barbellate *truncata*

Herderia truncata Cass. Dict. Sci. Nat. 60: 599 (1830); F.T.A. 3: 298; Hutch. in Kew Bull. 1914: 354, with fig.; Chev. Bot. 358; Berhaut Fl. Sén. 173, 198. *APD acc*

Herderia truncata var. *chevalieri* O. Hoffm. (1908)-Chev. Bot. 359.

Vernonia yatesii S. Moore (1914).

A spreading annual herb, woody at the base; florets reddish-purple to mauve; in damp sandy places.

Sen.: fide Berhaut l.c. **Gam.:** Hayes 541! **Mali:** Sébi (July) Chev. 1165! Guguber Hagerup 318! Koriensa (July) Lean 54! **Port. G.:** Boé, Vehetche (June) Esp. A2069! **N. Nig.:** Aboh Barter 308! Abinsi (May) Dalz. 661! Yola (May) Dalz. 37!

A variety (var. *villosa* DC. Prod. 5: 14 (1836); Berhaut Fl. Sén. 174, 204) with the leaves densely villous with appressed hairs, has been recorded from Senegal (Perrottet).

62. VERNONIA

Schreb.-F.T.A. 3: 266. Nom. cons.

- 1 Trees, shrubs or woody climbers: 2
Herbs or undershrubs: 26
2 Involucre bracts with coloured or whitish appendages; capitula 1.5-3 cm. or more diam.; achenes often black

- and ribbed; pappus-setae more or less uniform, usually deciduous and buff in colour; leaves often toothed; erect shrubs or small trees: **3**
- Involucral bracts not appendaged: **12**
- 3** Leaves sessile: **4**
- Leaves petiolate: **6**
- 4** Leaves narrowed to base without auricles; pappus persistent with the outer setae shorter; achenes minutely pubescent [1. kotschyana](#)
- Leaves auricled; pappus caducous, more or less uniform; achenes glabrous: **5**
- 5** Capitula 3-4 cm. diam.; leaves up to 30 cm. long and 10 cm. broad, thinly pubescent beneath; branches shortly velvety [2. calvoana var. calvoana](#)
- Capitula 1-2 cm. diam.; leaves up to 15 cm. long and 7 cm. broad, densely pubescent beneath; branches thinly tomentose [2a. calvoana var. microcephala](#)
- 6** Capitula large, 3 cm. or more diam. in flower; pappus caducous: **7**
- Capitula smaller, hardly exceeding 2.5 cm. diam. in flower: **9**
- 7** Leaves thinly pubescent beneath; achenes glabrous; pappus uniform; lamina cordate-auriculate at junction with petiole [3. insignis](#)
- Leaves woolly-tomentose beneath; achenes pubescent; outer pappus very short: **8**
- 8** Involucral bracts softly tomentellous outside, linear; leaves rather small, irregularly dentate [4. stenostegia](#)
- Involucral bracts puberulous, lanceolate; leaves up to 20 cm. long and 6 cm. broad, serrate [5. tenoreana](#)
- 9** Lamina tapered to base; leaf-margin serrate: **10**
- Lamina broadly rounded at base; leaf-margin coarsely dentate; leaves tomentose beneath, puberulous only above; middle involucral bracts acute; achenes pubescent or minutely puberulous; pappus-setae of variable length, the outer shorter [8. iodocalyx](#)
- 10** Middle involucral bracts obtuse or rounded: **11**
- Middle involucral bracts acute; leaves thinly tomentose beneath; lamina-base broadly cordate at the junction with the petiole; achenes minutely puberulous [7a. leucocalyx var. acuta](#)
- 11** Leaves tomentose beneath; lamina-base decurrent on the petiole; achenes glabrous or nearly so [6. mokaensis](#)
- Leaves pubescent and glandular beneath; lamina-base very narrowly cordate at the junction with the petiole; achenes sparsely pubescent [7. leucocalyx var. leucocalyx](#)
- 12** Capitula about 2 cm. long, sessile or nearly so, each subtended by a tomentose foliaceous bract; involucral bracts lanceolate, acute; leaves very large, sessile, fimbriately lobed near base, undulate-margined, densely tomentose beneath; achenes glabrous; pappus uniform; a tree [9. frondosa](#)
- Capitula with involucre hardly exceeding 1 cm. in length, without foliaceous bracts; involucral bracts more or less ovate or oblong: **13**
- 13** Climbers or scramblers: **14**
- Erect shrubs or small trees: **16**
- 14** Leaves ovate, acutely acuminate; involucral bracts coloured; florets purple: **15**
- Leaves broadly ovate, rounded at apex, entire; petiole slender, about 1 cm. long, leaving a peg on the stem after leaf-fall; achenes glandular, glabrous or nearly so; involucral bracts green; florets white, 10-11 in each capitulum [12. andohii](#)
- 15** Inner involucral bracts not exceeding 5 mm. in length, more or less narrowed to the tip; outer pappus-setae very short, distinctly fimbriate, scale-like and spreading at maturity. [10. biafrae](#)
- Inner involucral bracts 6-7 mm. long, broadly rounded at the tip; outer pappus-setae very little broader than the inner and hardly scale-like; leaves often sinuate-margined [11. tufnelliae](#)
- 16** Leaves petiolate: **17**
- Leaves sessile, the lamina continuous with stem-clasping auricles; capitula mostly sessile along the inflorescence branches or clustered at their tips; achenes pubescent: **24**
- 17** Pappus 2-seriate, the outer setae shorter; florets mauve or white: **18**
- Pappus more or less uniform; florets white; **23**
- 18** Achenes pubescent; leaf-margin serrate: **19**
- Achenes glabrous; involucre up to 6 mm. long: **21**
- 19** Petiole auricled at base; capitula with a single floret [13. auriculifera](#)
- Petiole not auricled at base; florets several to each capitulum; leaves up to 30 cm. long and 10 cm. broad, softly pubescent when young, glabrescent; **20**

- 20 Leaves long-cuneate to base; florets 3-5 in each capitulum [14. myriantha](#)
 Leaves abruptly narrowed to the petiole; florets about 7 in each capitulum [15. ampla](#)
- 21 Branches of inflorescence short, flexuous, ascending, bearing capitula in dense rounded clusters; leaves abruptly narrowed to base, acute at apex, puberulous only on the veins beneath [16. thomsoniana](#)
 Branches of inflorescence spreading laterally with capitula distinctly separated, or not in large clusters; leaves cuneate, densely pubescent beneath: 22
- 22 Lateral branches of inflorescence hardly exceeding 8 cm. in length; capitula on peduncles over 5 mm. long or also a few clustered at the tips of branches; leaves oblanceolate, up to 15 cm. long and 5 cm. broad, entire, obtuse [17. doniana](#)
 Lateral branches of inflorescence wide-spreading, 15 cm. or more long; capitula subsessile or on peduncles not exceeding 5 mm. in length; leaves very large, sinuate-margined [18. conferta](#)
- 23 Lamina rather abruptly narrowed to base, entire, undulate; achenes glabrous, shallowly 10-ribbed, densely glandular between the ribs [19. colorata](#)
 Lamina long-cuneate to base, remotely toothed, flat; achenes pubescent [20. amygdalina](#)
- 24 Inflorescence subumbellate with numerous small capitula clustered at branch-tips; florets 3; involucre bracts 3-seriate, glumaceous, glabrescent; outer pappus-setae shorter and more or less united at base [21. subuligera](#)
 Inflorescence paniculate; involucre bracts 4-5-seriate, puberulous; pappus-setae uniform: 25
- 25 Florets 5-8; involucre about 5 mm. long; inner involucre bracts mostly obtusely rounded at apex without broad hyaline margins [22. theophrastifolia](#)
 Florets about 10; involucre about 7 mm. long; inner involucre bracts mostly acute at apex, with broad hyaline margins [23. richardiana](#)
- 26 Flower-heads appearing before or separately from the leaves; stem arising from a perennial stock: 27
 Flower-heads accompanying the leaves: 29
- 27 Apex of stock at most whitish-tomentose and scaly with reduced leaves; roots fusiform, fleshy; involucre bracts greyish-green, 4-5-seriate, thinly woolly outside, up to 1.3 cm. long, rounded at apex; leaves lanceolate, variable in size up to 15 cm. long and 6 cm. broad, serrulate, pustulate-scabrid above, densely tomentose beneath; pappus-bristles flat, the outer shorter; achenes strongly ribbed, pubescent and glandular ... [51. pumila](#)
 Apex of stock densely brownish-woolly; roots fibrous; involucre bracts purplish, slightly pubescent outside; leaves (when present) elongate-oblanceolate, 20 cm. or more long, 5-6 cm. broad, petiolate, minutely denticulate or repand-dentate, with numerous lateral nerves; pappus with the outer bristles successively shorter but not much broader or flatter than the inner; achenes pubescent: 28
- 28 Capitula solitary or tightly clustered on very short peduncles arising directly from the stock; involucre bracts linear-lanceolate, up to 1.5 cm. long, the inner with long-acute crisped apex; leaves softly pubescent beneath [24. chthonocephala](#)
 Capitula several, long-pedunculate in a branched almost leafless inflorescence; involucre bracts orbicular to oblong and rounded at apex, less than 1 cm. long; leaves puberulous beneath [25. subaphylla](#)
- 51..... Achenes pubescent at least on the angles: 52
- 29 Capitula solitary or subsolitary, terminal on simple leafy or leafless scapes; achenes pubescent: 30
 Capitula several to numerous in branched inflorescences: 36
- 30 Head subsessile, closely surrounded and overtopped by 5 or 6 of the uppermost leaves [26. chapmanii](#)
 Head distinctly pedunculate: 31
- 31 Leaves mostly in a basal rosette, oblanceolate, up to 12 cm. long and 4 cm. broad, tomentose when young; apex of the stock brown-woolly: 32
 Leaves mostly on the subaerial shoot: 33
- 32 Involucre bracts 2-3-seriate, ovate, acuminate, up to 1.5 cm. long and 7-8 mm. broad, purplish; peduncle terete; achenes 3-4 mm. long, ribbed; outer pappus of short fimbriate scales, the inner shortly plumose [27. acrocephala](#)
 Involucre bracts 3-4-seriate, lanceolate, acute, up to 2 cm. long and 4 mm. broad, not purplish; peduncle ribbed; pappus uniform, the outer setae shorter [28. gerberiformis](#)
- 33 Capitulum 3-5-5 cm. diam.; involucre bracts 4-5-seriate, lanceolate or narrowly oblong: 34
 Capitulum up to about 2 cm. diam.; involucre bracts 2-3-seriate, broadly ovate, purplish; leaves elliptic, up to 4 cm. long and 1.5 cm. broad, finely serrate; pappus as in No. 30 [31. jaegeri](#)
- 34 Leaves densely tomentose beneath [52c. guineensis var. procera](#)
 Leaves glabrous or puberulous beneath: 35
- 35 Leaves oblong-obovate, rounded at apex, up to 20 cm. long and 7 cm. broad, obscurely denticulate, glabrous; involucre bracts glabrous, long-apiculate; outer pappus shorter and slightly broader than the inner [29.](#)

macrocyaneus

- Leaves elliptic, acute, up to 6 cm. long and 2 cm. broad, serrate, puberulous; outer pappus of slender setae, shorter than inner; inner pappus-setae distinctly broadened and fimbriate towards apex [30. nimbaensis](#)
- 36** Innermost involucre bracts very long and tinged crimson on the inner surface, about twice as long as the pappus and achene; outer involucre bracts spreading down the peduncle; stems woolly at base; leaves obovate or obovate-lanceolate, cuneate at base, up to 15 cm. long and 7 cm. broad, denticulate, thick, harshly scabrid on both surfaces; achenes densely tomentose [32. nigritiana](#)
- Innermost involucre bracts not much longer than the others or the pappus, not coloured: **37**
- 37** Flower-heads sessile subtended by broad leafy bracts; leaves scabrid on both surfaces, glandular-punctate beneath, linear-lanceolate to elliptic, acute, entire or nearly so, up to 18 cm. long and 4 cm. broad; achenes villous: **38**
- Flower-heads not closely subtended by leafy bracts: **39**
- 38** Capitula exceeding 1 cm. diam., widely campanulate, few; involucre bracts sharply apiculate, arachnoid-pubescent [33. purpurea var. purpurea](#)
- Capitula smaller, rounded at the base; leafy bracts rather small; involucre bracts tomentose . [33a. purpurea var. schnellii](#)
- 39** Capitula sessile on elongated spike-like inflorescence branches; involucre tomentose but occasionally glabrescent, about 1 cm. long; leaves oblong or elliptic, apiculate, 5-15 cm. long, 2.5-6 cm. broad, scabrid above, woolly-tomentose beneath, nervose; outer pappus of very short setae; achenes pubescent [34. camporum](#)
- Capitula corymbose or paniculate: **40**
- 40** Outermost involucre bracts linear-filiform; pappus uniform; achenes pubescent: **41**
- Outermost involucre bracts not linear-filiform, rather short: **43**
- 41** Outer bracts nearly as long as the intermediate ones, slender; leaves narrowly lanceolate, up to 2 cm. broad, distantly serrate [35. pauciflora](#)
- Outer bracts rather short; leaves elliptic, up to 18 cm. long and 6 cm. broad, serrate or dentate; involucre up to 2 cm. long: **42**
- 42** Stems glabrescent or setulose; peduncles glabrescent except at the extreme apex; leaves elliptic-lanceolate, up to 10 cm. long and 2.5 cm. broad, abruptly narrowed into a very short petiole, sharply but not deeply serrate, harshly crisped-setulose on the veins beneath, rigid [36a. glabra var. occidentalis](#)
- Stems pubescent; peduncles dark-brownish pubescent; leaves elliptic, up to 18 cm. long and 6 cm. broad, long-cuneate to a short petiole, remotely and shallowly dentate, setulose on the midrib and veins beneath, minutely glandular and sparsely pubescent on the lamina, flaccid; capitula usually few [36b. glabra var. hillii](#)
- 43** Leaves linear to linear-lanceolate, up to 5 mm. broad; achenes pubescent; pappus whitish or buff: **44**
- Leaves more than 5 mm. broad: **47**
- 44** Leaves linear-acicular with recurved margins; flower-heads campanulate, 1-1.5 cm. long; involucre bracts acute, villous: **45**
- Leaves linear-lanceolate with numerous gland-pits beneath, 1-3 cm. long, more or less flat; achenes uniformly pubescent; pappus 2-seriate, inner setae shortly plumose; flower-heads up to 1 cm. long: **46**
- 45** Pappus 2-seriate, the outer of short scales, the inner shortly plumose; leaves 1-3 cm. long, scabrid-setulose; achenes 5-6-ribbed, pubescent on the ribs, glandular between; annual herb [37. perrottetii](#)
- Pappus more or less uniform, the outer setae shorter but not broader than the inner; leaves 1-1.5 cm. long, pubescent; perennial herb [38. bauchiensis](#)
- 46** Outer pappus of very short scales; capitula rather few on slender peduncles 1-2 cm. long; involucre bracts lanceolate, acute, keeled with a distinct median nerve; leaves glabrescent beneath; annual herb [39a. poskeana var. elegantissima](#)
- Outer pappus of short setae; capitula numerous on peduncles up to 4 cm. long; involucre bracts oblanceolate, obtuse or triangular-tipped, 3-nerved; leaves crisped-pubescent beneath; perennial herb [40. plumbaginifolia](#)
- 47** Pappus purple-tipped; leaves broadly oblanceolate, acute, 6-7 cm. long, 2-2.5 cm. broad, serrate at least in the upper half, glabrous, coarsely reticulate-veined; involucre bracts broadly linear-lanceolate, villous; capitula densely corymbose; achenes silky; outer pappus inconspicuous [41. djalensis](#)
- Pappus white, yellow, buff or brown: **48**
- 48** Capitula elongate-ovoid or turbinate, distinctly longer than broad, with involucre bracts in many series; shrubby plants with numerous upper stem-leaves and a leafy inflorescence; leaves narrowly elliptic to lanceolate, 4-8 cm. long; pappus 2-seriate; achenes pubescent: **49**
- Capitula not much longer than broad: **50**
- 49** Involucre bracts rounded and villous at apex, the outer ovate to orbicular, glumaceous below; leaves lanceolate with inrolled margins, densely gland-pitted and pubescent beneath; inner pappus-setae plumose, pale buff . [42. ocephala](#)

- Involucral bracts acute, tomentose especially near the margins, glabrescent, purplish-brown; leaves elliptic to oblanceolate, 4-6 cm. long, 1-2 cm. broad, rigidly leathery, closely reticulate-veined, shiny, glabrous, minutely gland-dotted beneath, flat; inner pappus-setae almost smooth, outer with a scale-like base, brown [43. saussureoides](#)
- 50** Outer pappus of short scales distinctly broader than the inner bristles; achenes 4(-5)-angled, often glandular between the ribs (to p. 274) : **51**
- Outer pappus of bristles shorter but not broader than the inner, or if broader at base produced into a simple bristle, or pappus uniform: **57**
- Achenes glabrous or glabrescent, glandular between the angles; perennial herbs: **54**
- 52** Achenes uniformly pilose; outer pappus-scales rather narrow, setaceous, stiff; capitula 2-3 cm. diam.; involucral bracts 4-6-seriate, acutely setose-acuminate, villous; leaves sessile, lanceolate, 5-6 cm. long and about 1 cm. broad, thinly scabrid-pubescent; perennial herb [44. philipsoniana](#)
- Achenes pubescent only on the angles, glandular between: **53**
- 53** Capitula 10-15 mm. broad, more or less clustered at the ends of spreading leafy branches; stem leafy at flowering time; upper leaves stem-clasping, oblanceolate, serrate; annual herb [45. ambigua](#)
- Capitula 5-8 mm. broad, densely clustered at the ends of long erect almost leafless branches; leaves at flowering time in a sub-basal rosette; seasonal 'biennial' herb [46. bambilorensis](#)
- 54** Capitula mostly shortly stalked: **55**
- Capitula mostly sessile, spread along the upper sides of unequally divaricate inflorescence-branches: **56**
- 55** Flower-heads 5-8 mm. broad, numerous in a compact terminal corymb; upper stem leafy; leaves shortly petiolate, elliptic-lanceolate, acute, or obtuse, 3-7 cm. long, 1-2 cm. broad, pubescent and minutely glandular beneath, scabrid above [47. blumeoides](#)
- Flower-heads 10-15 Tmm. broad, 4 to 12 in a terminal corymb, or sometimes in a single tight cluster; upper stem subscapose with a few sessile leaves; leaves rhomboid-elliptic, up to about 10 cm. long and 4 cm. broad, crisped-pubescent, minutely glandular and venose beneath, scabridulous above, margin crenate-denticulate [48. klingii](#)
- 56** Flower-heads 1.5-2 cm. broad; upper leaves sessile, 1/2-amplexicaul, densely tomentose beneath, glabrescent above [49. bamendae](#)
- Flower-heads 1-1.5 cm. broad; upper leaves rounded at base but not amplexicaul, densely pubescent beneath, scabrid above [50. rugosifolia](#)
- 57** Leaves woolly- or silky-tomentose beneath; achenes pubescent: **58**
- Leaves at most rather densely pubescent beneath; herbs or undershrubs: **63**
- 58** Leaves coarsely toothed, lanceolate to narrowly obovate, up to 15 cm. long and 5 cm. broad, white- or buff-woolly beneath; achenes ribbed; pappus-bristles flat, uniform, scarcely barbellate: **59**
- Leaves entire or minutely toothed; involucral bracts with dark tips; outer pappus mostly of shorter bristles; perennial herbs: **61**
- 59** Capitula numerous in a branched corymb (1-)1.5-2.5 cm. broad in flower: **60**
- Capitula very few or solitary, terminal on long simple branches, 3-6 cm. broad in flower [52c. guineensis var. procera](#)
- 60** Appendage to the involucral bracts blunt, smoothly obtuse or ragged [52a. guineensis var. guineensis](#)
- Appendage to the involucral bracts acute, coloured, papery [52b. guineensis var. cameroonica](#)
- 61** Leaves sessile and rounded at base, ovate-lanceolate, 3-6 cm. long, 1-1.5 cm. broad; capitula 7-8 mm. long on leafy branches [53. nestor](#)
- Leaves narrow at base: **62**
- 62** Inflorescence a broad panicle; capitula sessile along spreading branches, about 6-8 mm. long; involucral bracts pubescent outside; leaves broadly lanceolate; achenes 4-ribbed [54. cistifolia](#)
- Inflorescence a small corymb; capitula 5-8 mm. diam.; involucral bracts appressed-silky; leaves lanceolate, mucronate, 2-10 cm. long, 1-2 cm. broad, distinctly veined and uniformly densely silky beneath, thinly silky and glabrescent above; pappus more or less uniform [55. smithiana](#)
- 63** Leaves mostly basal, oblanceolate, up to 25 cm. long and 4 cm. broad; involucral bracts obtuse in heads 1-1.5 cm. broad [25. subaphylla](#)
- Leaves not mostly basal: **64**
- 64** Achenes glabrous, glabrescent or glandular only: **65**
- Achenes pubescent or tomentose; pappus 2-seriate, the outer bristles shorter but not broader than the inner: ... **66**
- 65** Leaves sessile, rounded and clasping at base, lanceolate, up to 8(-12) cm. long and 2(-2.5) cm. broad, very shallowly dentate, apiculate, minutely glandular-punctate beneath; involucral bracts thinly pubescent, glabrescent; outer pappus-setae about 1/3 the length of the inner, broadened into a scale-like base; achenes 1.5

mm. long, rounded on one side, smooth, hardly angled [56. migeodii](#)

Leaves petiolate, narrowed to base, obovate to oblanceolate, rigidly leathery, up to 10 cm. long and 3 cm. broad, remotely serrulate, closely reticulate, sparsely glandular-punctate beneath, rusty-pubescent when young, glabrescent; capitula very small with about 5 florets, less than 1 cm. long and 5 mm. broad; involucre bracts obtuse; pappus uniform; achenes 3 mm. long, strongly 8-10-ribbed, glandular; woody undershrub [57. glaberrima](#)

- 66** Involucre bracts long-tapered, acute; capitula about 5 mm. broad in flower; leaves broadly ovate, obtuse, crenate-dentate, abruptly narrowed to the petiole [58. cinerea](#)

Involucre bracts abruptly triangular-tipped or obtuse, apiculate: **67**

- 67** Capitula about 1 cm. broad in flower, pedunculate in broad corymbs; stem simple or sparingly branched, striate, thinly pubescent; leaves ovate-rhomboid, up to 8 cm. long and 2 cm. broad, very acute, mucronate, remotely serrate-dentate, tapered at the base to a short petiole, thinly pubescent and gland-dotted beneath, scabridulous above [59. undulata](#)

Capitula 5-8 mm. broad in flower, subsessile or pedunculate in a divaricately branched inflorescence; stem woody, profusely and shortly branched, terete, minutely but densely white-tomentose; leaves obovate to oblanceolate, 1-2 cm. long, 5-10 mm. broad, rounded at apex, tapered at base, subentire, minutely puberulous, glabrescent, gland-dotted beneath [60. cinerascens](#)

- 1. *Vernonia kotschyana* Sch. Bip. in Walp. Rep. 2: 947 (1843); F.T.A. 3: 380; Chev. Bot. 355; Berhaut Fl. Sén. 176.**

APD: Synonym of Vernonia adoensis var. kotschyana (Sch. Bip. ex Walp.) G. V. Pope

A shrub with erect, pithy, striate, sparsely pubescent stems 2-5 ft. high; florets pale mauve in heads 1-1 1/2 in. across.

Sen.: fide Chev. l.c. **Mali:** fide Chev. l.c. **N. Nig.:** Kano (Dec.) Hagerup 641! Sokoto Lely 151! Katagum (Sept.) Dalz. 173! Mongu, 4,300 ft. (July) Lely 385! **[Br.] Cam.:** Gurum, Vogel Peak, Adamawa (Nov) Hepper 1318!

Extends through Cameroun and Ubangi-Shari to **Ethiopia**.

***Vernonia calvoana* (Hook. f.) Hook. f.**

- 2. *Vernonia calvoana* var. *calvoana* in Bot. Mag. 94: t. 5698 (1868); F.T.A. 3: 293; Adams in J.W. Afr. Sci. Assoc. 3: 117. *APD acc***

***Stengelia calvoana* Hook. f. (1864).**

A shrub up to about 15 ft. high with ribbed velvety pithy branches and rather large sessile leaves; florets purple to pale mauve in heads nearly 2 in. across which have white appendages to the middle and inner involucre bracts; **in clearings in montane forest.**

[Br.] Cam.: Cam. Mt., 2,500-7,000 ft. (Nov.-Feb.) Mann 1238! Dalz. 8325! Dunlap 112! Maitland 124! 242! Migeod 38! 49! Steele 5! Moyuko, 2,000 ft. (Apr.) Hutch. & Metcalfe 84!

- 2a. *Vernonia calvoana* var. *microcephala* C. D. Adams l.c. 118 (1957). *APD acc***

A shrub 2-6 ft. high; flower-heads up to 1 in. across; florets mauve; **in sheltered places in montane grassland.**

[Br.] Cam.: Sagbo, 5,400 ft., Bamenda to Ndop (Dec.) Boughey GO 104441 Nkambe to Misage, 6,000-7,000 ft. (Sept.) Lightbody FHI 26259! Mambila Plateau, 4,600-6,000 ft., Adamawa (Jan.) Hepper 1671! Latilo & Daramola FHI 28998!

[A variety intermediate between *V. calvoana* var. *calvoana* and var. *microcephala*, occurring in Kenya and Uganda, has been described (Adams l.c. 118). Low regrowth from the stem-bases, and presumably also young plants of *V. calvoana* in W. Africa, may have small leaves lacking basal auricles, which therefore, appear to be petiolate rather than sessile-C. D. A.].

- 3. *Vernonia insignis* (Hook. f.) Oliv. & Hiern in F.T.A. 3: 292 (1877).**

APD: Synonym of Vernonia calvoana (Hook. f.) Hook. f. var. calvoana

***Stengelia insignis* Hook. f. (1864).**

A shrub or small tree 15-20 ft. high with flower-heads about 2 in. across; florets pale purple to mauve; **in clearings in montane forest.**

[Br.] Cam.: Cam. Mt., 3,000-8,250 ft. (Sept., Dec.-Feb., Apr.) Mann 1925! Maitland 1027! Keay FHI 28647! Adams GC 11725! Boughey A502b! GC 17461! Irvine 1465! Morton GC 7102!

4. **Vernonia stenostegia** (Stapf) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 166 (1931). *APD acc*

Candidea stenostegia Stapf in Bot. Mag. 149: t. 8981 (1923).

A shrub 2-6 ft. high, sometimes leafless below; flower-heads 1-1 1/2 in. across with linear, velvety involucre bracts; florets pale bluish-purple.

N. Nig.: Nassarawa Robins! Vom (Apr., Dec.) Dent Young 136! Morion K334! Jos, 4,000 ft. (Feb., Mar., Dec.) Hill 10! Batten-Poole 211! Coombe 15! Lely P160 Pankshin (Dec.) W. D. MacGregor 418!

5. **Vernonia tenoreana** Oliv. in Trans. Linn. Soc. 29: 92 (1873); F.T.A. 3: 290. *APD acc*

Vernonia lasiolepis O. Hoffm. (1898)-Chev. Bot. 355.

An erect shrub up to 6 ft. high with flower-heads 1-1 1/2 in. across; florets cream-coloured.

Sen.: fide F.T.A. l.c. Port. G.: R. Buba (Dec., Jan.) Esp. Santo 2335! d'Orey 214! Chitole (Dec., Feb.) Esp. Santo 2882! 3170! Bambadinca, Bafata (Dec.) Esp. Santo 3833! Guin.: Timbo (Oct.) Also in Cameroun.

6. **Vernonia mokaensis** Mildbr. & Mattf. in Engl. Bot. Jahrb. 59, Beibl. 133: 5 (1924); Guinea in Anal. Inst. Bot. Cav. 10, 1: 319 (fig.), 320.

APD: Synonym of Vernonia calvoana var. mokaensis (Mildbr. & Mattf.) C. Jeffrey

A shrub or small tree up to 12 ft. high with serrate leaves narrowed to both ends; flower-heads up to about 1 in. across with purple florets.

F. Po: Moka, scrub and grassland, 4,000-4,500 ft. (Sept.-Nov., Dec. without fl.) Mildbr. 7077. Tessman 2807. Boughey 26! Wrigley & Melville 678! Finca Puente, Musola (Jan.) Guinea 1638!

Vernonia leucocalyx O. Hoffm.

7. **Vernonia leucocalyx** var. **leucocalyx** in Engl. Bot. Jahrb. 30: 422 (1901).

APD: Synonym of Vernonia calvoana var. microcephala C. D. Adams

A shrub 6-9 ft. high with elliptic, acute, long-cuneate leaves; flower-heads about 1 in. across with broad white involucre bract appendages and blue florets; in upland, grassland.

S. Nig.: Mt. Koloishe, 5,000 ft., Obudu (Dec.) Savory & Keay FHI 250691 [Br.] Cam.: Batibo to Bali, Bamenda (Jan., May) Keay FHI 28331! Ujor FHI 30380!

Also in Tanganyika.

7a. **Vernonia leucocalyx** var. **acuta** C. D. Adams in J.W. Afr. Sci. Assoc. 3: 120 (1957).

APD: Synonym of Vernonia calvoana var. acuta (C. D. Adams) C. Jeffrey

An erect shrub 9-12 ft. high; flower-heads 1/2-1 in. broad with acutely appendaged white involucre bracts and purple florets; in the open margins of montane forest.

[Br.] Cam.: Bamenda, 6,000-8,200 ft. (Dec.-Jan., Apr.-June): Lakom Maitland 1485! Bambui Boughey GC 10776! Santa Boughey GC 11036! Bafut-Ngemba F.R. Keay & Lightbody FHI 28366!

8. **Vernonia iodocalyx** O. Hoffm. in Engl. Pflanzenw. Ost-Afr. C: 403 (1895).

APD: Synonym of Vernonia lasiopus var. iodocalyx (O. Hoffm.) C. Jeffrey

An erect shrub with coarsely dentate petiolate leaves; flower-heads under 1 in. broad, distinctly stalked but clustered at the ends of velvety branches, with white-appendaged acute involucre bracts; florets exserted, purple fading to mauve.

Guin.: Mali, 5,000 ft., Fouta Djallon (Sept., Oct.) Schnell 7169! Jac.-Fél. 1997!

Also in **E. Africa**.

9. **Vernonia frondosa** Oliv. & Hiern in F.T.A. 8: 294 (1877). *APD acc*

APD: *Synonym of Vernonia titanophylla Brenan*

Vernonia aff. frondosa of Schnell in Mém. I.F.A.N. 22: 512 (1952).

A little-branched shrub or small tree 15-20 ft. high and 1 ft. girth; leaves sessile, up to 3 ft. long and 1 1/2 ft. broad, crowded near the top of the stem; flower-heads sessile or subsessile, about 1 in. across, in clusters along the branches of a panicle 2-3 ft. broad; florets with purple lobes and white tubes; **forest clearings**.

Iv. C.: Nimba Mts., 3,000 ft. (Dec., Apr.) Adam 16464! Schnell 5189. **S. Nig.:** Ondo Sankey 9! Kennedy 1979! 2078! Epe Barter 3294! Calabar to Oban (Jan.) Onochie & Okafor FHI 36000x! Omo F. R., Ijebu (Dec.) Onochie FHI 36593! **[Br.]**

Cam.: R. Kindong F.R., Kumba (Jan.) Binuyo & Daramola FHI 35072!

Also in **Cameroun**.

10. **Vernonia biafrae** Oliv. & Hiern in F.T.A. 3: 270 (1877); F.W.T.A., ed. 1, 2: 168, partly (excl. Migeod 381; Mildbr. 10800). *APD acc*

Vernonia senecioides A. Chev. in Mém. Soc. Bot. Fr. 28: 259 (1917); Chev. Bot. 357.

A climbing or scrambling shrub with ribbed puberulous branches, and copious panicles of purple campanulate flower-heads 1/4 in. wide.

Guin.: Tonfili, Faranna (Jan.) Chev. 20436! **S. L.:** Njala (Feb.) Deighton 2441! Makali (Feb.) Deighton 4057! **Ghana:** Aburi Hills (Mar.) Johnson 622! Mt. Also in **Congo**.

11. **Vernonia tufnelliae** S. Moore in J. Bot. 46: 292 (1908).

APD: *Synonym of Vernonia biafrae Oliv. & Hiern*

Vernonia biafrae of F.W.T.A., ed. 1, 2: 168, partly (Migeod 381; Mildbr. 10800), not of Oliv. & Hiern.

A scandent shrub like the last with slightly larger more brightly coloured flower-heads and coarsely toothed or sinuate-margined leaves; at **the margins of montane forest**.

[Br.] Cam.: Cam. Mt., 3,000 ft. (Dec.) Mildbr. 10800! Bangwa, Mamfe (Jan.) Lobe Babute Cam 21/37! Bamenda, 6,000-7,500 ft. (Sept., Dec., Jan.) Adams GC 11325! Keay & Lightbody FHI 28355! Migeod 381! Kumbo (Feb.) Hepper 1968! Binka, Nkambe Div. Savory UCI 365!

Also in **Rio Muni, Congo, Uganda** and **Tanganyika**.

12. **Vernonia andohii** C.D. Adams in J. W. Afr. Sci. Assoc. 3: 115 (1957). *APD acc*

Microglossa volubilis var. **laxiflora** A. Chev. Bot. 363, name only.

A scrambling shrub up to 30 ft. high **in open forest**; florets white in numerous shortly stalked heads less than 1/2 in. long.

Iv. C.: Bouroukrou (Dec.-Jan.) Chev. 16804! **Ghana:** Asuansi (Jan.) Fishlock 20! Abetifi, 2,000 ft., Kwahu (Jan.) Irvine 1672! Pepease, 2,000 ft. (Jan.) Irvine 1827! Mt. Ejuanema, Kwahu (Dec.) Adams 5138! Akropong, Akwapim (Jan.) Irvine 2619! Obuasi, Ashanti (Feb.) Andoh FH 4137!

13. *Vernonia auriculifera* *Hiern* in Cat. Welw. 1: 539 (1898).

APD: Synonym of Gymnanthemum auriculiferum (Hiern) Isawumi

Vernonia uniflora *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 169 (1931).

A shrub or small tree 6-15 ft. high with broad corymbs of minute mauve flowers; in open grassland or at the margin of forest in mountainous country.

[Br.] Cam.: Bamenda, 6,000-7,500 ft. (Dec., Jan., Mar., Apr.) Boughey GC 11421! Migeod 356! Maitland 1629! Morton K47! Johnston FHI 10438! Bafut-Ngemba F.R. (Jan.) Tiku FHI 22234! Bamenda to Ndop, 5,000 ft. (Dec.) Adams GC 11093! Ndu (Feb.) Hepper 1945!

Also in Congo, Uganda, Kenya and Angola.

14. *Vernonia myriantha* *Hook. f.* in J. linn. Soc. 7: 198 (1864); F.T.A. 3: 297; F.W.T.A., ed. 1, 2: 169 (excl. Chev. 20330, 20689 and Migeod 484). *APD acc*

A shrub or small soft-wooded tree 10-20 ft. high with numerous small heads of white florets in dense terminal corymbose panicles.

[Br.] Cam.: Cam. Mt., 5,000-6,000 ft. (Dec.-Mar.) Mann 1913! 1936! Dalz. 8195! Dunlap 80! Keay FHI 28646! Dundas FHI 13907! Maitland 256! 516! 954! 1227! Adams GC 11763! F. Po: 4,000-5,000 ft. (Dec.) Mann 622!

15. *Vernonia ampla* *O. Hoffm.* in Engl. Bot. Jahrb. 30: 423 (1901); Adams in J. W. Afr. Sci. Assoc. 2: 64 (1956).

APD: Synonym of Vernonia myriantha Hook. f.

Vernonia conferta of Chev. Bot. 353, partly (Chev. 20330; 20689), not of Benth.

Vernonia myriantha of F.W.T.A., ed. 1, 2: 169, partly (Chev. 20330, 20689); of Aubrév. Fl. For. C. Iv., ed. 2, 3: 313, not of Hook. f.

A shrub or small tree 15-20 ft. high with mauve florets in numerous flower-heads each about 1/2 in. long; in clearings of upland forest.

Guin.: Dalaba Plateau, 3,600 ft. (Dec.) Chev. 20330! Soundia, Kissi (Feb.) Chev. 20689! Timbi-Madina (fr. Mar.) Adam 11637 bis! S. L.: Duunia, Talla (Feb.) Sc. Elliot 4833! Moria, Scarcies (Feb.) Sc. Elliot 4839! Loma Mts. (Jan.) Jaeger 4122!

Also in Ethiopia and south to Transvaal and Zululand.

16. *Vernonia thomsoniana* *Oliv. & Hiern* in Trans. Linn. Soc. 29: 91 (1873); F.T.A. 3: 295. *APD acc*

Vernonia amygdalina of Chev. Bot. 352, partly (Chev. 20398).

Vernonia pobeguini *Aubrév.* Fl. For. Soud.-Guin. 487, t. 109, fig. 3 (1950), French descr. only.

A shrub up to about 10 ft. high with numerous flower-heads 1/4 in. long densely packed in rounded terminal clusters; florets mauve; in upland savanna.

Guin.: Timbo (Jan.) Pobéguin 52! 1431! Dalaba to Pitou (Dec.) Pobéguin Tonfili, Faranna (Feb.) Chev. 20398! [Br.] Cam.: R. Metschum, Bafut, 3,000 ft., Bamenda (Jan.) Keay FHI 28521!

Extends through Cameroun and Congo to Sudan, east tropical Africa and Angola.

17. *Vernonia doniana* *DC.* Prod. 5: 23 (1836); F.T.A. 3: 295. *APD acc*

A shrub 6 ft. high, rusty-pubescent on the branchlets and inflorescence, with small campanulate-turbinate flower-heads 1/4 in. across in short racemes or pedunculate clusters; florets? purple.

S. L.: Don! Leicester Peak Miss Turner! Freetown (Aug.) Burbridge 522! Lib.: Bilimu (Jan.) Harley 1350!

18. *Vernonia conferta* *Benth.* in Fl. Nigrit. 427 (1849); F.T.A. 3: 294; Chev. Bot. 353, partly (excl. Chev. 20330; 20689); Aubrév. Fl. For. C. Iv., ed. 2, 3: 314, t. 369.

APD: Synonym of Vernonia doniana DC.

A tree with a slender stem up to 25 or 30 ft. high, pale rusty-tomentose on branchlets and inflorescence, with large distinctly petiolate sinuate-margined leaves crowded near the ends of the branches; florets white or pale mauve in numerous small flower-heads forming a very large terminal erect panicle; **in secondary forest**.

Throughout central and south tropical Africa.

[This is a variable species; the leaves of many plants, particularly from the drier and more northerly localities, have more acute tips and the undersurfaces much less woolly with the secondary and tertiary veins clearly visible; in these plants the middle and outer involucral bracts may be mucronate or acuminate, rather than rounded, with the tips slightly reflexed; there is also variation in the number and distribution of glands on the involucral bracts.-C. D. A.].

20. **Vernonia amygdalina Del.** Cent. Pl. Afr. 41 (1826); F.T.A. 3: 284; Chev. Bot. 352, partly (excl. Chev. 20398); Aubrév. Fl. For. C. Iv., ed. 2, 3: 313, and Fl. For. Soud-Guin. 488, t. 109, fig. 2.

APD: Synonym of Gymnanthemum amygdalinum (Delile) Sch. Bip. ex Walp.

Vernonia senegalensis of Chev. Bot. 357, partly (Chev. 15105), not of Less.

A shrub or small tree 6-15 ft. high with striate, pubescent branchlets becoming glabrous; florets sweet-scented, white, in heads 1/4 in. broad; pappus buff or reddish; common and **often planted**.

Throughout tropical Africa from **Ethiopia** and **Sudan** to Rhodesia, **Angola**, S. Tomé and Annobon.

21. **Vernonia subuligera** *O. Hoffm.* in Engl. Pflanzenw. Ost-Afr. C: 403 (1895).

APD: Synonym of Vernonia myriantha Hook. f.

Vernonia myriantha of F.W.T.A., ed. 1, 2: 169, partly (Migeod 484), not of Hook. f.

A shrub about 12 ft. high with flower-heads in dense rounded clusters; florets bluish-mauve.

[Br.] **Cam.:** Bamenda, 5,500-7,000 ft. (Jan., Feb.) Keay & Lightbody FHI 28353! Migeod 484! Bafut-Ngemba F.R., 6,500 ft. (Jan.) Tiku FHI 22235!

Also in **Uganda** and **Tanganyika**.

22. **Vernonia theophrastifolia** *Schweinf. ex Oliv. & Hiern* in F.T.A. 3: 294 (1877). *APD acc*

A shrub or small tree up to 15 ft. high with sessile auriculate oblanceolate leaves and small sessile or subsessile flower-heads in a divaricately branched inflorescence; florets reddish-purple.

[Br.] **Cam.:** Lekitaba, Mambila Plateau, Adamawa (Jan.) Latilo & Daramola FHI 34376!

23. **Vernonia richardiana** (*O. Ktze.*) *P.-Sermolli* in Webbia 7: 340 (1950).

APD: Synonym of Vernonia theophrastifolia Schweinf. ex Oliv. & Hiern

Cacalia richardiana *O. Ktze.* (1891).

Vernonia seretii *De Wild.* in Ann. Mus. Congo, ser. 5, 2: 207 (1907); Adams in J.W. Afr. Sci. Assoc. 2: 66 (1956).

Vernonia myriocephala *A. Rich.* (1848)-F.T.A. 3: 296, not of DC. (1836).

A shrub 6-10 ft. high, unbranched below, with sessile undulate-margined leaves; flower-heads subsessile in divaricately branched panicles; florets bluish-purple to mauve.

Ghana: Amedzofe Hill, 2,300 ft. (Feb., Apr.) Morton GC 8410! A1999! A2690! **N. Nig.:** Jos Plateau Batten-Poole 212! Kurra Falls, Jos (Dec.) Savory 119! Naraguta, 4,000 ft. (Dec.) Coombe 41! Ropp (Dec.) W. D. MacGregor FHI 10503!

[Br.] **Cam.:** Mayo Selbe, Gashaka Dist., Adamawa (Jan.) Hepper 1634!

Also in **Ethiopia**, **Sudan** and across central Africa to Congo.

24. **Vernonia chthonocephala** *O. Hoffm.* in Bol. Soc. Brot. 13: 17 (1896). *APD acc*

A dwarf perennial herb with flower-heads about 1 in. across, having purplish involucre bracts, usually appearing near the ground after grass burning and separately from the leaves; leaves oblanceolate, up to about 8 in. long; florets purple.

Togo Rep.: Bismarckburg Büttner 379. **N. Nig.:** Vom, 3,000-4,500 ft. (Jan.) Dent Young 133! Jos (Dec.) Monod! [Br.]

Cam.: Kakara, 4,900 ft., Mambila Plateau (Jan.) Hepper 1775!

Also in **Sudan**, **Uganda**, **Kenya**, **Congo**, **Nyasaland** and **Angola**.

25. **Vernonia subaphylla** *Bak.* in Kew Bull. 1895: 290. *APD acc*

APD: Synonym of Vernonia subaphylla Baker

A perennial herb with few round-based flower-heads, about 1/2 in. across, terminal on the branches of an almost leafless stem about 2 ft. high, arising from a densely woolly stock; florets reddish-purple; **in upland grassland, flowering usually after burning.**

[Br.] **Cam.:** Nchan, Bamenda, 5,000 ft. (Apr.) Maitland 1471! Bambui, 3,500-4,000 ft. (Apr.) Maitland 1715! Bamenda (leaf & fl. Mar.) Morton, K123! Ndop to Kumbo (Dec.) Boughey GC 11151! Ngong, Wum Div. (Feb.) Hepper 2837!

Also in **Congo**.

26. **Vernonia chapmanii** *C.D. Adams* in J.W. Afr. Sci. Assoc. ined. (1963). *APD acc*

A perennial herb with leafy stems about 1 ft. high arising from a woody stock; florets purple in terminal solitary heads partly hidden by the uppermost leaves.

[Br.] Cam.: between Chabbel Zanche and Kan Iyaka, 5,500 ft., Mambila Plateau (July) Chapman 42!

27. *Vernonia acrocephala* Klatt in Ann. Nat. Hofmus. Wien 7: 100 (1892). *APD acc*

A perennial herb 2-8 in. high with single or rarely double-headed scapes arising from a basal rosette of leaves; involucre of rather few broad acuminate purplish bracts about 1/3 in. long; florets pale purple; in montane grassland.

[Br.] Cam.: Bamenda, 5,000 ft. (Mar., Apr., June) Maitland 1417! 1549! Morton K118! Onochie FHI 34876! Bafut-Ngemba F.R., 7,200 ft. (Feb.) Hepper 2181!

Also in Cameroun and Angola.

28. *Vernonia gerberiformis* Oliv. & Hiern in F.T.A. 3: 285 (1877).

APD: Synonym of Linzia gerberiformis (Oliv. & Hiern) H. Rob.

An acaulescent herb with a basal rosette of oblanceolate leaves and a solitary-headed scape arising from a densely woolly perennial stock; scape 1-5 in. long in flower, longer in fruit; florets purplish-blue.

N. Nig.: Jos Plateau: Bokkos, 4,000 ft. (Dec.) Coombe 73! N. of Ropp (Apr.) Morton K377!

Extends through Sudan and Congo to Uganda, Kenya and Tanganyika and south to Angola.

29. *Vernonia macrocyanus* O. Hoffm. in Bol. Soc. Brot. 13: 20 (1897).

APD: Synonym of Linzia gerberiformis subsp. macrocyanus (O. Hoffm.) Isawumi

Vernonia primulina of Chev. Bot. 356, and of F.W.T.A., ed. 1, 2: 166, not of O. Hoffm.

A perennial herb with smooth ribbed simple or sparingly branched stems 1-2 ft. high in clumps from a fleshy rhizome and large solitary flower-heads 1 1/2-2 in. across with rich blue or purple florets; in burnt savanna.

Mali: Bougouni (Apr.) Chev. 681. N. Nig.: Sokoto (Sept.) Ryan 2! Naraguta (Nov.) Lely 695! Ropp, 4,000 ft. (Dec.) Coombe 47! Zaria (Feb.-Mar.) Bunny & Ryan 31! Dalz. 363! Onyeagocha FHI 7642! [Br.] Cam.: Belel, N. Adamawa (Jan.) Hepper 1629!

Also in Uganda, Tanganyika and Angola.

30. *Vernonia nimbaensis* C.D. Adams in J. W. Afr. Sci. Assoc. ined. (1963). *APD acc*

A perennial herb with erect usually branched, striate puberulous stems 1 ft. or more high; leaves sessile, serrate, prominently reticulate-veined; involucre solitary and terminal to the main stem on a stout peduncle, up to 1 1/2 in. across in fruit; in montane grassland.

Guin.: Nzo Mt., 4,000-4,500 ft. (fr. Mar.) Chev. 21009! 21023! ridges of Nimba Mts. (fr. Apr.) Schnell 925! S. L.: Loma Mts. (sterile Aug.) Jaeger 1086!

31. *Vernonia jaegeri* C.D. Adams in l.c. ined. (1963). *APD acc*

A perennial herb up to about 9 in. high with a leafy stem arising from a woody stock; heads solitary or few, about 3/4 in. across.

S. L.: savanna at about 5,600 ft., Loma Mts. (fr. Feb.) Jaeger 4242!

32. *Vernonia nigritiana* Oliv. & Hiern in F.T.A. 3: 288 (1877); Chev. Bot. 355; Berhaut Fl. Sén. 177 (as *V. nigritana*).

APD: Synonym of Linzia nigritiana (Oliv. & Hiern) Isawumi

Vernonia baoulensis A. Chev. Bot. 352, name only.

An erect, branched herb or undershrub with annual regrowth of pithy stems 1-2 ft. or more high arising from a perennial stock; leaves harshly scabrid; inner involucre bracts coloured bright red on the inner surface, spreading in heads up to 2 in. across; **in savanna**.

Extends to **Sudan**, **Uganda**, Nyasaland, Rhodesia and **Angola**.

38. **Vernonia bauchiensis** *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 168 (1931). *APD acc*

A perennial, slightly pubescent herb with stems about 6 in. high from a woody base; florets purple in heads 1/2 in. long, solitary at the ends of the branches.

N. Nig.: Jos Plateau (Jan.) Lely P86!

39. **Vernonia poskeana** *Vatke & Hildebrandt* in Oestr. Bot. Zeitschr. 25: 324 (1875); F.T.A. 3: 274; Berhaut Fl. Sén. 176. *APD acc APD acc*

39a. **Vernonia poskeana var. elegantissima** (*Hutch. & Dalz.*) *C.D. Adams* in J.W. Afr. Sci. Assoc. 3: 121 (1957).

APD: Synonym of Vernonia elegantissima Hutch. & Dalziel

Vernonia elegantissima *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 167 (1931).

A slender erect slightly branched annual herb, usually about 1 ft. high; florets purple, mauve or white in heads about 1/3 in. long, fairly numerous on slender stalks.

Sen.: Niokolo-Koba (Jan.) Berhaut 1553! **Ghana:** Dutukpene Scarp, 1,600 ft. (Dec.) Adams 4527! **N. Nig.:** Patti Lokoja (Nov.) Dalz. 36! Anara F.R., Zaria (Oct.) Keay FHI 5498! Igabi, Zaria (Nov.) Keay FHI 28112! Jos (Oct.) Lely P824! Hepper 1006!

Other varieties and forms occur in Congo, Angola and E. Africa.

40. **Vernonia plumbaginifolia** *Fenzl ex Oliv. & Hiern* in F.T.A. 3: 279 (1877); Chev. Bot. 356, partly (Chev. 525; 560). *APD acc*

Stems herbaceous slender striate thinly pubescent, 1/2-2 ft. high from a perennial woody stock; florets bright purple in subcampanulate heads 1/4-1/2 in. across.

Mali: Banfara (Mar.) Chev. 525! Bambanatoumba (Mar.) Chev. 560! **N. Nig.:** Birnin Gwari (Mar.) Meikle 1343!

Also in **Sudan**.

41. **Vernonia djalonensis** *A.Chev. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 167 (1931); Chev. Bot. 354, name only. *APD acc*

An erect robust perennial soft-stemmed undershrub, branched above, with crowded leaves and broadly turbinate flower-heads 3/4 in. across when open; florets blue- or reddish-purple; middle and inner involucre bracts densely whitish- or yellow-woolly except at the tips, which are deep purple.

Guin.: Fouta Djallon (Mar., Aug.-Oct.); Diaguissa to Boulivel Chev. 18043! Timbo to Ditinn Chev. 18394! Dalaba Plateau, 3,000-4,000 ft. Chev. 18568! Jac.-Fél. 2063! 7065! Adam 12666! Mali Schnell 7228!

42. **Vernonia oocephala** *Bak.* in Kew Bull. 1895: 68.

APD: Synonym of Vernonia stenocephala Oliv.

An erect undershrub 1-4 ft. high, almost unbranched or branched from near the base, with whitish florets in numerous crowded straw-coloured heads about 1/2 in. long.

N. Nig.: Jos Plateau Lely 250! Naraguta (May) Lely 67! Shere Hills (Dec.) Savory 128! Jos (bud Nov., fl. Dec.) Onochie FHI 21743! Coombe 3! Morton K350! Kaduna to Zaria (Dec.) Meikle 764! Zaria to Wazeta (Feb.) Dalz. 367! **[Br.] Cam.:** Vogel Peak, 4,000 ft., Adamawa (Dec.) Hepper 1534!

Also in **Congo**, **Tanganyika**, **Nyasaland**, **Rhodesia** and **Angola**.

43. **Vernonia saussureoides** *Hutch.* in Kew Bull. 1921: 378, fig. 6.

APD: Synonym of Vernonia infundibularis Oliv. & Hiern

A perennial herb with erect glabrous pithy stems 2-3 ft. high arising several together from a woody stock; florets rich blue in top-shaped heads 1/2-3/4 in. long; **in hill grassland**.

N. Nig.: Jos (Apr., June, July) Lely P236! Batten-Pools 117! Naraguta Lely 286! Ropp to Mongu Morton K364! Mongu F.R., Pankshin Keay & King FHI 37087! **[Br.] Cam.:** Bamenda to Bambui, 4,500 ft. Mambila Plateau (Jan.) Hepper 1838!

Also in **Sudan**, **Congo**, **Uganda** and **Angola**.

60. *Vernonia cinerascens* Sch. Bip. in Schweinf. Beitr. Fl. Aethiop. 162 (1867); F.T.A. 3: 275; De Miré & Gillet in J. Agric. Trop. 3: 711. *APD acc*

A shrub 1-3 ft. high with whitish-pubescent glandular stems and leaves; florets deep reddish-purple in stalked heads scarcely 1/4 in. broad.

Sen.: Niokolo (June) Adam 14230! **Niger:** central and southern Aïr, among rocks and talus in mountains above 5,000 ft. vide De Miré & Gillet l.c.

Extends through **Sudan** to the Red Sea, **Ethiopia** and northwestern India, and also in **Angola** and S.W. Africa.

63. ERLANGEA

Sch. Bip.-F.T.A. 3: 265, not of F.W.T.A., ed. 1, 2: 170.

- 1** Involucres 1-1.3 cm. broad on velvety-tomentose peduncles 1.5 cm. or more long, few and hardly contiguous; involucre bracts ovate, acuminate with spreading tips; leaves opposite, verticillate or alternate, shortly petiolate, ovate to lanceolate, up to 12 cm. long and 3 cm. broad, serrate, with 8-12 pairs of ascending lateral nerves *l. fruticosa*

Involucres 5-8 mm. broad on peduncles 1-5 mm. long, numerous and tightly clustered in broad cymes at the ends of slender pubescent branches; involucre bracts ovate with erect acute tips and broad scarious margins; leaves opposite or alternate, petiolate, blade elliptic, up to 15 cm. long and 6 cm. broad, serrate-dentate, with 10-14 pairs of curved-ascending lateral nerves *2. schimperi*

1. *Erlangea fruticosa* C.D. Adams in J.W. Afr. Sci. Assoc. ined. (1963). *APD acc*

A shrub up to about 8 ft. high with velvety striate branchlets scarred with the bases of old leaves; flower-heads about 1/2 in. across, rather few in flat terminal corymbs; florets purple or mauve.

Guin.: Mt. Benna, Kindia (fl. & fr. Nov.) Jac.-Fél. 2123! Madina Tossékéré (fr. Oct., fr. Mar.) Adam 11680! 12532! **S. L.:** Loma Mts. (fr. Nov.) Jaeger 489!

2. *Erlangea schimperi* (Oliv. & Hiern ex Benth.) S. Moore in J. Linn. Soc. 35: 313 (1902).

APD: Synonym of Bothriocline schimperi Oliv. & Hiern ex Benth.

***Bothriocline schimperi* Oliv. & Hiern ex Benth.** in Hook. Ic. Pl. t. 1133 (1873); F.T.A. 3: 266.

Erect and shrubby up to about 4 ft. high with white, pale blue or mauve florets in clustered heads 1/4 in. across.

S. L.: Bintumane Peak (Nov.) Jaeger 363! **S. Nig.:** Ikwette Plateau, 5,200 ft., Ogoja (Dec.) Savory & Keay FHI 25220! **[Br.] Cam.:** Bamenda Dist. (Dec., Jan., Mar.) Keay FHI 28330! Boughey GC 11123! Morton K150!

Also in **E. Africa**.

64. CENTRATHERUM

Cass. in Bull. Sci. Soc. Philom. Paris 1817: 31; Dict. Sci. Nat. 7: 383 (1817). *APD acc*

- 1 Stems densely villous, glabrescent; leaves alternate narrowly oblanceolate, acute, up to 8 cm. long and 1.5 cm. broad, thinly setulose above, woolly-tomentose beneath, sharply serrulate; flower-heads few in a loose terminal corymb, shortly pedunculate, 1-1.5 cm. diam.; involucre bracts very numerous, subulate-filiform, very acute, up to 1 cm. long, pubescent, the outermost sometimes leafy or the flower-head closely subtended by a single linear leafy bract; florets all tubular; achenes glabrous, closely 10-ribbed; pappus caducous, subplumose towards base..... *I. angustifolium*

Centratherum angustifolium (*Benth.*) *C.D. Adams* in J.W. Afr. Sci. Assoc. 6: 149 (1961)

APD: Synonym of Kinghamia angustifolia (*Benth.*) *C. Jeffrey*

Gymnanthemum angustifolium *Benth.* (1849).

Vernonia benthamiana *Oliv. & Hiern* in F.T.A. 3: 282 (1877).

Erlangea angustifolia (*Benth.*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 170 (1931).

An erect simple or slightly branched annual herb with fairly stout striate stems 1-2 ft. high; florets pale mauve or pink to bluish-purple in subglobose flower-heads about 1/2 in. across.

Guin.: Dalaba-Diaguiss Plateau (Oct.) Chev. 18765! 18793! Jac.-Fél 2019! Kindia (Nov.) Jac.-Fél. 2073! Sandomoli Mt. (Sept.) Schnell 7314! Madina Tossékéré (Oct.) Adam 12517! 12562! **S. In tropical and extra-tropical Africa including S. Tomé, and Asia and the Mascarene Islands.

66. GUTENBERGIA

Sch. Bip.-F.T.A. 3: 263.

- 1 Flower-heads about 5 mm. diam., numerous; involucre bracts in 3-4 series, acute, loosely pubescent outside; leaves sessile, auricled at base, linear-lanceolate, 4-6 cm. long, up to 1 cm. broad, discolorous, thinly pubescent above, white-tomentose beneath; achenes 1.5 mm. long, about 8-ribbed, glabrous; corolla 3.5 mm. long [1. rueppellii](#)
 Flower-heads 1 cm. or more diam., few or solitary: **2**
- 2 Capitula several, pedunculate; involucre bracts in 6 or more series, acutely acuminate or mucronate; leaves subsessile, oblong-lanceolate; corolla 6-8 mm. long; achenes 2-2.5 mm. long, 10-ribbed, glabrous: **3**
 Capitula solitary, sessile, 2.5-3 cm. diam., closely surrounded by clustered leaves; stem-leaves small, linear-lanceolate [4. foliosa](#)
- 3 Middle involucre bracts acuminate, pubescent; capitula about 1 cm. diam.; leaves mostly narrowed to base or shortly rounded, thinly greyish-pilose beneath [2. nigritana](#)
 Middle involucre bracts subtruncate-mucronate, glabrescent; capitula 2-2.5 cm. diam.; leaves mostly broadly rounded at base, usually white woolly pilose beneath [3. macrocephala](#)

1. **Gutenbergia rueppellii** *Sch. Bip.* in Gedenkb. 4 Jubelf. Buchdr. 120, t. 4 (1840); F.T.A. 3: 263. *APD acc*

Ethulia rueppellii (*Sch. Bip.*) *Hochst. ex A. Rich.* (1848).

An erect much-branched annual herb 1-2 ft. high with the leaves whitish beneath; florets reddish-purple or white in heads about 1/4 in. across; [a local weed of waysides and open land.](#)

N. Nig.: Jos Plateau (Sept.) Lely P696a! Naraguta, common (July, Nov.) Lely 464! 711!

Also in [Sudan](#), [Ethiopia](#), [Eritrea](#), [Uganda](#) and [Kenya](#).

2. **Gutenbergia nigritana** (*Benth.*) *Oliv. & Hiern* in F.T.A. 3: 264 (1877) (incl. var. *scabra* *Oliv. & Hiern*).

APD: Synonym of Kinghamia nigritana (*Benth.*) *C. Jeffrey*

Oiospermum nigritanum *Benth.* (1849).

Gutenbergia macrocephala of Chev. Bot. 351, not of *Oliv. & Hiern*.

An erect herb, 1-4 ft. high with puberulous striate branches, wrinkled leaves and mauve to reddish-purple florets in heads 1/4 in. across; [in open grassland.](#)

Guin.: Manankoro to Boola, Beyla (Mar., Apr.) Chev. 20904! Adam 12064! Nzérékoré (Oct.) Jac.-Fél. 2045! Timbo (Oct.) Jac.-Fél. 1872! 2084! Bafing (Oct.) Adam 12656! Nimba Mts. (Apr., Sept.) [Both this species and *G. nigritana* are very variable in respect of leaf-margin, which may be serrated or entire, and the shape of the leaf-base, which may be broad or narrow. The density of the tomentum on the undersurface of the leaf in *G. macrocephala* is also variable, and there is a great range of shape between the inner and outer involucre bracts-C. D. A.]

4. **Gutenbergia foliosa** *O. Hoffm.* in Engl. Bot. Jahrb. 24: 462 (1897).

APD: Synonym of Kinghamia foliosa (O. Hoffm.) C. Jeffrey

A simple-stemmed herb up to 4 ft. high with scabrid crowded narrow leaves, woolly-tomentose beneath.

Togo Rep.: Misahöhe, Angomé Tongbe (July) Baumann 34.

[Baumann 34 was seen for the first edition, but the specimen presumably was destroyed in Berlin; apparently no further gatherings have been made—C. D. A.]

67. EUPATORIUM

Linn.—F.T.A. 3: 300.

- 1 Shrubby scrambler with pithy, finely striate branches; leaves opposite, ovate, grossly dentate to subentire, cuneate at base, acute, 3-10 cm. long, 2-6 cm. broad, with a pair of curved lateral veins arising above the base, densely gland-dotted and puberulous beneath; petiole slender, about 1 cm. long; flower-heads pedunculate in spreading inflorescences at the ends of short stiff lateral branches; involucre oblong-turbinate, 1 cm. long; involucre bracts numerous, strongly nerved, imbricate, the outer shorter; achenes ribbed with cartilaginous margins, glabrous or nearly so; pappus-setae buff, in a single series, barbellate, about 6 mm. long [1. odoratum](#)
Erect herbs:.....2
- 2 Stem-leaves mostly alternate, sessile or shortly petiolate, ovate to narrowly lanceolate, subacute, 5-7 cm. long, up to 3 cm. broad (frequently much smaller and narrower), gland-dotted beneath; shoots several usually arising from a woody perennial stock; stems, leaves and inflorescence curly-pubescent; flower-heads crowded in a terminal inflorescence, few-flowered; involucre bracts few, oblong, about 6 mm. long, membranous on the margins, not nerved; achenes sulcate, pubescent; pappus as above2. [africanum](#)
Stem-leaves mostly opposite; annual herbs with a single main glabrous or glabrescent stem:.....3
- 3 Leaves elliptic-lanceolate, tapered to and distinctly 3-veined at base; flower-heads up to 1 cm. broad; involucre bracts linear, acute3. [triplinerve](#)
Leaves ovate-rhomboid, abruptly narrowed to a slender petiole 1-3 cm. long, 3-veined, the lateral pair of veins submarginal at base; flower-heads up to 5 mm. broad; involucre bracts 2-seriate, linear-oblong, 3-4 mm. long, equalling or exceeding the florets, glabrous, glumaceous; achenes blackish, sulcate; pappus-setae very fine, about 20, spreading, white4. [microstemon](#)

1. *Eupatorium odoratum* Linn. Syst. Nat., ed. 10, 2: 1205 (1759).

APD: Synonym of Chromolaena odorata (L.) R. M. King & H. Rob.

A diffuse shrub with angular pubescent branched stems up to about 8 ft. high; florets white, mauve or pale blue in heads arranged in sub-umbellate inflorescences at the ends of short branches; **a rank-scented weed.**

S. Nig.: Ubiaja, Benin (Apr.) Daramola FHI 31258! Udi, Enugu pitwood plantations (June, Nov.) Jones FHI 18804! Keay & Mallam FHI 22721! mile 34 Enugu to Abakaliki (Feb.) Hepper 2237!

Native of Central and tropical S. America; also in S. E. Asia; spreading rapidly in our area.

2. *Eupatorium africanum* Oliv. & Hiern in F.T.A. 3: 301 (1877); Chev. Bot. 360; Robyns Fl. Sperm. Parc. Nat. Alb. 2: 457, t. 43.

APD: Synonym of Stomatanthes africanus (Oliv. & Hiern) R. M. King & H. Rob.

Vernonia humilis C. H. Wright (1897).

V. malosana Bak. (1898).

A herb or undershrub with usually several erect curled-pubescent stems 6 in. to 3 ft. high arising from a perennial woody stock; florets cream to greyish-mauve, rather few in numerous small heads clustered at the branch-tips; **in grassland, mostly in hilly districts.**

Guin.: Fassakoudou to Késséridou (Feb.) Chev. 20809! Kindia (Dec.) Jac.-Fél. 2199! Boula to Baizia (? Apr.) Adam 12057! Mali (June, Sept.) Schnell 7109! Adam 14451! **S. L.:** near Falaba (Mar.) Sc. Throughout tropical Africa; the only indigenous species.

3. **Eupatorium triplinerve** *Vahl* Symb. Bot. 3: 97 (1794). *APD acc*

A herb 2-3 ft. high with almost glabrous stems and leaves; florets mauve in rather few heads about 1/3 in. broad; **a weed**.

Dah.: Abomey (Feb.) Chev. 28174!

Widely spread in the tropics of Asia and America and also in the Mascarene Islands.

4. **Eupatorium microstemon** *Cass.* in Dict. Sci. Nat. 25: 432 (1822).

APD: *Synonym of Fleischmannia microstemon (Cass.) R. M. King & H. Rob.*

Eupatorium guadalupense *Spreng.* (1826).

An erect annual herb, branched above, 1-3 ft. high with terete striate glabrescent stems; florets pale mauve to white in small numerous more or less clustered heads on long branches; **a common weed of farms and roadsides in forest areas, at least in Ghana.**

iv. C.: teste Mangenot. **Ghana:** Bosuso (May) Adams 1760! Asiakwa (Nov.) Boughey GC 13125! Techiman to Ejura (Dec.) Morton GC 9561! Wenchu to Chiraa (Dec.) Adams 3198! Aburi to Nsawam (Oct.) Morton A3440! Pramkese (Jan.) De Wit & Morton A2957! New Tafo (Oct.) Lovi WACRI 8926! Dunkwa (Feb.) Whiting 14!

Also in **Central America, Mexico** and the **West Indies** and almost certainly introduced in our area.

[The first gathering of this weed was apparently made as recently as May 1953; it should be sought in other parts of the area of this Flora—C. D. A.]

68. MIKANIA

Willd.—F.T.A. 3: 301. Nom. cons.

- 1 Leaves coarsely crenate-dentate to subentire, ovate-triangular, acuminate, cordate to rounded-truncate at base, 5-10 cm. long, up to 8 cm. broad; involucre bracts variable in length up to 8 mm.; achenes black, 3 mm. long, mostly cartilaginous-ribbed on the angles, glandular; pappus-setae minutely barbellate, often pinkish, up to 5 mm. long:2

Leaves 3-5(-7)-lobed, up to about 5 cm. long and 4 cm. broad; lobes oblong-lanceolate, mucronate; leaves openly cordate; involucre bracts about 4 mm. long; achenes black, 2-2.5 mm. long, angled but margins not cartilaginous, eglandular, minutely transversely rugulose; pappus-setae barbellate, buff, less than 2 mm. long 2. carteri

- 2 Capitula mostly sessile or shortly stalked in tightly rounded clusters; involucre bracts about 6 mm. long1. cordata var. cordata

Capitula on stalks 5-15 mm. long in an open panicle; involucre bracts 7-8 mm. long 1a. cordata var. chevalieri

Mikania cordata (*Burm. f.*) *B.L. Robinson APD acc*

1. **Mikania cordata var. cordata**—in Contrib. Gray Herb. 104: 65 (1934). *APD acc*

Eupatorium cordatum *Burm. f.* (1768).

Mikania chenopodifolia *Willd.* (1803).

Mikania scandens of F.T.A. 3: 301; Chev. Bot. 361; F.W.T.A. ed. 1, 2: 172, not of Willd.

Scrambling up to 25 ft. or more **in old farms and clearings**; florets white or rarely bluish in numerous small few-flowered clustered heads.

Sen.: Sedhiou, Casamance (Feb.) Chev. 2038 bis! **Gam.:** Hayes 557! **Port. G.:** Pessube, Bissau (Oct.) Esp. Santo 982! **Guin.:** Heudelot 610! Farmar 267! Kouria (Oct.) Caille in Hb. Widespread in the Old World tropics.

1a. **Mikania cordata** var. **chevalieri** C.D. Adams in J.W. Afr. Sci. Assoc. ined. (1963).

APD: *Synonym of Mikania chevalieri* (C. D. Adams) W. C. Holmes & McDaniel

Mikania laxa A. Chev. Bot. 360, name only, not of DC.

S. L.: Jigaya (Nov.) Thomas 2839! Bumbuna (Oct.) Thomas 3937! **Lib.:** Gbanga (Sept.) Linder 448! Flumpa, Sanokwele (Sept.) Baldwin 9364! **iv. C.:** Mbasso to Abongoua (Dec.) Chev. 22651! **S. Nig.:** Lagos (Oct.) Moloney! Sapoba, Benin (Sept., Nov.) Jones FHI 4981! Meikle & Keay 524! Onochie FHI 34275! Nun R. (Sept.) Mann 496!

Extending probably into Congo and **Angola**.

This plant differs from typical *M. cordata* in having a more open inflorescence with slightly larger capitula; the stems and undersurface of the leaves are often purplish and the whole plant is usually glabrous.

2. **Mikania carteri** Bak. in Kew Bull. 1895: 106; Robinson l.c. 67. **APD acc**

Mikania scandens Willd. var. **laciniata** Hutch. & Dalz. F.W.T.A., ed. 1, 2: 172.

Mikania tropaeolifolia O. Hoffm. (1898).

A scrambling herb with rather small divided leaves; involucre green; florets white with purple styles.

S. Nig.: Lagos Rowland! Idanre Hills, Ondo (Oct.) Keay & Onochie FHI 20241! Okelifi Hill, Ondo (Nov.) Onochie FHI 34344! Ado Rock, Oyo (Sept., Oct.) Savory & Keay FHI 25450! Keay FHI 37182! Onitsha (Oct.) Onochie FHI 34126! Okafor FHI 35871!

Also in **Cameroun**.

This species closely resembles *M. corydalifolia* Griseb. (1863) from Cuba.

69. ADENOSTEMMA

J.R. & G. Forst.-F.T.A. 3: 299. **APD acc**

- 1 Achenes smooth; leaves long-petiolate, ovate to ovate-rhomboid, cuneate and sub-entire towards the base, 8-15 cm. long, 3-7 cm. broad, glabrous or nearly so beneath, prominently trinerved from above the base, rather sharply serrate-dentate; flower-heads numerous, 6-8 mm. long; achenes with a club-like pappus [1. mauritianum](#)
Achenes closely warted; pappus as above: **2**
- 2 Leaves ovate, abruptly narrowed at base into the long petiole, crenate or coarsely serrate, 5-12 cm. long, 3-6 cm. broad, subscabrid on the nerves beneath; flower-heads small and numerous [2. perrottetii](#)
Leaves oblong-lanceolate to linear, subsessile or shortly petiolate, shallowly serrate, up to 12 cm. long and 1-3 cm. broad, glabrous; flower-heads large and few [3. caffrum](#)

1. **Adenostemma mauritianum** DC. Prod. 5: 110 (1836). **APD acc**

Adenostemma viscosum of F.T.A. 3: 300, partly, not of J.R. & G. Forst.

An erect usually branched herb 2-4 ft. high, with rather rough stems and white florets in small heads in loose dichotomous terminal panicles.

S. Nig.: Eket Talbot 3371! [**Br.**] **Cam.:** Cam. Mt., 2,500-7,500 ft. (Nov.-Apr.) Mann 1218! 1958! Dalz. 8338! Dunlap 84! Maitland 481! Migeod 42! 129! Hutch. & Metcalfe 8! Adams 1643! Oku, 6,500 ft., Bamenda Dist. (Feb.) Hepper 2047! **F. Po:** 4,000-8,000 ft. (Dec.) Mann 575! Boughey 183!

2. **Adenostemma perrottetii** DC. l.c. 110 (1836); F.T.A. 3! 300, in syn.; Berhaut Fl. Sén. 69.

APD: *Synonym of Adenostemma viscosum J.R. Forst. & G. Forst.*

Adenostemma viscosum of Chev. Bot. 359, partly, not of J.R. & G. Forst.

Adenostemma mauritanum of F.W.T.A., ed. 1, 2: 172, partly (Liberian record), not of DC.

Siegesbeckia abyssinica of Stapf in Johnston Lib. 615, not of Oliv. & Hiern.

A weak-stemmed annual weed of damp shady places, 1-3 ft. high; florets white or pale mauve.

Sen.: Niokolo-Koba (Oct.) Adam 15796! **Mali:** Gaibala Spring, Kita Massif (Oct.) Jaeger! **Port. G.:** Safim, Bissau (Jan.) Esp. Santo 1657! Brene, Bissau (Jan.) Esp. Also in **Sudan, Congo** and extending to southern Africa.

[Plants of wet places in the western part of the range tend to be smaller, decumbent and have linear leaves, possibly divided when submerged.]

70. AGERATUM

Linn.-F.T.A. 3: 300. APD acc

- 1 A softly hispid herb with opposite leaves; petioles slender 1-3 cm. long, blades ovate up to 6 cm. long and 4 cm. broad; flower-heads in compact terminal cymose inflorescences; involucre bracts in about 3 rows, oblong, shortly pointed, strongly 2-nerved, glabrous or with a few setose hairs; achenes sharply 4-angled, black when mature, sparsely pubescent, glabrescent; pappus of 5(-6) spreading fimbriate scales each terminating in a barbellate hair..... [*l. conyzoides*](#)

Ageratum conyzoides Linn. Sp. Pl. 839 (1753); F.T.A. 3: 300; Chev. Bot. 360. *APD acc*

A faintly aromatic erect or procumbent annual herb 1-3 ft. high with mauve florets in heads about 1/4 in. long; a common weed.

Sen.: (Jan.) Roger! Dakar (Jan.) Chev. 2043! Cape Verde (Dec.) Berhaut 725! **Gam.:** Genieri (Feb.) Fox 59! Basse (Mar.) Todd 12! **Mali:** Badumbé (Dec.) Chev. 52! **Guin.:** (Apr.) Bouery 21! Bamenda, 5,000 ft. (Jan.) Migeod 427! **F. Po.:** (Oct.) T. Vogel 17! Monte Balea (Dec.) Guinea 463!

Widespread through the tropics and subtropics.

Ageratum houstonianum Mill. (1768).

With long-pointed linear-lanceolate shortly hispid involucre bracts and white or bluish-purple florets in larger more round-based heads is reported from Mali (Roberty 1035! 1036! cult.) and from Buea (teste Morton,? escape from cultivation).

A native of Mexico.

71. PLEIOTAXIS

Steetz-F.T.A. 3: 440.

- 1 Stems and lower surfaces of the leaves woolly-tomentose; leaves broadly lanceolate, acutely acuminate, acute at base, 10-15 cm. long, 2-4 cm. broad, denticulate with about 10-15 pairs of parallel lateral nerves; petiole about 1-5 cm. long, encircling the stem; flower-heads narrowly campanulate, about 4 mm. long, the innermost broadly lanceolate and 2 cm. long, with a broad darkened grooved midrib; achenes pubescent; pappus straw-coloured, 1-5 cm. long [newtonii](#)

Pleiotaxis newtonii O. Hoffm. in Engl. Bot. Jahrb. 15: 537 (1893); Chev. Bot. 377; Berhaut Fl. Sén. 175, 203. *APD acc*

APD: Synonym of Pleiotaxis chlorolepis C. Jeffrey

An erect perennial herb with striate stems up to 4 or 5 ft. high and leaves softly whitish-tomentose beneath; florets bright red; [in savanna](#).

Sen.: Niokolo-Koba Berhaut 1536; 4631. **Port. G.:** Gabu (Oct., Nov.) Esp. Santo 2773! 2951! 2963! Souaco to Bafatá (Nov.) Esp. Santo 3595! **Guin.:** Kouroussa (July) Pobéguin 328! 73. GERBERA

Linn. ex Cass. in Bull. Sci. Soc. Philom. Paris 1817: 34; F.T.A. 3: 445; Brenan in Mem. N.Y. Bot. Gard. 8: 488 (1954); Taxon 9: 160 (1960).Nom. cons.

- 1 An acaulescent perennial herb with a silky-tomentose stock; leaves elliptic, rounded at the apex, narrowed into a slender petiole, 5-20 cm. long, 2-6 cm. broad, entire or denticulate, sparingly pilose above, softly pilose beneath; flower-heads solitary on a tomentose peduncle up to 30 cm. long; peduncle thickened towards the apex and lengthening further in fruit; involucre bracts linear, 1.5-2 cm. long, shaggy outside, glabrous and shiny-black within; ray-florets tubular, about 2 cm. long, variable in colour; disk-florets shorter, usually white; achenes spreading at maturity, long-beaked, setulose; pappus of numerous smooth pinkish-buff spreading setae[*piloselloides*](#)

Gerbera piloselloides (Linn.) Cass. in Dict. Sci. Nat. 18: 461 (1820); F.T.A. 3: 445; Chev. Bot. 377.

APD acc

Arnica piloselloides Linn. (1760).

A perennial herb with solitary flower-heads on leafless peduncles 6-18 in. high, arising from a rosette of leaves; outer florets pale crimson to greenish-yellow; **in hill grassland**.

Guin.: Diaguissa (Apr.) Chev. 12944! **Ghana:** Amedzofe Dokosi! **[Br.] Cam.:** Bamenda Dist., 4,500-6,500 ft. (Dec., Jan., Mar., Apr., June) Maitland 1470! 1710! Migeod 365! Boughey GC 10886! Morton. K60! 96! 242! Hepper 2110! 2838! Gembu to Likitaba, Mambila Plateau (June) Chapman 48!

From Eritrea and **Ethiopia** in high grassland through east and central Africa to **Angola**, S.W. Africa and Transvaal, and also in Madagascar.

74. HYPERICOPHYLLUM

Steetz in Peters Reise Mossamb. Bot. 49, t. 50 (1863).

Jaumea of F.T.A. 3: 395, not of Pers.

- 1 Stems several from a woody rhizome, slightly setulose but soon glabrous, ribbed; leaves lanceolate to ovate-elliptic, obtuse at apex, more or less rounded at base, 5-8 cm. long, 1.5-4 cm. broad, faintly gland-dotted, reticulate on both sides, opposite, sessile, more or less scale-like below; flower-heads solitary or subsolitary,

about 2.5 cm. diam.; peduncle up to 15 cm. long; involucre bracts 2-3-seriate, broadly ovate-lanceolate, acutely acuminate, about 2 cm. long, glabrous; florets all tubular; achenes pubescent; pappus in a single series with golden-buff, densely and shortly plumose setae 1-1.3 cm. long [multicaule](#)

Hypericophyllum multicaule *Hutch.* in Kew Bull. 1907: 50. *APD acc*

An erect perennial herb with several stiff pale green stems, pinkish at the base, up to 2 ft. high, arising from a woody rhizome; leaves bright green, rather fleshy and glossy; involucre pale green; florets greenish-white in heads 1 in. long; **flowering after grass burning.**

S. L.: Loma Mts. (sterile, Aug.) Jaeger 1085! **iv. C.:** Koualé to Kouroukoro (May) Chev. 21756! **N. Nig.:** Kontagora (Jan.) Dalz. 52! Meikle 1058! Birnin Gwari, Zaria (May) Keay FHI 25807! Jos Plateau (Feb.) Lely P79!

75. **BERKHEYA**

Ehrh.-F.T.A. 3: 428. *Nom. cons.* *APD acc*

- 1 Stems erect, ribbed, with crisped hairs; leaves linear-oblong, up to about 15 cm. long, sparsely and minutely scabrid-pubescent above, white-woolly tomentose beneath, with an acute spinescent apex and numerous spine-tipped teeth on the margin, sessile, auriculate and amplexicaul; flower-heads several, pedunculate, 5-7 cm. diam.; involucre bracts margined with long spines, longer than the disk-florets; ligules of ray-florets linear; pappus-scales oblanceolate, serrulate [spekeana](#)

Berkheya spekeana *Oliv.* in Trans. Linn. Soc. 29: 100, t. 66 (1873); F.T.A. 3: 429. *APD acc*

A leafy thistle-like herb up to 4 or even 6 ft. high, with yellow florets in heads nearly 3 in. across and milky latex; **in montane grassland.**

[Br.] Cam.: Bamenda, 5,000-7,500 ft. (Jan., Mar., June, Aug.) Migeod 380! Morton K29! Savory UCI 286! Njinikom (June) Maitland 1718! Jakiri (Feb.) Hepper 2081! Banja, Bamenda to Nkwa (Aug.) Ujor FHI 29955! Shwai, Bansa (Dec.) Egbuta FHI 3776!

Also in **Congo, Sudan, Kenya, Uganda** and **Tanganyika.**

[The West African plants have the upper leaf surface more sparsely appressed-setulose than the central and eastern African forms.]

76. **ECHINOPS**

Linn.-F.T.A. 3: 430.

- 1 Leaves very small, not exceeding 3 cm. long, usually 1.5-2 cm. long, shortly pinnately toothed; compound heads 3-5 cm. diam.: **2**
 Leaves much larger than above, usually white-woolly-tomentose beneath: **3**
- 2 Stem-wings continuous between the nodes from the decurrent leaf-bases; stems and leaves beneath thinly cottony when young, glabrescent; involucre bracts subentire, rhomboid-elliptic [1. gracilis](#)
 Stems winged only for a short distance in two lines below each leaf; whole plant glabrous; involucre bracts lanceolate to rhomboid-elliptic, serrulate in the upper half [2. guineensis](#)
- 3 Stem-leaves not divided, entire or at most dentate: **4**
 Stem-leaves divided, lanceolate to ovate or elliptic in plan, with segments spine-tipped: **6**
- 4 Leaves smooth and glabrous above; stem smooth; leaves linear, shortly auriculate, more or less distinctly dentate, 10-25 cm. long, 0.5-2(-3) cm. broad (incl. the spine-tipped teeth); heads terminal on rather short peduncles, 5-6 cm. broad [3. longifolius](#)
 Leaves densely setose above; stem setulose, deeply grooved; leaves lanceolate to oblong-elliptic, more or less rounded at base, sessile, entire; heads terminal, 4-5 cm. broad, those on lateral branches smaller; **5**
- 5 Lamina up to about 12 cm. long and 2 cm. broad, acutely acuminate [4. mildbraedii](#)
 Lamina 8-10 cm. long and 3-3.5 cm. broad, shortly acute [5. lanceolatus](#)
- 6 Outer involucre bracts of some of the partial capitula developed into hard spines up to 3 cm. long, projecting beyond the spherical head which is about 6 cm. diam. in flower; stems grooved, woolly-tomentose, very thinly

setulose; leaves woolly-tomentose on both surfaces, also scabrid above, dentate-pinnatifid, with marginal and terminal spines 1 cm. or more long; partial heads about 2.5 cm. long with numerous buff setae 1.5 cm. long arising near the base; involucre bracts minutely ciliate on the shoulders of the broader basal portion below a spinose apex [6. spinosissimus](#)

Outer involucre bracts uniform, not developed into long spines; stems grooved, setose; leaves woolly-tomentose beneath; heads 6-12 cm. diam.: [7](#)

- [7](#) Leaves ovate in plan, doubly dentate in deeply pinnatifid segments, sessile, amplexicaul and auriculate, thinly tomentose and scabridulous above; partial heads (capitula) up to 4 cm. long with the basal setae buff about 1 cm. long; involucre bracts pectinate-ciliate, smoothly tapered at apex [7. amplexicaulis](#)

Leaves obovate in plan, the lower nearly entire, the upper deeply pinnatisect, shortly stalked, the bases of the petioles half-amplexicaul but not auriculate, shortly and densely setose above and on the veins beneath; partial heads (capitula) 1.5-3 cm. long with the basal setae buff 3-7 mm. long; involucre bracts expanded at apex into a spinulose tuft [8a. giganteus var. lelyi](#)

1. *Echinops gracilis* O. Hoffm. in Mém. Soc. Bot. Fr. 2, 8: 42 (1908). *APD acc*

A bushy perennial herb or undershrub usually about 2-3 ft., but sometimes up to 6 ft. high; stem woody below; florets pale mauve or fading white in sessile or shortly stalked spherical heads about 2 in. across; [in hill grassland](#).

N. Nig.: Jos Plateau (Apr.) Lely P219! Vom, 4,000 ft. (Feb.) Dent Young! McClintock 213! Bokkos (Dec.) Coombe 62! **[Br.] Cam.:** Bamenda Dist., 4,800-6,300 ft. (Dec., Jan., Mar., Apr.) Also in **Sudan** and **Ethiopia**.

[This species behaves in habitat and location as a casual or introduced weed. There is, however, at present no further evidence to suggest or confirm its presence or origin outside tropical Africa.]

7. *Lactuca intybacea* Jacq. Ic. Pl. Rar. 1: 16, c. 162 (1781).

APD: Synonym of *Launaea intybacea* (Jacq.) Beauverd

Lactuca goraeensis (Lam.) Sch. Bip. (1842)-F.T.A. 3: 452; F.W.T.A., ed. 1, 2: 177, partly (excl. syn. *L. tuberosa* A. Chev. and Rowland, Millen 133, Dodd. 379); Trochain Mém. I.F.A.N. 2: 376; Berhaut Fl. Sén. 171.

Sonchus goraeensis Lam. (1792).

Launaea goraeensis (Lam.) O. Hoffm. (1893)-Chev. Bot. 380.

An annual herb with erect stems up to 6 ft. high from a taproot; florets pale lemon-yellow; leaves yellowish-green, glossy.

Sen.: Dakar (Jan.) Chev. 2045. fide Trochain l.c. **Ghana:** Ada road Morton A2183! **Niger:** Air De Miré & Gillet. **N. Nig.:** (Nov.) Noble A27!

Thinly scattered through the Old and New World tropics in semi-arid regions.

82. CREPIS

APD: Synonym of *Youngia* Cass.

Linn.-F.T.A. 3: 448; Babcock in Univ. Calif. Publ. 22 (1947).

- 1 Scape leafy; inner involucre bracts lanceolate, acute, pubescent within, 1-nerved in the outer midline, not changing at maturity, ultimately reflexed; achenes 8-10 mm. long, fusiform, 10-ribbed, finely setulose; pappus buff, 5 mm. long [*L. cameroonica*](#)

Scape bracteate; inner involucre bracts lanceolate, obtuse, glabrous within, becoming carinate dorsally and spongy-thickened at the base in mature heads; achenes about 7 mm. long; pappus pale buff or white, 6 mm. long [*2a. newii* subsp. *kundensis*](#)

1. *Crepis cameroonica* Babc. ex Hutch. & Dalz. F.W.T.A., ed. 1, 2: 178 (1931); Babcock l.c. 346, fig. 63.

APD: Synonym of *Crepis newii* subsp. *oliveriana* (Kuntze) C. Jeffrey & Beentje

Crepis hookeriana Oliv. & Hiern in F.T.A. 3: 450 (1877), not of Ball (?) (1873) or of C. B. Clarke (?) (1876).

Anisorhamphus hypochaeroides Hook. f. (1864), not of DC. (1838).

A perennial herb with loosely hairy stems 6 to 20 in. high arising in a basal rosette of pale green leaves from a thick stock; florets bright yellow; involucre bracts green with blackish hairs, forming heads about 3/4 in. broad.

[**Br.**] **Cam.:** Cam. Mt., common from 7,000 ft. to near summit (Nov.-Apr.) Mann 1318! 1918! Maitland 848! 888! 1002! 1243! Migeod 199! Dundas FHI 20360! Keay FHI 28608! Brenan 9559! Morton GC 6903! Boughey GC 12665!

2. *Crepis newii* Oliv. & Hiern in F.T.A. 3: 449 (1877); Babcock l.c. 369. *APD acc*

2a. *Crepis newii* subsp. *kundensis* (Babc.) Babc. l.c. 374, fig. 77 (1947).

APD: Synonym of Crepis hypochaeridea (DC.) Thell.

Crepis bumbensis subsp. *kundensis* Bab. in Bull. Jard. Bot. Brux. 15: 300 (1937).

A perennial herb with a branched scape 1-2 ft. high from a rosette of leaves; florets yellow in heads 1/3 in. broad; latex white; **in open hill pasture.**

[Br.] Cam.: Bamenda Dist., 4,500-7,500 ft. (Dec., Jan., Mar., Apr.) Maitland 1469! 1481a! 1678! Migeod 443! Keay FHI 28384! Morton K98! Adams GC 11212! Boughey GC 11433! Hepper 2115! 2713! Binka, Nkambe (Oct.) Hepper 1887! Maisamari, 4,700 ft., Mambila Plateau (Jan.) Hepper 1688!

The range of *C. newii*, including the several subspecies of Babcock, extends to **Tanganyika** and **Angola**.

Davey 493 (Mali: Diafarabé) has a rosette with a few small lobulate, sparsely setulose leaves on a short scape 6 in. high and yellow florets in an involucre of sparsely setulose scarious-margined bracts. This plant may be *C. juvenalis* F. Schulz (in Flora 23: 719 (1840)), a native of western N. Africa also recorded from the Atlantic Islands, and from Europe as an alien.

83. SONCHUS

Linn.-F.T.A. 3: 457.

- 1 Flowering stems leafy:2
Flowering stems leafless; leaves when present in a basal rosette, obovate to oblanceolate, rounded at apex, 6-20 cm. long, 2-8 cm. broad, denticulate or rarely smooth-margined; achenes oblong, ribbed, smooth, glabrous; pappus white:8
- 2 Leaves distinctly auriculate; bracteoles on peduncles absent, those subtending inflorescence-branches linear-subulate like miniature leaves; base of involucre more or less woolly-pubescent, at least when young:3
Leaves shortly or not auriculate; bracteoles on peduncles and at inflorescence-branches ovate to ovate-lanceolate, small, more or less clasping; base of involucre glabrous, glandular or thinly pubescent, not woolly:6
- 3 Leaves obovate to oblanceolate in plan, 10-20 cm. long, coarsely and irregularly lobed, sharply triangular-denticulate; involucre glabrescent; annual weedy herbs:4
Leaves linear to linear-lanceolate, up to 40 cm. long, entire or sparsely runcinate-pinnatifid, minutely denticulate, long-acute, tailed-auriculate; peduncles and bases of the involucre persistently buff or whitish woolly-pubescent; achenes oblong, 4-8-ribbed, minutely transversely rugulose; tall annual or perennial hollow-stemmed herbs of hill grassland:5
- 4 Achenes smooth, about 10-ribbed, winged, flat, elliptic, rounded at both ends; leaf-base auricles more or less rounded [1. asper](#)
Achenes rugulose, grooved, not winged, obovate, narrowed to the base; leaf-base auricles more or less pointed [2. oleraceus](#)
- 5 Outer involucral bracts densely setose, especially in the midline or at base and apex with ascending bronze-coloured hairs [3. angustissimus](#)
Outer involucral bracts glabrous or with a very few minute setae at apex [4. schweinfurthii](#)
- 6 Leaves linear-lanceolate, mostly basal, runcinate-pinnatifid and coarsely dentate, shortly auriculate at base, the lower 10-12 cm. long; achenes pubescent or glabrous, 4- or many-ribbed in the same capitulum .. [5. chevalieri](#)
Leaves linear to linear-oblanceolate, mostly cauline, simple or nearly so, entire or remotely denticulate, not distinctly auriculate at base:7
- 7 Stems spreading horizontally; leaves 5-10 cm. long, 4-7 mm. broad, obtuse, apiculate; achenes as above; pappus pale buff [6. brunneri](#)
Stems erect; leaves up to 15 cm. long and 1 cm. broad, acute; achenes 10-12-ribbed, [7. exauriculatus](#)
- 8 Stems dwarf, hardly exceeding 10 cm. in length, from a massive tuberous rootstock; involucre 1-1.5 cm. long, on bracteate peduncles up to 1 cm. long, contiguous in a bunched inflorescence:9
Stems 25-50(-75) cm. long from a stout taproot; inflorescence divaricately branched into a spreading panicle; involucre narrowly oblong, 1.5-2 cm. long on peduncles up to 3 cm. long, each with a single minute bracteole or ebracteolate [10. rarifolius](#)
- 9 Inner involucral bracts ovate to lanceolate, successively longer from outside to inside, twisted at apex; stem-apex and bracteoles within densely clothed with long matted buff hairs; bracteoles linear [8. ledermannii](#)
Inner involucral bracts linear, distinct from and about four times longer than the outer without intermediates, more or less flat; stem-apex and bracteoles within glabrous or thinly pubescent; bracteoles ovate [9. elliotianus](#)

1. *Sonchus asper* (Linn.) Hill Herb. Brit. 1: 47 (1769). *APD acc*

Sonchus oleraceus var. *asper* Linn. (1753)-F.T.A. 3: 457; Hiern in Cat. Welw. 1: 622.

A coarse erect or decumbent herb 1-3 ft. high with sharply toothed undulate leaves, pale green beneath and glossy above; florets yellow; a casual weed.

[Br.] Cam.: Cam. Mt., Upper Farm, Buea, 3,300 ft. (Mar., Apr.) Boughey GC 7032! Brenan & Jones 9582!

A casual weed; cosmopolitan.

2. *Sonchus oleraceus* Linn. Sp. Pl. 794 (1753); F.T.A. 3: 457; Chev. Bot. 379; Berhaut Fl. Sén. 171. *APD acc*

A coarse erect annual herb 1-3 ft. high with a milky sap and occasionally with glandular hairs on stems and peduncles; florets yellow; a weed.

Sen.: fide Berhaut l.c. Mali: Kankan (Mar.) Chev. 564! Timbuktu (Aug.) Hagerup 248! Guin.: Mali (Jan.) Roberty 16551! N. Nig.: Jos, 4,100 ft. (fr. Oct.) Hepper 1027! [Br.] Cam.: Bamenda, 5,000 ft. (Feb.) Migeod 457! F. Po: estate of Marcelino Puente (Jan.) Guinea 1736; 1737.

A cosmopolitan weed.

3. *Sonchus angustissimus* Hook. f. in J. Linn. Soc. 7: 203 (1864); F.T.A. 3: 458. *APD acc*

An erect herb 2-10 ft. high with glabrous striate hollow stems and campanulate flower-heads 3/4 in. long with pale yellow florets.

S. Nig.: Ikvette, 5,200 ft., Ogoja (Dec.) Savory & Keay FHI 25261! [Br.] Cam.: Cam. Mt., 5,000-9,500 ft. (Nov.-May) Mann 1311! 1919! Dunlap 200! Deistel 616! Mildbr. 10843! Brenan & Onochie 9390! Bamenda Dist., 6,000-8,200 ft. (Jan., Feb., Apr., May) Migeod 342! 491! Maitland 1750! Morton K255! Boughey GC 11044!

Also in Sudan, Uganda, Kenya, Tanganyika and S. Rhodesia.

4. *Sonchus schweinfurthii* Oliv. & Hiern in F.T.A. 3: 458 (1877). *APD acc*

An erect herb like the last, 3-6 ft. high, with white latex; ligules of florets yellow within, pinkish outside.

[Br.] Cam.: Bamenda, 3,600-5,000 ft. (Dec., Jan., Mar., Apr.) Migeod 366! Keay FHI 28416! Ujor FHI 30053! Boughey GC 11108! Morton K39! Kumbo, 5,500 ft. (Feb.) Hepper 1988! Maisamari, 4,600 ft., Mambila Plateau (Jan.) Hepper 1656!

Also in Ubangi-Shari, Congo, Sudan, Kenya, Uganda, Tanganyika, Nyasaland, N. Rhodesia and Angola.

5. *Sonchus chevalieri* (O. Hoffm. & Muschl.) Dandy in F. W. Andr. Fl. Pl. Sudan 3: 51 (1956).

APD: Synonym of Launaea brunneri (Webb) Amin ex Boulos

Launaea chevalieri O. Hoffm. & Muschl. (1910)-Chev. Bot. 380.

Sonchus prenanthoides Oliv. & Hiern in F.T.A. 3: 459 (1877); F.W.T.A., ed. 1, 2: 178, not of Bieb. (1808).

Launaea integrifolia Hagerup (1930).

A pale-stemmed diffusely branched annual or perennial herb up to about 2 ft. high, woody at the base, with a rosette or dentate leaves; florets with pale yellow ligules often reddish outside.

Sen.: Rufisque (Dec.) Chev. 2051! Nianing (Feb.) Berhaut 5350! Mali: Timbuktu (July) Chev. 1259! Hagerup 134! Selingourou (Feb.) Davey 26! Ghana: Gambaga (Dec.) Adams & Akpabla GC 4224! Also in Mauritania, Sudan, Ethiopia, Kenya and Tanganyika.

6. *Sonchus brunneri* (Webb) Oliv. & Hiern in F.T.A. 3: 459 (1877); F.W.T.A., ed. 1, 2: 178; Berhaut Fl. Sén. 4, 198.

APD: Synonym of Launaea brunneri (Webb) Amin ex Boulos

Rhabdotheca brunneri Webb in Fl. Nigrit. 147 (1849).

Sonchus bipontini of Chev. Bot. 379, not of Aschers.

A bushy spreading stiff-branched herb of littoral sands about 8-12 in. high at most; ligules white, pale yellow at the base and tinged pink outside.

Sen.: Sôr Isl. Brunner 26! Dakar (Jan.) Chev. 2046! Kayar (Mar.) Berhaut 5661!

Also in **Mauritania**.

7. **Sonchus exauriculatus** (*Oliv. & Hiern*) *O. Hoffm.* in Engl. Pflanzenw. Ost-Afr. C: 421 (1895).

APD: Synonym of Launaea cornuta (Hochst. ex Oliv. & Hiern) C. Jeffrey

Sonchus bipontini var. *exauriculatus* *Oliv. & Hiern* in F.T.A. 3: 459 (1877).

An erect perennial herb with glaucous stems up to about 4 ft. high; ligules of florets pale yellow, reddish outside.

[Br.] Cam.: Gurum, Vogel Peak area, Adamawa (Dec.) Hepper 1598! From Sudan and Somaliland to Congo, Nyasaland and Zanzibar.

8. **Sonchus ledermannii** *R. E. Fries* in Act. Hort. Berg. 8: 118 (1925).

APD: Synonym of Lactuca lasiorhiza (O. Hoffm.) C. Jeffrey

A perennial herb with a thick taproot yielding white latex; the leaves appear separately from the tufted inflorescences which are about 2 in. high with yellow florets in purplish involucre; ligules reddish outside.

[Br.] Cam.: Ngel Nyaki, 5,400 ft., Mambila Plateau (Jan.) Hepper 2878! Vogel Peak, 4,900 ft., Adamawa (Dec.) Hepper 2877!

Also in **Cameroun**, **Tanganyika** and **N. Rhodesia**.

9. **Sonchus elliotianus** *Hiern* in Cat. Welw. 1: 623 (1898); Chev. Bot. 379.

APD: Synonym of Launaea nana (Baker) Chiov.

Sonchus nanus *O. Hoffm.* (1895), not of Sond. (1865).

Lactuca nana *Bak.* (1895).

A perennial herb with leafless flowering shoots a few inches high from a thick laticiferous rhizome; florets yellow, often tinged reddish.

Guin.: Diaguissa (Apr.) Chev. 12910! Timbikounda, Faranna (Jan.) Chev. 20604! **S. L.:** Sc. Elliot 5010! York (May) Deighton 5530! Makene (Jan.) Deighton 3590! Kabala (Feb.) Deighton 4245! Also in **Congo**, **Uganda**, **Rhodesia**, **Angola**, **Transvaal** and **Madagascar**.

84. LAUNAEA

Cass.-F.T.A. 3: 460.

- 1 Involucral bracts with distinct broad hyaline margins; involucre cylindrical; leaves mostly basal, coarsely dentate and denticulate with sharp whitish cartilaginous teeth; outer achenes wrinkled, muricate, few or several-ribbed; bracteoles on peduncles very few or absent [nudicaulis](#)

Launaea nudicaulis (Linn.) Hook. f. in Fl. Brit. Ind. 3: 416 (1881); Muschl. Man. Fl. Egypt 2: 1059.
APD acc

Chondrilla nudicaulis Linn. (1771)-De Miré & Gillet in J. Agric. Trop. 3: 708 (1956).

A rosette herb with a branched, scapose inflorescence up to about 1 ft. high; ligules of florets yellow within, crimson outside.

Niger: Air vide De Miré & Gillet l.c.

Also in **Cape Verde Islands**, **Mauritania**, **Tibesti**, through N. Africa and **Egypt** to **Arabia** and India, and in **S. W. Africa**.

GENTIANACEAE

Annual or perennial herbs. Leaves opposite, often connate at the base; stipules absent. Flowers hermaphrodite, actinomorphic or rarely zygomorphic. Calyx tubular or of separate sepals, imbricate. Corolla contorted. Stamens the same number as the corolla-lobes and alternating with them, inserted on the corolla; anthers 2-celled, opening lengthwise. Disk present or absent. Ovary superior, mostly 1-celled with 2 parietal placentas, sometimes 2-celled with the placentas adnate to the septa; style simple. Ovules often numerous. Fruit usually a capsule. Seeds with copious endosperm and small embryo.

Mainly in temperate and subtropical regions, abundant in the mountains of the northern hemisphere.

Recognised by the herbaceous habit, opposite exstipulate leaves, gamopetalous corolla, the stamens the same number as and alternate with the corolla-lobes, and the superior ovary with usually parietal placentas.

- 1 Leaves well developed, green:2
Leaves rudimentary, membranous; flowers solitary, terminal; stamens included in the corolla-tube; calyx-lobes subulate [13. Voyria](#)
- 2 Flowers solitary in both leaf axils all along the stems; calyx-tube ribbed [1. Neurotheca](#)
Flowers in axillary or terminal cymes or clusters:3
- 3 Flowers in terminal dichotomous cymes:4
Flowers in dense axillary clusters all along the stem or in dense terminal clusters or heads:9
- 4 Ovary 2-celled:5
Ovary 1-celled with parietal or sometimes intrusive placentas:6
- 5 Corolla blue [2. Exacum](#)
Corolla white or yellow [3. Sebaea](#)
- 6 Anthers all fertile:7
Anthers not all (usually only one) fertile; corolla-lobes without nectaries [7. Canscora](#)
- 7 Corolla-lobes with 1-2 fringed nectaries near their base [4. Swertia](#)
Corolla-lobes without nectaries near their base:8

-
- 8 Calyx shortly 4-lobed; anthers straight; corolla yellow [5. *Schultesia*](#)
 Calyx deeply 5-lobes; anthers twisted; corolla pink [6. *Centaurium*](#)
- 9 Anthers exserted from the corolla-tube: 10
 Anthers not exserted; flowers 5-merous [12. *Enicostema*](#)
- 10 Flowers 4-merous: 11
 Flowers 3-merous [11. *Pycnosphaera*](#)
- 11 Anthers not all (usually only one) fertile; corolla white [8. *Schinziella*](#)
 Anthers all fertile; corolla blue or mauve: 12
- 12 Stigma 2-lobed, throat of corolla with a fringe of hairs [9. *Dialoniella*](#)
 Stigma simple, throat of corolla without a fringe of hairs [10. *Faroa*](#)
-

1. NEUROTHECA

Salisb.-F.T.A. 4, 1: 559.

- 1 Calyx-tube as long as or shorter than the teeth, unequally 10-12-ribbed, lobes subulate-lanceolate; leaves oblanceolate, 1-2.5 cm. long, narrowed to the base; flowers small and inconspicuous [1. *longidens*](#)
 Calyx-tube longer than the teeth, regularly 8-ribbed; lobes about 1/3 as long as the tube, triangular-lanceolate, very acute; leaves up to 2.5 cm. long; flowers numerous and conspicuous [2. *loeselioides*](#)

1. *Neurotheca longidens* N.E. Br. in F.T.A. 4, 1: 560 (1904).

APD: *Synonym of Congolanthus longidens* (N.E. Br.) A. Raynal

A prostrate or suberect herb with slender angular branches up to 12 in. long, glabrous, with small white or pale lilac flowers solitary in the leaf axils.

S. Nig.: Lagos (Nov.) Dalz. 1240! (Apr., July) A. P. D. Jones FHI 19409! Moloney!

Also in the **Congo** and **Uganda**.

2. *Neurotheca loeselioides* (Spruce ex Prog.) Baill. Hist. 10: 138 (1888); F.T.A. 4, 1: 560; Chev. Bot. 446 (incl. var. *grandiflora* Knobl.). *APD acc*

Octopleura loeselioides Spruce ex Prog. in Mart. Fl. Bras. 4, 1: 212 (1865).

Neurotheca robusta Hua (1906)-Chev. Bot. 446.

Neurotheca rupicola Hua (1906).

Erect, usually branched herb with slender angular stems up to 18 in. high, with blue or violet flowers 1/3-1/2 in. long solitary in the leaf axils.

Also in **Uganda**.

2. EXACUM

Linn.-F.T.A. 4, 1: 545.

- 1 A slender annual up to 75 cm. high, simple or branched above; leaves linear to lanceolate-ovate, acute, up to 6 cm. long, 3-5-nerved; flowers in terminal cymes; pedicels up to 1.4 cm. long; sepals ovate, 4 mm. long, broadly winged on the keel; corolla campanulate, tube 3 mm. long, the lobes shorter than the tube; anthers exserted; capsule globose, 4 mm. diam [quinquenervium](#)

Exacum quinquenervium *Griseb.* Gen. et Sp. Gent. 112 (1838); *F.T.A.* 4, 1: 546; Chev. Bot. 445.

APD: Synonym of Exacum oldenlandioides (S. Moore) Klack.

Erect herb of wet places with pale blue flowers.

Sen.: Casamance (Jan.) Chev. 2843. **Port. G.:** Bafata to Salinho Esp. Santo 3823! **Guin.:** Kankan Chev. 15681. Tossékéré (Oct.) Adam 12752! **S. L.:** Mateboi (Nov.) Jordan 837! Musaia (Dec.) Deighton 5700! **Ghana:** Achimota (Sept.) Milne-Redhead 5133! Accra to Winneba (Oct.) Cudjoe! **N. Nig.:** Kano (Dec.) Hagerup 664! Abo Barter 140! **S. Nig.:** Lagos Rowland! Apapa (Oct.) Dalz. 1254! Aguku Thomas 1057! Enugu (Aug.) Olorunfemi FHI 34198! **[Br.] Cam.:** Vogel Peak, Adamawa (Nov.) Hepper 1436!

Widespread in tropical Africa and Madagascar.

3. SEBAEA

R. Br.-F.T.A. 4, 1: 546.

- 1 Stamens inserted in the corolla sinuses, exserted; leaves orbicular, up to 1.5 cm. diam.; flowers shortly pedicellate, numerous, in dense terminal cymes:2
Stamens inserted in the corolla-tube, included; leaves lanceolate to elliptic; flowers very long-pedicellate in lax terminal cymes or more or less solitary;3
- 2 Corolla about 6 mm. long [1. brachyphylla](#)
Corolla about 12 mm. long [2. longicaulis](#)
- 3 Corolla-tube 2-3 times as long as the calyx, lobes 10-15 mm. long, white; leaves lanceolate [3. teuszii](#)
Corolla-tube about equal to the calyx, lobes cream or pale yellow:4
- 4 Leaves lanceolate; plant up to 20 cm. high:5
Leaves elliptic; plant 5-10 cm. high; corolla about 8 mm. long, lobes about 1.5 mm. long [6. pumila](#)
- 5 Corolla more than 2 cm. long, lobes 5-10 mm. long; leaves up to 3 cm. long [4. grandis](#)
Corolla 1-1.5 cm. long, lobes 2.5-5 mm. long; leaves up to 1.5 cm. long [5. luteo-alba](#)

1. **Sebaea brachyphylla** *Griseb.* Gen. et Sp. Gent. 170 (1838). *APD acc*

Sebaea multinodis *N. E. Br.* in *F.T.A.* 4, 1: 548 (1904); *F.W.T.A.*, ed. 1, 2: 182.

Erect herb of wet places up to 60 cm. high; flowers bright yellow.

[Br.] Cam.: Cam. Mt., 8,000-9,800 ft. (Nov., Jan., Mar.) Brenan 9522a! Migeod 158! Steele 39! Kumbo, 5,500 ft. (Feb.) Hepper 1969! Mambila Plateau, 4,900 ft. (Jan.) Hepper 1787! **F. Enicostema littorale Blume (1826)—F.T.A. 4, 1: 563; F.W.T.A., ed. 1, 2: 184.

Herb with angled or narrowly winged stems and small green and white flowers.

Gam.: Brown-Lester.

Throughout tropical Africa, S. Africa and tropical Asia.

13. VOYRIA

Aubl.—F.T.A. 4, 1: 569.

- 1 Stems erect, slightly flexuose, up to 6 cm. long, bearing about 3 pairs of very small rudimentary membranous leaves; flower terminal, solitary; calyx about 7 mm. long, lobes linear-lanceolate, setaceous at the apex; corolla-tube 2 cm. long, lobes 5, shortly spatulate-orbicular; anthers included in the corolla-tube; capsule elliptic, membranous [platypetala](#)

Voyria platypetala Bak. in Kew Bull. 1894: 26 (1894); F.T.A. 4, 1: 570.

APD: *Synonym of Voyria primuloides* Baker

A tiny pallid saprophytic herb of forest floors.

Lib.: Bobei Mt. (Sept.) Baldwin 9587! **Ghana:** (Dec.) Vigne FH 3217! **S. Nig.:** Nun R. Mann 514!

MENYANTHACEAE

Aquatic or marsh, herbs. Leaves alternate, entire or 3-foliolate, sometimes orbicular and peltate. Flowers hermaphrodite, actinomorphic. Corolla-lobes valvate or induplicate-valvate, margins on inside sometimes fimbriate. Stamens inserted towards the base of the tube or between the lobes; anthers 2-celled, sagittate or versatile. Ovary superior 1-celled, with 2 parietal placentas. Style 1, bifid at the apex. Ovules few to numerous. Fruit a 4 or 2-valved capsule, or fleshy and indehiscent. Seeds with copious endosperm and small embryo.

Mainly in the temperate regions of both hemispheres.

Formerly included in Gentianaceae but differing in the aquatic habit, alternate leaves and valvate aestivation.

NYMPHOIDES

Hill Brit. Herb. 77 (1756).

Limnanthemum Gmel. (1770)—F.T.A. 4, 1: 583.

- 1 Leaves simple, ovate-orbicular, deeply cordate at the base, 1-20 cm. long, glabrous, entire; petiole 1-2 cm. long; flowers fasciculate, usually numerous, variable in size; pedicels 3-6 cm. long; sepals ovate-lanceolate; corolla campanulate, 5-6-lobed, fimbriate; stamens 5-6; fruits indehiscent; seeds lenticular, smooth or more or less tuberculate, the margin sometimes carinate [indica](#)

Widespread in Old World tropics.

PRIMULACEAE

Annual or perennial herbs or rarely shrubs; stems erect or procumbent and rooting at the nodes. Leaves mostly basal, rarely cauline, alternate, opposite or verticillate, simple or lobate, often dentate; stipules absent. Flowers solitary to paniculate, actinomorphic, hermaphrodite. Calyx persistent, often leafy. Corolla hypocrateriform, campanulate or tubular, lobes 5, imbricate. Stamens inserted on the corolla, the same number as and opposite to the lobes. Ovary superior, rarely semi-inferior, 1-celled with a free basal placenta and numerous, or very rarely few ovules. Fruit a capsule, many-seeded or very rarely 1-seeded. Seeds angular with a small straight embryo in copious endosperm.

Mostly in the mountainous parts of the north temperate zone, rare in the Southern Hemisphere.

Recognised at once amongst the Gamopetalae by the united petals with the stamens inserted opposite to them and the peculiar placentation. *Ardisiandra* is endemic to the mountains of west and east tropical Africa.

Centunculus minimus Linn. Sp. Pl. 116 (1753).

Minute annual herb to about 2 in.; flowers white or pink; in damp places at high altitudes.

[Br.] Cam.: Cam. Mt., Mann's Spring, 9,500 ft. (fl. & fr. Dec.) Morton K867!

Also in Ethiopia, India, N., C. & S. America and Europe.

2. LYSIMACHIA

Linn.-F.T.A. 3: 489; Pax & Knuth in Engl. Pflanzenr. 4, 237, Primulac.: 256 (1905); P. Taylor in Kew Bull. 13: 142 (1958).

- 1 A perennial herb with numerous fibrous roots and erect or decumbent stems; leaves elliptic, entire, petiolate, with numerous black punctate glands; flowers numerous in terminal racemes, shortly pedicellate; calyx segments oblong, obtuse, about 3 mm. long; corolla about as long as calyx; fruit globose, about 3 mm. in diam.; style persistent, about 1 mm. long [ruhmeriana](#)

Lysimachia ruhmeriana Vatke in Linnea 40: 204 (1876); F.T.A. 3: 489; Pax & Knuth l.c. 292. *APD acc*

A branched herb to 4 ft. high; flowers white or pink; in grassland.

[Br.] Cam.: Bamenda (fl. & fr. Apr., May) Ujor FHI 30383! Maitland 1406!

Throughout tropical and southern Africa and Madagascar.

3. ARDISIANDRA

Hook. f.-F.T.A. 3: 488; Pax & Knuth in Engl. Pflanzenr. 4, 237, Primulac.: 222 (1905); P. Taylor in Kew Bull. 13: 146 (1958). *APD acc*

- 1 A creeping pubescent herb; stems rooting at the nodes; leaves suborbicular, cordate at base, deeply lobed, the lobes coarsely toothed; petiole as long as or longer than lamina; flowers in few-flowered extra-axillary corymbs or racemes; pedicels up to 1 cm. long; calyx-segments broadly ovate-lanceolate, somewhat accrescent; corolla campanulate, slightly longer than the calyx; capsule globose, dehiscent by 5 valves [sibthorpioides](#)

Ardisiandra sibthorpioides Hook. f. in J. Linn. Soc. 7: 205 (1864); F.T.A. 3: 488; Pax & Knuth l.c. 222. *APD acc*

Stems slender, up to 2 ft. long; flowers white; in montane forest.

[Br.] Cam.: Cam. Mt., 3,500-7,600 ft. (fl. & fr. Dec., Feb., fr. Aug.) Mann 2022! Rosevear Cam. 101/37! Maitland 1323! Schlechter 12846! Bafut-Ngemba F.R., 7,000 ft., Bamenda (fr. Feb.) Hepper 2863! F. Po: 6,500-7,500 ft. (fi. & fr. Mar., Sept.) Mann 1458! Wrigley & Melville 584!

Also in mountains of eastern Africa.

4. SAMOLUS

Linn.-F.T.A. 3: 490; Pax & Knuth in Engl. Pflanzenr. 4, 237, Primulac.: 336 (1905).

- 1 Herb with erect stems; leaves obovate-spathulate, rounded at apex, entire, up to 8 cm long and 3 cm. broad, the basal ones often forming a rosette; flowers in slender terminal racemes; pedicels up to 1.5 cm. long, with a bract in the middle; calyx campanulate, 3-4 mm. long, 5-toothed; corolla campanulate, slightly longer than the calyx, 5-lobed [valerandi](#)

Samolus valerandi Linn. Sp. Pl. 1: 171 (1753); F.T.A. 3: 490; Pax & Knuth l.c. 337. *APD acc*

A glabrous herb 1-3 ft. high, with small white flowers; in damp places.

N. Nig.: Bornu Denham & Clapperton.

Also in many other parts of tropical Africa and widespread throughout the world.

PLUMBAGINACEAE

Herbs, undershrubs or climbers. Leaves in a basal rosette or alternate; stipules absent. Flowers hermaphrodite, actinomorphic, often in unilateral inflorescences or subumbellate; bracts often sheathing, dry and membranous. Calyx often ribbed, mostly membranous between the ribs. Corolla gamopetalous, lobes imbricate, mostly persistent. Stamens 5, opposite the corolla-lobes; anthers 2-celled, opening lengthwise. Disk absent. Ovary superior 1-celled; styles 5, free or connate. Ovule 1, pendulous from a basal funicle. Fruit various. Seed with or without endosperm, and with a straight embryo.

Mainly halophytes; numerous around the Mediterranean; some highly decorative species.

PLUMBAGO

Linn.-F.T.A. 3: 486. APD acc

Perennial herbs or shrubby and occasionally climbing; leaves alternate; calyx tubular with stalked glands; flowers racemose.

- 1 A climbing undershrub; branches ribbed, glabrous; leaves ovate or ovate-lanceolate, acute, shortly cuneate at the base, 6-10 cm. long, 3-6 cm. broad, glabrous; petiole amplexicaul at the base; racemes mostly branched; calyx about 1 cm. long, clothed with stiff stalked glands; corolla longer than the calyx; capsule membranous, included in the persistent calyx [zeylanica](#)

Plumbago zeylanica *Linn. Sp. Pl.* 151 (1753); *F.T.A. 3: 486*; *Chev. Bot.* 383; van Steenis in *Fl. Males.*, ser. 1, 4: 109 (1949). *APD acc*

Climbing shrub about 3 ft. high, viscid above; flowers white, 3/4 in. long; [in thickets and near villages.](#)

Plumbago capensis *Thunb.*

It has blue flowers and stalked glands only on the upper part of the calyx.

Is cultivated in gardens.

PLANTAGINACEAE

Herbs. Leaves all radical or alternate or opposite, simple, sometimes much reduced. Flowers usually hermaphrodite, spicate, actinomorphic. Calyx herbaceous. Corolla gamopetalous, scarious, 3-4-lobed, lobes imbricate. Stamens usually 4, inserted on the corolla-tube and alternate with the lobes or hypogynous; anthers 2-celled, opening lengthwise. Ovary superior, 1-4-celled; style simple. Ovules 1 or more in each cell, axile or basal. Fruit a circumscissile capsule or nut. Seeds peltately attached, with fleshy endosperm and straight or curved embryo.

A small family represented in our area by one very distinct species.

PLANTAGO

Linn.-F.T.A. 5: 504.

Herbs with usually radical leaves and long-pedunculate spikes of small flowers; stamens usually 4; anthers versatile; fruit a circumscissile capsule.

- 1 A perennial herb with numerous roots; leaves all radical, very long-petiolate, ovate-orbicular in outline, widely cordate at the base, coarsely crenately lobed, about 9 cm. diam., with 3 principal nerves and several spreading side nerves, slightly pubescent on the nerves beneath, gradually narrowed into the petiole; spikes long-pedunculate, about 2 cm. long in flower, soon lengthening and slender [palmata](#)

Plantago palmata *Hook. f.* in J. Linn Soc. 6: 19 (1861); F.T.A. 5: 504; Pilger in Engl. Pflanzenr. 4, 269, Plantaginac.: 77 (1937). *APD acc*

Sessile herb with a tuft of long-petiolate leaves; flowers green; in montane grassland.

[Br.] Cam.: Cam. Mt., 4,400-7,000 ft. (fl. & fr. Dec., Apr.) Mann 1962! Maitland 1129! F. Po: Clarence Peak, 8,000 ft. (Dec.) Mann. 611!

Also on the mountains of E. Africa, from Ethiopia to Lake Nyasa.

SPHENOCLEACEAE

Annual herbs. Stems erect or decumbent, with aerenchymous tissue at the base. Leaves spirally arranged, simple, entire, exstipulate. Inflorescences terminal, densely spicate, acropetal. Flowers subtended by a bract and two bracteoles, bisexual, regular. Calyx-tube adnate to the ovary, lobes 5. Corolla campanulate-urceolate, perigynous, lobes 5, imbricate. Stamens 5, epipetalous, alternating with corolla-lobes; filaments short; anthers rounded, 2-locular, dehiscing longitudinally. Ovary semi-inferior, 2-locular; style short, stigma capitate. Fruit a capsule, circumscissile, seeds numerous, minute.

A monogeneric family with one pantropical species and one species endemic to our area.

Separable from Campanulaceae by the circumscissile capsule and imbricate corolla lobes on the regular flowers.

SPHENOCLEA

Gaertn.-F.T.A. 3: 480. Nom. cons.

- 1 Leaves lanceolate, more or less acute, up to 10 cm. long and 3 cm. broad, entire, glabrous; petiole up to 1.3 cm. long; spikes terminal, cylindric, up to 7 cm. long, about 1 cm. diam.; calyx-lobes ovate-rounded, imbricate; corolla divided nearly to the base, as long as the calyx, white; anthers 5, subsessile, suborbicular; style very short; stigma shortly bifid; capsule depressed-globose, dehiscing transversely [l. zeylanica](#)
- Leaves obovate-elliptic, sessile, rounded at the apex, 2-4 cm. long, 1-2 cm. broad; spikes very short, oblong; corolla twice as long as the calyx-lobes, pink; filaments as long as the anthers [2. dalzielii](#)

1. **Sphenoclea zeylanica** *Gaertn.* Fruct. 1: 113, t. 24, fig. 5 (1788); F.T.A. 3: 481; Chev. Bot. 382; Berhaut Fl. Sén. 197; Airy Shaw in Fl. Males., ser. 1, 4: 27. *APD acc*

Phytolacca octandra of F.T.A. 6, 1: 98 (Rowland), not of Linn.

An erect glabrous herb with spongy stems 1-4 ft. high; flowers greenish-white in congested spikes; in rice-fields, beside rivers and open swamps, often gregarious in tidal creeks.

Sen.: Farmar 118! Berhaut 577; 3975. Gam.: Kuntaur Ruxton 115! Mali: Gao (fl. & fr. Sept.) Hagerup 353! Port. G.: Brene, Bissau (Jan.) Esp. Santo 1681! S. L.: Freetown Sc. Elliot 5924! In the tropics generally.

2. **Sphenoclea dalzielii** *N. E. Br.* in Kew Bull. 1912: 277; Berhaut Fl. Sén. 194, fig. 20, 5. *APD acc*

Straggling herb with spongy stems; flowers pink; [on mud beside pools](#).

Sen.: Tambacounda Berhaut 1649; 3262. **Gam.:** Bansang, Macarthy Div. Duke 7! **N. Nig.:** Katagum Dist. Dalz. 201!

Also in [Ubangi-Shari](#).

CAMPANULACEAE

Herbs to small trees, nearly always with milky juice. Leaves alternate, rarely opposite, simple; stipules absent. Flowers hermaphrodite, actinomorphic. Calyx-tube adnate to the ovary, 3-10-lobed. Corolla gamopetalous, tubular or campanulate, lobes valvate. Stamens as many as the corolla-lobes and alternate with them, inserted towards the base of the corolla or the disk; anthers free, 2-celled, opening lengthwise. Ovary inferior or rarely superior, 2-10-celled, with axile placentas. Ovules mostly numerous. Fruit capsular or baccate.

A widely distributed family, in Africa mainly confined to the south.

The absence of stipules distinguishes it from the herbaceous Rubiaceae.

3. LIGHTFOOTIA

APD: Synonym of Wahlenbergia Schrad. ex Roth

L'Hérit. Sert. Angl. 4 (1788); F.T.A. 3: 473.

- 1 Stems glabrous, angular, slender; leaves subulate, about 1 cm. long and 1 mm. broad, apex acute, decurrent at base, margins thick and with a few minute teeth towards apex; flowers numerous in a branched inflorescence; corolla about 2 mm. long; calyx-lobes 0.5 mm. long; ovary glabrous; seeds trigonous [1a. abyssinica var. tenuis](#)
Stem pilose at least below; leaves crenulate and undulate; corolla about as long as calyx lobes:2
- 2 Leaves lanceolate about 1 cm. long and 3 mm. broad; flowers rather numerous in lax inflorescences; pedicels very slender 1-3.5 cm. long; calyx-teeth of fruit shortly triangular, about 1 mm. long, much shorter than the ovary; fruit about 3 mm. long; seeds trigonous[2. ramosissima](#)
Leaves ovate or obovate, 1-3 cm. long, 8-20 mm. broad; flowers numerous in branched inflorescences; pedicels slender 1-1.5 cm. long; calyx-teeth of fruit long-triangular, about 2.5 mm. long, as long as the ovary; fruits about 2.5 mm. long; seeds trigonous[3. hirsuta](#)

1. **Lightfootia abyssinica** Hochst ex A. Rich. Tent. Fl. Abyss. 2: 1 (1851).

APD: Synonym of Wahlenbergia abyssinica (Hochst. ex A. Rich.) Thulin subsp. abyssinica

APD: Synonym of Wahlenbergia abyssinica (Hochst. ex A. Rich.) Thulin

1a. **Lightfootia abyssinica var. tenuis** Oliv. in J. Linn. Soc. 21: 401 (1885); Hepper in Kew Bull. 15: 61.

APD: Synonym of Wahlenbergia abyssinica (Hochst. ex A. Rich.) Thulin subsp. abyssinica

Slender, well-branched herb 1-2 ft. high.

[Br.] Cam.: Mambila Plateau Chapman 59!

Also in **Uganda**, **Kenya** and **Tanganyika**.

2. **Lightfootia ramosissima** (Hemsley) E. Wimm. ex Hepper in Kew Bull. 15: 61 (1961).

APD: Synonym of Wahlenbergia ramosissima (Hemsl.) Thulin subsp. ramosissima

Cephalostigma ramosissimum Hemsley in F.T.A. 3: 472 (1877); F.W.T.A., ed. 1, 2: 191.

Erect branched annual with slender ribbed hispid stems 3-10 ins. high; flowers blue.

[Br.] Cam.: Cam. Mt., 5,000-7,000 ft. (fl. & fr. Nov., Dec.) Mann 1992! Maitland 1185!

3. **Lightfootia hirsuta** (Edgew.) E. Wimm. ex Hepper l.c. (1961).

APD: Synonym of Wahlenbergia hirsuta (Edgew.) Tuyn

Cephalostigma hirsutum Edgew. in Trans. Linn. Soc. 20: 81 (1851); F.T.A. 3: 472.

C. perotifolium Hutch. & Dalz. F.W.T.A., ed. 1, 2: 191 (1931), not *Wahlenbergia perotifolia* Wight & Arn. (1834).

Erect much-branched pilose annual a few inches high; flowers blue, rarely yellow; **in moister places between rocks.**

Ghana: Sunyani (fl. & fr. Dec.) Adams 2870! Gambaga Scarp (Sept.) Hall 811! **N. Nig.:** Nabardo Lely 623! Jos Plateau (fl. & fr. Oct.) Lely P802! P804! Vom Dent Young 167! Gindiri (fl. & fr. Oct.) Hepper 1100! 1100a! [**Br.**] **Cam.:** Vogel Peak, Adamawa (fl. & fr. Nov.) Hepper 1341!

LOBELIACEAE

Herbs, shrubs or small trees, always with milky juice; leaves alternate, rarely opposite or verticillate, simple; stipules absent. Flowers hermaphrodite, zygomorphic. Calyx-tube adnate to the ovary, 5-lobed. Corolla gamopetalous, tubular, usually bilabiate, lobes 5, valvate. Stamens 5, epigynous, alternate with the corolla-lobes, inserted on or free from the corolla; filaments partly free, anthers completely connate in a tube around the filiform style, 2-celled, opening lengthwise. Ovary inferior, 2-celled with axile placentation, rarely 1-celled with parietal placentation; ovules numerous, very rarely few. Fruit capsular or baccate; seeds minute, embryo straight in fleshy endosperm.

A widely distributed family in the tropics and subtropics, few species in the temperate zone, in Africa mainly confined to the South, some remarkable species of *Lobelia* in the African mountains, especially in E. Africa, where they are a prominent feature of the vegetation.

Distinguished from Campanulaceae by the zygomorphic corolla and the anthers cohering into a tube around the style.

- 1 Capsule more or less globose or obovoid (nearly as broad as long), dehiscent with 2 valves:2
Capsule elongate-conic to fusiform, tortuose, at length splitting into 5 narrow-linear strips; flowers bluish3.
[*Dielsantha*](#)
- 2 Flowers bluish or white; stigma 2-lobed, lobes more or less rounded to oblong, spreading1. [*Lobelia*](#)
Flowers yellowish; stigma 2-lobed, lobes long-filiform, rolling back2. [*Monopsis*](#)

1. LOBELIA

Linn.—F.T.A. 3: 464; E. Wimm. in Engl. Pflanzenr. 4, 276b Campanulac-Lobelioid.: 408 (1953).

Anthers all bearded at apex:10

- 1 Tall stiff erect herb, mostly unbranched, 1.5-2.5 m. high; stem softly tomentellous; leaves sessile, lanceolate, acute, up to 20 cm. long and 3 cm. broad, densely denticulate to irregularly dentate, shortly pubescent on both surfaces; flowers in a dense terminal raceme, 20-25 cm. long; bracts linear-lanceolate, 25 mm. long, 3-5 mm. broad; pedicels 10-15 mm. long, 2-bracteolate in the middle; calyx-lobes sublinear, entire, tomentellous, obtuse and mucronulate, 10-15 mm. long; corolla 25-35 mm. long, puberulous; filaments glabrescent, up to 28 mm. long; anther-tube glabrous at the apex, 6 mm. long1. [*columnaris*](#)

Small herbs, erect, decumbent or prostrate, 5-80 cm. high:

Anthers with only the 2 lower bearded at the apex:2

- 2 Leaves basal, few, ovate to elliptic, shortly petiolate, rounded at the base or cuneate, subacute at the apex, densely denticulate on the margin, scarcely pilose above, glabrous beneath; stem without leaves, 5-20 cm. high, hirtellous below, glabrous above; inflorescence a one-sided raceme with few flowers; pedicel 4 mm. long, calyx-tube obconic, lobes subulate with a tooth near the base; corolla 6 mm. long; stamens 3 mm. long; anther-tube glabrous2. [*lelyana*](#)

Leaves cauline, alternate:3

- 3 Prostrate, creeping herb, densely leafy, stems glabrous:4

Erect or ascending (occasionally decumbent) herbs, stems with scattered leaves:5

- 4 Leaves ovate-rounded, 4-5 mm. long and about as broad, glabrous, truncate or rounded at base, margin bluntly toothed and mucronulate; petiole 1-2 mm. long; flowers solitary in the uppermost axils of the leaves; pedicels about twice as long as the leaf, hirtellous; calyx-tube turbinate, hirtellous, the lobes linear, acute, 1.5 mm. long; corolla 8 mm. long, deep sky blue or blue and white, glabrous, the lower 3 lobes oblong; anther-tube glabrous upwards3a. [*minutula* var. *kiwuensis*](#)

Leaves ovate-rounded, 5-10 mm. long, 5-12 mm. broad, rounded-truncate at base, margin angular-dentate, glabrous; petiole 2 mm. long; flowers singly in the axils of the uppermost leaves; pedicels 10-20 mm. long, hirtellous; calyx-tube obconic, hirtellous, the lobes subulate, ciliate, 2 mm. long; corolla dull blue, 11 mm. long, subglabrous; stamens 5 mm. long; anther-tube upwards hirtellous4. [*acutidens*](#)

- 5 Leaves (except the lowest) lanceolate to linear:6

Leaves suborbicular, ovate to elliptic or subrhomboidal, the uppermost often more lanceolate; petioles 3-10 mm. long:7

- 6 Calyx-lobes ciliate; corolla 5 mm. long, glabrous within; lower leaves ovate to oblong, 2-4 cm. long, 1-2-2 cm. broad, with petiole 5-10 mm. long, the upper leaves subsessile; seeds ovoid-globose, 0.4-0.5 mm. long [5. *molleri*](#)
- Calyx-lobes glabrous; corolla about 10 mm. long, upper lobes hirtellous; lower leaves spatulate, about 3 cm. long, 8 mm. broad, narrowed into a short petiole; the others subsessile, remotely denticulate, all glabrous; seeds oblong-ellipsoid, 0.5 mm. long [6. *senegalensis*](#)
- 7 Corolla 3-6 mm. long; erect herbs: [8](#)
- Corolla 9-10 mm. long; erect, or often decumbent below and rooting at nodes; leaves ovate: [9](#)
- 8 Stem and branches conspicuously 3-winged; leaves ovate to elliptic, 1-2 cm. long, 3-15 mm. broad, subcordate truncate to gradually narrowed to base, blunt to acute at the apex, more or less dentate, scarcely hirtellous above; bracts lanceolate, acute; pedicels 1 cm. long; calyx-lobes lanceolate to linear, entire, 2 mm. long; corolla about 5 mm. long, stamens 3 mm. long [7a. *heyneana* var. *inconspicua*](#)
- Stem and branches not winged, the leaf at most very narrowly decurrent; leaf ovate to ovate-elliptic, 1.5-5 cm. long, 8-32 mm. broad, glabrous or scarcely hirtellous; petiole 3-10 mm. long; flowers in a lax, terminal raceme; pedicels 3-8 mm. long with short bracts; calyx-tube turbinate, soon oblong-cylindrical, 3-4 mm. long, lobes subulate, entire, 2 mm. long; corolla 3-4 mm. long; anther-tube hirtellous above [8. *sapinii*](#)
- 9 Leaves bluntly acuminate, 5-40 mm. long, 3-17 mm. broad, rounded to cuneate at base, margin denticulate; petiole 3-10 mm. long; flowers solitary in axils of the upper leaves or in a lax raceme; bracts more or less lanceolate; calyx-tube obconic, lobes linear, 3-6 mm. long, sometimes ciliate, spreading; seeds oblong-ellipsoid [9. *rubescens*](#)
- Leaves acute at apex, 15-25 mm. long, 5-10 mm. broad, rounded to cuneate at base, margin serrulate; petiole 5-7 mm. long, winged; flowers laxly clustered; calyx-tube obconic, lobes subulate, 2-4 mm. long, minutely ciliate, spreading; seeds compressed-elliptic [10. *kamerunensis*](#)
- 10 Leaves sessile, linear-lanceolate (some of lowermost leaves ovate), acute, denticulate, 1-3.5 cm. long, 4-6 mm. broad, glabrous; flowers solitary, axillary or in lax racemes; pedicels 2-4 cm. long with 2 divaricate bractlets at the base; bracts narrow-lanceolate, shorter than the pedicels; calyx-tube obovoid, lobes subulate, 1 mm. long [11. *djurenensis*](#)
- Leaves petiolate, ovate, about 5 cm. long, 3 cm. broad, acute to acuminate at apex, subcordate or rounded to cuneate at base, sparsely pilose on both sides or only beneath: [11](#)
- 11 Corolla 7-9 mm. long, white or pale blue, with lilac margins; pedicels with 2 bractlets near the middle; seeds compressed-ovoid, 0.8 mm. long [12. *hartlaubii*](#)
- Corolla 14-25 mm. long, blue, rarely white; pedicels with 2 bractlets near the base; seeds convex-oblong, 1 mm. long [13. *baumannii*](#)

1. ***Lobelia columnaris* Hook. f.** in J. linn. Soc. 6: 14 (1862); F.T.A. 3: 466; E. Wimm. in Engl. Pflanzenr. 4, 276b, Campanulac.-Lobelioid.: 660. **APD acc**

***Tupa columnaris* (Hook. f.) Vatke** (1874).

Erect simple herb, 6-9 ft. high; flowers blue or lilac; **in montane grassland.**

[Br.] **Cam.:** Cam. Mt.: above Ukile 8,500 ft. (Mar.) Brenan 9536! above Bamenda, 6,000 ft., Migeod 360! Ndu, 6,000 ft. (fl. & fr. Feb.) Hepper 1937! **F. Po:** Clarence Peak (Dec.) Mann 1316! Moka, 3,800-4,000 ft. (Nov., Jan.) Mildbr. 7067! Guinea 1609!

Also in **Cameroon**.

2. ***Lobelia lelyana* E. Wimm.** l.c. 465 (1953).

APD: *Synonym of Lobelia sapinii De Wild.*

Erect annual herb, up to 8 in. high; flowers dull blue; **on rocks.**

N. Nig.: Jos Plateau (Sept.) Lely P727!

3. ***Lobelia minutula* Engl.** Bot Jahrb. 19, Beibl. 47: 50 (1894). **APD acc**

3a. ***Lobelia minutula* var. *kiwuensis* (Engl.) E. Wimm.** in Ann. Naturhist. Mus. Wien 56: 347 (1948); Engl. Pflanzenr. l.c. 486.

APD: *Synonym of Lobelia minutula Engl.*

***Lobelia kiwuensis* Engl.** Ergebn. Deutschen Zentralaf.-Exped. 1907-08, 2: 345 (1911).

A small caespitous herb with stems creeping; flowers deep blue or white-spotted.

[Br.] Cam.: Lakom, 6,000 ft., Bamenda (fl. & fr. Apr.) Maitland 1773!

4. *Lobelia acutidens* Hook. f. in J. Linn. Soc. 7: 204 (1864); F.T.A. 3: 467; E. Wimm. l.c. 488. *APD acc*

A small prostrate, creeping herb; flowers dull blue.

F. Po: 9,000 ft. (Mar.) Mann 1452! above Basilé, 8,000 ft., St. Isabel's Peak Mildbr. 7171!

5. *Lobelia molleri* Henriq. in Bol. Soc. Brot. 10: 137 (1892); E. Wimm. l.c. 472. *APD acc*

Lobelia thomensis Engl. & Diels (1899).

Lobelia fervens of F.W.T.A., ed. 1, 2: 193, not Thunb.

A weak erect or partly decumbent herb, glabrous, 1 ft. or more high; flowers white.

[Br.] Cam.: above Buea, frequent Deistel 39 (652)! 91! F. Po: Moka, about 3,600 ft. Tessmann 2873!

Also in Cameroun, S. Tomé, Uganda and Tanganyika.

6. *Lobelia senegalensis* A. DC. Prod. 7: 372 (1839); F.T.A. 3: 469; E. Wimm. l.c. 551; Berhaut Fl. Sén. 174. *APD acc*

Lobelia kohautiana Vatke (1874).

Lobelia chilawana Schinz (1900).

Lobelia trierarchi R. Good (1924).

A glabrous erect, branched herb, about 1 ft. high; flowers pale blue with white spots.

Sen.: Perrottet 439! Sieber 15! Boivin 403! Cayor Leprieur! R. Senegal Heudelot 512! Sangalkam (Dec.) Berhaut 204!

Also in Sudan, Somaliland and Mozambique.

7. *Lobelia heyneana* Roem. & Schult. Syst. Veg. 5: 50 (1819). *APD acc*

7a. *Lobelia heyneana* var. *inconspicua* (A. Rich.) E. Wimm. l.c. 475, fig. 79 c. (1953).

APD: *Synonym of Lobelia inconspicua* A. Rich.

Lobelia inconspicua A. Rich. (1851)-F.T.A. 3: 468.

Lobelia ilysanthoides Schlechter (1922), partly.

A small erect herb, 2-11 cm. high, stem narrowly winged and sparsely pilose; flowers 3-5 mm. long, reddish or lilac.

S. L.: Jaeger 451!

Also in Cameroun, Ethiopia and Tanganyika.

8. *Lobelia sapinii* De Wild. in Bull. Jard. Bot. Brux. 3: 261 (1911); E. Wimm. l.c. 511. *APD acc*

Lobelia ledermannii Schlechter (1922).

A glabrous erect branched herb, up to 8 in. high; flowers blue or white with deep blue stripes or bright blue with 2 rows of dark dots across lower lip.

N. Nig.: Anara F.R., Zaria (Oct.) Keay FHI 5465! Naraguta F.R., 3,800 ft., (Nov.) Hepper 1072! [Br.] Cam.: Vogel Peak, Adamawa (Nov.) Hepper 1484!

Also in Cameroun, Congo, Tanganyika and Nyasaland.

9. *Lobelia rubescens* De Wild. in Rev. Zool. Bot. Aft. 8, Suppl. 27 (1920); E. Wimm. l.c. 507. *APD acc*

Erect, subglabrous herb to 1 ft. high, often decumbent or somewhat trailing and rooting at the base; flowers blue, about 1/2 in. long; in marshes.

S. L.: Loma Mts. (Feb.) Jaeger 4257!

Also in Congo, Uganda and Tanganyika.

[Note.: This specimen seems to be an intermediate form between *L. kamerunensis* Engl. and *L. rubescens* De Wild.-E. W.]

10. *Lobelia kamerunensis* Engl. ex Hutch. & Dalz. F.W.T.A., ed. 1, 2: 193 (1931); E. Wimm. l.c. 507.

APD: *Synonym of Lobelia rubescens* De Wild.

APD: *Synonym of Lobelia rubescens* De Wild.

APD: *Synonym of Lobelia molleri* Henriq.

Erect or decumbent-ascending herb to 1 ft. high, stems and leaves above slightly pilose or glabrescent; flowers white, bluish within with dull spots on the lower lip, 1/4 in. long.

S. L.: Loma Mts. 1,400 ft. (Sept.) Jaeger 1979! **S. Nig.:** Sonkwala, 5,500 ft., Obudu Div. (Aug., Dec.) Stone 80! Savory & Keay FHI 25247! **[Br.] Cam.:** Cam. Lobelia schaeferi Schlechter in Engl. Bot. Jahrb. 57: 624 (1922).

Decumbent or ascending herb, 1-2 ft. high, often rooting below, branched, sparsely pilose; flowers white, blue or mauve with white margins; in montane forest.

[Br.] Cam.: (eastern border): Mbo, 5,000 ft. (Nov.) Ledermann 6054!

Also in **Cameroun**, **Uganda** and **Madagascar**.

13. *Lobelia baumannii* Engl. in Abhandl. Preuss. Akad. Wiss. 46 (1894); E. Wimm. l.c. 586. APD acc

Erect herb, stem decumbent at the base, rooting at the nodes, 1 ft. or more high; flowers white with purple markings on the throat, anthers blue.

S. Nig.: Sonkwala, Obudu Div. (Dec.) Savory & Keay FHI 25208!

Widespread in E. Africa.

2. MONOPSIS

Salisb. in Trans. Hort. Soc. Lond. 2: 37 (1817); E. Wimm. in Engl. Pflanzenr. 4, 276b, Campanulac.-Lobelioid.: 698 (1953).

- 1 Small herb; stems prostrate, scabrid; leaves opposite, lanceolate, up to 2.5 cm. long and 6 mm. broad, subacute at both ends, midrib scabrid, margins callous and crenate; flowers solitary in the axils of the leaves; peduncles 8-25 mm. long, divaricate; calyx-tube obconic, retrorse-pilose, lobes sublinear, 4 mm. long, ciliate, divaricate or deflexed; corolla about 8 mm. long, bilabiate; capsule oblong-obovoid, hirtellous, 6 mm. long; seeds compressed-globose, scrobiculate, 0.6-0.8 mm. long*stellarioides* var. *schimperiana*

Monopsis stellarioides (*Presl*) *Urb.* in *Jahrb. Bot. Gart. Berl.* 1: 275 (1881). *APD acc*

Dobrowskya stellarioides *Presl* (1836), partly.

Monopsis stellarioides var. **schimperiana** (*Urb.*) *E. Wimm.* l.c. 704 (1968).

APD: Synonym of *Monopsis stellarioides* subsp. *schimperiana* (*Urb.*) *Thulin*

Monopsis schimperiana *Urban* in *Jahrb. Bot. Gart. Berl.* 1: 276 (1881).

Lobelia stellarioides (*Presl*) *Benth. & Hook. f. ex Hemsley* in *F.T.A.* 3: 470 (1877).

L. mukuluensis *De Wild.* (1920).

Straggling herb, with weak stems 1-2 ft. long; flowers yellow with dull red throat and often reddish outside; in montane marshes.

[Br.] *Cam.*: Litoka, 4,400 ft., Cam. Mt. (Apr.) Maitland 1087! Bamenda (fl. & fr. May) Daramola FHI 41185! Jakiri, 5,000 ft., Bamenda (Feb.) Hepper 1957! *F. Po.*: Biao, 6,500 ft. (Sept.) Wrigley & Melville 469!

Also in Cameroun, tropical E. Africa, E. Congo.

3. DIELSANTHA

E. Wimm. in *Ann. Naturhist. Mus. Wien* 56: 372 (1948); *Engl. Pflanzenr.* 4, 276b, Campanulac.-Lobelioid.: 743, fig. 111 (1953).

- 1 Erect or decumbent, branched, herb; stems succulent, more or less square, often rooting below; leaves ovate to oblong-ovate, 3-7 cm. long, 2-3-5 cm. broad, subacuminate to acute at the apex, rounded to cuneate, margin serrate, slightly hirsute on the surfaces or glabrescent; petioles 5-15 mm. long; flowers few, sessile in sessile axillary fascicles; corolla as in *Lobelia*, 1 cm. long, all segments ciliate at the apex; all anthers bearded; calyx-tube at first peduncle-like, soon becoming conical or spindle-shaped; fruit 1.5-2 cm. long, 2 mm. broad, with 5 sepals at apex, splitting into 5 narrow strips [galeopsoides](#)

Dielsantha galeopsoides (*Engl. & Diels*) *E. Wimm.* l.c. (1953). *APD acc*

Lobelia galeopsoides *Engl. & Diels* in *Engl. Bot. Jahrb.* 26: 118 (1899); *F.W.T.A.* ed. 1, 2: 193.

A weak herb, about 8 in. high; flowers lilac or blue-violet.

S. Nig.: Oban Talbot 1259! [Br.] *Cam.*: Barombi gorge (May) Preuss 184! *F. Po.*: St. Isabel's Peak (Aug.) Mildbr. 6365!

GOODENIACEAE

Herbs or undershrubs. Leaves alternate or rarely opposite; stipules absent. Flowers zygomorphic. Calyx tubular, adnate to the ovary, rarely free. Corolla gamopetalous, bilabiate or rarely 1-lipped, lobes valvate, often induplicate. Stamens 5, alternate with the corolla-lobes, free or rarely shortly adnate to the corolla; anthers 2-celled, free or connivent around the style. Ovary mostly inferior, 1-4-celled; stigma indusiate at the top. Ovules 1 or more in each cell, erect or ascending. Fruit drupaceous or nut-like, or capsular. Seeds small, with straight embryo in the middle of copious endosperm.

Mainly Australian; represented in our area by one widely distributed species.

SCAEVOLA

Linn.-*F.T.A.* 3: 462. *Nom. cons.*

- 1 A succulent low shrub; leaf-scars oblique, prominent; leaves narrowly obovate, fleshy, rounded at the apex, broadly petiolate, 5-8 cm. long, 2.5-4 cm. broad, glabrous, faintly nerved when dry; flowers in short axillary cymes, sessile; bracts linear; calyx very short and annular; corolla about 2 cm. long, glabrous outside, densely woolly inside; style pubescent, indusiate stigma finely ciliate; fruit fleshy, about 1.3 cm. long, ellipsoid-globose [plumieri](#)

Scaevola plumieri (*Linn.*) *Vahl* *Symb. Bot.* 2: 36 (1791). *APD acc*

Lobelia plumieri Linn. (1753).

Scaevola lobelia Murr. (1774)-F.T.A. 3: 462; Chev. Bot. 381.

A low shrub 1-3 ft. high, succulent and nearly glabrous, with thick branchlets marked by leaf-scars; flowers white or greenish-yellow, fruits blue-black; on sandy shores near high-water mark.

Sea coast of Africa, tropical America and S. India.

Scaevola sericea Vahl

A native of Madagascar and tropical Asia.

Cultivated at Victoria.

HYDROPHYLLACEAE

Annual or perennial herbs. Leaves radical or alternate, rarely opposite, entire to pinnately or palmately lobed. Flowers usually cymose, hermaphrodite, actinomorphic. Calyx-segments 5, imbricate. Corolla gamopetalous, lobes imbricate or contorted. Stamens the same number as the corolla-lobes and alternate with them, mostly inserted towards the base of the tube; anthers 2-celled. Ovary superior, 1-celled with 2 parietal placentas, or 2-3-celled; styles 1 or 2. Ovules numerous. Fruit a loculicidal or rarely septicidal capsule. Seeds with fleshy endosperm and small straight embryo.

Mainly North American.

HYDROLEA

Linn.-F.T.A. 4, 2: 2; Brand in Engl. Pflanzenr. 4, 251, Hydrophyllac.: 174 (1913). Nom. cons.

Herbs; leaves alternate, entire, narrow. Flowers blue, in axillary clusters, or in terminal cymes. Sepals 5, free to near the base, imbricate. Corolla 5-lobed to near the base, open. Stamens 5; anthers sagittate. Ovary 2-(rarely 3-) celled; ovules numerous; styles 2, divergent. Capsule septicidally 2-valved.

- 1 Flowers in axillary clusters along the stems or in very short axillary racemes; leaves lanceolate, very acutely acuminate, acute at the base, 4-8 cm. long, 1-1.5 cm. broad, glabrous, with numerous lateral nerves; sepals oblong-lanceolate, acute, glabrous, about 6 mm. long; corolla lobed nearly to the base, very short; capsule broadly ovoid, glabrous [1. glabra](#)

Flowers in cymes; leaves linear or linear-lanceolate: **2**

- 2 Sepals cordate-ovate, about 7 mm. long; cymes lax, few-flowered; pedicels slender; leaves sessile, linear-lanceolate, acute, 2-5 cm. long, 0.5-1 cm. broad, glabrous, with very few lateral nerves; capsule subglobose, hidden by the slightly accrescent veiny sepals [2. macrosepala](#)

Sepals lanceolate, 4 mm. long; cymes rather compact, many-flowered; leaves linear, up to 9 cm. long, acute, glabrous; capsule globose, about 4 mm. diam., glabrous [3. floribunda](#)

1. *Hydrolea glabra* Schum. & Thonn. Beskr. Guin. Pl. 161 (1827); Brand l.c. 175.

APD: *Synonym of Hydrolea palustris (Aubl.) Raeusch.*

BORAGINACEAE

Trees, shrubs or herbs, often roughly scabrid or hispid. Leaves alternate or rarely opposite, simple; stipules absent. Flowers often in scorpioid cymes, actinomorphic or rarely oblique, mostly hermaphrodite. Calyx-lobes imbricate or rarely valvate. Corolla with contorted or imbricate lobes. Stamens the same number as the corolla-lobes and alternate with them, inserted on the corolla. Anthers 2-celled, opening lengthwise. Disk present or absent. Ovary superior, 2-celled or 4-celled by spurious septa, entire or deeply 4-lobed; style terminal or gynobasic. Ovules paired, erect or spreading from the central axis. Fruit a drupe or of 4: nutlets. Seeds with or without endosperm.

Generally distributed; very numerous in the drier parts of the Mediterranean regions.

Recognized by the usually rough hairs and often lobed ovary with gynobasic style.

- 1 Style terminal on top of the ovary (ovary not vertically lobed):2
Style inserted between the lobes of the ovary (ovary vertically lobed):6
- 2 Trees or shrubs:3
Herbs:5
- 3 Style once divided:4
Style twice divided[3. Cordia](#)
- 4 Stamens inserted at the throat of the corolla-tube; flowers small, cymose[1. Ehretia](#)
Stamens inserted at the bottom of the corolla-tube; flowers few, in leafy cymes [2. Rotula](#)
- 5 Styles two, separate; annual procumbent herb densely setose all over; flowers tetramerous, solitary, axillary ...[4. Coldenia](#)
Style one; herbs with scorpioid cymes (in one species flowers appearing solitary); flowers pentamerous (except the gynaeceum)[5. Heliotropium](#)
- 6 Calyx large and conspicuous, accrescent in fruit [6. Trichodesma](#)
Calyx rather small, not or only slightly accrescent:7
- 7 Nutlets depressed-globose, covered with glochidiate bristles[7. Cynoglossum](#)

Nutlets ovoid, without glochidiate bristles:8

8 Corolla-tube rather long and narrow; plants densely hispid with long stiff white hairs; flowers yellow [8. Arnebia](#)

Corolla-tube short, hypocrateriform, plants clothed with short spreading bristly hairs; flowers white or bright blue
.....[9. Myosotis](#)

1. EHRETIA

Linn.-F.T.A. 4, 2: 19.

1 Leaves glabrous beneath except sometimes on the nerves, broadly elliptic to obovate or almost suborbicular, abruptly acuminate, rounded to subacute at the base, 10-15 cm. long and up to 10 cm. broad, entire; petiole 1-2 cm. long, slightly pilose; cymes large, terminal, many-flowered; flowers small:.....2

Leaves shortly setulose with broad-based hairs beneath, obovate-elliptic, gradually acuminate, rounded at base, 12-16 cm. long, 5-8 cm. broad, with about 5-6 pairs of lateral nerves; petiole extremely short; cymes few-flowered; calyx-segments linear-lanceolate, glabrous; fruit narrowly obovoid, ribbed, 1 cm. long[2. trachyphylla](#)

2 Flowers clearly pedicellate, articulated at or near base of the calyx; inflorescences usually minutely pubescent; leaves nearly glabrous, sometimes very sparsely pilose on the midrib and principal nerves of the lower surface
.....[1a. cymosa var. cymosa](#)

Flowers subsessile, articulated at or near the base of calyx; inflorescences pubescent, tomentellous or shortly pilose[1b. cymosa var. zenkeri](#)

5. HELIOTROPIUM

Linn.-F.T.A. 4, 2: 28.

- 1 Leaves broadly ovate, more or less cuneate into the winged petiole, more or less triangular-pointed at the apex, up to 12 cm. long and 8 cm. broad, more or less undulatedentate, shortly pubescent; sometimes bullate; stems densely pilose or villous; spikes slender, curled towards the tip, up to 20 cm. long; corolla about 8 mm. long; fruit ovoid, ribbed, glabrous [l. indicum](#)
- Leaves linear to obovate (never ovate): **2**
- 2 Corolla-lobes with long linear-filiform points; leaves lanceolate, acute, 4-6 cm. long, up to 1.4 cm. broad, setulose-pilose; stems long-setose-pilose and with short gland-tipped hairs; fruits ovoid, slightly rugose [subulatum](#)
- Corolla-lobes without filiform points: **3**
- 3 Leaves rather broadly obovate-oblancheolate to obovate: **4**
- Leaves more or less lanceolate to linear: **5**
- 4 Flowers very small and numerous in a close slender spike-like cyme, appressed-pilose; calyx 2-3 mm. long; leaves oblong-elliptic, densely to thinly villous on both sides; fruits depressed, pubescent [3. ovalifolium](#)
- Flowers few, rather laxly spicate, softly villous; calyx about 5 mm. long; leaves elliptic, appressed-pilose between the nerves above, villous beneath; fruit ovoid, 4-ribbed, rugulose [4. supinum](#)

- 5 Leaves linear or linear-oblongate, several times longer than broad:6
 Leaves shortly lanceolate, about 3 times as long as broad; inflorescence leafy, the flowers appearing solitary;
 fruit ovoid:.....8
- 6 Leaves linear, not undulate, 2-2.5 cm. long, appressed-setose-pilose on both sides; flowers distinctly pedicellate;
 fruit depressed, sparingly setulose [5. strigosum](#)
 Leaves oblanceolate, with strongly undulate margins, up to 8 cm. long and 1.5 cm. broad, setulose-scabrid on
 both surfaces; flowers in dense short scorpioid cymes; stems setose-pilose; fruit glabrous:7
- 7 Nutlets free, equal, pilose at first, finally glabrous, rugose [6. bacciferum](#)
 Nutlets cohering in pairs; glabrous and smooth, each pair margined with a broad horny wing, with a round sinus
 at the apex [7. pterocarpum](#)
- 8 Fruit beaked up to 2 mm. long; flowers white with yellow throat [8a. baclei var. baclei](#)
 Fruit beaked up to 5 mm. long; flowers mostly entirely bright yellow [8b. baclei var. rostratum](#)

1. **Heliotropium indicum** Linn. Sp. Pl. 130 (1753); F.T.A. 4, 2: 32; Chev. Bot. 450; Berhaut Fl. Sén. 200

Also in **Cape Verde Islands** and **Mauritania**, extending to the coast of the Red Sea and to S. Africa.

2. *Trichodesma ledermannii* Vaupel in Engl. Bot. Jahrb. 48: 529 (1912); Brand in Engl. Pflanzenr. 4, 252: 24 (1921).

APD: Synonym of Trichodesma ambacense subsp. hockii (De Wild.) Brummitt

Trichodesma physaloides of F.W.T.A., ed. 1, 2: 200, not of (Fenzl) A. DC. (1846).

Stems herbaceous 1-2 ft. high from a woody rootstock, roughly hairy at first, with conspicuous bluish or white flowers 1-1 1/2 in. across, spotted in the throat.

N. Nig.: Kaduna (fl. Nov.) Lamb 95! Maigana Hill 47! Jos Plateau (fl. Jan.) Lely P74! Young 176! Vom (fl. Dec.) W. D. MacGregor 378!

Also in **Cameroun**.

Trichodesma uniflorum Brand in Fedde Rep. 12: 504 (1913), and in Engl Pflanzenr. l.c. 38

([Br.] Cam.: Johann-Albrechts-Hütte Winkler 1255. Victoria Zahn 530) is treated in F.W.T.A., ed. 1 as a synonym of *T. indicum* (L.) Lehm. (1818), an introduced species from the Eastern Tropics. No material seen for the Revised Edition.

7. CYNOGLOSSUM

Linn.-F.T.A. 4, 2: 51; Brand in Engl. Pflanzenr. 4, 252 (1921).

- 1 Nutlets cohering at the apex with the style, not separated from the style at maturity:2
 Spines on the nutlets spread all over the surface; leaves broadly lanceolate, 4-6 cm. long, 1.5-2 cm. broad, setulose-scabrid above, sparingly so beneath; cymes long and slender when in fruit [1a. lanceolatum subsp. lanceolatum](#)
- 2 Spines on the nutlet marginal and on the midrib; leaves lanceolate, acutely acuminate, up to 14 cm. long and 3 cm. broad, rather closely pilose with bulbous-based hairs above, setose-pilose beneath; cymes slender; calyx-lobes oblong; corolla slightly longer than calyx [1b. lanceolatum subsp. geometricum](#)
 Nutlets free before maturity, 7 mm. diam., smooth between the bristles on margin and midrib; leaves ovate, acuminate, narrowed at base with a short winged petiole, 6-12 cm. long, 4-7 cm. broad, pilose with discoid-based hairs on the upper surface, softly and shortly pubescent beneath; cymes few-flowered; calyx-lobes broadly ovate, setulose; corolla nearly twice as long as calyx [2a. amplifolium forma macrocarpum](#)

1. **Cynoglossum lanceolatum Forsk.** Fl. Aegypt.-Arab., Descr. Pl. 41 (1775); F.T.A. 4, 2: 54; Brand in Engl. Pflanzenr. 4, 252: 139 (1921); Chev. Bot. 452. *APD acc*

APD: Synonym of Cynoglossum coeruleum var. johnstonii (Baker) Baker & C.H. Wright

A pilose herb 3-6 ft. high, with white or bluish flowers.

1a. **Cynoglossum lanceolatum subsp. lanceolatum APD acc**

Cynoglossum lanceolatum subsp. eu-lanceolatum Brand, l.c. (1921).

Lib.: Cape Palmas (fl. & fr. Mar.) T. Vogel 18! **iv. C.:** Guidéko Chev. 19099. **Ghana:** Lakte (fl. & fr. Oct.) Johnson 820! Amedzofe (fl. & fr. May) Morton A3662! **N. Nig.:** Jos Plateau (fl. & fr. May) Lely 275! **S. Nig.:** Thomas 1745! 1827! **[Br.] Cam.:** Bamenda (fl. & fr. Apr.) Maitland 1630! Jakiri (fl. & fr. Feb.) Hepper 1954!

Widely distributed in the Old World tropics and subtropics.

1b. **Cynoglossum lanceolatum subsp. geometricum (Bak. & Wright) Brand** l.c. 140 (1921).

APD: Synonym of Cynoglossum coeruleum var. mannii (Baker & C.H. Wright) Verdc.

APD: Synonym of Cynoglossum geometricum Baker & C.H. Wright

Cynoglossum geometricum Bak. & Wright in F.T.A. 4, 2: 52 (1905).

Cynoglossum mannii Bak. & Wright in F.T.A. 4, 2: 52 (1905); F.W.T.A., ed. 1, 2: 200.

Cynoglossum lanceolatum subsp. geometricum var. mannii (Bak. & Wright) Brand l.c. 140 (1921).

Cynoglossum mannii Bak. & Wright l.c. (1905).

Erect herb, scabrid-pilose, up to 4-6 ft. high, with white flowers.

[Br.] Cam.: Cam. Mt. (fl. & fr. Jan., Feb., June, July) Deistel 657! Dalz. 8274! Migeod 108! Maitland 47! 1015! Mann 2005! Hutch. & Metcalfe 12! Oku (fl. & fr. Feb.) Hepper 2026! Nguroje, 5,500 ft., Mambila Plateau (fl. & fr. Jan.) Hepper 1756! Chapman 67!

Also in tropical E. Africa.

2. *Cynoglossum amplifolium* Hochst. ex A. DC. in Prod. 10; 149 (1846). *APD acc*

Widespread, but in our area represented by:

2a. *Cynoglossum amplifolium forma macrocarpum* Brand l.c. 141 (1921).

APD: *Synonym of Cynoglossum amplifolium var. subalpinum* (T.C.E. Fr.) Verdc.

Cynoglossum lancifolium Hook. f. in J. Linn. Soc. 7: 207 (1864); F.T.A. 4, 2: 53; F.W.T.A., ed. 1, 2: 200.

Erect herb up to 3 or 4 ft. high, hispid, with conspicuous bluish or white flowers 1-1 1/2 in. across, spotted in the throat.

[Br.] Cam.: Cam. Mt., 7,000-8,000 ft. (fl. & fr. Dec., fr. Jan.) Mann 1266! 2004! Johnston 10! 57! Maitland 966! Bafut-Ngemba F.R., Bamenda (fl. & fr. Jan., Feb.) Hepper 2859! Daramola FHI 40628!

8. ARNEBIA

Forsk.-F.T.A. 4, 2: 55; Johnston in J. Arn. Arb. 35: 51 (1954). *APD acc*

- 1 Whole plant densely hispid with long stiff white hairs; leaves linear-lanceolate, sub-acute, up to 8 cm. long and 1 cm. broad; cymes scorpioid; calyx-segments linear-subulate, about 8 mm. long, densely setose; corolla-tube narrow, 1 cm. long, lobes slightly pubescent; nutlets angular, rugose [hispidissima](#)

Arnebia hispidissima (Sieber ex Lehm.) DC. Prod. 10: 94 (1846); F.T.A. 4, 2: 56; Johnston in J. Arn. Arb. 35: 55 (1954). *APD acc*

Lithospermum hispidissimum Sieber ex Lehm. (1821)-Johnston in J. Arn. Arb. 33: 325 (1952).

Arnebia asperima (Del.) Hutch. & Dalz. F.W.T.A., ed. 1, 2: 201 (1931).

Anchusa asperima Del. (1813), name only.

Much-branched from a hard woody base, sometimes short and bushy, the hairs almost pungent, with yellow tubular flowers 1/2 in. long and a blood-red root; [a plant of dry sandy soil](#).

N. Nig.: Deli (fl. & fr. Apr.) E. Vogel 97! Katagum Dist. (fl. & fr. Feb.) Dalz. 75! [Br.] Cam.: Bama, Dikwa Div. (fl. & fr. Feb.) McClintock 2!

9. MYOSOTIS

Linn.-F.T.A. 4, 2: 57; Stroh in Beih. Bot. Cbl. 61B: 317 (1941).

- 1 Racemes with a leafy bract subtending each flower, short; stems dwarf; leaves narrowly oblong-lanceolate, the larger about 2 cm. long and 6 mm. broad, pilose-setose on both surfaces; calyx-lobes narrowly linear-lanceolate, 3-4 mm. long [1. abyssinica](#)

Racemes without leaf bracts, slender; stems up to 60 cm. high; leaves linear-lanceolate, acute, the larger about 5 cm. long and 1 cm. broad, thinly pilose on both surfaces; pedicels up to 5 mm. long in fruit, shortly pubescent; calyx-lobes lanceolate, pubescent [2. sp. nr. vestergrenii](#)

1. *Myosotis abyssinica* Boiss. & Reut. in Boiss. Diagn. pl. or., n. sér. 1, 11: 122 (1849); F.T.A. 4, 2: 58; Stroh l.c. 334; Hedberg in Symb. Bot. Upsal. 15, 1: 157 (1957). *APD acc*

Herb a few inches high, harshly pubescent, with small white flowers.

[Br.] Cam.: Cam. Mt., 8,000-10,000 ft. (fl. & fr. Nov.) Mann. 2033! F. Po: 8,500 ft. Mann 1459!

Also in E. Africa from [Ethiopia](#) to [Tanganyika](#).

2. *Myosotis* sp. nr. *vestergrenii* *Stroh* l.c. 328 (1941); Hedberg l.c. 158, 316. *APD acc*

Myosotis sylvatica of F.T.A. 4, 2: 57, partly (Johnston 72); of F.W.T.A., ed. 1, 2: 201, not of Hoffm.

Erect 1-2 ft. high, thinly hairy, with bright blue flowers.

[Br.] Cam.: Cam. Mt., 7,000-8,000 ft., upper forest (Dec., Feb.) Johnston 72! Maitland 1342! Morton K875!

SOLANACEAE

Herbaceous or woody. Leaves alternate, simple; stipules absent. Flowers hermaphrodite, mostly actinomorphic. Calyx 4-6-lobed, persistent. Corolla gamopetalous, usually 5-lobed, lobes folded, contorted or valvate. Stamens inserted on the corolla-tube and alternate with its lobes; anthers 2-celled, cells parallel, opening lengthwise or by apical pores. Ovary 2-celled, the cells sometimes again divided by a false septum; style terminal. Ovules very numerous, axile. Fruit a capsule or berry. Seeds with copious endosperm and curved or annular embryo.

Generally distributed, but most numerous in tropical regions.

- | | | |
|---|---|---------------------------------------|
| 1 | Fruit a capsule: | 2 |
| | Fruit a berry: | 4 |
| 2 | Capsule 4-valved; stamens 5; leaves and flowers large | 1. <i>Datura</i> |
| | Capsule 2-valved: | 3 |
| 3 | Stamens 5; flowers medium-sized | 2. <i>Nicotiana</i> |
| | Stamens 2; flowers very small | 3. <i>Schwenckia</i> |
| 4 | Anthers opening by slits lengthwise: | 5 |
| | Anthers opening by terminal pores | 8. <i>Solanum</i> |
| 5 | Calyx not enlarged in fruit or not strikingly so: | 6 |
| | Calyx enlarged and inflated in fruit: | 7 |
| 6 | Corolla rotate, valvate | 4. <i>Capsicum</i> |
| | Corolla urceolate, induplicate-valvate | 5. <i>Discopodium</i> |
| 7 | Flowers solitary | 6. <i>Physalis</i> |
| | Flowers fasciculate | 7. <i>Withania</i> |

Cyphomandra betacea (Cav.) *Sendtner* (in *Flora* 28: 172 (1845); Sandwith in *Chron. Bot.* 4: 225 (1938), for full syn.; *Solanum betaceum* Cav. (1799)).

This species, a native of Peru, is cultivated and often becomes naturalized in many parts of the tropics. In Africa it occurs particularly in the E. and SE. Attention is drawn to the first record from W. Africa (Cam. Mt., Mann's Spring, fl. & fr. Dec. 1959, Morton K852: "small tree 15 ft. high in moist forest, fl. very pale pinkish, fr. plum-shaped, orange") as it may soon become widely naturalized in our area.

The tree-tomato.

1. DATURA

Linn.—F.T.A. 4, 2: 258; Fosberg in *Taxon* 8: 52 (1959); Satina, Avery & Sachet in *Blakeslee, The Genus Datura* 16-47 (1959).

- | | | |
|---|--|-----------------------------------|
| 1 | Flowers 25-30 cm. long, pendulous; calyx not circumscissile, either persisting like a husk appressed to the fruit or spathiform; fruits unarmed and indehiscent, spheroid, ellipsoid or fusiform, terete; ovate-acuminate; leaves large, up to 24 cm. long and 12 cm. broad, ovate-acuminate, leaf-margin mostly entire: | 2 |
| | Flowers up to 20 cm. long, erect; calyx circumscissile near the base, the base persistent and expanding like a frill, shield or cup, calyx-tube falling off together with the corolla; fruit ovoid or globular, armed and dehiscent; leaves up to 16 cm. long and 8.5 cm. broad, ovate or triangular-ovate, leaf-margin frequently sinuate-repand, more or less dentate: | 3 |
| 2 | Calyx spathiform, terminating in a point, finely pubescent outside, appressed to the funnel-shaped lower part of the corolla-tube; principal nerves of the corolla terminating in 1-2 cm. long tail-like appendages between which the margin is entire or rounded; anthers free; fruit lemon-shaped | 1. <i>Candida</i> |

Calyx 5-toothed at the apex, nearly glabrous, very inflated and not appressed to the very thin pipe-like lower part of the corolla-tube; principal nerves of the corolla terminating in very short (0.5 cm. long) appendages; anthers coherent; fruit fusiform [2. suaveolens](#)

- 3 Petioles and branchlets densely and softly grey-pubescent or pilose; leaves ovate, unequal, rounded or truncate at the base, 8-20 cm. long, 4-14 cm. broad, entire, thinly pubescent beneath; flowers solitary, usually axillary; pedicels 1.5 cm. long, densely pilose; calyx tubular, about 9 cm. long; corolla narrowly trumpet-shaped, up to 18 cm. long, 10-lobed, lobes broadly triangular; capsule pendulous on the elongated pedicel, prickly, globose, 3-4 cm. diam., dehiscence irregular [3. innoxia](#)

Petioles and branchlets glabrous; corolla 5-6 lobed, lobes long-cuspidate or long-acuminate: 4

- 4 Capsule pendulous, dehiscing irregularly; leaves elliptic to broadly ovate or triangular-ovate, up to 20 cm. long, 14 cm. broad, subentire or with a few dentate lobes; pedicels 1 cm. long; calyx tubular, 6 cm. long, 1.5 cm. diam.; corolla often double, up to 20 cm. long, the 5-6 lobes long-cuspidate; capsule covered with blunt warts [4. metel](#)

Capsule erect, dehiscing by 4 valves; leaves rather narrowly ovate, up to 24 cm. long, 10 cm. broad, more or less coarsely dentate; pedicels very short; calyx tubular, up to 3.5 cm. long, 4 mm. diam.; corolla about 8 cm. long, the 5-6 lobes long-acuminate; capsule densely prickly [5. stramonium](#)

1. **Datura × candida** (Pers.) Safford in J. Wash. Acad. Sci. 11: 182 (1921); Pasquale in Cat. R. Orto Bot. Napoli 36 (1867), not validly published.

APD: Synonym of Brugmansia ×candida Pers.

Brugmansia candida Pers. (1805).

Datura arborea of Ruiz & Pavon Fl. Peruv. 2,15: 127 (1799), not of Linn. (1753); Fosberg l.c. 52; Sachet l.c. 41.

A handsome shrub or small tree; flowers white, very fragrant.

Ghana: Mampong Scarp (Aug.) Darko 712! **[Br.] Cam.:** Buea (Feb., Nov.) Migeod 148! Keay FHI 37545! Bamenda (Jan., Apr.) Ujor FHI 30035! Daramola FHI 40607! Ntim (Feb.) Hepper 1858!

Known only in cultivation; believed to be native of the Andean region of South America, now spreading widely in tropical and subtropical countries.

[Note: P. C. Standley states in Publ. Field Mus. of Nat. Hist. Bot. 18, 3: 1055 (1938): "In recent years this species has been listed frequently as D. Candida (Pers.) Pasqu., the specific name under which it was treated by Safford, but it now appears probable that the name D. arborea L. is the correct one." I cannot accept this brief discussion as sufficient for a taxonomic conclusion.-H. H.]

2. **Datura suaveolens** Humb. & Bonpl. ex Willd. Enum. Pl. Berol. 227 (1809); Safford, l.c. 185; Sachet l.c. 46.

APD: Synonym of Brugmansia suaveolens (Humb. & Bonpl. ex Willd.) Bercht. & C. Presl

Datura gardneri Hook. Bot. Mag. t. 4252 (1846).

A shrub or small tree like the last; flowers white, fragrant.

S. L.: Regent Sc. Elliott 4107! **Ghana:** Agogo (Apr.) Vigne FH 1909! **[Br.] Cam.:** Buea (Nov.) Migeod 113!

A native of Brazil, now much cultivated in the tropics.

3. **Datura innoxia** Mill. Gard. Dict., ed. 8, no. 5 (1768), as innoxia; Safford l.c. 179 (1921) and Ann. Rep. Smithsonian Inst. 1920: 545, t. 3, fig. 4 (1922); Fosberg l.c. 55; Satina & Avery l.c. 25; Sachet l.c. 44. *APD acc*

Datura metel of F.T.A. 4, 2: 256; F.W.T.A., ed. 1, 2: 202; Chev. Bot. 468; Berhaut Fl. Sén. 199, not of Linn.

Erect-branched herbaceous undershrub 2-4 ft. high, with long white flowers and long spiny spherical fruit; **in waste places.**

Sen.: Boivin! Chev, Berhaut 25. **Port. G.:** Cachén Mator (fl. & fr. Feb.) Esp. Santo 1312! **Guin.:** Farana (fl. & fr. Mar.) Sc. Elliot 5387! **N. Nig.:** Lokoja Shaw 41! Katagum Dalz. 93!

Widespread weed in the tropics; native of tropical S. America.

[Note: The spelling "innoxia", used by Miller (l.c.) and Fosberg and subsequent authors, is orthographically incorrect; it is not used here as Miller based this epithet upon the pre-Linnean polynomial of Boerhaave (Ind. alt. hort. acad. Lugd.-Bat. 1:

262, 1720) in which the correct spelling "innoxia" is used. It seems hardly justifiable to perpetuate the incorrect spelling. -H. H.]

4. **Datura metel** *Linn.* Sp. Pl. 1: 179 (1753); Safford in J. Wash. Acad. Sci. 11: 178, t. 1, B, C (1921) and Ann. Rep. Smithsonian Inst. 1920: 546, t. 1-2 (1922); Satina & Avery, l.c. 32; Sachet l.c. 44. *APD acc*

APD: Synonym of Datura inoxia Mill.

Datura fastuosa *Linn.* (1769)-F.T.A. 4, 2: 256; F.W.T.A., ed. 1, 2: 202; Chev. Bot. 467; Berhaut Fl. Sén. 192.

Datura alba *Nees* in Trans. Linn. Soc. 17: 73 (1837); Dunal in DC. Prod. 13,1: 541 (1852); Fosberg l.c. 53;

Datura fastuosa var. alba (*Nees*) *C. B. Cl.* in Hook. f., Fl. Brit. Ind. 4: 243 (1884); F.T.A. 4, 2: 257; Chev. Bot. 468,

Habit of the last, 2-3 ft. high, with white or wine-purple, sometimes (in cultivation) double flowers.

Sen.: Dakar (Jan.) Chev. 2874! Berhaut 905. **Guin.:** Poisson! **S. L.:** Kanike (Sept.) Thomas 2058! 9333! Roruks (fl. & fr. Nov.) Thomas 5754! Gorongo (fl. Dec.) Deighton 267! Serabu (fl. & fr. 5. **Datura stramonium** *Linn.* Sp. Pl. 179 (1753); F.T.A. 4, 2: 257; Chev. Bot. 468; Satina & Avery l.c. 18; Sachet l.c. 45; Berhaut Fl. Sén. 199; Aké Assi Contrib. 1: 177. *APD acc*

Datura tatula *Linn.* Sp. Pl., ed. 2,1: 256 (1762).

Erect branched, annual with smooth stems 1-2 ft. or more high, and rather slender white (*D. stramonium* *Linn.* proper) or purple-violet (*D. tatula* *Linn.* proper) flowers. The flower-colour is of no taxonomic importance.

Mali: Kabarah Chev. 1363. **Ghana:** Accra (fl. June) Dalz. 118! (fr. May) Morton A884! Assin Yan Kumasi Cummins 8as! **Togo Rep.:** Lomé Warnecke 364! **N. Nig.:** Kuka (fl. & fr. Feb.) E. Vogel 56! **[Br.] Cam.:** Bamenda (fr. July) Daramola FHI 41588!

Cosmopolitan.

2. NICOTIANA

Linn.-F.T.A. 4, 2: 259; Goodspeed, The Genus Nicotiana (1954).

- 1 Corolla about 4 cm. long, 3-4 mm. diam. in lower half of the tube, lobes very acute; upper leaves oblong-lanceolate to elliptic, apex acute, decurrent at the base, 8-15 cm. long, 1.5-6 cm. broad, sessile or subsessile; inflorescence a terminal cyme; pedicels glandular-pubescent, 1.5 cm. long; calyx about 1.5 cm. long, lobes long-acuminate; capsule ovoid or ellipsoid, 2 cm. long, surrounded by the persistent calyx, and with a short apical beak *1. tabacum*

Corolla not more than 2 cm. long, 6-7 mm. diam., lobes rounded or subacute; upper leaves broadly ovate or oblong-elliptic rounded or subacute at the apex and base, 4-10.5 cm. long, 2-7 cm. broad, petioles up to 4 cm. long; inflorescence and pedicels as above; calyx about 1 cm. long, lobes broadly triangular, acute; capsule globose, about 1.2 cm. diam., without an apical beak *2. rustica*

1. **Nicotiana tabacum** *Linn.* Sp. Pl. 180 (1753); F.T.A. 4, 2: 259; Chev. Bot. 468; Berhaut Fl. Sén. 203; Goodspeed l.c. 372. *APD acc*

Robust annual up to 6 ft. high, with long tubular white, pinkish, or sometimes cream flowers, viscid-glandular outside.

Sen.: Dakar Chev. 2875! **Mali:** Faraba Chev. 1020. **Guin.:** Kouria Caille in Hb. Chev. 14757. Koulikoro Chev. 20644; 25025. **S. L.:** Freetown (fl. & fr. Feb.) Johnston 72! Kuntara (fr. 4. CAPSICUM

Linn.-F.T.A. 4, 2: 250; Smith & Heiser in Am. J. Bot. 38: 362 (1951).

- 1 Annual or biennial herbs; leaves broadly lanceolate to ovate, apex acutely acuminate, cuneate or abruptly acute at the base, 5-8 cm. long, 2-5 cm. broad, entire, sub-glabrous; flowers in 3-8-flowered axillary clusters, producing usually only one fruit; pedicels up to 1.5 cm. long, swollen in the upper part; calyx obscurely 5-toothed, 10-ribbed; corolla rotate-campanulate, deeply 5-lobed, 5 mm. diam.; fruit a more or less elongated berry, subglobose to acutely conical, 1-several cm. long *1. annuum*
- Suffrutescent perennial; very similar to the above, but readily distinguished by its more or less shrubby habit; calyx truncate; fruits usually 2 or more from each flower-cluster, much smaller and rarely exceeding 2 cm. in length *2. frutescens*

1. *Capsicum annum* Linn. Sp. Pl. 188 (1753); F.T.A. 4, 2: 251; Chev. Bot. 466. *APD acc*

Stout herb 2-5 ft. high, much branched, angular, glabrous stems; flowers white or greenish; fruits red; cultivated.

Mali: San Chev. 1035. **S. L.:** Freetown (fr. Jan.) Johnston 51! Matotoka Thomas 1839! Njala (Feb.) Deighton 1883! **Iv. C.:** fide Chev. l.c. **N. Nig.:** Barter 522! Yates 65! Lokoja (fl. & fr. Sept.) Parsons 85! **S. Nig.:** Sapoba Kennedy 2617! Obompa (fr. Jan.) Thomas 2236! Port Harcourt (fr. Sept.) Stubbins 46!

Widely dispersed throughout the tropics, cultivated and sometimes naturalized.

2. *Capsicum frutescens* Linn. l.c. 189 (1753); F.T.A. 4, 2: 251; Chev. Bot. 467.

APD: *Synonym of Capsicum annuum L.*

Undershrub 2-3 ft. high, much-branched, angular, nearly glabrous stems; flowers white or pale yellow.

Sen.: Roger! Cape Verde T. Vogel! **Mali:** Kati Chev. 177. Siguiri Chev. 300. **S. L.:** Glanville 403! Kanitole (fr. Sept.) Thomas 2067! Yonibana (fr. Nov.) Thomas 4718! Hangha (Jan.) Thomas 7780! Njala (fl. & fr. Feb.) Deighton 1884! **iv. C.:** Sassandra (fr. Feb.) Leeuwenberg 2888! **Ghana:** Irvine 457! Kumasi Cummins 152! **Togo Rep.:** Lomé Warnecke 356! **N. Nig.:** Sapoba Kennedy 2615! 2616! 2618! **S. Nig.:** Obompa (fr. Jan.) Thomas 2231! Lagos (fl. & fr. Sept.) Dodd 439! **[Br.] Cam.:** Gwoza, Dikwa Div. (fr. Dec.) McClintock 67!

Widely dispersed throughout the tropics, cultivated and sometimes naturalized.

[It is impossible to give here an account of the very difficult taxonomy of this critical genus. The present writer therefore, feels unable to deal here with the various hybrids and infraspecific taxa (mainly cultivars) within the genus, or to recognize *C. sinense* Jacq. as a distinct species occurring in our area (as stated by J. Y. Wilson in Nature 183 (4): 1142 (1959)-H. H.]

5. DISCOPODIUM

Hochst.-F.T.A. 4, 2: 253.

- 1 Small tree or shrub, 15-20 ft. high; leaves elliptic to oblong-elliptic, broadly acuminate, cuneate at the base, 10-25 cm. long, 3-10 cm. broad, entire, glabrous or slightly pubescent on the midrib and 10-12 pairs of lateral nerves beneath; petioles 1-2 cm. long; flowers fasciculate, axillary; pedicels 1-1.5 cm. long; calyx 4 mm. long, lobes broadly triangular, spreading; corolla cylindrical, about 8 mm. long, tomentellous outside above the calyx, lobes more or less reflexed or spreading, half as long as the tube; stamens and style included; berry globose, 6-8 mm, diam. [penninervium](#)

Discopodium penninervium Hochst. in Flora 1844: 22; F.T.A. 4, 2: 253; Robyns Fl. Parc Nat. Alb. 2: 203 (1947) APD acc

Discopodium penninervium var. *sparsearaneosum* Bitter in Engl. Bot. Jahrb. 57: 17 (1920).

Flowers white or yellowish fading to brown.

[Br.] Cam.: Cam. Mt., 7,000-7,600 ft. (Feb., Mar., Dec.) Mann 1236! 2178! Brenan 9375! Maitland 1332! Mt. Mbakakeka, 7,900 ft., Bafut-Ngemba F.R., Bamenda (fl. Jan., fl. & fr. Feb.) Hepper 2166! Keay & Lightbody FHI 26288! 28365! **F. Po:** 4,000 ft. Mann 300!

Also in Cameroun, Congo and E. Africa from **Ethiopia** to Nyasaland, a typical highland species.

Some of the E. African plants are considered as varietally distinct by Bitter (l.c. 16 (1920)).

6. PHYSALIS

Linn.-F.T.A. 4, 2: 246; O. E. Schulz in Urban, Symb. Antill. 6: 140 (1909); Waterfall in Rhodora 60: 107-114, 128-142, 152-173 (1958).

- 1 Plants glabrous or nearly so (sometimes sparingly villose in No. 1):2
Plants villous or appressed-strigose:3
- 2 Leaves subentire, ovate 1.5-3(-5) cm. long, acuminate at apex, cuneate at base; fruiting calyx sub-globular, up to 15 mm. long and 12 mm. diam., finely puberulous; pedicels puberulous, up to 3 cm. long; corolla very small, up to 4 mm. long1. [micrantha](#)
Leaves coarsely sinuate-dentate, ovate, 5-10 cm. long, acuminate at apex, broadly cuneate to rounded at base; fruiting calyx ovoid, up to 3 cm. long and 2 cm. broad, glabrous or very finely puberulous; pedicels glabrous, up to 1 cm. long, corolla up to 8.5 mm. long2. [angulata](#)
- 3 Perennial, the whole plant densely villous; leaves entire or with a few large teeth, rhomboid to deltoid, acuminate at apex, broadly rounded, truncate or cordate at base, 8-10 cm. long, 6-7.5 cm. broad; pedicels up to 5-8 mm. long, not becoming longer in fruit; corolla 15 mm. long; fruiting calyx ovoid, about 4 cm. long and 3 cm.

broad, villous [3. *peruviana*](#)

Annual, the lower parts glabrescent, upper parts and pedicels appressed-strigose; leaves coarsely and irregularly sinuate-dentate, ovate to suborbicular, acuminate at apex, broadly rounded to cordate at base, 2-5 cm. long; flower-pedicels 5-8 mm. long, later 2-3 cm. long; corolla 8-10 mm. long; fruiting calyx turbinate, i.e. ovoid, abruptly acute, about 3 cm. long and 2.2 cm. diam., nearly glabrous [4. *pubescens*](#)

1. ***Physalis micrantha* Link** Enum. Pl. Hort. Berol. 1: 181 (1821); O. E. Schulz l.c. 147 (1909), for full synonymy.

*APD: Synonym of *Physalis lagascae* Roem. & Schult.*

(?) ***P. divaricata* D. Don** Prod. Fl. Nep. 97 (1825); Baldwin & Speese in Bull. Torrey Bot. Club 78, 3: 255 (1951).

Physalis minima of F.T.A. 4, 2: 246, of Chev. Bot. 465, and of Berhaut Fl. Sén. 175, not of Linn.

Physalis angulata of F.W.T.A., ed. 1, 2: 205, partly.

A very variable annual, stems more or less prostrate or sometimes erect up to 3 ft. high; flowers cream; calyx in fruiting state bladder-like.

Sen.: Perrottet 553! 567! Roger 132! Berhaut 494. **Gam.:** Saunders 68! **Mali:** Sikasso Ohev. 748. Djenné Chev. 2881. **S. L.:** Njala (Apr.) Thomas 100! (fr. Mar.) Deighton 542! Hepper 1405! **F. Po:** Botonos (fl. & fr. Feb.) Exell 870!

Native of tropical America, widely distributed in the tropics.

3. ***Physalis peruviana* Linn.** Sp. Pl. ed. 2, 1670 (1763); F.T.A. 4, 2: 248; Baldwin & Speese l.c. 255, 257. *APD acc*

Erect perennial up to 3 ft. high, densely hairy, from a creeping rootstock.

S. L.: Njala (fr. Oct.) Deighton 2419! **Ghana:** Kumasi (fl. & fr. Nov.) Irvine 1855! **N. Nig.:** Jos Plateau (fl. & fr. Oct.) Hepper 1179! Kura Falls Kennedy 2965! **[Br.] Cam.:** Bamenda (fl. & fr. Dec., Feb.) Baldwin 13853! Migeod 454! Jakiri (fl. & fr. Feb.) Hepper 1966!

Native of tropical S. America, occasionally cultivated and naturalized.

The "Cape Gooseberry."

4. ***Physalis pubescens* Linn.** Sp. Pl. 183 (1753); O. E. Schulz l.c. 143; Waterfall l.c. 164, for discussion. *APD acc*

Physalis turbinata Medik. (1780)-O. E. Schulz.

An annual herb about 2 ft. high; flowers yellow with brown centre.

Ghana: Achimota (fl. & fr. Nov.) Akpabla 1801! Chilinga, Krachi (fl. & fr. May) Morton A3971!

Introduced from America.

7. WITHANIA

Pauq.-F.T.A. 4, 2: 248. Nom. cons.

- 1 Shrubby herb, stems stellate-tomentose; leaves elliptic to broadly ovate-lanceolate, apex acute to rounded, abruptly acute to long-decurrent at the base, 5-10 cm. long, 2-5 cm. broad, entire or sinuate; petiole 1-2 cm. long; flowers 2-6 in axillary fascicles; pedicels about 5-6 mm. long, elongating to 1 cm. or more in fruit; calyx campanulate, divided to about the middle into 5 acute triangular lobes, inflated in fruit, 1-2 cm. long, up to 1 cm. broad; corolla campanulate, twice as long as the calyx, about 7-8 mm. long, stamens slightly exserted, style included; fruit a red, globose berry, enclosed by the inflated calyx [sommifera](#)

Withania somnifera (Linn.) Dunal in DC. Prod. 13, 1: 453 (1852); F.T.A. 4, 2: 249. *APD acc*

Physalis somnifera Linn. (1753).

Much-branched undershrub 3-7 ft. high; flowers small, pale.

Mali: Onatagouna Hagerup 430! **N. Nig.:** Ngurno (fr. Feb.) E. Vogel 58! Katagum (fr. Sept.) Dalz. 91! Jos Plateau (fl. & fr. Apr.) Lely P209! Vom (fl. & fr. Feb.) McClintock 252!

[A specimen collected by T. Vogel and cited as No. 35 in F.T.A. (l.c.) and F.W.T.A., ed. 1, 2: 205 from Cape Palmas, Liberia (fl. & fr. July 1841) may not have been collected there due to confusion of labels.]

8. SOLANUM

Linn.-F.T.A. 4, 2: 207.

Numerous hybrids have been recorded in this genus e.g. *S. indicum* subsp. *distichum* var. *modicearmatum* x *gilo* var. *gilo*, *S. indicum* subsp. *distichum* var. *distichum* x *gilo* var. *gilo* (Guin.: Chev. 16449! Iv. C.: Chev. 16436!); *S. dasyphyllum* x *macrocarpon* (see note below *S. macrocarpon*); *S. incanum* x *dasyphyllum* (?), etc. Cultivated species.

- Indumentum stellate (always fairly copious): **8**
- Indumentum simple or absent: **19**
- 1 Inflorescence terminal: **2**
 Inflorescences lateral, axillary, extra-axillary or leaf-opposed:
 - 2 Leaves entire: **3**
 Leaves pinnate or pinnately lobed up to 15 cm. long and 8 cm. broad with 3-4 pairs of leaflets, the leaflets of the upper pairs mostly confluent with the rachis; cymes very large, many-flowered; calyx 1 mm. long; corolla 9 mm. long; climber, entirely glabrous and without spines or prickles [6a. seaforthianum var. disjunctum](#)
 - 3 Inflorescences paniculate or broadly cymose (not spiciform): **4**
 Inflorescences spiciform, cymules subsessile on the axis; leaves oblong to obovate, gradually acuminate, 7-15 cm. long, 3-6 cm. broad; pedicels very short; calyx cupular, with minute teeth; corolla 7-8 mm. long, lobes linear-oblong; fruits about 5 mm. diam. [2c. terminale subsp. welwitschii](#)
 - 4 Leaves glabrous or nearly so: **5**
 Leaves tomentose beneath with stellate hairs: **6**
 - 5 Leaves coriaceous, shining above, leaf-nerves 7-9 pairs anastomosing clearly at the margin; not climbing (?) . [1. clerodendroides](#)
 Leaves membranous, never becoming coriaceous, not shining, leaf-nerves 11-13 pairs never clearly anastomosing; climbing [2b. terminale subsp. sanaganum](#)
 - 6 Leaves upper side entirely glabrous [3. giganteum](#)
 Leaves with indumentum on both sides: **7**
 - 7 Stems with axillary subactive buds bearing small leaves up to 2 cm. diam.; leaves elliptic to ovate-lanceolate, up

- to 16 cm. long and 8 cm. broad, densely tomentose on both surfaces; panicles lax, globose; calyx about 6 mm. long; corolla 1 cm. long [4. mauritianum](#)
- Stems with subdormant axillary buds; leaves elliptic to ovate, up to 21 cm. long and 10 cm. broad, pubescent above, tomentose beneath; inflorescences and flowers as above [5. verbascifolium](#)
- 8** Flowers subsolitary to about 4 together:..... **9**
- Flowers rather numerous, cymose (occasionally also a few solitary flowers); corolla up to 2 cm. diam.; fruits about 1 cm. diam. or less:..... **12**
- 9** Flowers white, corolla 12-16 cm. diam.: **10**
- Flowers almost purple-violet (rarely white), corolla up to 3 cm. diam.:..... **11**
- 10** Plants green; fruits globose or pear-like, up to 2.5 cm. diam., bright red, shining [8a. gilo var. gilo](#)
- Plants tinged with violet; fruits globose, light red-brown and tinged with violet [8b. gilo var. pierreanum](#)
- 11** Tomentum on stem floccose; plants always armed; leaves mostly up to 10 cm. long and 7 cm. broad; fruit globose, yellow [9. incanum](#)
- Tomentum on stem not floccose; plants (occurring in Africa) never armed; leaves up to 16 cm. long and 10 cm. broad; fruit egg-shaped, sometimes cucumber-like or pyriform, intense violet, white or dirty-yellow [10b. melongena var. inerme](#)
- 12** Leaves glabrous above, green, spines sometimes very large, up to 15 mm. long, compressed, base up to 5 mm. long, sharply recurved [11. aculeastrum](#)
- Leaves tomentose throughout, spines never longer than 1 cm., straight or slightly recurved:..... **13**
- 13** Leaves rather small, ovate, 2-7 cm. long, subentire; cymes about 7 cm. long, lax; calyx about 3 mm. long; corolla 1.3 cm. long; fruit up to 1 cm. diam. [12. albicaule](#)
- Leaves large, more or less elliptic, up to 10-16 cm. long, but sometimes smaller; lobate-sinuate to subentire: **14**
- 14** Corolla about 1 cm. long and up to 3.3 cm. diam.: **15**
- Corolla about 6 mm. long; cymes raceme-like; leaves very shortly pubescent above, subtomentose beneath:.. **17**
- 15** Cymes corymbose, nearly always unarmed; pedicels about 6 mm. long, with glandular hairs; calyx 4 mm. long, lobes triangular; corolla up to 2.5 cm. diam., white; fruit 1 cm. diam., dirty-brown [13. torvum](#)
- Cymes racemose, mostly armed with straight yellow spines; pedicels 10-15 mm., hairs not glandular; calyx 6 mm. long; corolla up to 3.3 cm. diam. (lower flowers of the inflorescence), violet; fruit up to 3 cm. diam., yellow or olive-yellow, shining:..... **16**
- 16** Leaves pubescent when young, becoming glabrescent and rather thinly scabrid-pubescent [14a. cerasiferum subsp. cerasiferum](#)
- Leaves densely yellowish tomentose, not becoming glabrescent [14b. cerasiferum subsp. crepinii](#)
- 17** Plants unarmed [15a. indicum subsp. distichum var. distichum](#)
- Plants armed:..... **18**
- 18** Plants armed with spines up to 10 mm. long and at the base 6 mm. broad [15b. indicum subsp. distichum var. grandemunitum](#)
- Plants armed with spines up to 5 mm. long and at the base 2.5 mm. broad [15c. indicum subsp. distichum var. modicearmatum](#)
- 19** Leaves sessile or subsessile, the latter long-decurrent on the midrib at the base:..... **20**
- Leaves distinctly petiolate:..... **21**
- 20** Calyx armed with long sharp bristles, very accrescent in fruit; the fruit about 3 cm. diam.; leaves pinnately lobed nearly to the middle, elliptic-obovate in outline, with prickles on the nerves, pilose on both surfaces [16. dasyphyllum](#)
- Calyx not armed and not accrescent in fruit, the latter 4 cm. diam.; leaves less lobate than above and glabrous [17. macrocarpon](#)
- 21** Plants armed with sharp prickles:..... **22**
- Plants unarmed:..... **24**
- 22** Fruits 3 cm. diam. or more; leaves pinnately lobed, shortly pubescent; flowers subsolitary; calyx-lobes pubescent, becoming prickly in fruit:..... **23**
- Fruits less than 1 cm. diam.; flowers not subsolitary; inflorescence subfasciculate, leaves glabrous or nearly so, with undulate margins [20. anomalum](#)
- 23** Corolla white; ripe fruit dirty-yellow or brownish; seeds about 2 mm. diam. without conspicuous hyalin margin [18. aculeatissimum](#)
- Corolla white or pale violet; ripe fruit orange or bright red; seeds about 4 mm. diam., with a conspicuous hyalin margin about 1 mm. broad [19. ciliatum](#)

- 24 Woody plants: 25
 Herbs: 26
- 25 Climber; leaves elliptic, acuminate, entire, up to 12 cm. long and 8 cm. broad, glabrous or nearly so; inflorescence few-flowered, subracemose [2a. terminale subsp. inconstans](#)
 Erect shrub; branches mealy-pubescent; leaves obovate-elliptic, hardly acuminate, up to 12 cm. long and 6 cm. broad, glabrous, undulate on the margin; flowers subfasciculate on a short peduncle [20. anomalum](#)
- 26 Plants pubescent; stems slightly winged; leaves ovate, subacute, up to 12 cm. long and 5 cm. broad, subentire; inflorescence 4-6-flowered [21. pseudospinosum](#)
 Plants glabrous or nearly so: 27
- 27 Flowers umbellate on a common peduncle; leaves ovate, shortly ciliate, entire or nearly so [22. nigrum](#)
 Flowers fasciculate, without a peduncle; pedicels about 5 mm. long; leaves lobulate, glabrous [7. aethiopicum](#)

1. **Solanum clerodendroides** *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 206 (1931).

APD: Synonym of Solanum madagascariense Dunal

An undershrub with crowded shining leaves, and flowers in a thyrsoïd panicle.

S. Nig.: Eket Talbot 3211!

Apparently endemic, only known from the type collection.

Solanum terminale *Forsk. APD acc*

2. **Solanum terminale subsp. terminale**-Fl. Aegypt.-Arab. 45 (1775); Bitter in Fedde Rep. 18: 301 (1922). *APD acc*

Solanum bifurcatum *Hochst. ex A. Rich.* Tent. Fl. Abyss. 2: 98 (1851); Exell Cat. S. Tomé 252.

Solanum bifurcum *Hochst. ex Dunal* in DC. Prod. 13, 1: 105 (1852); F.T.A. 4, 2: 213; Bitter in Engl. Bot. Jahrb. 54: 454 (1917).

In **Ethiopia**, **Arabia** and **tropical N. E. Africa**.

2a. **Solanum terminale subsp. inconstans** (*C. H. Wright*) *Heine* in Kew Bull. 14: 247 (1960); Aké Assi, Contrib. 1: 177.

APD: Synonym of Solanum terminale Forssk.

Solanum inconstans *C. H. Wright* in Kew Bull. 1894: 127; F.T.A. 4, 2: 211 (partly, excl. *S. symphostemon* De Wild. & Th. Dur.); Bitter in Engl. Bot. Jahrb. 54: 482 (1917); F.W.T.A., ed. 1, 2: 207.

Solanum togoense *Dammer* in Engl. Bot. Jahrb. 38: 59 (1905); F.T.A. 4, 2: 246, 571; Bitter l.c. 478; F.W.T.A., ed. 1, 2: 207.

Solanum suberosum *Dammer* l.c. 182 (1906); Bitter in Fedde Rep. 18: 307 (1922).

Inflorescences very small, long-peduncled, mostly lateral; fruit ellipsoid.

Togo Rep.: Badja (Mar.) Schlechter 12974! **S. Nig.:** Ondo Prov. (Aug.) Jones FHI 19515! Shasha F.R. (fl. & fr. Apr.) Richards 3373! Eket Talbot! Oban Talbot! **[Br.] Cam.:** Cam. Mt. Kalbreyer 172! **F. Po:** Mann 62! Guinea 1144! 1146! El Pico, 3,000 ft. (fl. & fr. Dec.) Boughey 190!

Also in **Cameroun**.

2b. **Solanum terminale subsp. sanaganum** (*Bitter*) *Heine* in Kew Bull. 14: 248 (1960).

APD: Synonym of Solanum terminale Forssk.

Solanum bansoense *Dammer* in Engl. Bot. Jahrb. 48: 237 (1912); Bitter in Engl. Bot. Jahrb. 54: 472 (1917), and in Fedde Rep. 18: 303 (1922), incl. var. *episporadotrichum* Bitter l.c. (1922) and subsp. *sanaganum* Bitter l.c. 304 (1922).

Solanum plousianthemum *Dammer* (1906)-Bitter in Engl. Bot. Jahrb. 54: 456 (1917).

Inflorescence large, terminal, fruits ellipsoid.

[Br.] Cam.: Bamenda, 3,500 ft. (May) Maitland 1960! Bafut-Ngamba F.R. (Apr.) Ujor FHI 30026! Dengdeng (Mar.) Mildbr. 8616! Nkom-Wum F.R. (June) Daramola FHI 41085!

Also in **Cameroun**, **Congo** and tropical E. Africa.

Distribution without revision of the whole group not properly known.

- 2c. **Solanum terminale subsp. welwitschii** (*C. H. Wright*) *Heine* in Kew Bull. 14: 248 (1960); Aké Assi, Contrib. 1: 178;

APD: Synonym of Solanum welwitschii C.H. Wright

Solanum welwitschii *C. H. Wright* in Kew Bull. 1894: 126, incl. var. strictum and oblongum; F.T.A. 4, 2: 213; Bitter in Engl. Bot. Jahrb. 54: 478 (1911); F.W.T.A., ed. 1, 2: 206.

Inflorescence spike-like, terminal, fruits globose.

Guin.: Sérédou (May) Collenette 29! Lola to Uzo Chev. 20992! Boola Chev. 20935! Mt. Tongoui Schnell 4079! **Iv. C.:** Sakota to Sassandra (Aug.) de Wilde 306! Yapo (fl. & fr. Also in **Cameroun**, **Rio Muni**, **the Congos** and **Angola**.

3. **Solanum giganteum** *Jacq.* Collect. 4: 125 (1790); Bot. Mag. 44: t. 1921; F.T.A. 4, 2: 229; Bitter in Engl. Bot. Jahrb. 57: 256 (1921). *APD acc*

A shrub or tree up to 25 ft. high, with white tomentum on all parts, except the surfaces of the leaves; flowers violet-purple.

[Br.] Cam.: Cam. Mt., Buea 4,000 ft. (fl. & fr. May) Mildbr. 9507! 9525! Bali-Ngemba F.R. (fr. May) Ujor FHI 30356!

Widespread in tropical Africa also in S. Africa, S. India and Ceylon.

4. **Solanum mauritianum** *Scop.* Delic. Fl. et Faun. Insubr. 3: 16 (1788); Bitter in Engl. Bot. Jahrb. 54: 491 (1917). *APD acc*

Solanum auriculatum *Ait.* (1789)-F.W.T.A., ed. 1, 2: 206.

Solanum verbascifolium of F.T.A. 4, 2: 221, partly (Angolan specimens), not of Linn.

A densely stellate-tomentose tree or shrub up to 20 ft. high, with blue-purple flowers.

S. L.: Njala, cultivated (July) Deighton 3961! **[Br.] Cam.:** Cam. Mt., Buea, 3,500-4,000 ft. (Feb., Apr. June, Nov.) Dundas FHI 20389! Dalz. 8207! Dunlap 103! Hutch. & Metcalfe 124! Maitland 58! Migeod 242!

Probably a native of S. America (Brazil, Paraguay, Uruguay); long-introduced and naturalized in many tropical and subtropical regions of the Old World. Not a native of Mascarene Islands, as stated in F.W.T.A., ed. 1, 2: 206.

5. **Solanum verbascifolium** *Linn.* Sp. Pl. 184 (1753); F.T.A. 4, 2: 221, partly; O. E. Schulz, in Urban, Symb. Antill. 6: 182 Bitter l.c. 490.

APD: Synonym of Solanum erianthum D. Don

An unarmed shrub, mealy-stellate-pubescent, with white flowers turning blue-purple.

Guin.: Lola (May) Roberty 18011! **S. L.:** Kenema (fl. & fr. Feb.) Deighton 4142! Tunisia (fl. Dec., fr. Nov., Jan.) Deighton 3827! 3877! Pyne 18! Gola Forest (Apr.) Small 609! **Lib.:** Vahon (fr. Nov. Baldwin 10253! Gonatown (fr. Dec.) Baldwin 10785! Mecca (fr. Dec.) Baldwin 10400! Klay (fl. & fr. Aug.) Barker 1395! **Ghana:** Krobo Williams 304! Afram, Mankrang F.R. Foggie FH 4856! Begoro (fr. Nov.) Morton! **N. Nig.:** Jebba (Nov.) Hagerup 729! **S. Nig.:** Lagos Millen 50! Olokemeji F.R. (Apr.) Ross 135/10/3! Akilla Kennedy 2376! Nikrowa, Okomu F.R. (fl. & fr. Sept.) Iriah FHI 23086!

A very common weed in the tropics of the whole world.

6. **Solanum seaforthianum** *Andr.* Bot. Reposit. 8; t. 504 (1808). *APD acc*

- 6a. **Solanum seaforthianum var. disjunctum** *O. E. Schulz* in Urban Symb. Antill. 6: 169 (1909); Bitter in Fedde Rep. Beih. 16: 309 (1923); Berhaut Fl. Sén. 47. *APD acc*

A very handsome climber, with large panicles of violet-purple flowers; fruits globose, red.

Sen.: Berhaut 1869. **S. L.:** Njala (fl. & fr. May) Deighton 5155! **S. Nig.:** Olokemeji (fl. & fr. Nov.) MacGregor FHI 364!

A native of W. Indies and Central America, introduced for ornamental purposes and naturalized in many parts of tropical Africa.

7. ***Solanum aethiopicum* Linn.** Amoen. Acad. 4: 307 (1759); F.T.A. 4, 2: 217, partly; F.W.T.A., ed. 1, 2: 208, partly (Thomas 146) and excl. syn.; Bitter in Fedde Rep. 16: 44 (1923). *APD acc*

A glabrous herb up to 2 ft. high, with white or pale violet flowers up to 2/3 in. diam. and globose, red shining fruits up to 3/4 in. diam.

Dah.: Cabolé (fr. May) Chev. 23769. Zagnanado Chev. 23070! **S. Nig.:** Thomas 146! (fr. Mar.) Irvine 3604!

Various forms cultivated in many parts of tropical Africa, frequently misidentified and confused with other species.

8. ***Solanum gilo* Raddi** in Atti Soc. Ital. Sci. Modena 18: 31 (1820); Bitter in Fedde Rep. 16: 48 (1923).

APD: Synonym of Solanum aethiopicum L.

A widespread long cultivated plant in many parts of tropical Africa; taxonomically it was almost entirely misunderstood until Bitter's revision. Introduced (and naturalized?) in S. America from where it was originally described.

- 8a. ***Solanum gilo* var. *gilo* APD acc**

***Solanum geminifolium* Thonning** in Schum. & Thonn. Beskr. Guin. Pl. 121 (1827); F.T.A. 4, 2: 223.

***Solanum naumanii* Engl.** (1886)-F.T.A. 4, 2: 216.

An unarmed shrub up to 4 ft. high, with white flowers and intense shining pink, sometimes yellowish, globose fruits.

Guin.: Tonfill (fl. & fr. Jan.) Chev. 20446! **S. L.:** Likuru (Feb.) Sc. Elliot 4955! Njala (fl. & fr. July) Deighton 2225! **Lib.:** Filoke (fr. July) Baldwin 6694! **Iv. C.:** Bébon (Dec.) Chev. 22643! Baoulé (July) Chev. 22179! 22194! 22297! Bouaké (fr. July) Chev. 22124! **N. Nig.:** Yates 13a! 20! 43! Katagum Dist. Dalz. 316! **S. Nig.:** Thomas 1237!

[Note: The note on "*S. incanum* Linn." in the Appendix p. 433 includes this species, and the plants called "Yalo" and similar belong to *S. gilo* Raddi var. *gilo*-H. H.]

- 8b. ***Solanum gilo* var. *pierreanum* (Paillieux & Bois) Bitter l.c. (1923).**

APD: Synonym of Solanum aethiopicum L.

***Solanum pierreanum* Paillieux & Bois** in Rev. Sci. Nat. Appl. 37: 483, fig. p. 484 (1890); André in Rev. Hort. 62: 343 (1890), 71: 495 (1899) and 72: 288, with fig. (1900); Chev. Bot. 464.

Like the last var., but fruits larger and lengthwise silicate and like the whole plant tinged with violet.

Mali: Kankan (Mar.) Chev. 589!

Only known as cultivated plant; also in Gabon.

[Note: This is clearly a horticultural variety, i.e. "cultivar" (cv.). The present writer, however, feels that it is better not to change the rank of this taxon given by Bitter without modern revision of the whole

9. ***Solanum incanum* Linn.** Sp. Pl. 1: 188 (1753); F.T.A. 4, 2: 238; Bitter l.c. 270, 297; F.W.T.A., ed. 1, 2: 206, partly (fig. 249); Berhaut Fl. Sén. 170. *APD acc*

A spiny undershrub up to 6 ft. high, pale stellate-tomentose all over, with violet purple, rarely white, 5-parted flowers and globose yellow fruits, up to 1 in. diam.

Sen.: Berhaut 147. Tamba-Kounda (Sept.) Berhaut 3205! **Mali:** Compongane (July) Chev. 24359! Mopti (fl. & fr. Dec.) de Wailly 5311! Timbuktu Hagerup 222! Iles de Bourem (July) Chev. 1291! **Togo Rep.:** Lomé Warnecke 351! **Dah.:** Cotonou (fl. & fr. June) Debeaux 191! Allada (Feb.) Chev. 23238! **N. Nig.:** Jebba Barter! Katagum (May) Dalz. 92! Daddara (fr. Dec.) Meikle 816! Sokoto (fl. & fr. July) Dalz. 387! Yola Dalz. 184! Kuka (fl. & fr. Jan.) E. Vogel 28! Kalkala Golding 52! **S. Nig.:** Abeokuta Millen 96! **[Br.] Cam.:** Rosevear Cam. 50/37!

The typical variety is widespread in drier north tropical Africa and north and eastwards to India. Many other infraspecific taxa accepted by Bitter (l.c. 275-282 (1923)) from other parts of Africa could not be studied in connection with this revision.

[Berkhaut 3205 is probably a hybrid between *S. incanum* and *S. dasyphyllum*.]

10. ***Solanum melongena* Linn.** Sp. Pl. 186 (1753); F.T.A. 4, 2: 242; Bitter l.c. 292.

The Egg-plant or Aubergine, a native of tropical Asia, widely cultivated in many horticultural varieties and often naturalized in the warmer parts of the world.

10a. *Solanum melongena* var. *melongena* APD acc

Plants to which this name could be applied do not occur wild in Africa, according to Bitter. Specimens of cultivated plants concerned are for example:

Mali: Mau Portères! **Iv. C.:** Guidéko (May) Chev. 16377! **S. Nig.:** Lagos Rowland!

10b. *Solanum melongena* var. *inerme* (DC.) Hiern in Cat. Welw. 1, 3: 748 (1898); F.T.A. 4, 2: 242; Bitter l.c. 294.

*APD: Synonym of *Solanum melongena* L.*

Solanum esculentum var. *inerme* Dunal in DC. Prod. 13, 1: 355 (1852).

Solanum incanum of F.W.T.A., ed. 1, 2: 206, partly, not of Linn.

Unarmed undershrub, flowers mostly 7-8-parted.

Sen.: Tambouakané (Dec.) Chev. 2878! **Guin.:** Faranna, Tonfili (fl. & fr. Jan.) Chev. 20451! **S. L.:** T. Vogel 52! Garrett 22! Motenta (June) Thomas 456! Mamba (Nov.) Thomas 4357! Kangama (Sept.) Fisher 91! **Togo Rep.:** Lomé Warnecke 351!

[Note: Garrett 22, determined by Hiern, has a few very small spines on the calyx-H. H.]

11. *Solanum aculeastrum* Dunal in DC. Prod. 13, 1: 366 (1852); F.T.A. 4, 2: 243; Bitter in Fedde Rep. 16: 166 (1923). APD acc

A tree or shrub up to 20 ft. high, with white tomentum on all parts, except the surface of the leaves, and mostly very big and sharp hook-like spines, but sometimes also unarmed.

11a. *Solanum aculeastrum* Dunal var. *aculeastrum* APD acc

The armed variety.

[Br.] Cam.: Bafut-Ngemba F.R., 7,100 ft. (fl. & fr. Feb., June) Ujor FHI 30449! Hepper 2183! Madange (fl. & fr. Jan.) Latilo & Daramola FHI 34356!

Widely distributed in the tropics and frequently cultivated as a hedge-plant.

11b. *Solanum aculeastrum* var. *albifolium* (C. H. Wright) Bitter in Fedde Rep., Beih 16: 170 (1923), including var. *exarmatum* Bitter and var. *conraui* (Dammer) Bitter (1923).

*APD: Synonym of *Solanum aculeastrum* Dunal*

Solanum albifolium C. H. Wright in Kew Bull. 1894: 127; F.T.A. 4, 2: 224.

Solanum conraui Dammer in Engl. Bot. Jahrb. 48: 242 (1912).

Unarmed variety.

[Br.] Cam.: Bamenda, Lakom, 6,000 ft. (Apr.) Maitland 1657! Bangwe (June) Conrau 255!

Also in **tropical East Africa** and **Angola**.

12. *Solanum albicaule* Kotschy ex Dunal in DC. Prod. 13, 1: 204 (1852); F.T.A. 4, 2: 255; Bitter in Fedde Rep. Beih. 16: 101 (1923); Carvalho & Gillet in J. Agric. Trop. 7: 237 (1960); Heine in Kew Bull. 16: 204.

*APD: Synonym of *Solanum forsskalii* Dunal*

Solanum heudelotii Dunal (1852); F.T.A. 4, 2: 224; Bitter l.c. 5 (1923); F.W.T.A., ed. 1, 2: 206; Monod in Contrib. Et. Sahara Occ. 2: 108; Berhaut Fl. Sén. 122.

Solanum scindicum Prain J. As. Soc. Beng. 65: 542 (1896).

An undershrub with slender branches and reflexed spines, shortly hoary-tomentose.

Sen.: Heudelot 34! 417! Perrottet 340! Leprieur! Huard! Oualo Berhaut 1376!

Also in **Mauritania**, **Chad**, **N.E. Africa (Ethiopia, Sudan, Egypt, Eritrea, Somalia)**, **Arabia** and **Pakistan**.

13. **Solanum torvum** Sw. Prod. 47 (1788); F.T.A. 4, 2: 231 (excl. syn. *S. ferrugineum* Jacq., incl. *S. torvum* var. *compactum* Wright); O. E. Schulz, in Urban, Symb. Antill. 6: 233 (1909), for full synonymy. Bitter in Engl. Bot. Jahrb. 57: 252 (1921). *APD acc*

Solanum mannii C. H. Wright, in Kew Bull 1894: 129, incl. var. *compactum* C. H. Wright, l.c. (1894); F.W.T.A., ed. 1, 2: 207.

A shrubby weed attaining 10 ft. or more in height, pale stellate-tomentose, with flattened spines, white or lilac flowers; fruits 1/3 in. diam.

Sen.: Richard! **Lib.:** Gbanga (fl. & fr. Nov.) Daniel 31! Lakrata (Apr.) Bequaert 188! Monrovia (fl. & fr. Dec.) Dinklage 3307! **S. L.:** Bafodea (fl. & fr. Apr.) Deighton 5470! Hill Station (fl. & fr. Nov.) Deighton 229! Regent (Jan.) Gledhill 40! Tombo (Jan.) Deighton 957! Guma (fl. & fr. Mar.) Hepper 2511! **Iv. C.:** Bingerville (fl. & fr. Dec.) Chev. 16030! 16074! (16014?). **Ghana:** Asawasi, Kumasi (Apr.) Andoh 5267! Bunsu, Akim (Mar., Apr.) Irvine 1356! 1754! Kotonfo (fl. & fr. Aug.) Andoh 4419! Dunkwa (fl. & fr. Feb.) Whiting 16! **S. Nig.:** Gambari F.R. (fl. & fr. Mar.) Meikle 1272! Lagos (fl. & fr. May) Dalz. 1190! Sapoba Kennedy 1766! 2717! Yoruba country (Dec.) Newberry 13! Nikrowa, Okomu F.R. (Sept.) Iriah FHI 23085! Baba Eko, Shasha F.R. (fl. & fr. Mar.) Ross 80! 273! **[Br.] Cam.:** Cam. Mt., 3,000-3,500 ft. (Jan., Nov.) Maitland 281! Migeod 241! Dunlap 104! Mamfe to Ikom (fl. & fr. Feb.) Hepper 2209! S. Bakundu F.R. (fl. & fr. Feb.) Binuya & Daramola FHI 35550! **F. Po:** Mann 55! Musola Guinea 1209! Boughey 107!

A very common weed throughout the tropics.

14. **Solanum cerasiferum** Dunal in DC. Prod. 13, 1: 365 (1852); F.T.A. 4, 2: 241, partly. *APD acc*

- 14a. **Solanum cerasiferum subsp. cerasiferum**-Bitter in Fedde Rep., Beih. 16: 283 (1923) (incl. var. *garuense* Bitter l.c. 285.) *APD acc*

Solanum xanthocarpum var. *schraderi* of Schweinf. Pl. nilot. 25, t. 9 (1862); F.T.A. 4, 2: 234, not of DC.

Solanum yolense Hutch. & Dalz. in F.W.T.A., ed. 1, 2: 206 (1931).

Herbaceous undershrub with blue-purple flowers and yellow fruits 1/2-3/4 in. across.

N. Nig.: Yola Dalz. 183!

Also in **Cameroun**, **Ubangi-Shari**, **Sudan** and **Ethiopia**.

- 14b. **Solanum cerasiferum subsp. crepinii** (van Heurck) Bitter l.c. 287 (1923) (incl. subsp. *duchartrei* (Heckel) Bitter l.c. 286 (1923)). *APD acc*

Solanum crepini van Heurck in Obs. Bot. 1: 89 (1870).

Solanum duchartrai Heckel in Rev. Gén. Bot. 2: 49, t. 2 (1890).

Sen.: Plateau de Thiés, Rufisque Duclot & Sambuc; Sieber. Walo (fl. & fr. Oct.) Perrottet 557!

15. **Solanum indicum** Linn. Sp. Pl. 187 (1753); F.T.A. 4, 2: 232, partly.

APD: *Synonym of Solanum anguivi* Lam.

A very critical group of a very wide distribution in the Old World tropics. As far as Bitter's revision is the most up-to-date work on these plants which are extremely difficult to classify, his infraspecific concept is generally accepted here, although it does not correspond well with modern taxonomic methods.

Solanum indicum subsp. distichum (Thonning) Bitter in Fedde Rep. Beih 16: 13 (1923).

APD: *Synonym of Solanum anguivi* Lam.

Solanum distichum Thonning (1827)-F.T.A. 4, 2: 223.

- 15a. **Solanum indicum subsp. distichum var. distichum** *APD acc*

Solanum indicum Linn. subsp. *distichum* var. *immunitum* Bitter l.c. 14 (1923).

Solanum senegambicum Dunal in DC. Prod. 13, 1: 194 (1852); F.T.A. 4, 2: 222.

Solanum anomalum of F.T.A. 4, 2: 232; of F.W.T.A., ed. 1, 2: 207, not of Thonning.

S. schroederi Dammer (1912), partly.

Solanum scalare C. H. Wright (1894)-F.T.A. 4, 2: 224.

A coarse tomentose, unarmed undershrub up to 6 ft. high, with white flowers and erect red globose fruits 1/3-1/2 in. diam.

Sen.: near R. Nunez Heudelot 47; 713! **S. L.:** Garrett 18! Yungeru (fr. Jan.) Thomas 1321! Njala (fl. & fr. Oct., Nov.) Deighton 1407! 1784! Sakaro (fl. & fr. Jan., Feb.) Sc. Elliot 4394! 4898! 17. **Solanum macrocarpon** Linn. Mant. Alt. 205 (1771); F.T.A. 4, 2: 214; Bitter in Fedde Rep., Beih. 16: 195 (1923) incl. var. *calvum* Bitter, l.c. 198 (1923), and other varieties; Burkill in Kew Bull. 1925: 333. *APD acc*

Half-woody usually unarmed undershrub with rather stout branches up to 5 ft. high, hairy or sometimes glabrescent; flowers 3/4-1 in. diam., white or bluish-purple; **often cultivated**.

Mali: between Senegal and Niger Bellamy 136! 208! **Guin.:** Tonfili (fr. Jan.) Chev. 20450! Timbo Pobéguin 1878! **S. L.:** Njala, cult. (fl. & fr. Dec.) Deighton 1803! 1803a! Kangama (Sept.) Fisher 94! Kanika (Sept.) Thomas 2063! Rowala (July) Thomas 1162! Mabum (Aug.) Thomas 1636! **Iv. C.:** Attéou Chev. 17045! Bouake (July) Chev. 22136! 22138! Arbasso (fl. Dec.) Chev. 22642! **N. Nig.:** Thornewill 95! **S. Nig.:** Lagos Dalz. 1189! Enugu (Mar.) Irvine 3605!

Also in **E. Africa**.

[Note: Intermediate forms between both *S. dasphyllum* and *S. macrocarpon* are not infrequent (for example: *S. L.*: Deighton 1803A; 1804), and it seems to be evident that the two species are very close. No. 17 may be a glabrous form of No. 16, arisen in cultivation, and perhaps there are hybrid swarms between both "species": see Bitter, l.c. 197 (1923).]

18. **Solanum aculeatissimum** Jacq. Icon. Pl. Rar. 1: 5, t. 41 (1781); F.T.A. 4, 2: 228, partly (excl. syn. *S. ciliatum* Lam.); Bitter l.c. 148. *APD acc*

An undershrub 1-2 ft. high, armed with nearly straight spines, with white flowers 1/2 in. diam. and smooth brown-yellow nodding fruits.

Guin.: Nzérékoré (fr. Oct.) Baldwin 12101! Diaguissa (Apr.) Chev. 12686! **S. L.:** Mano Bonjena (fr. May) Jordan 2114! Kanya (fr. Oct.) Thomas 3946! Njala (fr. Apr.) Deighton 2635! (Nov.) Deighton 1782! Yonibana (Oct.) Thomas 4213! **Lib.:** Whyte! Ganta (Oct.) Harley! **Iv. C.:** Guidéko Chev. 16428! Japo Chev. 16603! Soubré (fl. & fr. Dec.) Widespread throughout the world.

[Note: A broad view of this species has been taken for this revision owing to its complexity throughout the world. For a discussion on *Solanum nigrum* var. *guineense* Linn. Sp. Pl. 186 (1753), see Heine in Kew Bull. 14: 246 (1960).]

***Solanum wrightii* Benth.** in Fl. Hong Kong 243 (1861); Heine in Kew Bull. 14: 248 (1960).

Solanum macranthum hort. in Rev. Hort. 1867: 132, not of Dunal.

Solanum grandiflorum auct. not of Ruiz & Pavon Fl. Peruv. 2: 35, t. 168, fig. b. (1799); Bitter in Fedde Rep., Beih. 16: 180 (1923).

A large shrub or tree up to 20 ft. high, with very large, violet "potato-like" flowers up to 3 in. diam., cultivated at Njala, Sierra Leone.

A native of Bolivia, frequently cultivated in the tropics and sometimes naturalized.

The "Potato-Tree".

***Solanum hispidum* Pers.** Syn. 1: 228 (1805); Dunal in DC. Prod. 13, 1: 275; C. T. White in Kew Bull. 1939: 666.

Solanum stellatum Ruiz & Pavon Fl. Peruv. 2: 40, t. 176 (1799), not of Jacq. (1789) or of Moench (1794).

Solanum warszewiczii Weick ex Lambertye in Rev. Hort. 1865: 429; Bitter in Engl. Bot. Jahrb. 57: 253 (1921).

Solanum antiguense Coult. in Donnell Smith, Enum. pl. Guatem. 4: 187 (1895).

Solanum pynaertii De Wild. in Miss, E. Laurent 2: 437, t. 119 (1907).

A small shrub or tree up to 30 ft. high, in habit resembling *Solanum forvum* Linn., but with rusty-coloured tomentum of stellate hairs on all parts, mainly the younger ones, and more (and particularly more regularly) pinnatisect leaves.

Guin.: Dalaba, Fouta Djallon (Sept.) Schnell 7467!

An ornamental plant of Mexican and Guatemalan origin; apparently naturalized in Congo. Naturalized in Queensland, Ceylon and obviously in Peru, from where it was first described ("habitat in ruderalis, ad Pillao et Panao vicos" Ruiz & Pavon, l.c.).

Solanum tuberosum Linn. (1753)

The "European" potato, originally American, is mainly represented in our area by cultivars introduced from Europe; cultivated in the upland parts of our area.

Solanum lycopersicum Linn. (1753) incl. var.

Lycopersicum esculentum Mill. (1768)

L. cerasiforme Dunal (1813)

The tomato is more widely cultivated; originally American, it is mainly represented in our area by cultivars introduced from Europe; *S. lycopersicum* particularly frequently by the var. *cerasiforme* (Dunal) A. Voss (1896) and related cultivars.

Solanum guineense Linn. Sp. Pl. 184 (1753); Heine in Kew Bull. 14: 245 (1960).

Solanum aggregatum Jacq. (1790)-F.T.A. 4, 2: 214.

A S. African plant which, since Linnaeus, has been erroneously indicated from our area.

CONVOLVULACEAE

Herbaceous or woody plants, often climbing, juice usually milky. Leaves alternate, simple; stipules absent. Flowers hermaphrodite, actinomorphic; bracts often forming an involucre. Sepals usually free, imbricate, persistent. Corolla gamopetalous, mostly funnel-shaped, lobes 5, contorted. Stamens 5, inserted towards the base of the corolla-tube and alternate with the lobes; anthers 2-celled, opening lengthwise. Ovary often surrounded by a disk, 1-4-celled; ovules solitary or paired, erect; style terminal. Fruit a capsule or fleshy. Seeds sometimes hairy, with rather scanty endosperm and more or less curved embryo. Cotyledons folded or crumpled.

A widely distributed family, mainly in warmer regions; flowers very delicate and often fugitive.

For an account of the classification of the family, with extensive bibliography, see K. A Wilson in J. Arn. Arb. 41: 298 (1960).

- 1 Leafless parasitic plants with filiform stems and clusters of small flowers [1. Cuscuta](#)
- Leafy plants, not parasitic: [2](#)
- 2 Pollen grains smooth: [3](#)
- Pollen grains spinose: [14](#)
- 3 The 2 outer sepals much enlarged in fruit; bracts not enlarged; woody climbers [2. Calycobolus](#)

Widespread in the Old World tropics.

2. ***Cuscuta campestris* Yuncker** l.c. 138, fig. 14 (1932); van Ooststr. in Blumea 3: 68; Verdcourt l.c. 85-86; Meeuse, l.c. 648. *APD acc*

A parasite like the last; very common in some parts of tropical Africa and a **serious pest on cultivated plants**.

[Br.] Cam.: Kumbo (fl. & fr. Feb.) Hepper 1980!

A native of America, now a very widespread weed in warmer parts of the world.

3. ***Cuscuta blepharolepis* Welw. ex Hiern** Cat. Welw. 1: 743 (1898); F.T.A. 4, 2: 205; Yuncker l.c. 198,

fig. 68. *APD acc*

A saffron coloured parasite.

Guin.: Nzérékoré (fl. & fr. Sept.) Baldwin 13280!

Also in **Angola**.

2. CALYCOBOLUS

Willd. ex Roem. & Schult. Syst. Veg. 5: II (1819); House in Bull. Torrey Bot. Club 34 143; Heine in Kew Bull. 16: 387 (1963).

Prevostea Choisy, Ann. Sci. Nat. 4: 496 (1825); F.T.A. 4, 2: 81.

- 1** Leaves very shortly acuminate or not acuminate, ovate or ovate-elliptic, rounded at the base, 8-14 cm. long, 5-8 cm. broad, glabrous, pitted in the axils of the 4-7 pairs of lateral nerves; petiole 2-2.5 cm. long, glabrous; cymes several-flowered; sepals softly tomentose; corolla 1.5-2.5 cm. long, the 5 lobes slightly pubescent outside; style-arms unequal; two sepals in fruit very unequal, one twice as large as the other, orbicular, cordate at the base, the larger about 5 cm. diam., venose [1. heudelotii](#)

Leaves more or less long-acuminate: **2**

- 2** Corolla 1.5 cm. long or more: **3**

Corolla up to 12 mm. long; leaves ovate-lanceolate to oblong-elliptic, broadly acuminate, rounded to acuminate at base, 7-15 cm. long, 3-8 cm. broad, with about 8 pairs of lateral nerves prominently looped; **4**

- 3** Petiole tomentose; leaves shortly and broadly narrowed at base, obovate-elliptic, about 15 cm. long, 7 cm. broad, with 7-8 pairs of lateral nerves not pitted in their axils; pedicels pubescent; two sepals in fruit orbicular, one 2/3 as large as the other, the larger 5 cm. diam. [2. insignis](#)

Petiole slightly pubescent, 1 cm. long; leaves oblong-ob lanceolate, long-tailed-acuminate, gradually narrowed from above the middle to the obtuse base, 10-15 cm. long, 3-6 cm. broad, minutely glandular-punctate below, with 8-10 pairs of prominently looped lateral nerves; corolla 2 cm. long, very shortly lobed; two sepals in fruit very unequal, broadly ovate-orbicular, slightly pointed, one less than 1/3 as large as the other, the larger 7 cm. long [3. africanus](#)

- 4** Leaves minutely pubescent on the nerves beneath, becoming nearly glabrous, petiole pubescent, up to 1 cm. long; pedicel and calyx minutely pubescent and appearing nearly glabrous; corolla urceolate, slightly inflated, slightly pubescent only near the margin [4. micranthus](#)

Leaves and the 5-20 mm. long petioles entirely glabrous; pedicels and calyx persistently whitish to greyish pubescent; corolla tubular, straight, pubescent [5. parviflorus](#)

1. *Calycobolus heudelotii* (Bak. ex Oliv.) Heine in Kew Bull. 15: 390 (1963). *APD acc*

Prevostea heudelotii (Bak. ex Oliv.) Hallier f. in Bull. Herb. Boiss. 5: 1009 (1897); F.T.A. 4, 2: 83 (1905), incl. var. minor Rendle.

4. *Calycobolus micranthus* (U. Dammer) Heine l.c. 390 (1963). *APD acc*

Prevostea micrantha U. Dammer in Engl. Bot. Jahrb. 23, Beibl. 57: 57 (1897); F.T.A. 4, 2: 82.

A shrub 7-9 ft. high, with densely puberulous branchlets when young; flowers white, rather small, few together on short axillary peduncles sometimes below the leaves.

[Br.] Cam.: Johann-Albrecht-Höhe Staudt 637!

[Note: Only known from the type collection and perhaps only an occasional small-flowered form of *C. africanus* (G. Don) Heine-H. H.]

5. *Calycobolus parviflorus* (Mangenot) Heine l.c. (1963). *APD acc*

Prevostea parviflora Mangenot in Bull. I.F.A.N. 19: 359 (1957).

A glabrous climber up to 30 ft. high; flowers tubular, yellowish-green up to 1/2 in. long, in very short axillary cymes; **in swamp forest**.

Lib.: Moala (Nov.) Linder 1374! **iv. C.:** Adiopodoumé (fl. & fr. Dec.) Mangenot!

3. NEUROPELTIS

Wall.-F.T.A. 4, 2: 80.

- 1 Inflorescences long-spicate, 12-30 cm. long, up to 50-flowered; flowers hypocrateriform, up to 7 mm. long; leaves elliptic tending to obovate, up to 10 cm. long and 5 cm. broad, subcoriaceous, older leaves always flat: **2**
 Inflorescences short-racemose, 2-5 cm. long, 4-10 flowered; flowers campanulate, up to 16 mm. long; leaves elliptic, 8-14 cm. long and 4-6 cm. broad, chartaceous, older leaves very often folded towards the upper central part; fruiting bracts up to 4 cm. diam. [3. prevosteoides](#)
- 2 Branches and leaves beneath very finely whitish-pubescent, becoming glabrous [1. acuminata](#)
 Branches and leaves beneath densely ferrugineously hairy [2. velutina](#)

1. *Neuropeltis acuminata* (P. Beauv.) Benth. in Fl. Nigrit. 469 (1849); F.T.A. 4, 2: 80; De Wild. Pl. Bequaert. 1: 537 (1922); Mangenot in Rev. Bot. Appliq. 31: 521 (1951). *APD acc*

Porana acuminata P. Beauv. Fl. Oware 1: 66, t. 39 (1805).

Neuropeltis vermoesenii De Wild l.c. 542 (1922).

A climbing shrub with shining leaves and small white flowers in narrow racemes 3-6 in. long forming a panicle, with a large papery veined bract in fruit.

S. L.: Don! Mano Smythe 119! **Lib.:** Peahtah (Oct.) Linder 1048! Gbanga (Sept.) Linder 658! **Ghana:** (Dec.) Vigne FH 194! Bia F.R. (Feb.) Foggie 4447! Bobiri F.R. (Jan.) Andoh FH 5460! **N. Onochie in Hb. Brenan 8885! Ibadan South F.R. (Sept.) Keay FHI 28042! Calabar Williams! **[Br.] Cam.:** Victoria Kalbreyer 11!

Also in **Cameroun**, **Gabon**, **Congo** and **Angola**.

2. **Neuropeltis velutina** Hallier f. in Bull. Herb. Boiss. 5: 374 (1897); F.T.A. 4, 2: 81; De Wild., Pl. Bequaert. 1: 540; Mangenot l.c. 521. **APD acc**

Neuropeltis anomala Pierre ex De Wild. Pl. Bequaert. 1: 539 (1922).

Like the last, but the whole plant ferrugineously hairy.

S. L.: Mabomba (Nov.) Deighton 3772! Mabonto (Oct.) Thomas 3575! **Lib.:** Harley 492! Ganta (fr. Jan.) Baldwin 14049! Kondessu (fr. Dec.) Baldwin! **S. Nig.:** Gambari F.R. (fr. July) Symington FHI 4117! Ibadan (fr. July) Ahmed & Chizea FHI 20008! Eket Talbot!

Also in **Cameroun**, **Gabon** and **Congo**.

3. **Neuropeltis prevosteoides** Mangenot l.c. 52! (1951). **APD acc**

A lofty climber with relatively small golden-brownish pilose inflorescences and yellowish-white flowers with bracts becoming membranaceous-transparent in the fruiting state.

Lib.: Gbanga (Sept.) Linder 818! **iv. C.:** Niapidou (fr. Jan.) Leeuwenberg 2513! Adiopodoumé Mangenot.

(According to Mangenot (l.c. 521) common in all rain forests of Ivory Coast.)

4. DICHONDRA

J. G. & R. Forster-F.T.A. 4, 2: 65. **APD acc**

- 1 Leaves reniform, 1-3 cm. broad, more or less silky, especially on the lower face, long-petioled; flowers axillary, solitary; peduncles shorter than the petiole; calyx up to 2 mm. long, sepals oblong to oblong-spathulate; corolla yellow, slightly shorter than the calyx; utricles of the fruit about 2 mm. broad [repens](#)

Dichondra repens J. G. & R. Forst. Char. Gen. 40, t. 20 (1776); F.T.A., l.c. 65; van Ooststr. in Blumea 3: 72 (1938); Meeuse in Bothalia 6: 657 (1958).

APD: *Synonym of Dichondra micrantha Urb.*

A perennial herb with slender trailing pubescent stems rooting from the nodes, **in moist places**.

Maur.: Kaédi to Mbagne (Dec.) Mosnies in Hb. Raynal 7538! **Mali:** " Fleuve Blanc " Peney! **[Br.] Cam.:** Cam. Mt., 3,000 ft. Maitland 1310! Bamenda, 5,000 ft. Maitland 145! Oku (fl. & fr. Feb.) Hepper 2024! Lus, Nkambe Div. (fl. & fr. Feb.) Hepper 1861!

Cosmopolitan and widely spread in the warmer regions of both hemispheres.

5. EVOLVULUS

Linn.-F.T.A. 4, 2: 66; van Ooststr. in Meded. Bot. Mus. Herb. Utrecht 14: 1-267 (1934).

Volvulopsis Roberty (1952).

- 1 Leaves elliptic, oblanceolate-oblong to lanceolate; corolla shallowly lobed; capsule 2-celled [1. alsinoides](#)
Leaves orbicular or orbicular-obovate or elliptic; corolla deeply lobed, capsule 1-celled [2. nummularius](#)

1. **Evolvulus alsinoides** (Linn.) Linn. Sp. Pl., ed. 2, 1: 392 (1762); F.T.A. 4, 2: 67; Chev. Bot. 458; van Ooststr. l.c. 26. **APD acc**

Convolvulus alsinoides Linn. Sp. Pl. 157 (1753).

A tufted or spreading hairy herb; woody at the base, with sky-blue funnel-shaped flowers 1/4 in. across.

Sen.: Leprieur! Roger 12! Heudelot 229! Dakar Chev. 2891. **Mt. Roland Chev.** 2903. **Gam.:** Hayes 554! **Mali:** Siguiri Chev. 289. Sikasso Chev. 759. Gao (fl. & fr. Sept.) Hagerup 350! 2. **Evolvulus nummularius (Linn.) Linn.** Sp. Pl., ed. 2, 1: 391 (1762); F.T.A. 4, 2: 68; Chev. Bot. 458; van Oostatr. l.c. 114. **APD acc**

Convolvulus nummularius Linn. Sp. Pl. 157 (1753).

Volvulopsis nummularium (Linn.) G. Roberty (1952).

A perennial prostrate herb; flowers small, white, rarely pale blue.

Iv. C.: Marabadiassa Chev. 22012. **Ghana:** Achimota (fl. & fr Aug.) Milne-Redhead 5127! Akropong, Ashanti (fl. & fr. June) Darko 685! Lawra (Apr.) Adams 4081!

6. CRESSA

Linn.-F.T.A. 4, 2: 72.

- 1 A much-branched herb; branchlets dense, pubescent; leaves ovate, sessile, subacute, 5-6 mm. long, thinly pilose; flowers subsessile, crowded at the tops of the branchlets, the latter forming a panicle; calyx campanulate, pubescent; corolla 4-5 mm. long, lobes sharply reflexed; stamens exserted; stigma capitate; fruit ovoid, shortly beaked, slightly nerved, 4 mm. long, glabrous; seed ovoid, dark brown [cretica](#)

Cressa cretica Linn. Sp. Pl. 223 (1753); F.T.A. 4, 2: 72; Chev. Bot. 459; Berhaut Fl. Sén. 5, 6, 203. **APD acc**

Stems woody below, slender, spreading or ascending from a few inches to 1 ft. long; in damp sandy places, especially near the sea.

Sen.: Leprieur! Roger 73! Heudelot 409! Berhaut 201! Dakar Chev. 15812. **Mali:** Niayes (fl. & fr. Dec.) Chev. 2906! **Port. G.:** Bambadinca, Bafáta (fl. & fr. June) Esp. Santo 2518! **Guin.:** Conakry Maclaud!

Also in the Mediterranean region, Socotra, E. Africa, Madagascar, and in many other places of both hemispheres.

7. BONAMIA

Thouars-F.T.A. 4, 2: 78; van Ooststr. in Blumea 3: 75 (1938), and in Fl. Males., ser. 1, 4: 398 (1953); Meeuse in Bothalia 6: 664 (1958). Nom. cons.

- 1 Leaves oblong-ovate, mucronate, rounded at the base, 4-6 cm. long, 2-3.5 cm. broad, glabrous or nearly so above, appressed-silky-tomentose beneath to nearly glabrous, with about 8 pairs of lateral nerves impressed above, prominent beneath; petiole 1 cm. long; flowers in shortly pedunculate axillary cymes; pedicels tomentose, about 1 cm. long; calyx-segments ovate, acuminate, about 8 mm. long, tomentose; corolla 2 cm. long, pilose outside, slightly pilose to nearly glabrous in the throat, lobes only up to 4 mm. long; fruit ovoid, apiculate, about 1 cm. long; seeds black, glabrous [1. thunbergiana](#)
- Leaves oblong to lanceolate-elliptic or obovate, 5-12 cm. long, 2-5 cm. broad, at first slightly pilose on both sides and with ciliate margin, becoming glabrous or nearly so above, slightly furfuraceous and pilose on the midrib and lateral nerves beneath, with 5-7 pairs of lateral nerves; petiole 3-7 mm. long, tomentose; flowers in dense, subsessile terminal cymes; pedicels tomentose, 4-6 mm. long; calyx-segments elliptic to broad-elliptic, 4-7 mm. long, and 3-5 mm. broad, tomentose outside, glabrous inside, accrescent in fruit, becoming slightly orbicular and about 7 mm. diam.; corolla up to 15 mm. long, appressed-tomentose outside, very villose in the throat, lobes half as long as the corolla-tube; fruit obliquely ovoid, apiculate, 8-10 mm. in diam., seeds dark red and with a persistent blackish aril [2. vignei](#)

1. **Bonamia thunbergiana** (Roem. & Schult.) F. N. Williams in Bull. Herb. Boiss., 2e sér., 7: 371 (1907); Heine in Kew Bull. 14: 276 (1960). *APD acc*

Convolvulus thunbergianus Roem. & Schult. Syst. Veg. 4: 884 (1819).

C. cymosus Roem. & Schult. l.c. 303 (1819), not of Desrousseaux in Lam. (1791), or of Ruiz & Pavon (1799).

Bonamia cymosa (Roem. & Schult.) Hallier f. in Engl. Bot. Jahrb. 18: 91 (1893); F.T.A. 4, 2: 79; Chev. Bot. 459; F.W.T.A., ed. 1, 2: 210.

A woody climber and twiner, with wrinkled leaves brown-ochry beneath, and rather small white flowers 2/3 in. long in dense cymes forming one-sided panicles.

Gam.: Ingram! **Port. G.:** Catio (Dec.) Esp. Santo 2236! **Guin.:** Kouria to Ymbo Caille in Hb. Chev. 14754. Kouria Caille in Hb. Chev. 14795. **S. L.:** Afzelius! Don! Hart! Barter! Makump (Dec.) Also in **Cameroun**.

2. **Bonamia vignei** Hoyle in Kew Bull. 1934: 188. *APD acc*

APD: *Synonym of Bonamia longitubulosa Breteler*

APD: *Synonym of Bonamia nzabii Breteler*

A woody climber with dark brown pilose stems, inflorescences and petioles, leaves nearly glabrous; flowers small, white, in corymbose inflorescences (never forming onesided panicles); **in forest**.

Ghana: Tiasi (Oct.) Vigne FH 1387! Owabi (fr. Dec.) Lyon 2631!

8. CONVULVULUS

Linn.-F.T.A. 4, 2: 88; Verdcourt in Kew Bull. 12: 344 (1957); Meeuse in Bothalia 6: 666 (1958).

- 1 Leaves linear-oblongate, acute at the base, rounded and mucronate at the apex, 2-3 cm. long, 3-6 mm. broad, pilose; flowers solitary or paired in the leaf-axils; calyx-segments lanceolate, acuminate, 8 mm. long, densely pilose; corolla 1 cm. long [1. microphyllus](#)

Leaves lanceolate, hastate-lobulate at the base, about 4 cm. long, shortly pubescent; flowers paired on a common peduncle; calyx-segments about 8 mm. long, setulose; corolla 1.3-1.5 cm. long [2. aschersonii](#)

1. **Convolvulus microphyllus** Sieb. ex Spreng. Syst. Veg. 1: 611 (1824); Hallier f. in Engl. Bot. Jahrb. 18: 98 (1893); F.T.A. 4, 2: 91; F.W. Andr. Fl. Pl. Sudan 3: 106; Berhaut Fl. Sén. 200, 287; Carvalho & Gillet in J. Agric. Trop. 7: 240; Heine in Kew Bull. 16: 205.

APD: *Synonym of Convolvulus prostratus Forssk.*

Ipomoea microphylla Roth (1821).

Convolvulus pluricaulis Choisy (1834)-Hallier f. l.c.; F.T.A. 4, 2: 91; F.W.T.A., ed. 1, 2: 210.

Convolvulus scindicus Boiss. (1856), not of Stocks (1852).

Stems slender, rusty pilose, from a woody stock, erect or spreading, with whitish shortly funnel-shaped flowers 1/3 in. long.

Sen.: Heudelot 403! Leprieur (fide Hallier f. l.c.). Berhaut 1009.

Also in **Sudan**, **Egypt**, **Arabia**, **W. Pakistan** and **N. India**.

2. **Convolvulus aschersonii** Engl. Hochgebirgsfl. trop. Afr. 349 (1892; = Abh. Preuss. Akad. Wiss. 1891, 2); Meeuse in Bothalia 6: 677 (1958). *APD acc*

Convolvulus sagittatus Thunb. Prod. 35 (1794).

Convolvulus sagittatus var. abyssinicus (*Hallier f.*) *Bak. & Rendle* in F.T.A. 4, 2: 96 (1905); F.W.T.A., ed. 1, 2: 210.

Convolvulus sagittatus var. parviflorus subvar. *abyssinicus* *Hallier f.* in Bull Herb. Boiss. 6: 533 (1898).

Convolvulus sagittatus var. aschersonii (*Engl.*) *Verdc.* in Kew Bull. 12: 345 (1957).

Stems prostrate, grey-greenish, pubescent, with pink-purplish or white flowers 1/2 in. long.

N. Nig.: Hephram to Ropp, 4,600 ft. (July) Lely 362!

Widespread in the drier parts of tropical Africa from Eritrea and **Ethiopia** to **Angola**, Bechuanaland, S. Rhodesia and Transvaal.

9. JACQUEMONTIA

Choisy-F.T.A. 4, 2: 85; van Ooststr. in Blumea 3: 267 (1939), Fl. Males., ser. 1, 4: 431 (1953); Meeuse in Bothalia 6: 699 (1958).

- 1 Flowers subumbellate, few; pedicels about 1 cm. long, slender; bracts subulate; leaves oblong-lanceolate, rounded at the apex or emarginate, 3-4 cm. long, 1-2.5 cm. broad, entire, glabrous; calyx-segments ovate, 5 mm. long; corolla 7-8 mm. long; capsule about 5 mm. diam. [1. ovalifolia](#)

Flowers capitate, surrounded by leafy bracts; leaves broadly ovate, acuminate, cordate to rounded at the base, up to 8 cm. long and 5.5 cm. broad, glabrous or nearly so beneath; calyx-segments 1 cm. long, linear-lanceolate, long-pilose with brown hairs; corolla about 9 mm. long; capsule 4-5 mm. diam. [2. tamnifolia](#)

1. **Jacquemontia ovalifolia** (*Vahl*) *Hallier f.* in Engl. Bot. Jahrb. 18: 96 (1893); F.T.A. 4, 2: 87. *APD acc*

Convolvulus ovalifolius *Vahl* Eclog. Am. 2: 16 (1798).

C. coeruleus *Schum. & Thonn.* (1827).

Prostrate and ascending from a half-woody base, glabrous, with pale blue flowers 1/2 in. long.

Ghana: Accra Thonning. (June-July) T. Vogel 11! Brown 374! Dalz. 8! Irvine 668! 689! Prampram (Nov.) Morton 6075! Nungua, Accra Plains (fl. & fr. May) Rose Innes GC 30064! **Togo Rep.:** Lomé Warnecke 254!

Also in other coastal regions in tropical Africa (Somaliland, tropical E. Africa and **Angola**).

[The type is from the West Indies, but the plant has never been recorded from there since the type collection was made.]

2. **Jacquemontia tamnifolia** (*Linn.*) *Griseb.* Fl. Brit. W. Ind. 474 (1861); Bruce in Kew Bull. 1940: 63; Meeuse in Bothalia 6: 700. *APD acc*

Ipomoea tamnifolia *Linn.* (1753).

Convolvulus capitatus *Desr.* (1791).

Jacquemontia capitata (*Desr.*) *G. Don* (1837)-F.T.A. 4, 2: 85; Chev. Bot. 457; F.W.T.A., ed. 1, 2: 211.

Convolvulus guineensis *Schum.* (1827).

A slender twiner, pilose, with blue flowers.

Sen.: Richard Tol (fl. & fr. Sept., Oct.) Roger 9! Farmar 38! **Mali:** Télé Chev. 2901. Sompi Chev. 2902. San Chev. 2904.

[**Br.**] **Cam.:** Bama, Dikwa Div. (fl. & fr. Jan.) McClintock 157!

A native of tropical America, found there in all warmer parts, naturalized in tropical and S. Africa, and the Mascarene Islands.

Jacquemontia pentantha (*Jacq.*) *G. Don*

Convolvulus pentanthus *Jacq.*

A native of the warmer parts of America, is sometimes cultivated as an ornamental plant.

10. OPERCULINA

Silva Manso, Enum. Subst. Brazil. 16 (1836); van Ooststr. in Blumea 3: 361 (1939), Fl. Males., ser. 1, 4: 454 (1953).

- 1 Stems stout, hollow, conspicuously 4-winged on the older portions; leaves up to 13 cm. long and 18 cm. broad, palmatisect with 5 or more more or less elliptic lobes, with bluntish mucronulate apex and tapering base, veins beneath winged and conspicuous, sometimes obsoletely puberulous; petiole stout, narrowly winged, nearly as long as the blade; peduncle about 4 cm. long; few-flowered; bracts deciduous, membranous, bluntly ovate, about 7 mm. long; pedicels stoutly clavate and broadly winged, about 2.5 cm. long; calyx broadly cup-shaped, up to 2.5 cm. long and broad, glabrous, lobes broadly obovate to orbicular; corolla about 6.5 cm. long and nearly as broad; fruits depressed-globose, up to 3.5 cm. diam. (the persistent calyx included), bilocular (2-)3-4-seeded, epicarp fleshy, in the superior part circumscissile and forming a little cap ("operculum"); seeds about 1 cm. diam., glabrous [macrocarpa](#)

Operculina macrocarpa (Linn.) Urban Symb. Antill. 3: 343 (1902) (for full synonymy); Heine in Kew Bull. 14: 397. *APD acc*

Convolvulus macrocarpus Linn. Syst. Nat., ed. 10, 2: 923 (1759); Sp. Pl., ed. 2, 222 (1762).

Operculina convolvulus *Silva Manso* l.c. 49 (1836).

Merremia alata *Rendle* in F.T.A. 4, 2: 102 (1905); F.W.T.A., ed. 1, 2: 212.

A stout glabrous climber with winged hollow stems; flowers widely funnel-shaped, creamy-white.

Ghana: Takoradi (fl. & fr. Oct.) Homes 979! Odumassu (Oct.) Johnson 155! Krobo plains (Dec.) Johnson 517! Cape Coast (fr. Sept.) Hall 1600! **Togo Rep.:** Lomé Warnecke 273! (fl. & fr. Nov.) Mildbr. 7502!

A native of Brazil, also found in Martinique and Guadeloupe, apparently long-introduced and naturalized in our area. (See Appendix p. 440).

11. MERREMIA

Dennst. ex Hallier f.-F.T.A. 4, 2: 101; van Ooststr. in Blumea 3: 292 (1939), Fl. Males., ser. 1, 4: 439 (1953); Meeuse in Bothalia 6: 700 (1958).

- 1 Leaves deeply pinnatipartite, up to 4 cm. long, segments linear, thinly pilose; peduncles axillary, 2-3 cm. long, pilose, 1-3-flowered; calyx-segments with long linear points; corolla narrowly funnel-shaped, a little longer than the calyx; fruit globose, pilose [1. pinnata](#)
- Leaves not pinnately divided: **2**
- 2 Leaves linear-lanceolate or linear, usually hastately-lobulate or toothed at the base, subsessile, 3-5 cm. long, glabrous; peduncles slender, axillary, 1-3-flowered, bracteate towards the top; calyx-segments 5 mm. long, mucronate; corolla 1.5 cm. long; fruit ovoid-globose, about 8 mm. long [2a. tridentata subsp. angustifolia](#)
- Leaves neither linear nor lanceolate: **3**
- 3 Leaves more or less ovate, entire or 3-lobed to the middle: **4**
- Leaves deeply divided: **5**
- 4 Corolla less than 1 cm. long; calyx-segments dry and chaffy, 6 mm. long, obovate-elliptic; pedicels very short; leaves small, mostly shortly trilobed; fruit quadrangular-globose, about 8 mm. diam., glabrous ... [3. hederacea](#)
- Corolla 3 cm. long; calyx segments 1 cm. long, leathery; pedicels 1.5 cm. long; leaves broadly ovate, deeply cordate, about 12 cm. long and 7-10 cm. broad, glabrous or pubescent on the midrib beneath; fruit 1.5 cm. long; seeds covered with short hairs [4a. umbellata subsp. umbellata](#)
- 5 Calyx-segments and branchlets densely covered with long slender hairs; leaves divided completely to the base into 5 obovate acutely acuminate segments up to 8 cm. long and 4 cm. broad; calyx-segments 1.5-2 cm. long in flower, increasing to 3 cm. in fruit; corolla 2-2.5 cm. long; seeds glabrous [5. aegyptia](#)
- Calyx-segments glabrous; branchlets usually glabrous: **6**
- 6 Calyx 2-3 cm. long: **7**
- Calyx up to about 1 cm. long: **8**
- 7 Segments of the leaves sinuate-dentate, acute, 7-10 cm. long, lanceolate; stems and often the petioles usually with long slender hairs; corolla 3-5 cm. long; fruit ovoid, 1.5 cm. long; seeds glabrous [6. dissecta](#)
- Segments of the leaves nearly entire, acute 7-9 cm. long, oblanceolate; stems and petioles glabrous; corolla about 5 cm. long [7. kentrocaulos](#)
- 8 Leaves digitately lobed; stems winged in the lower part; leaf-segments variable, from linear- to broadly-

lanceolate, long mucronate, up to 10 cm. long and 3 cm. broad, pubescent towards the base of the principal nerves beneath; corolla-lobes densely setose in bud [8. pterygocaulos](#)

Leaves subpinnately divided with 2 lobes on each side, the terminal lobe linear-lanceolate, 5-6 cm. long, thinly pilose on the nerves beneath; peduncle densely pubescent, short; pedicels 5 mm. long; calyx 8 mm. long ... [9a. pes-draconis var. nigerica](#)

1. **Merremia pinnata** (*Hochst. ex Choisy*) *Hallier f.* in Engl. Bot. Jahrb. 16: 552 (1893); F.T.A. 4, 2: 113; Chev. Bot. 458; Berhaut Fl. Sén. 46. **APD acc**

Ipomoea pinnata *Hochst. ex Choisy* in DC. Prod. 9: 353 (1845).

Annual, trailing and twining, with slender loosely hairy stem, and cream-white flowers 1/3-1/2 in. long mostly hidden by the hairy calyx.

Breweria malvacea Klotzsch in Peters Reise Mossamb., Bot. 245, t. 37 (1861).

Astrochlaena malvacea (Klotzsch) Hallier f. (1893)—F.T.A. 4, 2: 121; F.W.T.A., ed. 1, 2: 213; Brennan in Mem. N.Y. Bot. Gard. 9: 8

(1954).

Astripomoea chariensis A. Chev. (1913), name only.

Habit of the last, 2-3 ft. high, hoary-stellate-tomentose, with red-purple flowers 1 1/2-2 in. long.

N. Nig.: Yola (June, Oct.) Dalz, 72! Shaw 76! 104!

From Ubangi-Shari and [Ethiopia](#) to S. Africa.**16. IPOMOEA**

Linn. Sp. Pl. 159 (1753); *F.T.A.* 4, 2: 128; van Ooststr. in *Blumea* 3: 481 (1940); *Fl. Males.*, ser. 1, 4: 458 (1953), (incl. *Calonyction* Choisy (1833)—*F.T.A.* 4, 2: 117; and *Quamoclit* Moench (1794)—*F.T.A.* 4, 2: 127).

- 1 Sepals distinctly awned at or below the apex; awn straight or curved; corolla salver-shaped with a long and narrow tube; stamens and style mostly exserted: **2**
 Sepals obtuse, acute or acuminate, whether mucronulate or not, but not distinctly awned at or below the apex; corolla mostly funnel-shaped, or campanulate, sometimes salver-shaped; stamens and style mostly included, sometimes exserted (when leaves pinnately out, see 3, I. *quamoclit*): **5**
- 2 Corolla white with greenish bands or pale bluish-purple, 5-15 cm. long; outer sepals 5-12 mm. long (without awn), inner ones 7-15 mm. (without awn): **3**
 Corolla scarlet, rarely pure white, rather small, 3-4.5 cm. long; outer sepals 2-4.5 mm. long (without awn); inner ones 3-6 mm. (without awn): **4**
- 3 Corolla white; tube not or slightly widened above, 7-12 cm. long; limb rotate; stamens and style exserted [1. alba](#)
 Corolla purplish; the tube distinctly widened above, 3-6 cm. long, the limb funnel-shaped to rotate; stamens and style not or scarcely exserted [2. muricata](#)
- 4 Leaves pinnately parted into numerous linear or filiform segments, rarely less deeply pinnately cut [3. quamoclit](#)
 Leaves not pinnately cut; ovate to orbicular, cordate at the base; margin entire or lobed [4. hederifolia](#)
- 5 Flowers in involucre heads: **6**
 Flowers not in involucre heads: **10**
- 6 Leaves digitately and deeply 7-9-lobed, long-pilose beneath, lobes acutely acuminate; bracts ovate-acuminate, up to 3 cm. long, pilose; calyx about 1 cm. long, pubescent; corolla about 3 cm. long [5. pes-tigridis](#)
 Leaves not lobed: **7**
- 7 Bracts not united, lanceolate: **8**
 Bracts united into an oval doubly acuminate involucre, up to 5 cm. diam.; leaves ovate, cordate, mucronate-acuminate, up to 7 cm. long and 5 cm. broad, pilose on both surfaces; corolla up to 4.5 cm. long: **9**
- 8 Leaves ovate-subcordate, up to 8 cm. long and 6 cm. broad, setose-pilose above, silky below; petiole and branches long-pilose; petiole up to 5 cm. long; corolla 3 cm. long; twining plant [6. heterotricha](#)
 Leaves oblong-lanceolate, mucronate, truncate or subcordate at the base, up to 12 cm. long and 4 cm. broad, pilose above, silky below; petiole 0.5-1 cm. long; corolla about 5 cm. long; plants usually not twining [7. argentaurata](#)
- 9 Corolla 4-5 cm. long; sepals lanceolate, acute [8. involucreta](#)
 Corolla 2.5-3 cm. long; sepals oblong-spathulate, obtuse [9. pileata](#)
- 10 Leaves bilobed at the apex, suborbicular, up to 12 cm. diam., with numerous nerves radiating from near the base; petiole up to 8 cm. long; flowers few in cymes; calyx 1-5 cm. long; corolla 5-6 cm. long [10a. pes-caprae subsp. brasiliensis](#)
 Leaves not bilobed at the apex: **11**
- 11 Leaves more or less ovate to suborbicular, pandurate or triangular, usually cordate at the base, never lobed: .. **12**
 Leaves linear or lanceolate and not cordate at the base, or more or less deeply lobed and then cordate (in some forms of I. *kotschyana* not properly cordate) : **29**
- 12 Flowers fairly long-pedunculate, not in a subsessile cluster: **13**
 Flowers in a subsessile cluster or subsolitary and subsessile: **28**
- 13 Leaves suborbicular, not acuminate, widely cordate at the base, up to about 12 cm. diam., with few radiating nerves from near the base; petiole up to 15 cm. long; flowers cymose; calyx segments unequal, 1-1.5 cm. long; corolla 7-8 cm. long; fruit subglobose, 1.5 cm. diam.; seeds puberulous [11. asarifolia](#)

- Leaves not suborbicular, usually acuminate: 14
- 14 Flowers purplish-red, pink or lilac (not yellow or white): 15
- Flowers yellow or white (or very rarely purplish in No. 22c): 24
- 15 Leaves softly tomentose or pubescent, surface sometimes becoming glabrescent: 16
- Leaves glabrous or nearly so: 19
- 16 Flowers subumbellate or in rather dense cymes with lanceolate bracts: 17
- Flowers solitary or geminate in the axils of the leaves: 18
- 17 Leaves cordate, acuminate, about 9 cm. long and 6 cm. broad, not markedly reticulate beneath; flowers umbellate; calyx-lobes about 8 mm. long, rounded at the apex, pilose; corolla 6 cm. long [12. rubens](#)
- Leaves broadly cordate-ovate, acuminate, about 10 cm. long and 8 cm. broad, entire, thinly pilose beneath; petiole pubescent; corolla 3 cm. long; fruit loosely pilose [13. velutipes](#)
- 18 Leaves ovate-oblong to suborbicular, 8-12 cm. long and 6-9 cm. broad, woolly on the marked venation beneath, rounded or slightly cordate at base; flowers solitary, surrounded by 2 large bracts; calyx 1.5 cm. long; corolla 8-10 cm. long [14. verbascoidea](#)
- Leaves oblong-ovate to triangular-mucronate, base retuse to shallowly cordate, ovate, obtuse 2.5-6 cm. long and up to 4 cm. broad; flowers solitary or paired, inflorescences with two linear bracts up to 7 mm. long; calyx up to 12 mm. long; corolla up to 2.5 cm. long [15. pyrophila](#)
- 19 Stems setose-pilose; leaves ovate-triangular, broadly and shortly acuminate, mucronate, widely cordate at base, up to 14 cm. long and 10 cm. broad; calyx up to 2.5 cm. long, segments oblong-elliptic; corolla up to 10 cm. long [16. setifera](#)
- Stems glabrous: 20
- 20 Corolla 18-20 mm. long; calyx-segments pilose-ciliate to glabrous, apiculate; (forms with entire leaves, for other characters see below) [24. triloba](#)
- Corolla 3.5-9 cm. long: 21
- 21 Leaves broadly cordate, subacute to obtusely acuminate, with a little mucro, 4-11 cm. long, and broad; corolla 3.5-5 cm. long: 22
- Leaves variable, lanceolate or long-hastate, hastate, cordate or entire at the base, always much longer than broad, up to 14 cm. long: 23
- 22 Sepals elliptic, with rounded apex; corolla-tube very narrow at the base and remaining 2-2.5 mm. in diam. for about 5-10 mm. above the base; fruit capsule about 1.5 cm. in diam., seeds brown, 7-8 mm. long, 5-6 mm. broad, slightly pilose; plants never cultivated [17. stenobasis](#)
- Sepals oblong, shortly and abruptly acute, mucronate, corolla-tube campanulate funnel-shaped, about 5-6 mm. diam. at the base; fruit capsules very rarely developed in African specimens, seeds glabrous; plants cultivated, but sometimes apparently wild in abandoned farm-land; (forms with entire leaves; for other characters see below) [32. batatas](#)
- 23 Leaves broadly triangular to lanceolate, more or less hastate at base, up to 14 cm. long and 8 cm. broad, with numerous lateral nerves; calyx 1 cm. long; corolla up to 9 cm. long [18. aquatica](#)
- Leaves triangular-ovate and entire to deeply trilobed with linear segments, about 7 cm. long with few lateral nerves; calyx about 6 mm. long; corolla about 5 cm. long [19. hellebarda](#)
- 24 Stems pubescent: 25
- Stems not pubescent; flowers umbellate, pedicels up to 1 cm. long; calyx-segments long apiculate; (forms with entire leaves; for other characters see above) [24. triloba](#)
- 25 Leaves bluntly elliptic-ovate to more or less pandurate, widely cordate at base, 4-6 cm. long, 3-4 cm. broad, pilose on both surfaces; flowers few, in axillary fascicles or solitary; calyx 1 cm. long, pilose; corolla a little larger than the calyx, not exceeding 14 mm. [20. vagans](#)
- Leaves acuminate-cordate: 26
- 26 Leaves, petioles and inflorescences more or less densely clothed with yellowish spreading hairs; leaves never becoming glabrescent, cordate-ovate, acute, mucronate, 4-9 cm. long; petioles 2.5-5 cm. long; flowers generally in dense, many-flowered cymes; corolla up to 2.5 cm. long [21. tenuirostris](#)
- Leaves, petioles, stems and inflorescences finely pubescent, never clothed with yellowish spreading hairs; leaves becoming almost glabrescent except the margin: 27
- 27 Leaves ovate with rounded sides, widely cordate at base, broadly acuminate and mucronate, 6-9 cm. long, 3.5-7 cm. broad, shortly ciliate, pubescent on the nerves beneath; petioles 1.5-4 cm. long; flowers cymose; calyx-segments 7-8 mm. long, mucronate, the outer ones not cordate or auricled at base, corolla 4 cm. long; fruit broadly ovoid, mucronate, 1.5 cm. long [22. obscura aggregate](#)
- Leaves cordate-ovate or cordate-oblong, obtuse or acute, mucronate, basal sinus variable, usually deep and rather narrow, 3-8 cm. long, 2-5 cm. broad, margin ciliate; petioles slender, 1-9 cm. long; flowers in 1-3-flowered inflorescences, calyx-segments very unequal, outer ones cordate or auricled at the base, long-acuminate, very

- acute; corolla not exceeding 2 cm.; fruit globose, apiculate, up to 9 mm. in diam. [23. sinensis](#)
- 28** Leaves very variable, from ovate-triangular to narrowly lanceolate, widely cordate, mucronate, up to 8 cm. long and 5 cm. broad, pubescent on the nerves beneath; flowers generally clustered, but sometimes solitary or paired; calyx-segments lanceolate, 7 mm. long, pubescent; corolla 1 cm. long; fruit pilose 25. *erica* [29](#)
..... [@](#)
- Leaves ovate, widely cordate at the base, rounded and mucronate at the apex, 3-5 cm. long, 1.5-3.5 cm. broad, long-petiolate; flowers solitary or paired, shortly pedicellate; calyx-segments oblong, 3-4 mm. long, thinly pilose; corolla 6-8 mm. long; fruit glabrous, nearly 1 cm. long [26. verticillata](#)
- 29** Leaves linear to lanceolate; flowers more or less pedicellate: **30**
- Leaves more or less deeply lobed: **33**
- 30** Calyx pubescent outside: **31**
- Calyx glabrous or warted outside: **32**
- 31** Calyx about 8 mm. long; corolla slightly longer than the calyx; leaves oblong-lanceolate, pilose beneath; stems pubescent [27. coscinosperma](#)
- Calyx 2 cm. long; corolla thrice as long as the calyx; leaves linear or oblong-linear, nearly glabrous; stems puberulous; fruit 1 cm. long [28. blepharophylla](#)
- 32** Leaves acute at apex; calyx warted outside; stems usually pilose [29. barteri](#)
- Leaves rounded or emarginate at apex; calyx not warted; stems glabrous [30. stolonifera](#)
- 33** Calyx glabrous outside: **34**
- Calyx pilose or pubescent outside: **39**
- 34** Leaf-lobes deeply divided into small segments; flowers subsolitary; calyx warted, 5 mm. long; corolla 1.5 cm. long; fruit 8 mm. long [31. coptica](#)
- Leaf-lobes entire or nearly so: **35**
- 35** Sepals apiculate, 7-10 mm. long: **36**
- Sepals not apiculate: **37**
- 36** Plants cultivated for their edible subterranean tubers, sometimes escaped from cultivation; stems mostly prostrate, thick; leaves broad-ovate to orbicular in outline, cordate or truncate at base, entire, or angular to palmately 3-5(-7)-lobed; petiole up to 15 cm. long; corolla pale violet, 3-4.5 cm. long [32. batatas](#)
- Plants without tubers and generally not cultivated; stems mostly twining, thinner; leaves mostly 3-lobed (but sometimes entire); corolla pink or red-purple, 18-20 mm. long [24. triloba](#)
- 37** Leaves broadly hastate, 3-lobed, sometimes nearly to the base, the outer lobes linear-lanceolate, about 5 cm. long, glabrous; flowers about 3 in a cyme; calyx 8 mm. long; corolla 6 cm. long, contracted at the base; seeds shortly tomentellous [19. hellebarda](#)
- Leaves palmate or palmately lobed: **38**
- 38** Leaves usually 5-7-lobed to about the middle, lobes acuminate; flowers cymose; corolla about 7 cm. long, contracted at base; fruit 1.5 cm. long; seeds long-villous [33. mauritiana](#)
- Leaves 5-lobed nearly to base, the outer lobes often lobulate, acutely mucronate; flowers cymose; calyx 6 mm. long; corolla 4.5 cm. long; fruit 1 cm. long; seeds long-pilose [34. cairica](#)
- 39** Leaves glabrous; sepals 7-8 mm. long, apiculate, always distinctly fimbriate at the margin, with some rather long hairs on the back; corolla 18-20 mm. long [24. triloba](#)
- Leaves pubescent, pilose or tomentose; sepals lanceolate to ovate, acuminate, pubescent or pilose-hairy: **40**
- 40** Leaf-shape orbicular in outline, 1-2-pinnatifid, with linear lobes; flowers solitary, axillary, subsessile, about 1 cm. long; sepals pubescent [35. kotschyana](#)
- Leaves trilobed, with broad-angular lobes; petioles about as long as the lamina; flowers in rather long-peduncled inflorescences (up to 12 cm. long); corolla 2.5-7 cm. long: **41**
- 41** Leaves thinly pilose beneath, cordate, trilobed to about the middle, lobes acuminate; petiole with reflexed hairs; calyx-segments 2 cm. long, long acuminate, densely pilose in the lower half; corolla up to 7 cm. long ... [36. nil](#)
- Leaves white-woolly-tomentose beneath, trilobed to the middle, cordate; calyx as above but shorter; corolla about 2 cm. long [37. aitonii](#)

1. Ipomoea alba Linn. Sp. Pl. 161 (1753); van Ooststr. in Blumea 3: 547; Meeuse in Bothalia 6: 765.

APD acc

Convolvulus aculeatus Linn. (1753).

Ipomoea bona-nox Linn. (1762).

Calonyction aculeatum (Linn.) House in Bull. Torrey Bot. Club 31: 590 (1904); F.W.T.A., ed. 1, 2: 213; Exell Cat. S. Tomé 249.

C. speciosum Choisy in Mém. Soc. Phys. Genève 6: 441 (1833); P.T.A. 4, 2: 117; Chev. Bot. 457.

A strong twiner with stems smooth or sparingly tubercled, and large white flowers 4-6 in. across the limb, expanding and fragrant at night; **wild in secondary vegetation, but often cultivated for ornament.**

Guin.: Kouria Caille in Hb. Chev. 14871. **S. L.:** Hanga (fr. Jan.) Thomas 7783! 7799! Yungeru (Jan.) Thomas 7251! 7287! Kumrabal (Dec.) Thomas 6741! 6867! 6959! Ronietta (Nov.) Thomas 5567! Njala (Dec.) Deighton 1851! **Lib.:** Bakratown (Oct.) Linder 877! **Ghana:** Akroso (Jan.) Deakin 115! **N. Nig.:** near Ibi, R. Benue (Nov.) Dalz. 73! **S. Nig.:** Lagos (fr. Mar.) Milien 88! Ibu T. Vogel 38! Ibadan (fr. Dec.) Newberry 124! Ogwashi (Dec.) Thomas 7053! Calabar (Feb.) Mann 2324! Oban Talbot 826!

A native of tropical America, often cultivated and naturalized, now widely distributed at low and medium altitudes throughout the tropics.

2. *Ipomoea muricata* (Linn.) Jacq. Hort. Schoenbr. 3: 40, t. 323 (1798); van Ooststr. l.c. 551.

APD: Synonym of Ipomoea turbinata Lag.

Convolvulus muricatus Linn. Mant. 44 (1767).

Calonyction muricatum (Linn.) G. Don Gen. Syst. 4: 264 (1837); F.T.A. 4, 2: 118; F.W.T.A., ed. 1, 2: 213; Chev. Bot. 456.

A strong climber like the last with tubercled stems and funnel-shaped flowers, white or reddish or lilac.

Sen.: Pont Chev. 2852. **Gam.:** Ingram! **S. L.:** Mahela (fr. Dec.) Sc. Elliot 4074! Musaia (fr. Feb.) Glanville 404! **N. Nig.:** Sokoto (Aug.) Dalz. 372! **S. Nig.:** Lagos Dawodu 257!

A native of tropical America, cultivated, and now widespread throughout the tropics, but apparently not as frequent as *I. alba* Linn.

3. *Ipomoea quamoclit* Linn. Sp. Pl. 159 (1753); van Ooststr. l.c. 555; O'Donell in Lilloa 29: 74, for full synonymy. *APD acc*

Convolvulus pennatus Desr. (1791).

Quamoclit pennata (Desr.) Boj. Hort. Maurit. 224 (1837); F.W.T.A., ed. 1, 2: 213.

Quamoclit vulgaris Choisy in Mém. Soc. Phys. Genève 6: 434 (1833); F.T.A. 4, 2: 128; Exell Cat. 8. Tome 249.

A glabrous twiner, **cultivated** like the last.

S. L.: Waterloo (fl. & fr. Aug.) Melville & Hooker 171! Njala (July) Deighton 1162! Bo (fl. & fr. Jan.) Thomas 7423! **Lib.:** Whyte **N. Nig.:** Sokoto (fl. & fr. Nov.) Moiser 25! **S. Very common throughout tropical Africa.

9. *Ipomoea pileata* **Roxb.** Fl. Ind., ed. Carey & Wall. 2: 94 (1824); F.T.A. 4, 2: 151; van Ooststr. l.c. 507; Fl. Males., ser. 1, 4: 468; Berhaut l.c. *APD acc*

Ipomoea involucrata var. *saxicola* **A. Chev. ex Meeuse** l.c. 745 (1958).

A slender twiner with flowers not more than 1 in. long; in all parts more slender than No. 8.

Sen.: Vélor, near Saloum Berhaut 525; 3485; 4779. **Gam.:** (fr. Dec.) Ingram!

Also in E. and S. Africa, the Mascarenes and in tropical Asia.

10. *Ipomoea pes-caprae* (Linn.) Sweet Hort. Suburb. Londin. 35 (1818); van Ooststr. l.c. 532; Exell Cat. S. Tomé 251 (1944); Meeuse l.c. 754; Naegelé in Bull. I.F.A.N. 21: 1186, f. 6 (1959). *APD acc*

Convolvulus pes-caprae Linn. Sp. Pl. 159 (1753).

Ipomoea pes-caprae (Linn.) Sweet subsp. *pes-caprae*

In Somaliland, tropical Asia and Malaysia.

- 10a. *Ipomoea pes-caprae* subsp. *brasiliensis* (Linn.) Ooststr. l.c. 3: 533; Meeuse l.c. *APD acc*

Convolvulus brasiliensis Linn. Sp. Pl. 169 (1753).

Ipomoea biloba of F.T.A. 4, 2: 172, not of Forsk. (1775) (W. Afr. specimens); Chev. Bot. 453.

Ipomoea pes-caprae "Roth" of F.W.T.A., ed. 1, 2: 215, only partly of (Linn.) Sweet (1818).

Glabrous perennial trailing on sand of the seashore, with half-succulent leaves and large red-purple flowers.

Sen.: Boivin! St. Louis Roger! **Guin.:** Conakry (fl. & fr. July) de Wit 7123! Chev. 12254! **S. L.:** Deighton 2039! Lumley (fl. & fr. Aug.) Melville & Hooker 245! River Beach (July) Small 157! Also in **Cape Verde Islands**, **tropical Asia and America**.

12. *Ipomoea rubens* Choisy in Mém. Soc. Phys. Genève 6: 463 (1834); Verdcourt in Webbia 13: 324 (1958). *APD acc*

Ipomoea lilacina Blume Bijdr. 715 (1826); F.T.A. 4, 2: 187; F.W.T.A., ed. 1, 2: 215; Berhaut Fl. Sén. 153, not of Schrank (1822).

Ipomoea riparia G. Don (1838)-Exell Cat. S. Tomé 251.

Ipomoea senegambica A. Chev., in Bull. Mus. Hist. Nat. Paris, ser. 2, 5: 234 (1933).

A fairly stout twiner with grey-pubescent striate stems and bright red-purple flowers 1 1/2-2 in. long.

Sen.: Roger! Niayes (Dec.) Chev. 2855! Berhaut 1308! **Guin.:** Cercle de Tillabéri (Jan.) de Wailly 5820! **N. Nig.:** T. Vogel 241! Nupe Barter 969! Jebba (Dec.) Hagerup 679! Yola (May) Dalz. 75!

Also in **Sudan**, **Uganda**, **E. Africa**, **Congo** and **Angola**.

13. *Ipomoea velutipes* Welw. ex Rendle in J. Bot. 32: 175 (1894); F.T.A. 4, 2: 155.

APD: *Synonym of Ipomoea chrysochaetia* var. *velutipes* (Welw. ex Rendle) Lejoly & Lisowski

Ipomoea camporum A. Chev. ex Hutch. & Dalz. F.W.T.A., ed. 1, 2: 215 (1931); A. Chev. in Bull. Mus. Hist. Nat. Paris, sér. 2, 5: 231 (1933); Verdcourt in Kew Bull. 13: 208.

A twiner with striate pubescent stems and long-pedunculate cymes of pale red-purple flowers.

Guin.: Kaba, Faranna (fl. & fr. Jan.) Chev. 20390! Ditinn (fl. & fr. Jan.) Roberty 16457! Dalaba to Mamou (fl. & fr. Jan.) Chev. 20392! **S. L.:** Musaia (Dec.) Deighton 4481! **S. Nig.:** Bendiga Ayuk, Ogoja (Dec.) Keay FHI 28136!

Also in **Congo**, **Angola** and **N. Rhodesia**.

14. *Ipomoea verbascoidea* Choisy in DC. Prod. 9: 356 (1845); F.T.A. 4, 2: 183; Meeuse l.c. 769. *APD acc*

Ipomoea lukafuensis De Wild. Ann Mus. Congo, sér. 4, 1: 112, t. 2 (1903); F.T.A. 4, 2: 184.

Ipomoea tessmannii Pilger in Notizbl. Bot. Gart. Berl. 7: 542 (1921); F.W.T.A., ed. 1, 2: 215.

A stout erect plant, with wrinkled leaves whitish-woolly beneath, and large reddish-purple flowers 3 in. long.

N. Nig.: Jos Plateau (June) Lely P366! Naraguta (June) Lely 287! Vom, 3,000-4,500 ft. Dent Young 180!

Also in Cameroun, Congo, Angola, E. Africa, N. and S. Rhodesia, Bechuanaland and S.W. Africa.

15. *Ipomoea pyrophila* A. Chev. in Bull. Mus. Hist. Nat. Paris, sér. 2, 5: 235 (1933). *APD acc*

A slender trailing plant with a thickened rootstock, densely covered with short spreading hairs; flowers in pedunculate cymes; in savanna after fires.

Guin.: Kouredrari40 (Feb.) Chev. 421! **N. Nig.:** Kontagora (fl. & fr. May) Dalz. 378! Ntachu to Madengyen (Jan.) Meikle 1073! Owudugu, Birnin Gwari (Feb.) Dagdash FHI 31422! Sokoto Lely 132! Jos Plateau (Jan.) Lely P43! Naraguta (May) Lely 40! 41! 458! Vom Dent Young 1811

[This species belongs to the *I. asperifolia-fulvicaulis* complex, which has been studied recently by B. Verdcourt (Kew Bull. 13: 202, and 14: 337). It may be treated later as an infraspecific taxon, but as these studies are not yet complete and have not dealt with the plants of our area, it seems inadvisable to establish a new taxon for it.

Ipomoea atacorensis A. Chev. (l.c. 232 (1933))

Belongs to the same group; it is only known from the type-specimen (Dahomey, Atacora Mts. (June) Chev. 24138!) and may be an extreme form of a taxon already described. Also, the specific delimitation between *I. tenuirostris* Choisy, incl. vars. (No. 21 below) and representatives of the *I. asperifolia-fulvicaulis* complex is neither clear nor satisfactory. Intermediates are represented at Kew from Sierra Leone (Musaia Deighton 4205! 5399!) and N. Nigeria (Katagum Dalz. 359! Birnin Gwari Meikle 1350!).]

16. *Ipomoea setifera* Poir. in Lam. Encycl. Méth. Bot. 6: 17 (1804); F.T.A. 4, 2: 199; F.W.T.A., ed. 1, 2: 216, partly (excl. Phimtre 55); Hill & Sandwith Fl. Trinidad & Tobago 2: 228 (1953); Berhaut Fl. Sén. 156, 158. *APD acc*

Convolvulus ruber Vahl Eclog. Am. 2: 12 (1798).

Ipomoea rubra (Vahl) Millesp. in Field Col. Mus. Bot. 2: 86 (1900); Urban Symb. Antill. 3: 345 (1902), not of Murray (1774).

A hirsute rather robust twiner and trailer with red-purple flowers 2 to nearly 4 in. long, the sepals often plicate, tubercled and apiculate.

Sen.: Berhaut 1780. **Gam.:** Kudang (Jan.) Dalz. 8050! S. bank of Gambia B. Brown-Lester 9! **Guin.:** Heudelot 750! **S. L.:** York (Dec.) Deighton 3338! Yunguru (Jan.) Thomas 7207! 7278! Port Loko (fr. Dec.) Thomas 6552! 6638! Kambia (cult.) (Dec.) Sc. Elliot 5902! Rokupr (fl. & fr. Jan.) Deighton 2945! **iv. C.:** Marahoui (fr. Jan.) de Wit 7647!

A native of tropical America and now naturalized in our area.

17. *Ipomoea stenobasis* Brenan in Kew Bull. 5: 228 (1950). *APD acc*

General appearance as in *I. asarifolia*, but more slender and graceful, and leaves always clearly pointed or acuminate, with a little mucro up to 1 mm. long (which is always lacking in *I. asarifolia*), and with a much more conspicuous glandular dotting on the lower surface.

S. Nig.: Idanre Hills (fl. & fr. Oct.) Keay FHI 22525! 22574! Ado Rock (Oct.) Hambley 342! Savory & Keay PHI 25442! Akure F.R. (Oct.) Keay FHI 25468!

Also in Congo and in Uganda.

18. *Ipomoea aquatica* Forsk. Fl. Aegypt.-Arab. Descr. Pl. 44 (1775); F.T.A. 4, 2: 170; van Ooststr. l.c. 528; Meeuse l.c. 753. *APD acc*

Ipomoea reptans Poir. in Lam. Encycl. Méth. Bot. 3: 460 (1814); F.W.T.A., ed. 1, 2: 215; Berhaut Fl. Sén. 158, not *Convolvulus reptans* Linn. (1753).

Ipomoea barteri of Chev. Bot. 453, not of Bak.

Nearly glabrous, stems hollow, from a stout woody stock, **trailing on mud** and rooting at the nodes, with pale or dark red-purple flowers 2-3 in. long.

Sen.: Richard Tol (fl. & fr. Sept.) Roger 95! Tamboukané Chev. 2863! Berhaut 559, 2271! **Gam.:** Kuntaur Kuxton 31! Pendaba Gardiner 17! 22! **Mali:** Dogo (fl. & fr. Apr., May) Davey 131! 577! 19. ***Ipomoea hellebarda* Schweinf. ex Hiern** in Cat. Welw. 1, 3: 737 (1898), incl. var. *sarcopoda* Welw. ex Hiern; F.T.A. 4, 2: 170 (excl. syn.); Hallier f. in Engl. Bot. Jahrb. 18: 142, in syn. (1893); Engl. Bot. Jahrb. 28: 43 (1899).

APD: *Synonym of Ipomoea marginata (Desr.) Verdc.*

Merremia hastifolia A. Chev. in Bull. Mus. Hist. Nat. Paris, sér 2, 5: 236 (1933).

A glabrous twiner or trailer with very variable leaves and flowers 2 in. long, lilac or darker red-purple.

Gam.: Ingram! Kambo, Central Prov. (Oct.) Frith 232! **Mali:** Goumal (fl. & fr. Jan.) Davey 230! **Guin.:** Mamou Chev. 20388! **Ghana:** Thonning (photo.)! Krobo Irvine 1022! Kpeloe (fr. Oct.) A. S. Thomas K5! Kumasi (Sept.) Dalz. 133! **Dah.:** Massé to Ketou Chev. 22992. **N. Nig.:** Naraguta Lely 549!

20. ***Ipomoea vagans* Bak.** in Kew Bull. 1894: 70; F.T.A. 4, 2: 137. **APD acc**

Ipomoea sulphurea Hochst. ex Choisy in DC. Prod. 9: 356 (1845); F.T.A. 4, 2: 137; E.W.T.A., ed. 1, 2: 216; Roberty in Bull. I.F.A.N. 15: 1060, incl. forma *deltoidea* Roberty; Berhaut, Fl. Sén. 157, 155 not of G. Don (1838).

Trailing, woody at the base, pale-pilose, with rather small white (or yellow) flowers with a leafy calyx.

Sen.: Perrottet. Leprieur. Berhaut 464, 2260, 2834. **Ghana:** Isert. **N. Nig.:** Sokoto (fl. & fr. Sept.-Nov.) Moiser 17! 81! Katagum Dist. Dalz. 180!

Also in **Sudan**.

21. ***Ipomoea tenuirostris* Choisy** in DC. Prod. 9: 379 (1845); F.T.A. 4, 2: 143; Verdcourt in Kew Bull. 13: 202 (on *I. asperifolia* Hallier f.). **APD acc**

Ipomoea gracilior Rendle in J. Bot. 46: 180 (1908).

Climbing in grass; flowers pale mauve with mauve centre, in cymose inflorescences.

S.L.: Makump (Dec.) Glanville 106! Jaiama (fr. Dec.) Deighton 3468! Musaia (fl. & fr. Dec.) Deighton 4539! Bintumane Peak, 5,400 ft. (fr. Jan.) T. S. Jones 61! **N. Nig.:** Naraguta (Oct.) Hepper 1164! **S. Nig.:** Koloishe Mt., 4,900 ft., Obudu (fl. & fr. Dec.) Savory & Keay FHI 25102! [**Br.**] **Cam.:** Bamenda, 5,000 ft. (fl. & fr. Jan.) Migeod 310!

Also in **Cameroun**.

[Note: A critical species; material at Herb. Kew not homogenous and in some specimens (Adams 5145; Deighton 3468; 4539; etc.) perhaps hybridized with *I. eriocarpa* R. Br.-H. H.)

22. ***Ipomoea obscura* (Linn.) Ker-Gawl.** in Bot. Reg. 3, t. 239 (1817); Verdcourt in Kew Bull. 13: 210, incl. var. *sagittifolia* Verdc.; F.T.A. 4, 2: 164; van Ooststr. l.c. 519; Meeuac l.c. 746 (1958), incl. var. *fragilis* (Choisy) Meeuse in Fl. Pl. Afr. 31, t. 1222 (1959). **APD acc**

Convolvulus obscurus Linn. Sp. Pl. ed. 2, 1: 220 (1762).

Ipomoea fragilis Choisy in DC. Prod. 9: 372 (1845); P.T.A. 4, 2: 165; F.W.T.A., ed. 1, 2: 216.

(?) **C. micrantha** Hallier f. in Bull. Herb. Boiss. 6: 541 (1898); F.T.A. 4, 2: 166.

Ipomoea afra Choisy l.c. 380 (1845), partly.

In typical specimens the corolla is 1.4-2.5 cm. long, whitish-yellow with or without a purplish centre.

Extremely common throughout tropical Africa. See note Linder 22c.

- 22a. ***Ipomoea ochracea* (Lindl.) G. Don** Gen. Syst. 4: 270 (1837); F.T.A. 4, 2: 166; Verdcourt in Kew

Bull. 13: 210. *APD acc*

Convolvulus ochraceus Lindl. in Bot. Reg., 13: t. 1060 (1827).

Ipomoea ochroleuca Spanoghe in Linnaea 15: 340 (1841) (as "ochroleuceae"), van Ooststr. l.c. 523, Fl. Males., sér. 1, 5: 561 (1958).

Ipomoea kentrocarpa Hochst. ex A. Rich. Tent. Fl. Abyss. 2: 70 (1851); F.T.A. 4, 2: 163; F.W.T.A., ed. 1, 2: 216, partly (excl. Sc. Elliot 4679).

In typical specimens the corolla is 2·7-4 cm. long, bright yellow with a purple centre.

Fairly common through our area in savanna. See note Linder 22c.

22b. *Ipomoea trichocalyx* Schum. & Thonn. Beskr. Guin. Pl. 91 (1827); Verdcourt in Kew Bull. 13: 210. *APD acc*

Ghana: Thonning (Photo!) (identified by F. Didrichsen as "I. afra Choisy," by H. Hallier f. as *I. ochracea*).

22c. *Ipomoea acanthocarpa* (Choisy) Ascherson & Schweinf. in Schweinf. Beitr. Fl. Aethiop. 277 (1867); F.T.A. 4, 2: 166 (1905);

APD: Synonym of Ipomoea obscura (L.) Ker Gawl. var. *obscura*

Calonyction? *acanthocarpum* Choisy in DC. Prod. 9: 346 (1845).

Corolla 1 in. long, whitish or pale purple, peduncles short, 1-3 flowered; fruits tipped with a sharp persistent style-base.

Sen.: Perrottet 521; 524. Lelièvre. **Port. G.:** Antula, Bissau (fl. & fr. Oct.) Esp. Santo 2583! **Niger:** Zinder (fl. & fr. Oct.) Hayerup 585! **N. Nig.:** Katagum Dist. Dalz. 183! Sokoto (fr. Aug.) Dalz. 375! **[Br.] Cam.:** Dikwa (fl. & fr. Nov.) McClintock 16!

Also in **Sudan**.

[The taxa *I. obscura*, *I. ochracea* and *I. trichocalyx* are kept recently by Verdcourt (in Kew Bull. 13: 209 (1958)) specifically distinct, but *I. ochracea* is considered as "actually little more than a large *I. obscura*" and Verdcourt is "far from satisfied" with his conclusions and says that "cultural work is needed on the members of this complex." *I. acanthocarpa*, *Merremia geophiloides* A. Chev. (in Bull. Mus. Hist. Nat. Paris, sér. 2, 5: 236 (1933), Sarafinian Chev. 20637! Koulounda to Kaba Chev. 20388!) and *Ipomoea sudanica* A. Chev. (l.e. 235 (1933), Moriguenieba Chev. 415. Koundian Chev. 445 I) from Guinée also belong to the *Ipomoea obscura*-complex, and I am quite unable to key satisfactorily these above-mentioned species and to refer properly the W. African material to them; for this reason no specimens are cited for Nos. 22 and 22a. It is, meanwhile, best to accept the name *I. obscura* (Linn.) Ker.-Gawl. for the whole and to treat it as an aggregate species-H. H.)

23. *Ipomoea sinensis* (Desr.) Choisy in Mém. Soc. Phys. Genève 6: 459 (1834); Meeuse in Bothalia 6: 728 (1958). *APD acc*

Convolvulus sinensis Desr. in Lam. Encycl. Meth. Bot. 3: 557 (1789).

Ipomoea tropica Santapau & Patel in J. Bombay Nat. Hist. Soc. 54: 799 (1957).

Ipomoea sinensis subsp. *blepharosepala* (Hochst. ex A. Rich.) Verdc., ex Meeuse in Bothalia 6: 729 (1958).

Ipomoea cardiosepala Hochst. ex Bak. & Wright in F.T.A. 4, 2: 147 (1905), not of (H.B.K.) Meissner (1869).

Ipomoea blepharosepala Hochst. ex A. Rich. Tent. Fl. Abyss. 2: 72 (1857).

A slender perennial, trailing or twining; flowers white or pinkish.

Niger: Air (fl. & fr. Aug.) Rodd!

In the tropics of the Old World.

24. *Ipomoea triloba* Linn. Sp. Pl. 161 (1753); Meisner in Martius Fl. Brasil. 7: 277 (1869), incl. vars.; Eggers in Bull. U.S. Nat. Mus. 13: 71 (1879), incl. vars.; Hallier f. in Engl. Bot. Jahrb. 18: 138 (1893); Britton & Wilson in Sci. Surv. P. Rico & Virgin Isl. 6, 1: 116 (1925); van Ooststr. in Blumea 3: 509 (1940). *APD acc*

Ipomoea leucantha Webb ex Hook. Fl. Nigrit. 152 (1849); F.T.A. 4, 2: 176; F.W.T.A., ed. 1, 2: 216; Berhaut Fl. Sén. 157; Eggers l.c. (1879); Britton & Wilson l.c. 117 (1925), not of Jacq. (1788).

A glabrous twiner and trailer with rather angular stems, sepals long-ciliate, density of indumentum very variable; flowers white, mauve, pink or pale red-purple 3/4-1 in. long.

Sen.: Ouassadou Berhaut 1231; 2129. Dakar (fl. & fr. Sept.) Berhaut 834! **Guin.:** Heudelot 734! **S. L.:** Glanville 366! Magbile (Dec.) Thomas 5930! 5932! 5981! Njala (fl. & fr. Nov.) Small 805 (red-fl. form)! Magbile (Dec.) Thomas 6065! 6491! Port Loko (Dec.) Thomas 5822! 6535! Russell (fl. & fr. Dec.) Deighton 3316 (red-fl. form)! Kambia (Dec.) Deighton 1082! Musaia (fl. & fr. Dec.) Deighton 4466! Segbwema (fl. & fr. Dec.) Deighton 3476! Roboli, near Rokupr (Nov.) Jordan 178! **Iv. C.:** Béyo (fl. & fr. Dec.) Leeuwenberg 2001!

A circumtropical weed, native of tropical America.

[Note: The W. African specimens are almost white-flowered, but this character is insufficient for a taxonomic distinction between American and African specimens; such white-flowered forms do occur also in the W. Indies and in S. America (see Meissner and Eggers, etc. l.c.), and they have sometimes been treated unnecessarily in the older literature as varietally or (as with *I. leucantha* Webb ex Hook., not of Jacq.) specifically distinct. -H. H.]

25. ***Ipomoea eriocarpa* R. Br.** Prod. Fl. Nov. Holl., ed. 1, 484 (1810); F.T.A. 4, 2: 136; Exell Cat. S. Tomé 250; van Ooststr. in Fl. Males., sér. 1, 4: 462 (1953). **APD acc**

APD: *Synonym of Ipomoea kourankoensis A. Chev.*

Ipomoea hispida (Vahl) Roem. & Schult. Syat. Pl. 4: 238 (1819); F.W.T.A., ed. 1, 2: 216; van Ooststr. in Blumea 3: 490 (1940), not of Zuccagni (1806).

Convolvulus hispidus Vahl (1794).

Ipomoea morsonii Bak. in Kew Bull. 1894: 91; F.T.A. 4, 2: 140; F.W.T.A. ed. 1, 2: 216.

Ipomoea leptocaulos Hallier f. in Engl. Bot. Jahrb. 18: 126 (1893); F.T.A. 4, 2: 140.

(?) **I. kourankoensis** A. Chev. in Bull. Mus. Hist. Nat. Paris, sér. 2, 5: 234 (1933).

A slender twiner, sparingly pubescent, with white flowers about 1/2 in. long.

Sen.: Roger 116! Ingram! **Gam.:** Genieri (fr. Feb.) Fox 23! **Mali:** Kara (fl. & fr. Dec.) Davey 177! Dogo (fr. Apr.) Davey 570! **Guin.:** Kouroussa (fr. Oct.) Pobéguin 584! **Port. Also in **Cameroun**, **Congo**, **E. Africa** and **Madagascar**.

SCROPHULARIACEAE

Herbs or shrubs, rarely small trees. Leaves alternate, opposite or verticillate; stipules absent. Flowers hermaphrodite, mostly zygomorphic. Calyx imbricate or valvate. Corolla-lobes imbricate. Stamens often 4 or 2, rarely 5, inserted on the corolla and alternate with the lobes, sometimes the fifth stamen represented by a staminode; filaments free from each other; anthers 1-2-celled, opening lengthwise. Ovary superior, entire, usually 2-celled; style terminal. Ovules numerous on axile placentas. Fruit a capsule or berry. Seeds numerous, with fleshy endosperm.

Widely distributed.

Recognized by the usually opposite exstipulate leaves, mostly zygomorphic flowers, entire ovary with terminal style, and axile placentas.

- 1 Flowers spurred; lower leaves opposite, upper leaves alternate: **2**
Flowers not spurred: **3**
- 2 Capsule dehiscent by apical pores; corolla 1-2 cm. long [1. *Linaria*](#)
Capsule splitting loculicidally and spreading; corolla 5 mm. long [2. *Diclis*](#)
- 3 Leaves alternate, never all radical (but densely congested in No. 3): **4**
Leaves opposite, or at least subopposite (sometimes the upper leaves alternate) or all radical: **8**
- 4 Stamens 2, staminodes absent [3. *Anticharis*](#)
Stamens 4 (rarely 5 in Nos. 7 and 9): **5**
- 5 Leaves orbicular; creeping herb with small rotate axillary flowers [7. *Sibthorpia*](#)
Leaves not orbicular; erect herbs: **6**
- 6 Corolla rotate; flowers in long racemes [5. *Celsia*](#)
Corolla with distinct tube: **7**
- 7 Leaves densely congested on short stems; flowers sessile amongst the leaves [4. *Aptosimum*](#)
Leaves not congested; stems erect; flowers axillary on long slender pedicels [9. *Capraria*](#)
- 8 Stamens 2 (2 staminodes also present in No. 20 and very reduced in No. 15): **9**
Stamens 4 (rarely 3 in No. 4): **14**
- 9 Leaves much divided; aquatic (*K. sessiliflora*); see also below [13. *Linnophila*](#)
Leaves not divided; creeping or erect: **10**
- 10 Creeping herb 1 cm. high; flowers solitary, slender-pedicellate; calyx 3-lobed; anther-cells confluent [22. *Glossostigma*](#)
Plant usually much larger, or if only about 2 cm. high and erect (as in No. 23) then calyx 5-toothed: **11**
- 11 Corolla-tube short, almost rotate; stamens exserted [6. *Veronica*](#)
Corolla with distinct tube, usually un-equally 2-lipped; stamens included: **12**
- 12 Flowers subsessile in dense axillary clusters, minute; stems very slender 2-3 cm. high; anther cells distinct; staminodes absent; stigma spatulate [23. *Psammeteris*](#)
Flowers axillary or in terminal racemes, not in dense clusters; stigma bilobed: **13**
- 13 Staminodes (inside lower lip) with a boss-like appendage and long slender sterile filament; capsule septicidal [20. *Ilysanthes*](#)
Staminodes (inside lower lip) reduced to 2 small protuberances or quite obsolete; capsule loculicidal [15. *Dopatrium*](#)
- 14 Leaves all radical; small tufted herbs with or without stolons [21. *Limosella*](#)
Leaves not all radical; more or less erect herbs: **15**
- 15 Calyx-lobes very unequal [14. *Bacopa*](#)
Calyx-lobes not markedly unequal: **16**

-
- 16 Stamens all (or some of them) inserted at the throat of the corolla: 17
 Stamens all inserted in corolla-tube: 20
- 17 Flowers 2-3 cm. long; calyx 5-partite, segments broad and imbricate [16. Artanema](#)
 Flowers up to 1 cm. long: 18
- 18 Lower filaments arched with a small boss-like appendage at the base; calyx slightly 2-lipped and narrowly winged along the nerves [18. Torenia](#)
 Lower filaments sharply angled and with a large boss-like appendage at base: 19
- 19 Calyx deeply 5-partite; flowers solitary or in lax spikes [19. Lindernia](#)
 Calyx 5-toothed; flowers in rather or very dense spikes [17. Craterostigma](#)
- 20 Anthers with 2 equal or subequal cells: 21
 Anthers 1-celled or with 1 fertile cell and 1 variously modified sterile cell or appendage; dry plants usually dark; mainly semi-parasitic: 29
- 21 Leaves pinnately or variously deeply divided, in at least the submerged ones: 22
 Leaves all entire or toothed, not deeply divided: 23
- 22 Corolla-tube short and campanulate, at most 1.5 cm. long, yellow, rarely white [13. Limnophila](#)
 Corolla-tube long and narrow, about 2.5 cm. long, white (R. fistulosa); see also below [28. Rhamphicarpa](#)
- 23 Anther-cells distinct and separate [11. Stemodia](#)
 Anther-cells distinct but contiguous: 24
- 24 Corolla-lobes 4; calyx deeply 4- or 5-lobed [8. Scoparia](#)
 Corolla-lobes 5, funnel-shaped or campanulate tube; calyx 5-toothed or lobed: 25
- 25 Flowers distinctly pedicellate, 5-20 mm. long: 26
 Flowers sessile or subsessile; plants drying blackish: 28
- 26 Fruits markedly reflexing on maturity [12. Stemodiopsis](#)
 Fruits not reflexing: 27
- 27 Bracteoles absent; corolla markedly bilabiate; pedicels 1-2 cm. long; plants drying green [10. Mimulus](#)
 Bracteoles present beneath calyx; corolla not bilabiate; pedicels 5-10 mm. long; plants drying blackish [24. Micrargeria](#)
- 28 Bracteoles absent; corolla neither thin nor conspicuously veined; seeds winged [25. Bartsia](#)
 Bracteoles present; corolla thin, conspicuously longitudinally veined; each seed enclosed in a transparent or opaque envelope [26. Alectra](#)
- 29 Calyx-teeth woolly inside (conspicuous as a white fringe on calyx-margin); anthers (at least two of them) 2-celled, with 1 fertile cell and 1 sterile cell or appendage; corolla subrotate [27. Sopubia](#)
 Calyx-teeth not woolly inside nor on margins; anthers all 1-celled; corolla-tube long and narrow: 30
- 30 Corolla-tube sharply curved at or above the middle, lobes unequal [30. Striga](#)
 Corolla-tube straight or nearly so: 31
- 31 Fruits obliquely ovoid, long-beaked; calyx campanulate; corolla-tube about 2 cm. long [29. Rhamphicarpa](#)
 Fruits straight, oblong or ellipsoid; calyx tubular: 32
 Corolla large, about 4 cm. long, upper lobes united and smaller than the lower; fruits fleshy and indehiscent [31. Cycnium](#)
- 32 . Corolla small, about 5 mm. long, with subequal lobes; fruits dry and dehiscent [28. Buchnera](#)

Russelia equisetiformis Schlecht. & Cham.

R. juncea Zucc.

A native of Mexico, is cultivated as an ornamental plant in our area.

1. LINARIA

APD: Synonym of Kickxia Dumort.

Juss.-F.T.A. 4, 2: 288.

- 1 Stems and leaves glandular-pubescent; leaves more or less ovate, with a few large teeth or hastately lobed, 5-15 mm. long, 4-10 mm. broad; petiole up to 9 mm. long, pubescent, or leaves sessile; flowers solitary, axillary, corolla about 1 cm. long with spur 3 mm. long, pubescent [1. *aegyptiaca*](#)
- Stems and leaves glabrous; leaves linear to lanceolate-hastate, 1.5-4.5 cm. long, 2-10 mm. broad; petiole 2-10 mm. long, glabrous; flowers solitary, axillary, corolla about 2 cm. long with spur 10 mm. long, slightly glandular-pubescent [2. *sagittata*](#)

1. ***Linaria aegyptiaca* (Linn.) Dum.-Cours.** Bot. Cult., ed. 1, 2: 92 (1802); De Miré and Gillet in J. Agric. Trop. 3: 718 (1956), incl. infra-specific forms.

APD: *Synonym of Kickxia aegyptiaca subsp. battandieri (Maire) Wickens*

APD: *Synonym of Kickxia aegyptiaca (L.) Nábelek*

APD: *Synonym of Kickxia aegyptiaca subsp. virgata Wickens*

***Antirrhinum aegyptiacum* Linn.** (1753).

***Kickxia aegyptiaca* (Linn.) Nábelek** in Publ. Fac. Sci. Univ. Masaryk, Brno 70: 31 (1926).

Straggling Linder-shrub with many slender branches a few inches to 2 ft. high; flowers yellow; in semi-desert.

Maur.: Kankossa (fl. & fr. Mar.) Roberty 16944! **Niger:** Aïr, fide De Miré & Gillet l.c.

Also in **N. Africa** and **Syria**.

2. ***Linaria sagittata* (Poir.) Hook. f.** Bot. Mag. t. 6060 (1873); F.T.A. 4, 2: 291; Berhaut Fl. Sén. 190.

APD: *Synonym of Kickxia heterophylla (Schousb.) Dandy*

***Antirrhinum sagittatum* Poir.** (1816).

***Linaria heterophylla* (Schousb.) Spreng.** (1825), not of Desf. (1798).

***Kickxia heterophylla* (Schousb.) Dandy** in F.W. Andr. Fl. Sudan 3: 137 (1956).

Slender twining herb with stems about 2 ft. long; flowers yellow.

Sen.: Perrottet 571! Wakam (Sept., Oct.) Berhaut 1153! 1980!

Also in **Sudan**, **Ethiopia**, **Somaliland**, **N. Africa**, **Arabia** and **Canary Islands**.

2. DICLIS

Benth.-F.T.A. 4, 2: 286.

- 1 Prostrate or ascending annual; leaves mostly alternate, ovate, acute at apex, truncate to cuneate at base, with several large teeth on each side, (5-) 10-18 mm. long and nearly as broad, minutely pubescent; petiole (3-)8-15 mm. long; flowers solitary, axillary; pedicels 11-34 mm. long; calyx deeply 5-lobed; corolla 2-lipped, upper lip small, lower lip 3 mm. long, 3-lobed, spur 1.5 mm. long; capsule splitting and spreading, 2 mm. long; seeds ovoid, longitudinally wrinkled [ovata](#)

***Diclis ovata* Benth.** in Hook. Comp. Bot. Mag. 2: 23 (1836); F.T.A. 4, 2: 287; Hepper in Kew Bull. 15: 65. *APD acc*

Slender herb at first more or less erect becoming prostrate, with sub-simple branches up to a foot long; flowers white, streaked reddish, spur yellowish; in moist, open places.

[Br.] **Cam.:** Buea (fl. & fr. May) Morton K943! Mambila Plateau: Gembu, 5,300 ft. (fl. & fr. Jan.) Hepper 1813! Maisamari to Bellel, 5,000 ft. (fl. & fr. Jan.) Hepper & Daramola 1710!

Also in **Cameroun (?)**, **Ethiopia**, **Uganda**, **Kenya**, **Tanganyika**, **N. & S. Rhodesia**, **Nyasaland**, **Angola**, **Madagascar** and **Mauritius**.

3. ANTICHARIS

Endl.-F.T.A. 4, 2: 275. APD acc

- 1 Leaves narrowly linear, 2-5.5 cm. long, about 3 mm. broad, with glandular hairs, acute; flowers axillary, solitary; pedicels very slender, 1-2 cm. long, with a pair of bracteoles above the middle; fruits ovoid, about 8 mm. long, beaked [1. linearis](#)

Leaves ovate-elliptic, about 1 cm. long and 5 mm. broad, densely glandular-pubescent, obtuse; pedicels 2-3 mm. long, with 2 inconspicuous bracteoles about the middle; fruits ovoid, about 7 mm. long, beaked [2. glandulosa](#)

1. **Anticharis linearis** (*Benth.*) *Hochst. ex Aschers.* in Monatsber. Akad. Wiss. Berl. 1866: 882 (1867); F.T.A. 4, 2: 275; Chev. Bot. 469; Berhaut Fl. Sén. 200; De Miré & Gillet in J. Agric. Trop. 3: 717 (1956).

APD: Synonym of Aptosimum pumilum (Hochst.) Benth.

APD: Synonym of Anticharis senegalensis (Walp.) Bhandari

Doratanthera linearis *Benth.* (1846).

Erect much-branched herb, woody below, up to 1 ft. or more high; flowers pink or purplish; **in semi-desert.**

Sen.: Leprieux! Walo Perrottet 557! Richard Tol Berhaut 1753. **Mali:** Ansongo (fl. & fr. Sept.) Hagerup 380! Goundam (Aug.) Chev. 3300! **iv. C.:** Ouagadougou (Oct.) Aubrév. 2662! **Niger:** Fada to Koupéla Chev. 24519! Aïr Mts. fide De Mire & Gillet l.c. **N. Nig.:** Fodama (fl. & fr. Nov., Dec.) Moiser 213! 231! Kuka, Bornu Prov. (fl. & fr. Jan.) E. Vogel 11!

From Cape Verde Islands to India.

2. **Anticharis glandulosa** *Aschers.* l.c. 880 (1867); De Miré & Gillet l.c. 717 (1956). *APD acc*

Erect herb about 6 ins. high, densely glandular; flowers bluish; **in semi-desert.**

Niger: Aïr Mts. fide De Miré & Gillet l.c.

Also in **N. Africa**, **Somaliland** and extends to India.

4. APTOSIMUM

Burch.-F.T.A. 4, 2: 267. APD acc

- 1 Densely caespitose herb, half woody at base, 3-10 cm. high; leaves linear to linear-lanceolate, 2-5 cm. long, 2-5 mm. broad, midrib prominent beneath, more or less pubescent on both sides, long-ciliate beneath; flowers sessile, axillary; calyx deeply 5-cleft, lobes subulate, about 1 cm. long, long-ciliate; corolla about 1 cm. long, tube narrow at base, broadening above, lobes subequal; stamens 4 [pumilum](#)

Aptosimum pumilum (*Hochst.*) *Benth.* in DC. Prod. 10: 345 (1846); F.T.A. 4, 2: 268. *APD acc*

Chilostigma pumilum *Hochst.* (1841).

Anticharis linearis of Monod in Contrib. Et. Sahara Occ. 2 (Phanéro.): 110 (1939),? partly, not of (*Benth.*) *Hochst.*

Densely tufted, with 2 or 3 horizontal branches at ground level 2 or 3 in. long; flowers white outside and blue inside; **in semi-desert.**

Maur.: Tagant Region Monod 1789! Néma to Timbrédra Rossetti 61/278! **Niger:** Tabbello, Aïr Chopard & Villiers! Agadès (fl. & fr. Nov.) de Wailly 5263!

Also in **Sudan** and **Somaliland**.

5. CELSIA

APD: Synonym of Verbascum L.

APD: Synonym of Rhabdotosperma Hartl

Linn.-F.T.A. 4, 2: 280; Murbeck in Lunds Univ. Årsskrift. n.f. 22: 1 (1925).

- 1 Leaves tomentose beneath, often very densely so, lanceolate, closely serrulate, 2-7 cm. long, 7-20 mm. broad; stems densely tomentose; bracts ovate-lanceolate, nearly as long as pedicels in flower; pedicels 1 cm. long in flower, 1.5 cm. long in fruit, glandular; flowers about 2 cm. diam.; fruits 6-8 mm. long [1. densifolia](#)

Leaves sparsely tomentose on the nerves beneath, oblong-lanceolate, crenate, up to 16 cm. long and 6 cm. broad; stems sparsely tomentose; bracts ovate-lanceolate, lower ones cordate, shorter than the pedicels; pedicels 1-2 cm. long in flower, 1.5-3 cm. long in fruit, glandular; flowers about 2.5 cm. diam.; fruits 8-10 mm. long [2. ledermannii](#)

1. **Celsia densifolia** Hook. f. in J. Linn. Soc. 7: 208 (1862); F.T.A. 4, 2: 284; Murbeck in Lunds Univ. Årsskrift. n.f. 22: 63 (1925).

APD: Synonym of Rhabdotosperma densifolia (Hook. f.) Hartl

Robust erect herb with pithy stems 3 ft. high, woody at the base; flowers yellow in a long terminal raceme; **in montane grassland and thickets.**

[Br.] Cam.: Cam. Mt., 9,000-10,000 ft. (fl. & fr. Dec.) Johnston 9! Maitland 892! Thorold CM 20! Lakom, Bamenda (fl. & fr. Apr.) Maitland 1409! Kumbo to Oku, 6,000 ft. (fl. & fr. Feb.) Hepper 1996! F. Po: 8,500 ft. Mann 1453!

2. **Celsia ledermannii** Schlechter in Murbeck l.c. 64 (1925).

APD: Synonym of Rhabdotosperma ledermannii (Murb.) Hartl

Stout erect herb woody at the base, 4-5 ft. high; flowers yellow; **in montane grassland.**

[Br.] Cam.: Muti, Bamenda Ledermann 5851. Lakom, 6,000 ft., Bamenda (fl. & fr. June) Maitland 1547! Mbakakeka Mt., 7,400 ft., Bamenda (fl. & fr. Jan.) Keay FHI 28409! Hepper 2131! Ndu, 6,000-7,000 ft. Bamenda (Sept.) Savory UCI 397!

6. VERONICA

Linn.-F.T.A. 4, 2: 356.

- 1 Stems and calyx pubescent: [2](#)
Plant entirely glabrous; leaves shortly petiolate, oblong-elliptic, 1.5-3 cm. long, 1-1.5 cm. broad, slightly serrate; flowers numerous in opposite axillary racemes; pedicels slender about 5 mm. long; calyx 2-3 mm. long; corolla about 4 mm. diam. [3. beccabunga](#)

- 2 Leaves petiolate, ovate, rounded or truncate at base, (1-)2-4 cm. long, 1-2 cm. broad, shortly pubescent on both surfaces, serrate except towards base; petiole about 1 cm. long; flowers paired or a few together on a slender axillary peduncle; calyx 3-4 mm. long, pubescent; corolla 8-10 mm. diam.; fruit bilobed, as long as calyx, pubescent [1. abyssinica](#)

Leaves sessile, lanceolate, narrowed at base, 1-4 cm. long, 2-12 mm. broad, pilose at first, soon becoming glabrous; flowers in a dense terminal spike-like raceme; calyx 4-5 mm. long, pubescent; corolla 10-14 mm. diam.; fruits reflex, shorter than calyx, pubescent [2. mannii](#)

1. **Veronica abyssinica** Fres. in Bot. Zeit. 2: 356 (1844); F.T.A. 4, 2: 358; Römpf in Fedde Rep., Beih. 50: 141 (1928); Hedberg in Sym. Bot. Upps. 15: 169 (1957). *APD acc*

Veronica africana Hook. f. in J. Linn. Soc. 7: 208 (1864).

Prostrate herb, creeping, branched from the base, more or less pilose; flowers blue or pinkish; **in montane grassland and scrub beside small streams.**

[Br.] Cam.: Cam. Mt., 5,000-9,000 ft. (fl. & fr. Dec., Jan.) Mann 1263! Dunlap 75! Bamenda, 6,000-8,000 ft. (fl. & fr. Jan., Apr., June, Sept.) Ujor FHI 30445! Savory UCI 279! Boughy GC 10557! Ndu (Feb.) Hepper 1939! Ngel Nyaki, Mambila Plateau (Jan.) Hepper 1718!

Also in the highlands of eastern Africa from **Ethiopia** to Nyasaland.

2. **Veronica mannii** Hook. f. in J. Linn. Soc. 6: 19 (1861); F.T.A. 4, 2: 359; Hedberg l.c. 169, 323. *APD*

acc

Erect or ascending perennial herb, stems with 2 lines of hairs, 6-18 in. high, internodes short, inflorescence densely glandular-pubescent; flowers blue; **in montane grassland**.

[Br.] Cam.: Cam. Mt., 9,000-13,000 ft. (fl. & fr. Nov.-Mar.) Mann 1312! 2030! Maitland 798! Keay FHI 28505! F. Po: Clarence Peak, 9,350 ft. (fl. & fr. Dec.) Mann 604!

3. *Veronica beccabunga* Linn. Sp. Pl. 12 (1753); F.T.A. 4, 2: 357. *APD acc*

Veronica anaganallis of F.W.T.A. ed. 1, 2: 231; Chev. Bot. 474; not *V. anagallis-aquatica* Linn.

A soft-stemmed herb, ascending up to 1 ft. high; flowers blue; **in wet places**.

Niger: Bilma Oasis (fl. & fr. May) Ducellier in Hb. Chev. 28627! Le Coeur 29!

Widely distributed in warm and temperate regions was included by error in the first edition. However, it is widespread in Africa and may well occur in our area; easily distinguished from *V. beccabunga* by its sessile leaves. -F.N. H.]

7. SIBTHORPIA

Linn.-F.T.A. 4, 2: 353.

- 1 A weak, straggly herb rooting at the nodes; stems thinly pubescent; leaves reniform-orbicular, crenate with numerous small teeth, 1.5-2 cm. diam., pilose on both surfaces; petiole slender, pubescent; pedicels 3-4 mm. long; calyx about 2 mm. long, pubescent, shortly lobed; corolla purple *europaea*

Sibthorpia europaea Linn. Sp. P. 631 (1753); Hedberg in Bot. Not. 108: 168 (1955), and in Sym. Bot. Upps. 15: 168 (1957). *APD acc*

Sibthorpia europaea var. *africana* Hook. in J. Linn. Soc. 7: 208 (1862); F.T.A. 4, 2: 354.

Sibthorpia australis Hutch. F.W.T.A., ed. 1, 2: 221 (1931).

A prostrate herb in **moist montane habitats**.

[Br.] Cam.: Cam. Mt., 7,000-8,500 ft. (Dec., Feb., Apr.) Mann 1963! Maitland 1197! 1322! Mildbr. 7098. Brenan 9566! Mbakakeka Mt. Coombe 236! Bafut-Ngamba F.R. (Feb.) Hepper 2094! Oku, 6,500 ft. (Feb.) Hepper 2009! F. Po: 7,500 ft. Mann 1455!

Widespread in oceanic parts of W. & S. Europe, in the Azores and on high mountains in tropical Africa.

8. SCOPARIA

Linn.-F.T.A. 4, 2: 354.

- 1 Stems ribbed, glabrous; leaves opposite or whorled, narrowly oblanceolate, narrowed and entire in the lower half, crenulate in the upper part, 2.5-5 cm. long, up to 1.5 cm. broad, glabrous, areolate-punctate below; flowers 1-2 in the upper reduced leaf-axils forming slender racemes; pedicels about 6 mm. long, glabrous; calyx and corolla 2-3 mm. long; capsule globose, 4 mm. diam. *dulcis*

Scoparia dulcis Linn. Sp. Pl. 116 (1753); F.T.A. 4, 2: 354; Chev. Bot. 474; Berhaut Fl. Sén. 61, 74. *APD acc*

Erect shrubby weed 1-3 ft.; flowers white or bluish, usually 4 petals, densely bearded inside.

Maur.: El Berbera (fl. & fr. Apr.) Monod 9531! **Sen.:** Richard Tol (fl. & fr. Jan.) Döllinger 4! **Gam.:** Kuntaur Ruxton 143! Genieri (fl. & fr. July) Fox 133! **Mali:** Timbuktu (fl. & fr. Widespread in the tropics.

9. CAPRARIA

APD: Synonym of Lindernia All.

Linn.-F.T.A. 4, 2: 355.

- 1 A small shrub; branches thinly pilose; leaves broadly oblanceolate, long-cuneate and entire towards the base, sharply serrate in the upper half, 3-3.5 cm. long, 1-1.5 cm. broad, slightly pubescent towards the margin; flowers 1-2, axillary; pedicels nearly 1 cm. long; calyx-segments linear-lanceolate, about 4 mm. long, ciliate; corolla widely funnel-shaped, 1 cm. long; fruit broadly ellipsoid, 5 mm. long, gland-dotted [biflora](#)

Capraria biflora Linn. Sp. Pl. 628 (1753); F.T.A. 4, 2: 355; Sprague in Kew Bull. 1921: 209. *APD acc*

Erect branched under-shrub, 2-3 ft. high; flowers white; [in waste places](#).

Ghana: Cape Coast (fl. & fr. July) T. Vogel 79! Accra (fl. & fr. Oct.) Brown 377! Dalz. 115! Irvine 1004! Adaiso (fl. & fr. Nov.) Morion GC 6145! Asebu, Asuansi (fl. & fr. Oct.) Lovi WACRI 3930!

A tropical American weed introduced into our area, Cape Verde Islands and Mauritius.

10. MIMULUS

Linn.-F.T.A. 4, 2: 310.

- 1 Glabrous perennial; stems quadrangular, slightly winged; leaves lanceolate or linear-lanceolate, 2-6 cm. long, 5-12 mm. broad, shortly toothed or undulate on margin, acute at apex, rounded or amplexicaul at base; flowers solitary, axillary; pedicels about 2 cm. long; calyx 7 mm. long, 5-toothed; corolla about 1 cm. long, very unequally 2-lipped; stamens 4 [gracilis](#)

Mimulus gracilis R. Br. Prod. 439 (1810); F.T.A. 4, 2: 310. *APD acc*

Slender stiffly erect herb, 1-2 ft. high, simple or sparingly branched; flowers white or mauve with yellowish spots in the throat; [in upland savanna](#).

N. Nig.: Jos Plateau (fl. & fr. June) Lely P 355! Panyam, 4,500 ft. (fl. & fr. July) Lely 410!

Also in [Sudan](#), [Ethiopia](#), [Tanganyika](#), [N. & S. Rhodesia](#), [Nyasaland](#), [Mozambique](#) and [Angola](#).

11. STEMODIA

Linn.-F.T.A. 4, 2: 313. Nom. cons.

- 1 Leaves lanceolate, sessile, broad at the base, up to 5 cm. long, dentate towards the apex, pubescent on the nerves; flowers in leafy spike-like racemes; calyx-segments linear, about 5 mm. long, pubescent; corolla 2-lipped; stamens 4, included; fruit narrow, glabrous, as long as the calyx [1. serrata](#)
- Leaves more or less ovate, serrate except the cuneate base, petiolate, about 1-5 cm. long; flowers axillary, subsolitary; fruit globose [2. verticillata](#)

1. **Stemodia serrata** Benth. in DC. Prod. 10: 381 (1846); F.T.A. 4, 2: 314; Berhaut Fl. Sén. 74. *APD acc*

An erect, much branched viscid glandular-pubescent aromatic herb, 6-12 in. high; flowers yellow or white.

Sen.: Leprieur! Perrottet 441! Roger. Berhaut 1307! **Ghana:** Nangodi (Dec.) Morton A1254!

Also in [Sudan](#), [Ethiopia](#), [Nyasaland](#) and [India](#).

2. *Stemodia verticillata* (Mill.) Boldingh Zakfl. Landb. Java 165 (1916). *APD acc*

Erinus verticillatus Mill. Gard. Dict. ed. 8, No. 5 (1768).

Stemodia parviflora Ait. (1789)-F.W.T.A., ed. 1, 2: 221.

A small, much-branched herb, slightly woody below, erect or decumbent, a few inches high; flowers blue-purple; [weed of waste places](#).

Guin.: Lalie (fr. Oct.) Adam 12667! **S. L.:** Rokupr (fl. & fr. July) Jordan 278! Bonthe (fl. & fr. Nov.) Deighton 2264! Njala (fl. & fr. Sept.) Deighton 2087! Hepper 2555! Makump (fl. & fr. Aug.) Deighton 1387! Nyiyama (fl. & fr. Apr.) Deighton 1659! **Lib.:**? Ganta (May) Harley 923! **[Br.] Cam.:** Ebonji, Kumba (fl. & fr. May) Olorunfemi FHI 30586! **F. Po:** El Pico, 1,700 ft. (fl. & fr. Dec.) Boughey 186a!

Introduced from tropical America; also in Mauritius and Java.

Stemodia senegalensis Desf. Cat. Hort. Paris, ed. 3, 107 (1829), name only. *APD acc*

An annual from Senegal without description.

It seems more probable that this is *S. serrata*, which is known from Senegal, than *S. verticillata* (syn. *S. parviflora*) under which it was provisionally placed in F.W.T.A., ed. 1, 2: 221.

12. STEMODIOPSIS

Engl.-F.T.A. 4, 2: 314.

- 1 herb from a small tufted base, pubescent with short stiff whitish hairs; leaves opposite, ovate, acute at apex, cuneate at base, coarsely dentate, 1-2 cm. long, 6-15 mm. broad; petiole 5-10 cm. long; inflorescences few-flowered, cymes in most axils; calyx deeply 5-fid, segments linear, 3 mm. long; corolla 5 mm. long, 2-lipped, lower lip shortly 3-lobed; fruit conical, 5-5 mm. long, slightly hairy [humilis](#)

Stemodiopsis humilis Skan in F.T.A. 4, 2: 316 (1906); Hepper in Kew Bull. 15: 65.

APD: *Synonym of Stemodiopsis rivae Engl.*

A perennial with tufted stems about 5 in. long from [cracks in large rocks](#); flowers greenish-yellow.

[Br.] Cam.: Mapeo, Alantika Mts., 2,500-3,500 ft., Adamawa (fl. & fr. Dec.) Hepper 1601!

Also in [Sudan](#), [Uganda](#), [Kenya](#), [Tanganyika](#), [Nyasaland](#), [S. Rhodesia](#) and [Mozambique](#).

13. LIMNOPHILA

R. Br.-F.T.A. 4, 2: 316. Nom. cons.

- 1 Flowers with slender pedicels 6-18 mm. long, axillary or subterminal; leaves deeply divided, the lower in whorls, the upper whorled or opposite and sometimes only serrate, 1-3 cm. long; calyx-segments linear, 5 mm. long; corolla 1 cm. long; fruit nearly equalling calyx [1. indica](#)
Flowers sessile or subsessile: **2**
- 2 Corolla 5-10 mm. long, about 2 mm. diam.; flowers in lax spikes or axillary, solitary: **3**
Corolla 13-15 mm. long, about 5 mm. diam., in a terminal congested spike and often also some axillary flowers; aerial leaves glabrous, punctate beneath, ovate, rarely all divided, rounded at base, 7-20 mm. long, 4-8 mm. broad, 3-nerved; calyx 5 mm. long, glabrous [4. dasyantha](#)
- 3 Bracts and leaves above water ovate, often broadly so and subcordate, 1.5-2.5 cm. long, 1-2 cm. broad, 5-7-nerved, serrulate, softly tomentose on both sides, submerged leaves much divided and whorled; stems above densely pubescent; flowers in interrupted spikes, numerous; corolla 5 mm. long; calyx pubescent, 4 mm. long [2. barteri](#)
Bracts and leaves all pinnatisect and whorled, up to 1 cm. long, glabrous, submerged leaves with finer segments; stems glabrous or slightly pubescent; flowers few, solitary, axillary; corolla 8-10 mm. long; calyx glabrous, gland-dotted, 5 mm. long [3. sessiliflora](#)

1. *Limnophila indica* (Linn.) Druce in Rep. Bot. Exch. Cl. Brit. Isles 3: 420 (1914). *APD acc**Hottonia indica* Linn. (1759).*Limnophila gratioloides* R. Br. (1810)-F.T.A. 4, 2: 319; F.W.T.A., ed. 1, 2: 223; Berhaut Fl. Sén. 61.*Ambulia gratioloides* (R. Br.) Baill. ex Engl.-Chev. Bot. 470.

Slender glabrous or slightly glandular-pubescent herb, branched or simple, a few inches to 2 ft. long; flowers small, white; in mud or submerged sometimes in masses.

Sen.: Roger 59! Berhaut 1511. **Mali:** Nafadié (fl. & fr. Jan.) Chev. 155! Gao (Mar.) de Wailly 5355! **Togo Rep.:** Lome Warnecke 230! **[Br.] Cam.:** Gurum, Adamawa (fl. & fr. Dec.) Hepper 1599!

Widespread in tropical Africa, Asia and Australia.

A dwarf form about 2 in. high with congested leaves and few flowers (Barter 1709) has been named *L. gratioloides* var. *nana* Skan in F.T.A. 4, 2: 319 (1906).

2. *Limnophila barteri* Skan in F.T.A. 4, 2: 317 (1906); Chev. Bot. 470; Berhaut Fl. Sén. 68. *APD acc**Limnophila fluviatile* A. Chev. in Bull. Mus. Hist. Nat. sér. 2, 4: 587 (1932), incl. forma *fluviatile* and forma *terrestris*.

Erect or semi-aquatic herb 1-2 ft. high, with viscid hairs; flower white.

Sen.: Berhaut 1518. **Mali:** Dogo (fr. Apr.) Davey 552! **Port. G.:** Batatá (fl. & fr. Dec.) Esp. Santo 2856! **Guin.:** Kindia to Télimélé (fl. & fr. Feb.) Roberty 10744! **S. L.:** Lomaburu (fr. Also in **Angola**.

14. BACOPA

Aubl. Pl. Guian. 1: 128, t. 49 (1775), nom. cons. Moniera Browne (1756).-F.T.A. 4, 2: 319. *APD acc*

- 1 Leaves palmately nerved with 5-7 almost equal nerves, spatulate, undulate on margin towards apex, broadly cuneate into petiole, 1-2.5 cm. long, 5-15 mm. broad, glabrous; prostrate, rooting at most nodes; flowers solitary; pedicels 1-1.5 cm. long; bracteoles absent; sepals and corolla-lobes 3-5, stamens 3-4 *1. egensis*
Leaves 1-nerved, midrib prominent: 2
- 2 Calyx 2-5(-6) mm. long in fruit; fruiting pedicels 1(-3) mm. long: 3
Calyx 8-11 mm. long in fruit; fruiting pedicels (2-)3-13 mm. long: 5
- 3 Leaves broad and subcordate at base, ovate-lanceolate, 1-2 cm. long, 4-9 mm. broad, densely glandular-punctate beneath; younger stems appressed-pubescent *2. occultans*
Leaves not subcordate at base narrowly lanceolate or linear: 4
- 4 Fruits and smaller calyx segments obscured by 2 large ovate calyx segments about 4 mm. broad; leaves narrowly

lanceolate, narrowed to base, 2-3 cm. long, 3-7 mm. broad; stem usually branched below [3. *hamiltoniana* var. *hamiltoniana*](#)

Fruits not obscured by calyx, segments all visible, at most 2.5 mm. broad; leaves linear, up to 2.5 cm. long and 2 mm. broad; stem simple[3a. *hamiltoniana* var. *angustisepala*](#)

- 5 Pedicels pubescent, 5-11 mm. long; largest calyx-segment broadly ovate, about 8 mm. long and 7 mm. broad in fruit, pubescent; leaves lanceolate, narrowed to base or sessile, 1-3.5 cm. long, 3--6(-15) mm. broad, pubescent[4. *floribunda*](#)

Pedicels and other parts glabrous:[6](#)

- 6 Erect, annual herb; largest calyx-segment oblong-lanceolate, about twice as long as broad, in fruit 8-11 mm. long and 4-6 mm. broad, toothed or entire; flowers solitary or often in short congested axillary racemes[5. *decumbens*](#)

Creeping herbs; flowers usually solitary in axils:[7](#)

- 7 Calyx-segments conspicuously venose at least in fruit, broadly ovate, 7-8 mm. long, 5-6 mm. broad; pedicels shorter than leaves; leaves lanceolate, crenate-serrate above, subacute, 2-3.5 cm. long, 5-11 mm. broad[6. *crenata*](#)

Calyx-segments not venose; pedicels as long as or longer than the leaves;[8](#)

- 8 Leaves oblanceolate, subentire, obtuse at apex, 5-15 mm. long, 3-8 mm. broad; calyx-segments narrowly ovate; stems fleshy[7. *monniera*](#)

Leaves ovate-elliptic, coarsely serrate, subacute at apex, about 2 cm. long and 1 cm. broad; calyx-segments broadly ovate; stems not fleshy[8. *procumbens*](#)

1. **Bacopa egensis** (*Poepp. & Endl.*) *Pennell* in Proc. Acad. Nat. Sci. Phil. 98: 95 (1946). *APD acc*

Hydranthelium egense *Poepp. & Endl.* (1845)-F.T.A. 4, 2: 351; F.W.T.A., 1, 2: 229.

A creeping herb; flowers white or bluish, fragrant; on muddy river and stream sides.

S. Nig.: Onitsha Barter 1252!

Also in [the Congos](#) and [Central and S. America](#).

2. **Bacopa occultans** (*Hiern*) *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 222 (1931); *Berhaut Fl. Sén. 74. APD acc*

Moniera occultans *Hiern* (1898).

Erect or ascending herb, up to 1 ft. high, sparingly branched near the base: flowers white; [in rice swamps and margins of lakes](#).

Sen.: Banbankountia (Dec.) *Berhaut* 1822! *S. L.*: Njala (fl. & fr. Oct.) *Deighton* 2811! *Miligi* (Oct.) *Jordan* 926! *Ghana*: Kamba, near Lawra (Nov.) *Harris*! *N. Nig.*: Nupe Barter 1689! *S. Nig.*: Eket Talbot!

Also in [Angola](#).

Bacopa hamiltoniana (*Benth.*) *Wettst. APD acc*

3. **Bacopa hamiltoniana** var. **hamiltoniana**-in *E. & P. Pflanzenfam.* 4, 3B; 77 (1891); F.W.T.A., ed. 1, 2: 222, excl. syn. *B. alternifolia* *Engl. Berhaut Fl. Sén. 74. APD acc*

Herpestis hamiltoniana *Benth.* (1835).

Moniera hamiltoniana (*Benth.*) *T. Cooke* (1905)-F.T.A. 4, 2: 323.

M. scabrida *A. Chev.* in *Mém. Soc. Bot. Fr.* 2, 8: 184 (1912); *Chev. Bot.* 471.

Erect usually well-branched herb about 6 in. high; [in damp places](#).

Sen.: Leprieur 237! *Berhaut* 1452. *Guin.*: Mankoutan (Nov.) *Jac-Fél.* 7349! *Iv. C.*: Toumodi Chev, 22391! *Ghana*: Gambaga Scarp (Sept.) *Hall* 752b! *N. Nig.*: Kontagora (fl. & fr. Tamajong FHI 19507!

Also in **Sudan**, the **Congos**, **Angola** and **Madagascar**.

7. **Bacopa monniera** (*Linn.*) *Wettst.* in E. & P. Pflanzenfam. 4, 3B: 77 (1895).

APD: *Synonym of Bacopa monnieri* (*L.*) *Pennell*

Lysimachia monnieri *Linn.* (1756).

Moniera cuneifolia *Michx.* (1803)-F.T.A. 4, 2: 320 and F.W.T.A., ed. 1, 2: 222, partly (excl. Beauvois and syn. *Herpestis crenata* *P. Beauv.*)

A creeping, or sometimes aquatic, herb; flowers blue or white.

S. Nig.: Ogun F. R., Lagos (Mar.) Hepper 2249! Majidun Ilaje, Lagos (Feb.) Hambler 410!

8. *Bacopa procumbens* (Mill.) Greenman in Publ. Field Columb. Mus., Bot. ser., 2: 261 (1907). *APD acc*

Erinus procumbens Mill. Gard. Dict., ed. 8, No. 6 (1768).

Herpestis chamaedryoides H. B. & K. (1817).

Bacopa chamaedryoides (H.B. & K.) Wettst. in E. & P. Pflanzenf. 4, 3B: 76 (1895).

A prostrate creeping herb with large yellow flowers; plant usually drying black.

[Br.] Cam.: Buea, 4,000 ft. (fl. & fr. Jan.) Morton K947!

Widespread in tropical America and presumably introduced into our area and recorded here for the first time from Africa; also in India and Queensland.

15. DOPATRIUM

Buch.-Ham. ex Benth.-F.T.A. 4, 2: 324.

- 1 Lowermost flowers in inflorescence sessile and cleistogamous; perfect flowers pedicellate, pedicels 5-10 mm. long; lower leaves oblanceolate, 1-3 cm. long; stem leaves ovate, 1-5 mm. long; calyx 1-2 mm. long; corolla 5-6 mm. long; fruits globose or ovoid, 1.5-2 mm. long [1. *junceum*](#)
All flowers perfect and pedicellate: [2](#)
- 2 Corolla less than 5 mm. long; calyx 3-3.5 mm. long, segments about 2 mm. long, narrowly lanceolate, acuminate; basal leaves elliptic, 10-15 mm. long; fruits narrowly ovoid [2. *baoulense*](#)
Corolla more than 10 mm. long: [3](#)
- 3 Calyx 4-6 mm. long; corolla salver-shaped, tube slender, 1-1.5 cm. long, limb 2-3 cm. across; racemes few-flowered: [4](#)
Calyx 2-3 mm. long; corolla subcampanulate, tube widening from base, less than 1 cm. long, limb less than 1 cm. across; lower leaves lanceolate; stem leaves minute, deltoid; racemes usually many flowered; pedicels up to 2 cm. long [5. *senegalense*](#)
- 4 Pedicels in fruit reflexed, up to 2 cm. long; basal leaves lanceolate acute, stem leaves deltoid [3. *longidens*](#)
Pedicels in fruit erect, up to 2 cm. long; basal leaves narrowly lanceolate, stem leaves ovate [4. *macranthum*](#)

1. *Dopatrium junceum* Buch.-Ham. ex Benth. Scroph. Ind. 31 (1835). *APD acc*

Erect, usually simple herb, to 1 ft. high; flowers white or pale mauve; **in wet places.**

Sen.: Richard Tol (Sept.) Martine 111! **N. Nig.:** Kumu (Oct.) Lely 666!

Widespread in tropical Africa and Asia.

2. *Dopatrium baoulense* A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 184 (1912); Chev. Bot. 471. *APD acc*

Ilysanthes parviflora of F.W.T.A., ed. 1, 2: 230, partly (syn. & Chev. 22250), not of (Roxb.) Benth.

Erect simple herb to 8 in. high; **in wet places.**

Iv. C.: Baoulé (Aug.) Chev. 22250!

3. *Dopatrium longidens* Skan in F.T.A. 4, 2: 325 (1906). *APD acc*

Erect herb often branched from base to 15 in. high; flowers large and showy, purple or mauve; **in wet places.**

Mali: Ségou (Aug.) Roberty 3756! **N. Nig.:** Nupe Barter 1683! Anara F.R., Zaria Prov. (Sept.) Olorunfemi FHI 24353! Jos (Aug.) Keay FHI 20072! Maraguta (Aug.) Lely 526! Jos Plateau Sounders 9! Dent Young! Gidan-Anju, Muri Div., Adamawa (Nov.) Latilo & Daramola FHI 28728!

Also in **Cameroun**, **Rio Muni**, **the Congos** and **Uganda** and extends into tropical Asia.

17. CRATEROSTIGMA

APD: Synonym of Lindernia All.

Hochst.-F.T.A. 4, 2: 328.

- 1 Lower lip of corolla 5-7 mm. long, tube 6-7 mm. long, densely puberulous; flowers congested in terminal heads; stems quadrangular, at least towards base, glabrous; lower leaves ovate to elliptic, obtuse, upper leaves lanceolate, acute, sessile, 1-2.5 cm. long, 3-11 mm. broad, subentire, glabrous [l. schweinfurthii](#)
Lower lip of corolla 2-3 mm. long, tube 5 mm. long, slightly puberulous and gland-dotted; flowers several together or solitary in interrupted spikes; leaves lanceolate, acute, with 2 or 3 small serrations on each side, 7-20 mm. long, 3-7 mm. broad, glabrous [2. guineense](#)

1. **Craterostigma schweinfurthii** (*Oliv.*) *Engl.* in Engl. Bot. Jahrb. 23: 501 (1897); F.T.A. 4, 2: 332; Chev. Bot. 472, partly.

APD: Synonym of Crepidorhopalon schweinfurthii (Oliv.) Eb. Fisch.

Torenia schweinfurthii Oliv. (1878).

Stem herbaceous 1-2 ft. high, erect or slightly decumbent at base with fibrous roots along the internodes, leaves tinged brown or purple beneath; flowers rich violet-blue; **in marshes**.

Ghana: Yeji (fl. & fr. July) Vigne FH 1256! Bosuso (May) Vigne FH 3848! **Dah.:** Atacora Mts. Chev. 23989! **N. Nig.:** Kontagora (fl. & fr. Jan., Nov.) Dalz. 165! Meikle 1044! Nupe Barter! Bokkos, Plateau Prov. (fl. & fr. Dec.) Coombe 74!

Also in **Cameroun**, **Sudan**, **Uganda**, **N. Rhodesia** and **Angola**.

2. **Craterostigma guineense** Hepper in Kew Bull. 14: 407, fig. 2 (1960).

APD: Synonym of Crepidorhopalon gracilis (Pilg.) Eb. Fisch.

Craterostigma schweinfurthii of Sousa in Est. Bot. Anais 5: 39 (1950); of Chev. Bot. 472, partly; (?) Berhaut Fl. Sén. 81.

Slender erect herb 11-16 ins. high, sparingly branched, similar in habit to the last; small blue flowers with yellow hairs on the lower lip; **in marshes**.

Sen.: Sedhiou to Tambaba (fl. & fr. Feb.) Chev. 2849! Badoii Berhaut 1831 (not seen). **Port. G.:** Antula, Bissau (fl. & fr. Dec.) Esp. Santo 1424! Prabis, Bissau (Nov.) Esp. Santo 1821! **Guin.:** Grandes Chutes (Dec.) Chev. 20239! 20318! Timbo to Ditinn (fl. & fr. Sept.) Chev. 18422! Dalaba-Diaguisaa Plateau, 3,200-4,200 ft. (Oct.) Chev. 18764! 18864!

18. TORENIA

Linn.-F.T.A. 4, 2: 334.

- 1 Flowers subsessile in leafy spikes; plant erect; leaves oblanceolate, dentate, narrowed to base and subsessile, 1-3 cm. long, 3-10 nun. broad, glabrous; calyx shortly 5-toothed, 3-5 mm. long, in fruit up to 6 mm. long and longitudinally winged; lower stamens inserted in a small boss [1. spicata](#)
- Flowers distinctly pedicellate, pedicel at least 1 cm. long; plants prostrate: **2**
- 2 Lamina lanceolate to ovate-lanceolate, 10-35 mm. long, 7-16 mm. broad, crenate-serrate; petioles 4-8 mm. long; bracteoles filiform at base of pedicel 2-5 mm. long; flowers axillary, solitary or a few together on a short leafless peduncle; pedicels 1-5-3 cm. long, usually reflexing in fruit; calyx slightly winged, at least in fruit, 10 mm. long; seeds pitted, numerous, very small; filaments with small appendage at base [2. thouarsii](#)
- Lamina ovate to suborbicular, (8-)10-12(-17) mm. long, 6-13 mm. broad, crenate; petioles 1-2(-4) mm. long; bracteoles absent; flowers axillary, solitary; filaments with a large appendage towards base; pedicels about 1 cm. long, not reflexing; calyx prominently winged, in fruit 9 mm. long; seeds pitted, few, twice as large as in No. 2 [3. dinklagei](#)

1. **Torenia spicata** Engl. Bot. Jahrb. 23: 502, t. 7, figs. G-M. (1897); F.T.A. 4, 2: 334. *APD acc*

Pseudolobelia humilis A. Chev. Bot. 480, name only.

Erect glabrous annual, simple or branched, the steins acutely 4-angular, 2-9 in. high; flowers blue, sometimes white or pink; **weed of cultivation and waste places in savanna**.

Mali: Ségou (Oct.) Roberty 2819! **Guin.:** Timbo to Ditinn (fl. & fr. Sept.) Chev. 18497! **Ghana:** Tamale (fl. & fr. Dec.) Adams & Akpabla 4154! Dedoro to Tankara (fr. Dec.) Adams 4331! **N. Also in **Cameroun**, **Ubangi-Shari** and **Congo**.

Torenia fournieri Linden ex Fourn.

With large flowers is cultivated in our area.

19. LINDERNIA

Allioni-F.T.A. 4, 2: 337.

- 1 Flowers terminal or subterminal; erect herbs 5-13 cm. high; pedicels 1-1.5 cm. long, erect:2
Flowers axillary, solitary; erect or procumbent:3
- 2 Fruits obtuse, as long as calyx; calyx shortly 5-toothed, 2-4 mm. long, thin; leaves ovate to ovate-elliptic, serrate, 5-10 mm. long, upper leaves and bracts decreasing in size and becoming subulate [1. crustacea](#)
Fruits acute, slightly longer than calyx; leaves and bracts similar and not decreasing in size [2. numulariifolia](#)
- 3 Calyx 2-3 mm. long:4
Calyx 5-9 mm. long:5
- 4 Leaves broadly ovate about 1 cm. long and broad, serrate, subsessile; flowers slenderly pedicellate, rarely sessile; calyx shortly triangular-toothed [2. numulariifolia](#)
Leaves narrowly lanceolate about 1 cm. long and 3 mm. broad, entire, subsessile; flowers sessile in lax spikes; calyx segments linear-filiform [3. debilis](#)
- 5 Fruits and flowers sessile or pedicel up to 2 mm. long in fruit; stems prostrate, pubescent; leaves ovate to suborbicular, 1-3 cm. long, about 1 cm. broad, serrate, obtuse at apex, subsessile; calyx about 7 mm. long, lobes subulate; fruit narrowly lanceolate, 11 mm. long, beak beyond seeds 1-2 mm. long [4. diffusa var. diffusa](#)
Fruits (and usually flowers) distinctly pedicellate; pedicels about 1-2 cm. long:6
- 6 Leaves ovate to suborbicular, or elliptic-oblong, 3-1.0 mm. broad:7
Leaves linear, 1-2.5 cm. long, 1-2 mm. broad, acute, sessile; corolla about 1 cm. long, with broad rounded lobes on lower lip [8. oliveriana](#)
- 7 Leaves ovate to suborbicular, about 1 cm. broad, not fleshy or congested:8
Leaves elliptic-oblong, 3-5 mm. broad, 7-13 mm. long, subentire, ciliate, rather fleshy and congested; calyx-lobes lanceolate; fruits about 1 cm. long, shortly beaked [7. abyssinica](#)

- 8 Beak of fruit beyond seeds 1-2 mm. long;.....9
 Beak of fruits beyond seeds 2.5-4 mm. long, attenuate; fruits very narrow, up to 18 mm. long; fruiting calyx 8-9 mm. long; leaves ovate to suborbicular, obtuse, about 1 cm. long and broad, crenate, shortly petiolate [6. vogelii](#)
 9 Leaves broadly ovate to suborbicular, 1-3.5 cm. long, 1-2 cm. broad, obtuse to subacute; fruits up to 11 mm. long [4a. diffusa var. pedunculata](#)
 Leaves ovate to ovate-lanceolate, 1-3 cm. long, 1-1.5 cm. broad, acute; fruits up to 19 mm. long [5. senegalensis](#)

1. **Lindernia crustacea** (Linn.) F. Muell. Census 97 (1882). *APD acc*

Capraria crustacea Linn. (1767).

Annual, erect or ascending, 2-3 in. high; flowers blue; [weed of gardens and waste places](#).

S. L.: Makump (fl. & fr. Aug.) Deighton 1385! Rokupr (fl. & fr. Sept.) Jordan 558! Njala (fl. & fr. June) Deighton 2079! Mattru (fl. & fr. July) Deighton 4841! **iv. C.:** Angedédou (Dec.) Small perennial, erect or ascending, 2-4 in. high; flowers blue; **a montane plant**.

[Br.] Cam.: Bamenda: Lakom, 6,000 ft. (fl. & fr. May) Maitland 1790! Bafut-Ngemba F.R., 6,000 ft. (Nov.) Lightbody FHI 26268! Bali-Ngemba F.R. (May) Ujor FHI 30325!

Also in **Sudan**, **Ethiopia** and **Uganda**.

8. *Lindernia oliveriana* Dandy in F.W. Andr. Fl. Pl. Sudan 3: 139 (1956). *APD acc*

Vandellia lobelioides Oliv. in Trans. Linn. Soc. 29: 120, t. 121B (1875), not of F. Muell. (1858).

Lindernia lobelioides (Oliv.) Wettst. in E. & P Pflanzenfam. 4, 3B: 80, fig. 36 A, B (1891); F.T.A. 4, 2: 340, not of F. Muell. (1882).

An ascending herb about 1 ft. high, with slender, nearly simple stems and few narrow leaves; flowers blue with white and yellow markings; **in swampy places**.

N. Nig.: Heipang, Jos Plateau (Aug.) Summerhayes 155!

Also in **Sudan**, **Ethiopia** and through E. Africa to S. Rhodesia.

20. ILYSANTHES

APD: Synonym of Lindernia All.

Raf.-F.T.A. 4, 2: 345.

- 1** Calyx deeply divided almost to base; prostrate or erect; fruits globose-ellipsoid; flowers axillary, solitary; pedicels slender about 6 mm. long and up to 2 cm. in fruit:**2**
- Calyx 5-toothed; plants erect; fruits linear, acute:**3**
- 2** Prostrate; leaves suborbicular, sessile, subcordate, 6-12 mm. long and broad, about 7-nerved from base; calyx 5 mm. long, lobes linear, about 1 mm. broad; fruits about as long as calyx [1. rotundifolia](#)
- Erect; leaves ovate, oblanceolate to linear, (3-)6-12 mm. long, (1-)3-8 mm. broad, 3-nerved from base; calyx 2 mm. long, lobes slender; fruits twice as long as calyx [2. parviflora](#)

- 3 Stems and leaves minutely but distinctly scabrid; leaves linear to lanceolate, 5-15 mm. long, with distinct lamina, 2-3(-4) mm. broad, midrib distinct; pedicels 5-12 mm. long, remaining erect in fruit; fruit 9 mm. long[3. *gracilis*](#)

Stems and leaves smooth and glabrous (sometimes slightly scabrid towards the base of the stem); leaves subulate to linear about 5 mm. long, 0.5-1 mm. broad, distinctly 2-nerved, midrib obscure; pedicels 1-8 mm. long, reflexing in fruit; fruit about 5 mm. long[4. *schweinfurthii*](#)

1. *Ilysanthes rotundifolia* (Linn.) Benth. in DC. Prod. 10: 420 (1846); F.T.A. 4, 2: 346; Hepper in Kew Bull. 15: 65.

APD: *Synonym of Lindernia rotundifolia* (L.) Alston

Gratiola rotundifolia Linn. (1771).

Ilysanthes ratundata Pilger in Engl. Bot. Jahrb. 46: 214 (1910).

Creeping herb rooting at the nodes; flowers few, white or pale mauve; [in boggy ground](#).

[Br.] Cam.: Bafut-Ngemba F.R., 6,000 ft., Bamenda (Jan.) Keay FHI 28380! Jakiri (Feb.) Hepper 1956! Nguroje, Mambila Plateau (Jan., June) Hepper 1713! Chapman 25!

Also in [Cameroun](#), [Congo](#), [E. Africa](#), [Madagascar](#) and through India to China.

2. *Ilysanthes parviflora* (Roxb.) Benth. in DC. Prod. 10: 419 (1846); F.T.A. 4, 2: 346; F.W.T.A., ed. 1, 2: 230, partly (excl. syn. *Dopatrium baoulensis* A. Chev. & Chev. 22250); Berhaut Fl. Sén. 54.

APD: *Synonym of Lindernia parviflora* (Roxb.) Haines

Gratiola parviflora Roxb. (1819).

Lindernia parviflora (Roxb.) Haines (1922)-F.W. Andr. Fl. Pl. Sudan 3: 139.

Erect or ascending herb, 2-9 in. high with slender usually diffuse branches; flowers blue and white; [in swamps](#).

Sen.: Perrottet 609! 610! Casamance (fr. Apr.) Perrottet 590! Ross Berhaut 1425! [Mali](#): Gao to Kokoromme (fl. & fr. Mar.) De Wailly 4987! [Ghana](#): Dormaa to Ahenkro (fl. & fr. Dec.) Adams 3010! [Niger](#): Air De Miré & Gillet. [N. Nig.](#): near Gombe (fl. & fr. Oct.) Lely 665!

21. LIMOSELLA

Linn.-F.T.A. 4, 2: 352; Glück in Engl. Bot. Jahrb. 66: 488 (1934).

- 1 Leaves spatulate with a distinct lamina and long petiole, 1·8-9 cm. long, 2·5-10 mm. broad, all radical; flowers axillary, solitary on pedicels about 1 cm. long; calyx 5-toothed, about 2 mm. long, glabrous; corolla a little longer than calyx; fruits subglobose, about 3 mm. long [1. africana](#)

Leaves subulate or acicular, terete or subterete, without a distinct lamina, 2-4·3 cm. long, 1 mm. broad; otherwise similar to above [2. subulata](#)

1. **Limosella africana** Glück in Notizbl. Bot. Gart. Berl. 12: 76 (1934), and in Engl. Bot. Jahrb. 66: 540, 558 (1934); Hedberg in Sym. Bot. Uppsal. 15: 166, 318 (1957). *APD acc*

Limosella aquatica of F.T.A. 4, 3: 352; of F.W.T.A., ed. 1, 2: 221; not of Linn.

A small tufted **aquatic or marsh herb**, often with stolons bearing tufts of leaves and rooting; flowers small, lilac or pinkish.

Mali: Bentia, Ansongo Hagerup 424! [**Br.**] **Cam.:** Cam. Mt., 9,800-10,800 ft. Mann!

Through much of tropical Africa and in S. Africa.

2. **Limosella subulata** Ives in Trana. Phys.-Med. Soc. New York 1: 440 (1817); Glück in Engl. Bot. Jahrb. 66: 491.

APD: *Synonym of Limosella australis R. Br.*

Limosella aquatica var. **tenuifolia** (Nutt.) Hook. f. in F.T.A. 4, 2: 352 (1906).

Limosella tenuifolia Nutt. (1818)-F.W.T.A., ed. 1, 2: 221, not of Wolf ex Hoffm. (1804).

Stolons usually absent.

F. Po: Clarence Peak, 9,350 ft. (Dec.) Mann 597!

Cosmopolitan.

22. GLOSSOSTIGMA

Arn. in Nov. Act. Nat. Cur. 18: 355 (1836). Nom. cons.

- 1 Small creeping herb; stems filiform prostrate rooting at nodes; leaves spatulate, about 1 cm. long, 1-1·5 mm. broad; flowers axillary, solitary; pedicels 3-9(-18) mm. long; calyx 3-lobed; corolla 5-lobed; stamens 2; stigma compressed; fruits 2-celled, many-seeded [diandra](#)

Glossostigma diandra (Linn.) O. Ktze. Rev. Gen. Pl. 2: 461 (1891); A. Chev. in Bull. Mus. Hist. Nat. Paris, sér. 2, 4: 587 (1932). *APD acc*

Limosella diandra Linn. (1767).

Microcarpaea spathulatum Hook. (1831).

Glossostigma spathulatum (Hook.) Arn. (1836)-Berhaut Fl. Sén. 93.

In small mats **on mud**.

Sen.: Leprieur! Perrottet! Podor (Dec.) Martine 33! Berhaut 1426! **Mali:** Timbuktu to Bamba (Mar.) Chev.! Timbuktu to Gao Chev.

Also in **Kenya**, **India** and **Ceylon**.

23. PSAMMETES

Hepper in Hook. Ic. Pl. t. 3582 (1962).

- 1 A small erect unbranched herb, 2.5-4 cm. high; stem narrowly 4-winged, lower internodes about 5 mm. long, upper internodes up to 16 mm. long; leaves opposite, linear-lanceolate, 3-7 mm. long, 1-1.5 mm. broad, glabrous; flowers cleistogamous, subsessile in axils of upper leaves and terminal; calyx (4-)5-lobed, lobes 1 mm. long, linear; corolla bilabiate, 1-2 mm. long, upper lip emarginate, lower lip 3-lobed; stamens 2; ovary 2-celled, style glabrous, stigma flattened; fruit ovoid, dry, 1 mm. long with numerous seeds [nigerica](#)

***Psammetes nigerica* Hepper l.c. (1962).**

*APD: Synonym of *Psammetes madagascariensis* (Bonati) Eb. Fisch. & Hepper*

A slender annual about 2 in. high; flowers pale yellow-brown; "in coconut palm plantation on degraded sands in furrows between ridges."

S. Nig.: Badagry (fl. & fr. Aug.) Onochie FHI 33493! Ogoyo-Igbosere, Lagos (Aug.) Savory UCI 271a!

24. MICRARGERIA

Benth.-F.T.A. 4, 2: 457.

- 1 Plants minutely scabrid all over; leaves linear-acicular, acute, 1-3.5 cm. long, more or less spreading; stems much-branched; flowers numerous in lax racemes; calyx campanulate, 3-4 mm. long, teeth triangular, acute or slightly acuminate, 1(-2) mm. long; corolla about 1 cm. long, widely funnel-shaped, puberulous outside; fruits subglobose, 3-4 mm. diam., smooth [l. filiformis](#)

Plants glabrous, only slightly scabrid on stem below; leaves erect; stems sparingly branched; calyx-teeth acuminate, 2 mm. long; otherwise similar to above [2. barteri](#)

1. ***Micrargeria filiformis* (Schum. & Thonn.) Hutch. & Dalz.** F.W.T.A., ed. 1, 2: 223 (1931); Berhaut Fl. Sén. 54, 94. *APD acc*

Gerardia filiformis Schum. & Thonn. (1827).

Gerardiella scopiformis Klotzsch (1861).

Micrargeria scopiformis (Klotzsch) Engl. (1895)-F.T.A. 4, 2: 457; Chev. Bot. 480.

Sopobia parviflora of F.W.T.A., ed. 1, 224, partly (Lely 604, Glanville 22).

Slender-branched erect annual herb, 1-2 ft. high; flowers showy, pink or purple; in moist grassland in savanna and rice-fields; drying grey-brown.

Sen.: Casamance Chev. 3299. Bad! Berhaut 1837. **Gam.:** Kombo Prov. Dawe 33! **Mali:** Kita massif (Nov.) Jaeger 5563! **Port. G.:** Bafatá (fl. & fr. Nov., Dec.) Esp. Santo 2855! 2966! APD: Synonym of Hedbergia abyssinica (Hochst. ex Benth.) Molau

Alectra petitiiana A. Rich. (1851).

Bartsia mannii of F.W.T.A., ed. 1, 2: 224, partly (Johnston 80).

Erect perennial herb 6 in. to 1 ft. high; flowers carmine or bluish-mauve; [in montane grassland](#); drying dark brown.

[Br.] **Cam.:** Cam. Mt., 8,000-12,000 ft. (fl. & fr. Nov.-Jan.) Johnston 80! Migeod 183! Maitland 805! 1298! Keay FHI 28607!

Also in [Ethiopia](#) and [E. Africa](#).

26. ALECTRA

Thunb.-F.T.A. 4, 2: 362; Melchior in Notizbl. Bot. Gart. Berl. 15: 423 (1941). *APD acc*

- 1 Calyx 13-16 mm. long, pilose on nerves outside, calyx-teeth about 5 mm. long; anthers apiculate, filaments all glabrous; flowers few, scattered in axils; stems slender, with 2 lines of hairs; leaves spreading, linear to linear-oblong, remotely serrate, sessile, only the midrib prominent, 2-5 cm. long, 3-8 mm. broad; seeds opaque [1. linearis](#)
- Calyx 5-10 mm. long:..... [2](#)
- 2 Calyx glabrous, teeth 2 mm. long; anthers apiculate, filaments all glabrous; flowers towards tips of stems; stems slender, with 2 obscure lines of hairs; leaves linear, subentire with ciliate margins, sessile, appressed to stem, only the midrib prominent, 1-5 cm. long, 2-4 mm. broad; seeds opaque [2a. rigida subsp. paludosa](#)
- Calyx pubescent, at least on margins and nerves:..... [3](#)
- 3 Pubescence of calyx on margins and nerves only, hairs usually long:..... [4](#)
- Pubescence of calyx short and evenly spread; leaves and bracts subentire; filaments glabrous; anthers not apiculate [6. vogelii](#)
- 4 Whole plant densely hispid; leaves clasping the simple stem, sessile, lanceolate, serrate, 1-2.5 cm. long, 5-10 mm. broad; inflorescence congested and with leafy bracts rather larger than the stem leaves; seeds in a transparent envelope [3. sp. nr. capensis](#)

Plants slightly hispid or glabrous:5

- 5 Leaves 2-4 mm. broad, 7-11 mm. long, lanceolate, rounded at base, slightly toothed, 1-nerved, ciliate; stems hispid-pilose; anthers apiculate, filaments all bearded; seeds opaque [4. *virgata*](#)

Leaves (5-)10-20 mm. broad, 10-50 mm. long, 3-nerved from base; seed in a transparent envelope 1-1.5 mm. long; filaments 2 bearded and 2 glabrous; anthers apiculate:6

- 6 Lower leaves ovate, broadly rounded at base or cordate, almost sessile, slightly to deeply serrate [5a. *sessiliflora* var. *senegalensis*](#)

Lower leaves lanceolate to elliptic, cuneate at base, distinctly petiolate, often deeply serrate [5b. *sessiliflora* var. *monticola*](#)

1. *Alectra linearis* *Hepper* in Kew Bull. 14: 402, fig. 1 (1960). *APD acc*

Slender, branched annual herb 6-17 ins. high with spreading leaves; flowers pale yellow; in drier parts of swamps; drying black.

Iv. C.: Nzi, Baoulé-Nord (fl. & fr. Aug.) Chev. 22286! **Ghana:** Babile, Lawra (fr. Sept.) Irvine 4733! **N. Nig.:** Lokoja (fr. Oct.) Dalz. 218! **S. Nig.:** Mamu R., Awka Dist. (May) Jones FHI 6142!

Also in [Uganda](#), [N. & S. Rhodesia](#), [Angola](#) and [S. Africa](#).

28. **BUCHNERA**

APD: Synonym of Striga Lour.

Linn.-F.T.A. 4, 2: 373.

- 1 Spikes head-like, 1-2.5 cm. long; leaves lanceolate to linear-lanceolate, entire or slightly dentate, lower ones obtuse, upper ones subacute: **2**
 Spikes elongate, usually lax and discontinuous, not head-like; leaves lanceolate to linear-lanceolate, the lowest often oblanceolate, petiolate: **3**
- 2 Stems and nerves of leaves beneath hispid with spreading hairs about 1 mm. long; lower leaves narrowed to base; calyx-teeth triangular, acuminate, about 1.5 mm. long; bracts ovate, villous [1. bowalensis](#)
 Stems above and upper leaves pubescent in the younger parts with hairs 0.25 mm. long, glabrous below; lower leaves slightly narrowed at base; calyx-teeth subulate, 2-3 mm. long; bracts broadly lanceolate, acuminate .. [2. capitata](#)
- 3 Plant hispid with hairs about 1 mm. long; calyx densely hispid; corolla-tube about 5 mm. long, sparsely villous outside; leaves often coarsely dentate [3. hispida](#)
 Plant almost glabrous; calyx glabrous or nearly so, with ciliate teeth; corolla-tube about 5 mm. long, glabrous outside; leaves subentire [4. leptostachya](#)

1. **Buchnera bowalensis** A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 185 (1912); Chev. Bot. 475. *APD acc*

Slender erect herb, 4-20 in. high; flowers blue; [in pools on ironstone plateau](#); drying black.

Mali: Banfora, Upper Volta (Sept.) Jaeger 5220! **Guin.:** Dalaba-Diaguissa Plateau, 3,200-4,000 ft. (Oct.) Chev. 18867! Bouria (fl. & fr. Sept.) Chev. 18461! Ditinn (Sept.) Schnell 7404!

2. **Buchnera capitata** Benth. in DC. Prod. 10: 495 (1846); F.T.A. 4, 2: 381. *APD acc*

Erect herb 1-3 ft. high, simple or slightly branched with bright green leaves; flowers usually white, or pale mauve; [in wet places amongst grass](#); drying black.

Nig.:** Ado Rock, near Olokemeji (June) Hambler 289! Onochie FHI 31208! **[Br.] Cam.:** Jada, Adamawa (Nov.) Hepper 1224!

Widespread in tropical Africa, also in S. Africa and Madagascar.

2. **Rhamphicarpa tubulosa** (*Linn. f.*) *Benth.* in Hook. Comp. Bot. Mag. 1: 368 (1836); F.T.A. 4, 2: 428.

APD: *Synonym of Cycnium tubulosum* (*L. f.*) *Engl. subsp. tubulosum*

Gerardia tubulosa *Linn. f.* (1781).

An erect herb 1-2 ft. high, sparingly branched; flowers blue, pink or white, fragrant; **in wet grassland**; drying black.

N. Nig.: Thornewill 74! Nupe Yates! Odeke, Kabba (Feb.) Jones FHI 5896! **S. Nig.:** Onitsha Talbot!

Also in **Ethiopia**, **E. Africa**, **Congo**, **N. & S. Rhodesia**, **Nyasaland**, **S. Africa** and **Madagascar**.

30. STRIGA

Lour.-F.T.A. 4, 4: 399.

- 1 Calyx 10- or more ribbed, 1 rib or more between each calyx-tooth:2
 Calyx 4-5-ribbed, each rib ending in a tooth:8
- 2 Plant glabrous; leaves reduced to scales clasping the stem, 2-7 mm. long; corolla-tube about 1 cm. long, slightly curved, corolla-lobes 1-2 cm. long; capsule-lobes 2, linear, reflexing, about 6 mm. long; calyx 4-toothed, about 15-ribbed [1. baumannii](#)
 Plants pubescent; capsule-lobes not reflexing at maturity:3
- 3 Flowers imbricated in a very dense spike:4
 Flowers not imbricated, forming a loose spike:6
- 4 Bracts ovate, about 7 mm. long and nearly as broad, evenly and shortly glandular-pubescent; corolla-tube 1-1.5 cm. long, densely pubescent above, corolla more or less 1.5 cm. diam.; leaves linear-lanceolate, coarsely serrate, 2-12 cm. long; stems hispid [2. macrantha](#)
 Bracts lanceolate, hispid with hairs about 1 mm. long on the margins and midrib; stems hispid:5
- 5 Leaves oblong-lanceolate, 3-4 cm. long, 3 mm. broad, very scabrid-setose; corolla about 4 mm. diam., lower lobes 2 mm. long, tube about 1 cm. long, shortly glandular-pubescent; bracts 8-12 mm. long, about 3 mm. broad, the hispid hairs arising from bulbous bases [3. klingii](#)
 Leaves linear, 2-3 cm. long, 3 mm. broad, hispid-setose; corolla nearly 2 cm. diam., lower lobes about 1 cm. long, tube 2 cm. long, puberulous; bracts 15 mm. long, 3 mm. broad, hair-bases inconspicuous [4. dalzielii](#)
- 6 Calyx-lobes about 5 mm. long in flower, becoming about 10 mm. long in fruit; bracts leafy each subtending 1 flower, opposite; flowers 1-2 cm. diam., corolla-tube 2-2.5 cm. long, sparsely pubescent [5. forbesii](#)
 Calyx-lobes at most 2 mm. long; bracts neither leafy nor opposite:7
- 7 Calyx-lobes triangular; calyx rather obscurely about 15-ribbed, pubescent; corolla-tube about 2 cm. long, glandular-pubescent, corolla about 1.5 cm. diam.; bracts ovate-lanceolate, 2-5 mm. long [6. primuloides](#)
 Calyx-lobes subulate; calyx distinctly 10-ribbed, usually hispid; corolla-tube up to 1 cm. long, minutely pubescent, corolla 5-10 mm. diam.; bracts linear-lanceolate, about 5 mm. long [7. asiatica](#)
- 8 Indumentum closely appressed to the stems, hairs directed upwards; leaves subulate, appressed, 5(-10) mm. long; bracts similar to the leaves; corolla tomentose-pubescent, the tube about 1 cm. long, the lobes 2-3 mm. long [8. linearifolia](#)
 Indumentum of stems more or less erect or spreading, scabrid-hispid or plant glabrous:9
- 9 Stems scabrid-hispid or conspicuously pubescent:10
 Stems glabrous or very slightly pubescent, not scabrid; flowers opposite or subopposite:16
- 10 Corolla-tube conspicuously pubescent or tomentose, often glandular; flowers usually alternate:11
 Corolla-tube nearly glabrous or very shortly pubescent; flowers alternate; stems not sharply angular:13
- 11 Bracts acuminate, obovate to oblanceolate, 3-4 mm. broad, 7-9 mm. long, ciliate, the lower ones linear, about 8 mm. long, spikes compact, 2.5-3.5 cm. long; leaves linear, spreading, 4-6 cm. long, basal ones about 1 cm. long and erect, scabrid [9a. bilabiata subsp. jaegeri](#)
 Bracts acute, lanceolate to linear-lanceolate, ciliate:12
- 12 Stems square, sharply angular with decurrent leaf-bases, branching above; inflorescences usually only about 1/2 as long as the rest of the stem; bracts linear-lanceolate, about 1 cm. long, not imbricate; leaves linear to linear-lanceolate, 1-5.5 cm. long, usually spreading [9b. bilabiata subsp. rowlandii](#)
 Stems terete or obtusely square, branching below; inflorescences usually about twice as long as the rest of the stem, lax; bracts linear, 1-1.5(-3) cm. long; leaves linear, 1-3 cm. long, few [9c. bilabiata subsp. barteri](#)
- 13 Bracts linear to subulate:14
 Bracts lanceolate to lanceolate-elliptic, markedly ciliate on margin and sometimes on midrib outside, about 1 cm. long and 2(-3) mm. broad; leaves linear or slightly elliptic-linear, 3-9 cm. long, 3-7 mm. broad, scabrid; corolla often very large [13. hermontheca](#)
- 14 Calyx-tube 1.5-2 mm. long, teeth 1 mm. long, up to 2 mm. in fruit; mature fruits 2-3 mm. long; leaves 1-2 cm. long, scabrid [10. brachycalyx](#)
 Calyx-tube 3-8 mm. long; leaves linear, 1-5 cm. long, scabrid:15
- 15 Bracts mostly shorter than calyx, about 3 mm. long (lower ones sometimes longer); calyx-tube 3-4 mm. long, teeth 1-2 mm. long; mature fruits about 4 mm. long [11. aspera](#)
 Bracts leafy, much longer than calyx, up to 3 cm. long, only uppermost about same length; calyx-tube 6-8 mm.

long, teeth 2 mm. long, spreading and lengthening to up to 5 mm. in fruit; mature fruits 5-6 mm. long [12. passargei](#)

16 Leaves subulate to linear, 1-2(--3) cm. long; corolla-tube densely pubescent [14. aequinoctialis](#)

Leaves ovate, scale-like from a broad base, few, about 5 mm. long; corolla-tube glabrous [15. gesnerioides](#)

1. **Striga baumannii** *Engl.* Bot. Jahrb. 23: 515, t. 12 figs. O-T (1897); F.T.A. 4, 2: 414. *APD acc*

Tall glaucous herb 2 ft. or more high; flowers dull-yellow, in long slender spikes; roots subsucculent from a fairly stout stock; [parasitic on grass roots in moist grassland](#); drying grey.

2. *Cynium petunioides* Hutch. in Kew Bull. 1921: 251.

APD: Synonym of Cynium adonense subsp. camporum (Engl.) O. J. Hansen

Erect perennial herb 9-18 ins. high; flowers white, fading black; **in grassland**; drying green to brown.

N. Nig.: Jos Plateau (Jan.) Lely P135! Naraguta (Dec.) Kennedy 2850! Lely 17! Vom, 4,000 ft. (Feb.) McClintock 214! Jos (Mar.) Hill 17! **[Br.] Cam.:** Ndop, Bamenda (Jan.) Keay FHI 28427! Gembu, Mambila Plateau (Jan.) Hepper 1820!

OROBANCHACEAE

Herbs, parasitic on roots, often covered with scales at the base, never green; stems with alternate, often crowded, scales. Flowers solitary in the axils of bracts, often crowded, hermaphrodite, zygomorphic. Calyx 4-5-toothed or lobed or variously split, lobes open or valvate. Corolla gamopetalous, often curved; limb oblique or 2-lipped, lobes 5, imbricate, the adaxial 2 interior. Stamens 4, didynamous, inserted below the middle of the corolla-tube, alternate with the lobes, the fifth (adaxial) one reduced to a staminode or absent; anthers often connivent in pairs, opening lengthwise. Ovary superior, 1-celled, with 4 parietal placentas; style terminal; ovules numerous. Capsule often enveloped by the calyx, opening by 2 valves. Seeds very numerous, small, with fleshy endosperm and minute embryo.

A small family recognised by the parasitic habit, absence of leaves, and the zygomorphic flowers usually crowded into spikes.

- 1** Calyx-lobes rounded; corolla 2.5-5 cm. long; stems fleshy [1. Cistanche](#)
 Calyx-lobes acute; corolla about 1 cm. long; stems not fleshy [2. Orobanche](#)

1. CISTANCHE

Hoffm. & Link-F.T.A. 4, 2: 463.

- 1** A parasite, destitute of chlorophyll; stem stout, fleshy, glabrous; leaves reduced to fleshy scales, lurid-purple or yellowish, lower crowded, triangular, caudate-acuminate to acute, upper lanceolate, 1-2.5 cm. long, with thinner margins; spikes up to 30 cm. long, dense; bracts like the leaf-scales; calyx 5-lobed to about the middle; corolla-tube 2.5-5 cm. long, at length curved, wider in the upper half, villous in the lower part; lobes broader than long; anthers woolly [phelypaea](#)

Cistanche phelypaea (Linn.) Cout. Fl. Port. 571 (1913); Graham in F.T.E.A. Orobanchac. 2 (q.v. for discussion); F.W. Andr. Fl. Pl. Sudan 3: 150, fig. 40; Berhaut Fl. Sén. 5. *APD acc APD acc*

Lathraea phelypaea Linn. (1753).

Cistanche lutea (Desf.) Hoffgg. & Link Fl. Port. 1: 319, t. 63 (1809); F.T.A. 4, 2: 463; Chev. Bot. 480.

Phelipaea lutea Desf. (1798).

Stem 6-18 in. high, swollen at base; flowers bright yellow; [parasite on plants in maritime and sandy inland habitats](#).

Sen.: Berhaut 999. Leprieur! Dakar (Dec., Jan.) Chev. 3317! Debeaux! St. Louis (June) Roger! Kayar (July) Kesby 17!
Mali: Goundam, parasitic on *Salvadora persica*, Chev. 3316! Gao de Wailly 5396! **Dah.:** Haut Dahomey Gironcourt 76!

Also in Cape Verde Isl., Spain, along southern shore of Mediterranean to [Egypt](#), [Sudan](#), [Arabia](#) and possibly beyond.

[G. Beck in Engl. Pflanzenr. 4, 261, Orobanchac. 33, 35 (1930), records the species *C. senegalensis* (Reuter) G. Beck (*Phelipaea senegalensis* Reuter (1847)); *C. hesperugo* (B. Webb) G. Beck (*Phelipaea hesperugo* B. Webb (1849)) and *C. brunneri* (B. Webb) G. Beck (*Phelipaea brunneri* B. Webb (1849)) from Senegal. These may all be *C. phelypaea* (Linn.) Cout., but available material is insufficient to be sure. -F. N. H.)

2. OROBANCHE

Linn.-F.T.A. 4, 2: 464.

- 1 A parasitic herb, without chlorophyll; stems simple or slightly branched, not fleshy; leaves reduced to a few small ovate scales, up to 1 cm. long; spikes elongated or short and congested; bracts subtending each sessile flower, lanceolate to ovate-lanceolate as long as the calyx; bracteoles narrower and nearly as long as the bracts; calyx 4-lobed, each lobe acutely deltoid; corolla hairy (or glabrous in W. Afr. specimen) [ramosa](#)

Orobanche ramosa Linn. Sp. Pl. 633 (1753); F.T.A. 4, 2: 465; G. Beck in Engl. Pflanzenr. 4, 261 Orobanchac. 66 (1930); Graham in F.T.E.A. Orobanchac. 3, fig. 1, 1-2.

APD: *Synonym of Phelipanche ramosa (L.) Pomel*

A herb with pale yellow stems about 1 ft. high; flowers mauve-blue or pale yellow with a blue lip; [parasitic on a wide range of hosts](#).

Mali: Timbuktu Hagerup 200a!

Widespread in Europe; in Africa and America probably introduced.

\$/eflora

LENTIBULARIACEAE

Annual or perennial herbs, terrestrial, epiphytic or aquatic, with much modified parts for the capture of small organisms. Leaves entire or much divided, often bearing traps. Inflorescence racemose, bracteate, those of some aquatic species supported on the water by a whorl of modified spongy leaves (floats). Flowers zygomorphic. Calyx-lobes 2, 4 or 5. Corolla 2-lipped, spurred or saccate. Stamens 2, attached at the base of the corolla, filaments often winged; anthers 2-celled, dorsifixed, the cells sometimes confluent. Ovary superior; style usually very short, persistent; stigma unequally 2-lipped. Ovules 2—numerous on a free central placenta. Fruit a capsule, usually globose opening by valves or pores, circumscissile or indehiscent. Seeds without endosperm, sometimes winged.

A small and very remarkable family of great morphological interest. Habitat usually aquatic or damp places; flowers mostly small or very small but usually brightly coloured.

- 1 Calyx-lobes 5; traps tubular, with 2 divergent helically twisted arms [1. *Genlisea*](#)
 Calyx-lobes 2, free to or near the base; traps bladder-like, ovoid or globose [2. *Utricularia*](#)

1. GENLISEA

St. Hil. Voy. Dist. Diam. 2: 428 (1833); F.T.A. 4, 2: 497.

- 1 Inflorescence and ovary more or less densely covered with gland-tipped hairs; leaves spatulate, numerous in a basal rosette, 0.5-3 cm. long; scape up to 35 cm. tall, 2-12-flowered; corolla violet, rarely white or yellow, lower lip deeply 3-lobed, about as long as spur [1. *africana*](#)
 Inflorescence and ovary without gland-tipped hairs; ovary, calyx and pedicels hispid; leaves spatulate, up to 5 cm. long; scape up to 30 cm. tall, 2-6-flowered; corolla violet, lower lip shortly 3-lobed, shorter than the spur [2. *hispidula*](#)

1. *Genlisea africana* *Oliv.* in J. Linn. Soc. 9: 145 (1865); F.T.A. 4, 2: 497; Chev. Bot. 484.

APD: Synonym of Genlisea hispidula Stapf

Genlisea stapfii *A. Chev.* in Mém. Soc. Bot. Fr. 2, 8: 188 (1912); Chev. Bot. 484.

Slender, erect herb of **wet grassland** with remarkable subterranean inverted Y-shaped traps for the capture of small organisms; flowers pedicellate, 1/4-1/3 in. long.

Mali: Bamako Garnier! **Port. G.:** Suzana to Cassalal (Nov.) Esp. Santo 3125! Gabu (Oct.) Esp. Santo 3525! **Guin.:** Timbo to Ditinn (Sept.) Chev. 18415! Frigulagbé (July) Chillou 581! Boughey GC 18161! **[Br.] Cam.:** Mamfe (Mar.) Onochie FHI 34870!

Also in **E. and S.E. tropical Africa**.

2. *Genlisea hispidula* *Stapf* in Fl. Cap. 4, 2: 437 (1904); F.T.A. 4, 2: 498. *APD acc*

Similar to the above but lacking the gland-tipped hairs and with fewer, larger leaves.

N. Nig.: Jos Plateau (Apr.) Morton K404! **[Br.] Cam.:** Buea (May) Mildbr. 9468! Jakiri, 5,800 ft., Bamenda (Feb.) Hepper 1964!

Also in **S.E. tropical and S. Africa**.

2. UTRICULARIA

Linn.—F.T.A. 4, 2: 469; Pellegr. in Bull. Soc. Bot. Fr. 61: 13-21 (1914); P. Taylor in Kew Bull. 18 (1) (1963).

-
- 1 Terrestrial or epiphytic herbs with entire leaves or apparently leafless or nearly so:2
 Aquatic herbs with leaves divided into filiform segments:..... 17
- 2 Inflorescence and 1-2 obovate-spathulate or broadly linear leaves arising from a small globose tuber; epiphyte; corolla yellow, 12-25 mm. long [1. mannii](#)
 Inflorescence and leaves not arising from a tuber:3
- 3 Bracts not produced below the point of attachment:4
 Bracts produced below the point of attachment: 14
- 4 Fruiting pedicel as long as or longer than the calyx, flattened or winged:.....5
 Fruiting pedicel much shorter than the calyx, terete:..... 12
- 5 Seeds verrucose, ovoid; leaves usually present at flowering time, linear, 3-nerved, thalloid, rosulate at the base of the scape; corolla yellow, less than 10 mm. long [2. andongensis](#)
 Seeds smooth or reticulate:.....6
- 6 Corolla yellow; seeds ovoid, smooth with a prominent hilum; leaves 1-nerved often not present at flowering time:7
 Corolla violet or mauve:.....9
- 7 Corolla 12 mm. or more long, spur thick, straight, conical, obtuse or subacute:8
 Corolla less than 10 mm. long, spur slender, curved, acute [4. scandens subsp. schweinfurthii](#)
- 8 Upper lip of corolla shorter than the calyx, lower lip about 1/4 as long as the spur [3a. micropetala var. micropetala](#)
 Upper lip of corolla longer than the calyx, lower lip 1/2 as long as the spur ... [3b. micropetala var. macrocheilos](#)
- 9 Seeds globose, reticulate, the cells of the testa isodiametric; fruiting pedicels erect: 10
 Seeds ovoid, reticulate, the cells of the testa distinctly longer than broad; fruiting pedicels recurved [6. baoulensis](#)
- 10 Spur curved, acute; inflorescence usually twining: 11
 Spur straight, obtuse; inflorescence not twining; corolla 10-12 mm. long, upper lip broad, longer and wider than the calyx [5c. spiralis var. pobeguinii](#)
- 11 Corolla 12-30 mm. long, upper lip broad, longer and wider than the calyx [5a. spiralis var. spiralis](#)
 Corolla up to 10 mm. long, upper lip shorter and narrower than the calyx [5b. spiralis var. tortilis](#)
- 12 Calyx, bracts and bracteoles pectinate; leaves narrowly linear, rosulate at the base of the scape; scape 3-12 cm. high; corolla deep yellow [7. fimbriata](#)
 Calyx, bracts and bracteoles entire; leaves narrowly spatulate:..... 13
- 13 Corolla yellow, sub-persistent; margin of calyx-lobes strongly recurved; flowers numerous [8. formula](#)
 Corolla mauve or white, not persistent; margin of calyx-lobes not recurved; flowers few (2-4) [9. arenaria](#)
- 14 Bracteoles present, similar to the bracts but smaller; flowers white or mauve: 15
 Bracteoles absent; flowers yellow:..... 16
- 15 Leaves inconspicuous, peltate; calyx-lobes more or less equal, upper acute; corolla lower lip entire; seeds smooth [10. pubescens](#)
 Leaves numerous and conspicuous at flowering time, orbicular or reniform, long-petiolate; calyx-lobes very unequal, upper emarginate; corolla lower lip 5-crenate; seeds glochidiate [11. striatula](#)
- 16 Inflorescence zigzag; all bracts on the inflorescence-axis fertile; calyx-lobes obtuse, not strongly nerved at flowering time [12. subulata](#)
 Inflorescence straight; some bracts on the inflorescence-axis sterile; calyx-lobes acute, strongly nerved at flowering time [13. stanfieldii](#)
- 17 Plants attached by thickened claw-like rhizoids; spur of corolla absent:..... 18
 Plant free floating; corolla with well developed spur: 19
- 18 Leaves up to 100 cm. long, bearing few or no traps; corolla 4-6 mm. long, lower lip emarginate; fruits about 1.6 mm. long [14. rigida](#)
 Leaves up to 6 cm. long, traps numerous on the rachis; corolla 2-3 mm. long, lower lip 4-lobed; fruits about 1.2 mm. long [15. tetraloba](#)
- 19 Inflorescence with a whorl of spongy floats:..... 20
 Inflorescence without a whorl of floats: 22
- 20 Corolla upper lip entire, lower lip about equal to the spur; calyx accrescent, longer than the fruit: 21
 Corolla upper lip deeply bilobed, lower lip much shorter than the inflated cylindrical spur; calyx not accrescent, smaller than the fruit [17. benjaminiana](#)

- 21** Inflorescence floats narrowly cylindrical up to 15 mm. long, 5-10 times as long as wide; corolla usually mauve [16a. inflexa var. inflexa](#)
 Inflorescence floats ellipsoid up to 40 mm. long, 2-3 times as long as wide; corolla usually yellow .. [16b. inflexa var. stellaris](#)
- 22** Traps arising in the angle of bifurcation of the leaf segments; inflorescence 1-4-flowered; corolla yellow, hairy; fruiting pedicels reflexed [18. reflexa](#)
 Traps arising laterally on the leaf segments above the point of bifurcation:..... **23**
- 23** Scape many-flowered; fruiting pedicels recurved; leaves very large, repeatedly pinnately divided; seeds with a narrow regular wing [19. foliosa](#)
 Scape 1-4-flowered; fruiting pedicels erect; leaves very small 1-2 times forked only; seeds with a broad irregular wing: **24**
- 24** Corolla 10-20 mm. long, upper lip broader than the lower [20a. gibba subsp. gibba](#)
 Corolla up to 6 mm. long, upper lip about as wide as the lower [20b. gibba subsp. exoleta](#)

1. *Utricularia mannii* Oliv. in J. Linn. Soc. 9: 149 (1865); F.T.A. 4, 2: 484. *APD acc*

Utricularia bryophila Ridl. in Ann. Bot. 2: 306 (1889); F.T.A. 4, 2: 484.

Epiphyte on mossy tree trunks with slender scape 1-4 in. high arising from small tuber and bearing 1-3 yellow flowers 2/3-1 in. long.

[Br.] Cam.: Cam. Mt., 4,000-6,000 ft. (Nov.) Mann 2112! Buea (Aug.) Gregory 321b! Bamenda, 7,000 ft. (May) Keay FHI 37937! F. Po: Ureka, 2,000-3,000 ft. (Aug.) Thorold 80! Moka, 4,600 ft. (Sept.) Wrigley & Melville 434a! 434b!

Also in S. Tomé and Principe.

2. *Utricularia andongensis* Welw. ex Hiern Cat. Welw. 787 (1900); F.T.A. 4, 2: 481. *APD acc*

Terrestrial herb of wet rocks with erect or twining scape arising from a rosette of thalloid linear leaves and bearing a few small yellow flowers.

Guin.: Kindia (Apr.) Chillou 1306! Nzérékoré (Sept.) Baldwin 13296! S. L.: Tonkolili Dist. (Nov.) Marmo 132! Bintumane Jaeger 1100! Lib.: Sanokwele (Sept.) Baldwin 9556! N. Nig.: Jos (Aug.) 3. *Utricularia micropetala* Sm. in Rees Cyclop. 37: No. 58 (1819); F.T.A. 4, 2: 483. *APD acc*

3a. *Utricularia micropetala* Sm. var. *micropetala*

APD: Synonym of Utricularia micropetala Sm.

Erect or twining herb to about 6 in. high; pedicels longer than the calyx, winged; corolla yellow with a thick conical spur and very short upper and lower lips.

Guin.: Friguiagbé (Nov.) Boismare 482! Fouta Djallon Heudelot 676! Ditinn (Jan.) Roberty 16461! Mt. Gangan (Nov.) Schnell 2207! S. L.: Afzelius! Waterloo (Oct.) Lane-Poole 405! N. Nig.: Vom Dent Young 187! Naraguta (Aug.) Lely 553! [Br.] Cam.: Vogel Peak, Adamawa Div. (Nov.) Hepper 1486!

3b. *Utricularia micropetala* var. *macrocheilos* P. Tayl. Taxon 12: ined. (1963).

APD: Synonym of Utricularia macrocheilos (P. Taylor) P. Taylor

Similar to above but upper and lower lips of the corolla well developed.

Guin.: Kindia (Oct.) Pobéguin! Farmar 199! Macenta (Oct.) Baldwin 9796! S. L.: Bintumane (Sept.) Jaeger 1994!

4. *Utricularia scandens* Benj. in Linnaea 20: 309(1847). *APD acc*

Utricularia wallichiana Wight (1850).

Utricularia gibbsiae Stapf in F.T.A. 4, 2: 574 (1906).

A widespread species, subsp. scandens occurring throughout E. & S. tropical Africa, Madagascar and tropical Asia, and the following subspecies in W. Africa.

4a. *Utricularia scandens* **Benj.** subsp. *schweinfurthii* (*Bak. ex Stapf*) *P. Tayl.* l.c. (1963).

APD: Synonym of Utricularia scandens *Benj.*

Utricularia schweinfurthii *Bak. ex Stapf* in F.T.A. 4, 2: 482 (1906).

Utricularia prehensilis of Pellegr. in Bull. Soc. Bot. Fr. 61: 17 (1914), partly; of F.W.T.A., ed. 1, 2: 234, not of E. Mey.

Erect or twining; corolla yellow; seeds smooth with a prominent hilum.

Guin.: Benna (Nov.) Schell 21441 **Iv. C.:** Mankono (Jan.-Nov.) Chev. 21888! de Wilde 943! **N. Nig.:** Kontagora (Nov.) Dalz. 145! [**Br.**] **Cam.:** Bamenda (Jan.-Feb.) Hepper 1963! Migeod 418! Keay FHI 28533!

Also in **Ubangi-Shari**, **Congo**, **Sudan** and **Ethiopia**.

5. *Utricularia spiralis* *Sm.* in Rees Cyclop. 37: No. 5 (1819). *APD acc*

5a. *Utricularia spiralis* *Sm.* var. *spiralis* *APD acc*

Utricularia spiralis *Sm.* F.T.A. 4, 2: 482, partly; F.W.T.A., ed. 1, 2: 234, partly (excl. syn. *U. baoulensis*).

Utricularia baumii *Kam.* (1902)-F.T.A. 4, 2: 480; Pellegr. in Bull. Soc. Bot. Fr. 61: 16, incl. var. *leptocheilos* Pellegr. l.c. (1914).

Slender twining herb to about 1 ft. high; corolla violet, 1/2 -1 in. long, spur curved, slender, acute.

Guin.: Conakry Maclaud! Kindia Farmar 201! Telemélé (Jan.) Koberty 16468 1 Benna (Nov.) Schnell 21521 **S.L.:** Mano, Bonjema (Jan.) Capstick in Deighton 53081 Sherbro Is. (Feb.) Dalz. 1027! Hepper 1545! Gulumba, Dikwa Div. (Dec.) McClintock 109!

Throughout tropical and S. Africa, Madagascar, N. Africa, Portugal and tropical Asia to Australia.

GESNERIACEAE

Acaulescent or caulescent herbs, or rarely shrubs. Leaves opposite (rarely alternate), those of a pair equal or unequal; plants sometimes 1-foliate and the leaf cotyledonary in origin. Inflorescence generally of open axillary cymes, the flowers at each dichotomy being paired and opening serially; occasionally much congested and sub-capitate, or pseudoracemose. Flowers hermaphrodite (very rarely

unisexual) often protandrous, usually zygomorphic, often large and showy, sometimes cleistogamous with reduced corolla. Calyx tubular and 5-lobed or divided to the base or 3 upper lobes only united. Corolla gamopetalous with distinct tube, often 2-lipped, proportion of lobes to tube variable; lobes imbricate, and adaxial pair often interior. Stamens rarely 5, usually 4 or 2, inserted on corolla-tube; anthers free or variously connate, 2-celled, opening lengthwise. Disk annular or cup-like, often lobed or undulate, rarely oblique. Ovary superior, 1-celled with 2 parietal bilamellate placentas, occasionally 2-celled by their union centrally. Ovules numerous. Fruit a capsule (often linear, sometimes spirally twisted) or a more or less fleshy berry. Seeds numerous, small, more or less ellipsoid, sometimes tailed with hair-like appendages at either end; endosperm absent or very slight.

Mainly in the tropics and subtropics, often favouring shady places (at least for their roots) and sometimes epiphytic. Comparatively few in Africa. The African genera either occur in Asia or have affinity with genera there. They are not closely related to the tropical American genera.

- 1 Flowers in open pedunculate cymes arising from leaf-axil or leaf-base, or subsolitary; fertile stamens rarely 4, usually only the 2 antecous ones; fruit dehiscing longitudinally, straight or spirally twisted:2
Flowers in densely congested, bracteate, cymose heads; 2 posticous stamens only fertile; capsule circumscissile4. [Epithema](#)
- 2 Capsule many times longer than broad; filaments without appendages; caulescent (in W. African species):3
Capsule ovoid or oblong; filaments with distinct tooth-like appendage; inflorescence arising from the base of the midrib of the single leaf; acaulescent3. [Acanthonema](#)
- 3 Capsule valves flat; flowers subsolitary; stems creeping1. [Didymocarpus](#)
Capsule valves twisting spirally; flowers cymose; stems erect2. [Streptocarpus](#)

In addition to the above indigenous genera the E. African *Saintpaulia ionantha* and members of the American genus *Achimenes* are sometimes cultivated.

1. DIDYMOCARPUS

Wall.-F.T.A. 4, 2: 503. Nom. cons.

- 1 Stems prostrate and rooting at and between nodes, glabrous; leaves ovate, rounded at base, subobtusate, 4-6 cm. long, 3-4 cm. broad, glabrous, with about 6 pairs of lateral nerves; petiole 2.5-3.5 cm. long, nearly glabrous; flowers subsolitary; pedicels 1 cm. long; calyx-segments linear, 8 mm. long, slightly pilose; corolla urceolate, 8 mm. long, lobes very short, acute; fruit linear [kamerunensis](#)

***Didymocarpus kamerunensis* Engl. Bot. Jahrb. 18: 79, t. 4-5 (1894); F.T.A. 4, 2: 503.**

APD: Synonym of Schizoboea kamerunensis (Engl.) B.L. Burt

A weak-branched herb 1 ft. or more long, with white axillary flowers.

[Br.] Cam.: Barombi Preuss 951! F. Po: Moka, 4,550 ft. (Jan., Sept.) Guinea 2094! Wrigley 619!

2. STREPTOCARPUS

Lindl.-F.T.A. 4, 2: 504.

- 1 Ovary glabrous or nearly so; ripe capsule glabrous, 4-5 cm. long; branchlets hispid with gland-tipped hairs; lower leaves very long-petiolate, upper sessile, ovate-elliptic, acuminate, rounded or subcordate at base, 8-12 cm. long, 4-6 cm. broad, setulose above, nearly glabrous beneath; corolla 1 cm. long 1. [elongatus](#)
Ovary and ripe capsule pubescent; corolla 2.5-3.5 cm. long, the tube glandular-pubescent outside; leaves ovate-elliptic, rounded to subcordate at base, shortly and obtusely pointed, up to 12 cm. long and 7 cm. broad, pubescent to nearly glabrous on both surfaces; lower flowers small and cleistogamous, the tiny corolla narrowly hood-like and persistent on the young fruit:2
- 2 Capsule at most 5 cm. long, pubescent2. [nobilis](#)
Capsule 12 cm. long, glandular-pubescent3. [insularis](#)

1. *Streptocarpus elongatus* Engl. Bot. Jahrb. 18: 76, t. 4-5, fig. A (1894); F.T.A. 4, 2: 509. *APD acc*

Erect herb 1-1 1/2 ft. high, with white flowers in lax pedunculate cymes.

[Br.] Cam.: Buea, 4,000 ft. (Jan.) Maitland! Preuss 1010! Buea to Mann's Spring, 4,500 ft. (Dec.) Morton K 889!

[Note: Jaeger 236 & 455 from Loma Mts., Sierra Leone, are very closely allied to *S. elongatus* but the material is not yet sufficient to say if they are really conspecific-B. L. B.]

2. *Streptocarpus nobilis* C.B. Cl. in DC. Monogr. Phan. 5, 1: 155 (1883); F.T.A. 4, 2: 511. *APD acc*

Streptocarpus balsaminoides Engl. (1894)-F.W.T.A., ed. 1, 2: 236.

Streptocarpus lagosensis C.B. Cl. (1906).

Streptocarpus atroviolaceus Engl. (1921).

Streptocarpus princeps Mildbr. & Engl. (1921).

(?) *S. violascens* Engl. (1921-fruiting spec. only).

Stems up to 3 ft. high, half-succulent; chasmogamous flowers deep violet-purple, 1-1 1/4 in. long. Sometimes only a few inches high with all the flowers cleistogamous.

Guin.: Landouman country (fr. Jan.) Heudelot 728! S. L.: Bumban, (Oct.) Deighton 3277! Iv. C.: Donané, 1,100 ft. (Oct.) Chev. 4179! Ghana: Bobiri F.R. (Oct.) Andoh 4915! Mpraeso scarp (Nov.) Vogel Peak, 2,500 ft., Adamawa (fr. Nov.) Hepper 2759!

Also on S. Tomé.

3. *Streptocarpus insularis* Hutch. & Dalz. F.W.T.A., ed. 1, 2: 237 (1931). *APD acc*

Streptocarpus denticulatus Engl. Bot. Jahrb. 57: 213 (1921), not of Turrill (1915).

A handsome plant 3 ft. high with dark violet-blue flowers; in mountain grassland.

F. Po: Moka, 4,000-5,500 ft. (Nov.) Mildbr. 7113.

Streptocarpus kerstingii Engl. Bot. Jahrb. 57: 209 (1921).

Togo Rep.: Sokode to Basari (fr. Nov.) Kersting 501 (22).

Specimen in fruit and leaf only.

3. ACANTHONEMA

Hook. f.-F.T.A. 4, 2: 502. Nom. cons. *APD acc*

- 1 Stems short, tomentose, bearing one leaf and a short cyme; leaf ovate-oblong, cordate at base, up to 20 cm. long and 10 cm. broad, with numerous lateral nerves, setulose-pilose above and on the nerves beneath; cymes several-flowered; pedicels 1 cm. long; calyx-segments lanceolate, 5 mm. long, pilose; corolla slightly curved, 2 cm. long; fruit ovoid, sharply beaked, 6 mm. long, glabrous *strigosum*

Acanthonema strigosum Hook. f. in Bot. Mag. t. 5339 (1862); F.T.A. 4, 2: 502. *APD acc*

Carolofritschia diandra Engl. (1899).

Flowers bluish-purple, in short cymes borne 1-4 together at the base of the leaf; epiphytic or on rocks, etc.

S. Nig.: Calabar Hewan! [Br.] Cam.: Cam. Mt., 2,000 ft. (Dec.) Mann 1948! F. Po: 1,000-2,000 ft. (Nov.) Mann 569!

Also in Cameroun.

[This plant normally has two stamens: 4 or 5 stamens may occur exceptionally, associated with a more or less regular corolla, in many diandrous genera of Gesneriaceae].

4. EPITHEMA

Blume-F.T.A. 4, 2: 501.

- 1 Nearly stemless herb; leaves ovate-elliptic, cordate at the base, up to 12 cm. long and 3-8 cm. broad, thinly pilose on both surfaces, serrulate; petiole 2-2.5 cm. long, pilose; mature flowers not seen [tenua](#)

Epithema tenua C. B. Cl. in DC. Monogr. Phan. 5, 1: 181 (1883); F.T.A. 4, 2: 502. *APD acc*

Epithema graniticolum A. Chev. in Mém. Soc. Bot. Fr. 2, 8: 189 (1912); Chev. Bot. 484.

Somewhat succulent, with a single leaf at flowering; calyx hirsute-velvety; **on rocks in forest.**

Guin.: Boola Mt., 3,200 ft., Guérzé country (Mar.) Chev. 20924. **S. L.:** Denkali, Loma Mt. (Oct.) Jaeger 227! **Lib.:** Vahon, Kolahun Dist. (Nov.) Baldwin 10215! **iv. Also in **Uganda**.

BIGNONIACEAE

Trees or shrubs, sometimes scandent, very rarely herbs. Leaves opposite, rarely alternate, mostly compound, digitate or pinnate, sometimes the terminal leaflet tendril-like (but not in the native genera of W. Africa); stipules absent, pseudostipules present in some genera. Flowers often showy, hermaphrodite, more or less zygomorphic. Calyx campanulate, closed or open in bud, truncate or 5-toothed, sometimes spathaceous. Corolla with 5 imbricate lobes sometimes forming 2 lips, the upper of 2, the lower of 3 lobes. Stamens alternate with the corolla-lobes, only 4 or 2 perfect. Anthers connivent in pairs or rarely free, 2-celled, opening lengthwise; staminode representing the fifth stamen often short, sometimes absent, often 3 present when only two stamens. Disk usually present. Ovary superior, 2-celled with 2 placentas in each cell or 1-celled with parietal bifid placentas. Style terminal, 2-lipped; ovules numerous. Fruit capsular or fleshy and indehiscent. Seeds often winged, without endosperm; embryo straight.

- 1 Climbing shrub (if, exceptionally, not climbing, then with very long slender shoots), ovary 2-celled, ovules in 8 series (each placenta bearing four rows of ovules); fruit dehiscent, cylindrical, apparently very similar to those of *Newbouldia* (not yet known in ripe state); calyx irregularly 5-lobed, sometimes slightly bilabiate or subspathaceous [1. Dinklageodoxa](#)
- Erect trees or shrubs: **2**
- 2 Calyx not spathaceous: **3**

- Ovules in 4-6 series; valves of the fruit flat; calyx beaked in bud [5. Markhamia](#)

The following ornamentals have been introduced into our area:

Bignonia capreolata Linn.

S. E. North America

Crescentia cujete Linn.

Tropical America

Haplophragma adenophyllum (Wall. ex G. Don) P. Dop

India

Jacaranda mimosifolia D. Don

N. W. Argentine

Pandorea pandorana (Andr.) van Steenis

Indonesia, New Guinea

Parmentiera cereifera Seem.

C. America

Pyrostegia venusta (Ker-Gawl.) Miers

Brazil

Saritaea magnifica (Sprague ex van Steenis) Dugand

Arrabidaea magnifica Sprague ex van Steenis

Colombia

Tabebuia rosea (Bertol.) DC.

C. America

Tecoma stans (Linn.) H.B.K.

C. America

Tecomaria capensis (Thunb.) Spach

S. Africa

1. DINKLAGEODOXA

Heine & Sandwith in Kew Bull. 16: 223 (1962).

- 1 Branchlets glabrous; leaflets 1-2 pairs, long-elliptic, entire, acuminate on both sides (sometimes in big leaflets leaf-base rounded), 7-18 cm. long and 2.5-6 cm. broad; minutely punctate and sparsely glandulose beneath; inflorescence terminal, 10-20 flowered, racemose-paniculate; peduncles 5-7 mm. long, 1-3-flowered, pedicels 7-9 mm. long; calyx about 15 mm. long, and at the top 15 mm. in diam., glabrous, covered with small flattened glands; corolla campanulate funnel-shaped, 5-6 cm. long, glabrous outside, slightly puberulous within, with small immersed glands in the inferior part [scandens](#)

Dinklageodoxa scandens Heine & Sandwith, l.c. 223, figs. 1 & 2 (1962). *APD acc*

Kigelia dinklagei Aubrév. & Pellegr. in Fl. For. C. Iv. 3: 210 (1936), invalidly published (short French descr. only).

Dinklageanthus volubilis Melchior ex Dinklage & Mildbr. in Fedde Rep. 41: 266 (1937), name only.

A climber, up to 11 ft. high, in trees of coastal savanna, with white flowers, corolla outside lilac at the base, inside with purplish lines and dots; ripe fruits unknown.

Lib.: Monrovia (Nov.) Dinklage 2926! 3282! Duport (Nov.) Bequaert in Hb. Linder 1511! Mt. Barclay (Nov.) Bunting 22! Arboretum of the College of Forestry, Paynesville (Nov.) Voorhoeve 76! 82!

2. KIGELIA

DC. Bibl. Univ. Genève, n.s., 17: 135 (1838); F.T.A. 4, 2: 533.

- 1 A tree, extremely variable in all its parts, with imparipinnate leaves up to 50 cm. long, with 3-6 pairs of leaflets; leaflets elliptic, elliptic-oblong, to oblong-lanceolate, up to 20 cm. long and 6 cm. broad, papery to subcoriaceous, rounded to apiculate, entire to slightly dentate-serrate in the upper part, sometimes scabrid above, indumentum on the rachis and on the leaves beneath present or absent, with 7-12 pairs of lateral nerves, sessile or stalked up to 1 cm. long; inflorescences in long-peduncled hanging panicles, up to 50 cm. long; flowers 6-13 cm. long; calyx 1-3 cm. long and 1-2 cm. broad; corolla 5-10 cm. long; fruits sausage-like, up to 45 cm. long and 15 cm. diam. [africana](#)

Widespread in tropical Africa.

[Note: Sprague in F.T.A. accepted for *Kigelia* 14 taxa: 10 in specific, and 4 in infraspecific (varietal) rank. Aubréville & Sillans more recently accepted only 1 sp. with 3 varieties in our area and Ubangi-Shari: i.e. *K. africana* var. *africana*, var. *aethiopica* (Decne.) Aubrév. ex Sillans, var. *elliptica* (Sprague) Sillans. But Sillans states that the characters used in his key are due to ecological adaptations. I find from a taxonomic study of all the characters accepted in Sprague and Sillans that they break down even variably and the only practical conclusion possible is that there is one extremely variable species in Africa. Much of its variability may be accounted for by the fact that it grows in both dense forest and in savanna. -H. H.]

3. STEREOSPERMUM

Cham. in Linnaea 7: 720 (1832); F.T.A. 4, 2: 517.

- 1 Calyx campanulate, 5-6 mm. long, softly tomentellous to nearly glabrous outside; corolla about 5 cm. long, tube softly pubescent outside; leaflets 3-4 pairs, stalked, oblong or oblong-elliptic, shortly acuminate, 5-10 cm. long, entire or crenate-serrate, glabrous or softly pubescent; panicle large, usually softly pubescent; capsule cylindrical, elongate, up to 60 cm. long; seeds winged at each end, 2.5-3 cm. long [1. kunthianum](#)
 Calyx tubular, 1.5-2 cm. long, glabrous outside; corolla 5-6 cm. long, tube glabrous or very sparingly pubescent outside; leaflets 5-6 pairs, oblong, long-acuminate, 8-14 cm. long, closely reticulate below, glabrous; panicle glabrous except for the small bracts; fruit as above [2. acuminatissimum](#)

1. **Stereospermum kunthianum** *Cham.* in Linnaea 7: 721 (1832); F.T.A. 4, 2: 518; Chev. Bot. 487; Aubrév. Fl. For. C. Iv., ed. 2, 3: 240; Fl. For. Soud.-Guin. 497, t. 112, fig. 1-4. **APD acc**

A tree of [savanna woodlands](#), up to 30-40 ft. high, with drooping ample panicles of pink or purplish and darker streaked flowers 1-2 in. long; flowering in the dry season usually while leafless.

PEDALIACEAE

Annual or perennial herbs. Leaves opposite or the upper alternate, simple; stipules absent. Flowers hermaphrodite, zygomorphic. Calyx of 5 or 4 segments or 4-fid or spathaceous. Corolla gamopetalous, often oblique; lobes 5, imbricate. Stamens 4, or rarely only 2 perfect, alternate with the corolla-lobes; anthers connivent in pairs, 2-celled, cells distinct, parallel or divaricate, opening lengthwise; fifth stamen often represented by a staminode. Disk hypogynous, fleshy. Ovary sessile, 1-celled with 2 intrusive parietal placentas or 2-4-celled, the cells again often divided by spurious septa; style terminal. Ovules solitary or numerous on each placenta. Fruit a capsule, nut, or subdrupaceous; endocarp hardened and often horned or prickly. Seeds without endosperm; embryo with flat cotyledons.

- 1 Flowers in erect terminal racemes; pedicels not inserted between two small sessile nectarial glands, short[1. Martynia](#)
Flowers solitary, axillary; pedicels inserted between 2 small nectarial glands:[2](#)
- 2 Ovary and fruit 2-celled; cells undivided; fruit indehiscent, more or less turbinate, regular and symmetric, 4-angled, up to 2 cm. long, with one lateral spreading spine at each basal angle[2. Pedalium](#)
Ovary and fruit 2-(rarely 4-) celled; cells incompletely divided by a false septum; fruit dehiscent or indehiscent, never turbinate or properly 4-angled, obliquely ovoid (and therefore more or less asymmetric) and rostrate when spined at the base:[3](#)
- 3 Cells of the ovary and capsule very unequal, the posticous one small and indehiscent[3. Rogeria](#)
Cells of the ovary and capsule equal-sized:[4](#)
- 4 Capsule acute or beaked, without lateral appendages[4. Sesamum](#)
Capsule with 2 divergent horns or spines at the apex[5. Ceratotheca](#)

1. MARTYNIA

Linn. Sp. Pl. 618 (1753).

- 1 Annual; clothed with patent, long, glandular-viscid hairs; main stem almost hollow; leaves opposite, long-petioled, broad, palmatinerved; flower with 2 membranous bracteoles at the base; calyx 5-partite to the base; corolla obliquely campanulate thimble-shaped, lobes very unequal, broad; perfect stamens 2 (anterior ones); anthers cohering; ovary 1-celled, divided into 4 compartments by 2 deeply intruding, parietal, opposite, T-shaped placentas touching in the middle; fruit a beaked horn-like capsule about 3 cm. long[annua](#)

Martynia annua *Linn.* l.c. (1753); *Backer in Fl. Males.*, ser. 1, 4: 221, fig. 3 (p. 220) (1951). *APD acc*

A foetid, erect, rank herb, frequently widely branched, up to 6 ft. high, with yellowish or greenish-white flowers.

S. Nig.: Ago-Are, Oyo (Apr.-May) Onochie FHI 34001! Sofoluwe FHI 38160! Sabongida Ora, Benin Prov. (July) Umana FHI 34507! Ibadan (June) Squire K1! Olokemeji (May) Foster 303! Okeke & Adebusuyi FHI 18248!

Native of Mexico, locally naturalized in tropical Africa and in other parts of the tropics.

2. PEDALIUM

Linn.-F.T.A. 4, 2: 540.

- 1 Annual herb with simple or branched subsucculent stem; leaves petiolate, elliptic, obovate or oblong, rounded or truncate at the apex, entire or coarsely dentate, 1·5-5 cm. long; flowers solitary in the leaf axils; calyx small; corolla-tube subcylindric or narrowly funnel-shaped, about 2·5 cm. long, pale primrose-yellow; fruit an indehiscent 4-angled capsule, subpyramidal, rounded to acute at the apex, with a spreading spine at each basal angle, and then abruptly contracted into a narrow collar below, 1-2 cm. long and 0·6-1 cm. broad [murex](#)

Pedaliium murex *Linn.* Syst. Nat., ed. 10, 1123 (1759); F.T.A. 4, 2: 540 (1906); F.T.E.A., Pedaliac. 6, fig. 2. *APD acc*

Erect, spreading or subprostrate, sparsely glandular herb, 1-2 1/2 ft. high; a saline soil indicator in sand or limestone in short grass near the coast.

Ghana: Keta (fr. July) Akpabla 32! **Togo Rep.:** Mahoux 511! **S. Nig.:** Badagry (fr. Aug.) Onochie FHI 33470!

Also in **East tropical Africa**, **Socotra**, **Madagascar**, and in **India** and **Ceylon**.

3. ROGERIA

J. Gay ex Delile, Cent. Pl. Afr. 78 (1826)46; F.T.A. 4, 2: 548. *APD acc*

- 1 Stems mealy-glandular in the upper part; leaves broadly obovate, 3-lobed, truncate or shortly cuneate at the base, 5-10 cm. long, glandular below and rather glaucous; lobes obtuse, dentate, teeth subulate, with glands at the base; flowers 1-3 in the leaf-axils, subsessile; corolla 4-5 cm. long; capsule 2·5-3 cm. long with 4 spreading spines below the middle, often with 4 smaller between [adenophylla](#)

Rogeria adenophylla *J. Gay ex Delile* l.c., t. 2, fig. 3 (1826); J. Gay in Ann. Sci. Nat. sér. 1, 1: 457 (1824); F.T.A. 4, 2: 548; Chev. Bot. 488; Berhaut Fl. Sén. 64. *APD acc*

Stout herb up to 9 ft. high; flowers white to purplish; in dry savanna.

Sen.: Roger! Perrottet 548! Richard Tol (Jan.) Döllinger 68! Bondy (fl. & fr. Nov.) Trochain 891! Berhaut 1202. **N. Nig.:** Jos Kennedy 2863! Keffin Hausa Dalz. 100 bis! Kouka, L. Chad (fl. & fr. Feb.) E. Vogel 48! Mongonu, Baga (fr. Jan.) Daggash FHI 24962! Sokoto (July) Dalz. 365! Moiser 85!

Also in **Mauritania**, **Sudan** and extending to **Angola**.

4. SESAMUM

Linn.-F.T.A. 4, 2: 550.

- 1 Seeds muricate, 2-3 mm. long, with a suborbicular 2-3 mm.-long wing at the base and apex; capsule sub-obconical, narrowed to the base, about 5 cm. long, long-beaked, strigillose, calyx deciduous in fruit; plants nearly glabrous, lower leaves palmately 3-5-foliolate or -partite with narrow lobes or segments; corolla up to 3 cm. long, pubescent [1. alatum](#)
- Seeds not winged; capsule parallel-sided, rounded at the base; calyx persistent in fruit; plants usually pubescent, leaves when lobed or partite with broad and ovate segments: [2](#)
- 2 Mature seeds on their broad surfaces with finely reticulate ribs or almost smooth, up to 3 mm. long and 1·5 mm. broad; capsule up to 3 cm. long and 12 mm. broad, crowned by a very conspicuous subulate beak; lowest leaves often deeply divided or palmately compound [2. indicum](#)
- Mature seeds rugose or pitted; leaves never parted or divided: [3](#)
- 3 Seeds up to 3 mm. long and 2 mm. broad; leaves petiolate (petiole 0·2-2·5 cm. long), varying from obovate-elliptic (the lower) to narrowly oblong (the upper), 3·5-11 cm. long and 1·2-4 cm. broad; capsule up to 3 cm. long and 1 cm. broad [3. radiatum](#)
- Seeds up to 1·5 mm. long and 1 mm. broad; leaves sessile or subsessile (very rarely the lower ones shortly petiolate; the petiole then up to 5 mm. long), linear to linear-lanceolate, 2-12 cm. long and 0·1-1 cm. (lower ones sometimes up to 4 cm.) broad; capsule up to 2·4 cm. long and 4 mm. broad. [4. angustifolium](#)

1. **Sesamum alatum** *Thonning* in Beskr. Guin. Pl. 284 (1827); F.T.A. 4, 2: 559; Chev. Bot. 489; Berhaut, Fl. Sén. 11, 23, 264; F.T.E.A., Pedaliac., 17, fig. 7,1-3. *APD acc*

Sesamum sabulosum *A. Chev.* Bot. 489 (1920), name only.

Erect herb 2-3 ft. high with sulcate 4-angled stems finely glandular when young; flowers pink or bright red with spotted throat; **in dry savanna**.

Sen.: Roger! Berhaut 757. **Mali:** Timbuktu (fl. & fr. June, July) Chev. 1293! Hagerup 117! Diendéla (Mar.) Chev. 624! Fenadjie (fl. & fr. June) Davey 124! **Ghana:** Thonning (photo)! Throughout tropical Africa.

[Berhaut's var. grandiflora (l.c., 1954), French descr. only, has "corollas up to 5 cm. long and a flat U-shaped capsule with two truncate horns". Not seen, but almost certainly only an occasional form-H. H.]

ACANTHACEAE

Herbaceous or climbing, rarely somewhat shrubby. Leaves opposite, often with distinct cystoliths; stipules absent. Flowers hermaphrodite, zygomorphic, often with conspicuous bracts. Calyx-segments or lobes 4 or 5, imbricate or valvate; rarely the calyx reduced to a ring. Corolla gamopetalous, 2-lipped or sometimes 1-lipped, lobes imbricate or contorted. Stamens 4, didynamous or 2, inserted on the corolla-tube and alternate with its lobes; filaments free amongst themselves or partially connate in pairs; anthers 2-celled or 1-celled by reduction, cells confluent or separated, sometimes one much smaller than the other, opening lengthwise. Disk present. Ovary superior, sessile on the disk, 2-celled. Capsule mostly elastically dehiscent from the apex downwards, the valves recurved and leaving the central axis. Seeds mostly with indurated funicle; endosperm rarely present; embryo large.

Recognised by the usually herbaceous habit, opposite leaves and the peculiar capsule.

 Anther-cells not tailed: 27
- 27 Shrubs or undershrubs; capsules always with retinacula; bracteoles absent: 28
 Herbs or creepers, often prostrate and rooting at the nodes; bracteoles present, longer than the calyx: 31
- 28 Flowers in terminal, elongated many-flowered racemes; capsule compressed globose-ellipsoid [24. Thomandersia](#)
 Flowers in short, bracteate, sometimes unilateral spikes, not always terminal, but also axillary, basal etc.; capsules elongate (not known in No. 26): 29
- 29 Leaves triplinerve, acicular or ericaceous [25. Lepidagathis](#)
 Leaves with 5-10 pairs of lateral nerves, never triplinerve, acicular or ericaceous: 30
- 30 Corolla inflated upwards, mouth oblique, abaxial stamens with 2-celled anthers, one anther-cell below the other, smaller; inflorescence terminal, loose-racemose; minutely hairy; leaves green on both sides [26. Filetia](#)

- Corolla-mouth funnel-shaped, hardly oblique, abaxial stamens with 1-celled anthers; inflorescence of dense axillary heads with long white hairs; leaves with thick white tomentum beneath [27. *Neuracanthus*](#)
- 31** Leaves with cystoliths; capsules with retinacula and 2 ovules in each cell [28. *Afrofittonia*](#)
- Leaves without cystoliths; capsules with papilliform, not curved retinacula, many-seeded [29. *Staurogyne*](#)
- 32** Anthers 2-celled: **33**
- Anthers 1-celled: **48**
- 33** Anther-cells at equal or nearly equal levels, the cells not or (in No. 34) slightly tailed: **34**
- Anther-cells at unequal levels: **42**
- 34** Ovules numerous in each ovary-cell; calyx-segments 4: **35**
- Ovules 1-2 in each cell: **36**
- 35** Leaves alternate, subradical, crenate (in some forms lyrate) to subentire [30. *Elytraria*](#)
- Leaves opposite, not subradical, entire [31. *Nelsonia*](#)
- 36** Bracteoles not present: **37**
- Bracteoles present: **38**
- 37** Calyx-segments 4 [32. *Barleria*](#)
- Calyx-segments 5 [33. *Pseuderanthemum*](#)
- 38** Stigma shortly bifid: **39**
- Stigma undivided: **41**
- 39** Flowers spicate, spikes thyrsoïd or solitary [34. *Adhatoda*](#)
- Flowers paniculate or subracemose: **40**
- 40** Stamínodes (2) present [35. *Graptophyllum*](#)
- Stamínodes absent [36. *Schaueria*](#)
- 41** Flowers in a terminal spike up to 15 cm. long, corolla up to 12 mm. long, whitish [37. *Chlamydocardia*](#)
- Flowers solitary, axillary, corolla up to 4 cm. long [38. *Anisotes*](#)
- 42** Anther-cells not tailed: **43**
- Anther-cells tailed at the base: **46**
- 43** Placentas not rising elastically in fruit and not throwing out the seeds: **44**
- Placentas rising elastically in fruit and throwing out the seeds [42. *Dicliptera*](#)
- 44** Seeds smooth [39. *Peristrophe*](#)
- Seeds tubercular-scabrous: **45**
- 45** Corolla-tube thick-cylindric or inflated in the upper half (not linear) [40. *Isoglossa*](#)
- Corolla-tube linear-cylindric, regular (not inflated) [41. *Rhinacanthus*](#)
- 46** Placentas not rising elastically in fruit and not throwing out the seeds: **47**
- Placentas rising elastically in fruit and throwing out the seeds [45. *Rungia*](#)
- 47** Capsule 4-seeded; seeds rough or tubercled [43. *Justicia*](#)
- Capsule 2-seeded; seeds smooth [44. *Monechma*](#)
- 48** Flowers appearing as though enclosed between two opposite bracts which are often connate into a tube [46. *Hypoestes*](#)
- Flowers not appearing as though enclosed between two opposite bracts: **49**
- 49** Herb up to 1 m. high; flowers purple to pale-pink, in rather dense, spike-like terminal inflorescences; corolla-tube 2-2.5 cm. long; capsule about 1 cm. long [47. *Brachystephanus*](#)
- Shrubby plants with woody branches, up to 4 m. high: **50**
- 50** Shrub up to 1.5 m. high; flowers bright red, in a terminal spike-like inflorescence, composed of shortly stalked cymules; corolla-tube 2.5 cm. long; capsule up to 4 cm. long [48. *Ruspolia*](#)
- Shrub up to 4 m. high; flowers mauve to whitish, in a very loose panicle with 100-200 flowers, corolla-tube very short, 2-3 mm. long; capsule about 1.5 cm. long [49. *Oreacanthus*](#)

1. HYGROPHILA

R. Br.-F.T.A. 5: 30; Benoist in Bull. Soc. Bot. Fr. 60: 330 (1913).

Synnema Benth. (Afr. spp.)-F.T.A. 5: 29; Benoist l.c. (1913); F.W.T.A., ed. 1, 2: 248.

Kita A. Chev. in Rev. Bot. Appliq. 30: 266 (1950).

- 1 Corolla not 2-lipped, up to 1 cm. long, tube nearly linear-cylindric; segments about 2 mm. long; stamens nearly equal; capsules about 6 mm. long, with about 8 seeds; leaves usually about 15 mm. long and 8 mm. broad, sometimes the lower ones much longer (African "Hemigraphis" species) [1. abyssinica](#)
Corolla markedly 2-lipped: **2**
- 2 Inflorescence laxly cymose, axillary, its branches few-flowered; leaves sessile, usually linear to narrowly subacute, sometimes (in No. 4) with large obtuse teeth along the margins (Sect. Nomaphila; Kita A. Chev.): **3**
Inflorescences subspicate or in axillary clusters: **5**
- 3 Corolla 2 cm. long; leaves lanceolate-elliptic, acuminate, up to 10 cm. long and 1.5 cm. broad, minutely and closely puberulous beneath; calyx-segments linear, unequal, up to 1 cm. long [2. laevis](#)
Corolla 4-11 mm. long; leaves up to 9 cm. long and 1 cm. broad, but usually much smaller: **4**
- 4 Leaves broadly lanceolate, up to 2 cm. long, obtuse, sometimes the lower ones obscurely toothed; calyx segments linear-lanceolate, at flowering time about 3 mm. long, slightly accrescent in fruit; corolla up to 4.5 mm. long; capsule 5 mm. long, with short, but well distinguishable retinaculas, containing 10-14 small seeds (about 0.5 mm. long) [3. stagnalis](#)
Leaves linear to linear-lanceolate, up to 8 cm. long, acute, usually entire, but sometimes strongly toothed with up to 6 teeth on each side up to 7 mm. long; calyx-segments linear-filiform, the posticous 8-9(-10) mm., the 4 others 5-7 mm. long; corolla up to 1 mm. long; capsule 4-5 mm. long with papilliform retinacula, containing 40-50 very small sand-grain like seeds (about 0.3 mm. long) [4. borellii](#)
- 5 Capsules with 4-8 seeds; leaves elongate-ob lanceolate to linear-ob lanceolate, up to 25 cm. long and 3.5 cm. broad, more or less setose-pilose on the upper surface, with inconspicuous rod-like cystoliths beneath; bracts and calyx-segments setose with white hairs (Sect. Asteracantha): **6**
Capsules with 8 to numerous seeds; leaves never longer than 12 cm.: **7**
- 6 Flower-whorls with stiff spines up to 4 cm. long, bracts lanceolate; fruits with up to 8 seeds [5. auriculata](#)
Flower-whorls without spines, bracts much resembling the ordinary leaves but smaller, with a large dilated base which sheathes the flowers or fruits; fruits with 4 seeds [6. niokoloensis](#)
- 7 Capsules with very short papilliform (not curved) retinacula (Afr. "Synnema" spp.): **8**
Capsules with markedly curved retinacula (Sect. Physichilus, Polychema and Hygrophila): **9**
- 8 Stamens 2; stems glandular-puberulous; leaves of two forms, the lower, if submerged, sometimes pinnatifid, the upper sessile, linear-ob lanceolate, 2-5 cm. long, about 6 mm. broad, puberulous; flowers at the nodes; bracts foliaceous, up to 1 cm. long, pilose; corolla-tube 5-6 mm. long; style pubescent [7. africana](#)
Stamens 4; corolla with an extremely short or wanting upper-lip, flowers in axillary clusters; leaves sessile, narrowly lanceolate, about 4-5 cm. long and 1 cm. broad, very variable from entire to remotely toothed or very deeply serrate-pinnatifid; corolla-tube 3 mm. long; style pubescent [8. brevituba](#)
- 9 Inflorescence continuous, spike-like; bracts and calyx-segments markedly pectinate-ciliate, linear; corolla about 1.5 cm. long; leaves linear, sometimes slightly dentate or even pinnatifid, up to 5 cm. long, with rod-like cystoliths on the upper surface [9. senegalensis](#)
Inflorescence not spike-like, the flowers in interrupted axillary clusters: **10**
- 10 Plants entirely glabrous except for a few occasional caducous bristles around the nodes and some cilia on the calyx-lobes; leaves linear-lanceolate, sessile, up to 6 cm. long and 8 mm. broad [10. pobeguini](#)
Plants pubescent to setose-pilose; leaves lanceolate or oblanceolate, petiolate up to 12 cm. long and 3 cm. broad: **11**
- 11 Calyx and bracts densely setose-ciliate with stiff white hairs: **12**
Calyx and bracts softly pilose (not markedly setose); flowers very few or several at each node: **13**
- 12 Flowers large, about 1.5 cm. long, few in each cluster [9. senegalensis](#)
Flowers smaller, numerous in each cluster; flower-clusters 1.5 cm. diam.; calyx-segments 5-6 mm. long; leaves linear, up to 5 cm. long, with rod-like cystoliths on the upper surface; fruit 8 mm. long [11. barbata](#)
- 13 Small spreading plants, much-branched; leaves up to 2.5 cm. long and 5 mm. broad, often remotely and obtusely toothed (not absolutely entire, as stated in F.T.A. 5: 35); corolla about 10 mm. long; calyx divided to a little below the middle, up to 9 mm. long [12. micrantha](#)
Stout erect plants, unbranched or little branched; leaves up to 7 cm. long and 2.5 cm. broad, always entire; corolla 1.2-2 cm. long; calyx divided nearly to base: **14**
- 14 Leaves and inflorescences softly and shortly pubescent: **15**
Leaves shortly setose-pilose only on the nerves beneath, oblanceolate, nervose, 4-8 cm. long, up to 3 cm. broad; bracts much shorter than the calyx-segments, the latter linear-filiform; corolla 2 cm. long [16. uliginosa](#)
- 15 Pubescence velvety, intermixed with longer hairs; leaves up to 12 cm. long and 2.5 cm. broad, rarely

heterophyllous, i.e. submerged leaves pinnatifid; calyx-segments obtuse; corolla about 2 cm. long .. [13. odora](#)

Pubescence not velvety, hairs more or less equal, small and rather stiff-bristly; leaves up to 4.5 cm. long and 8 mm. broad; calyx-segments acute; corolla 12-13 mm. long [14. chevalieri](#)

1. *Hygrophila abyssinica* (Hochst. ex Nees) T. Anders. in J. Linn. Soc. 7: 22 (1868); Heine in Kew Bull. 16: 174 (1962). *APD acc*

***Hemigraphis abyssinica* (Hochst. ex Nees) C. B. Cl.** in F.T.A. 5: 58 (1899); Morton in J. W. Afr. Sci. Assoc. 3: 175 (1957), partly (Morton 8830).

***Polyechma abyssinicum* Hochst. ex Nees** in DC. Prod. 11: 83 (1847).

(?) ***Synnema abyssinicum* (Hochst. ex Nees) Bremek.** in Verh. Ned. Akad. Wetensch., Afd. Natuurk., ser. 2, 41, 1: 136 (1944).

***Hemigraphis schweinfurthii* (S. Moore) C. B. Cl.** in F.T.A. 5: 58, partly (Schweinfurth 2708; 2799); Schnell in Mém. I.F.A.N. 18: 13 (1952).

***Cardanthera africana* var. *schweinfurthii* S. Moore** in J. Bot. 18: 7 (1880), partly (Schweinfurth 2708; 2799)

(?) ***Synnema schweinfurthii* (S. Moore) Bremek.** l.c. 141 (1944), partly (Schweinfurth 2708; 2799).

A very variable herb in large specimens up to 1 ft. tall, but mostly much smaller, glabrescent or hairy, with dense axillary clusters and small purplish-blue flowers; **in wet or muddy places.**

Ghana: Tumu (fl. & fr. Mar.) Morton GC 8830! **N. Nig.:** Jos waterworks Schnell 9622. Near Toto, Jos to Bauchi (fr. Apr.) Morton K402! **[Br.] Cam.:** Dikwa (fl. & fr. Mar.) McClintock 14!

Throughout tropical Africa.

[An extremely variable marsh-plant, described and treated under numerous names in the genera *Cardanthera*, *Hemigraphis*, *Hygrophila*, *Polyechma* and *Synnema*. Its systematic position is not yet satisfactorily elucidated, but it is certainly a member of Hygrophilinae, and not Strobilantheae; see Bremekamp in Acta Bot. Neerland. 4: 647 (1955). The synonymy as given above contains only the names (and corresponding synonyms) which have been used by previous authors for plants from the region of the F.W.T.A.; it may be completed by further studies on the African "Hemigraphis"-species.-H.H.]

2. *Hygrophila laevis* (Nees) Lindau in E. & P. Pflanzenfam. 4, 3B: 297 (1895); F.T.A. 5: 36; Benoist l.c. 332. *APD acc*

***Nomaphila laevis* Nees** in DC. Prod. 11: 85 (1847); T. Anders. in J. Linn. Soc. 7: 21 (1863); Berhaut Fl. Sen. 94.

***Kita laevis* (Nees) A. Chev.** in Rev. Bot. Appliq. 30: 266 (1950).

Erect herb about 1 ft. high, becoming woody at the base, rooting at the lower nodes, with pale mauve flowers; **beside streams.**

Sen.: Heudelot 197! Berhaut 1468. **Mali:** Kénieba (fl. & fr. Mar.) Roberty 17048! **Ghana:** base of Gambaga Scarp (Dec.) Morton A1377!

3. *Hygrophila stagnalis* Benoist in Mém. Soc. Bot. Fr. 2, 8: 277 (1917). *APD acc*

(?) ***Kita gracilis* A. Chev.** l.c. 267 (1950).

Low herb with long creeping stems rooting at the nodes; flowers pale mauve; **in temporarily dry river beds and marshy places.**

Guin.: Kollangui Chev. 12229! [(?) **Mali:** "in R. Bakoy, 30 km. W. of Kita" Chev. s.n. (1950)].

[*Kita gracilis* is "probably only an ecological form" of *H. laevis*, according to Chevalier l.c.]

4. *Hygrophila borellii* (Lindau) Heine in Kew Bull. 16: 176 (1962). *APD acc*

***Brillantaisia borellii* Lindau** in Engl. Bot. Jahrb. 33: 186 (1902).

Accra Plains (July) Deighton 3386 Nungua (June) Rose Innes GC 30073! **Dah.:** Ouémé (Feb.) Gironcourt 239!

[Note: As the taxonomy of the genus *Ruellia* Linn. in Africa is still uncertain and much in need of a revision, this name for the plants concerned may be altered in future. The application of Jacquin's *R. patula* to the W. African specimens does not seem to be justified, and these specimens, named since C. B. Clarke's treatment of Acanthaceae for F.T.A. as "*Ruellia patula* Jacq.", are practically conspecific with *R. praetermissa* Lindau, a Sudan species, which has also been recorded from Middle Shari-H.H.]

2. *Ruellia togoensis* (Lindau) Heine in Kew Bull. 16 181 (1962). *APD acc*

Dischistocalyx togoensis Lindau in Engl. Bot. Jahrb. 33: 188 (1902); F.W.T.A., ed. 1, 2: 249.

Stenochista togoensis (Lindau) Bremek. in Engl. Bot. Jahrb. 73: 148 (1943).

Ruellia ardeicollis Benoist in Mém. Soc. Bot. Fr. 2, 8: 278 (1917); Chev. Bot. 494; F.W.T.A., ed. 1, 2: 246.

A slightly woody herb 1 ft. or more high, with white flowers about 2 in. long more or less like the last but with a longer tube.

iv. C.: Orodougou (June) Chev. 21816! Morénou (Nov.) Chev. 22436! **Ghana:** Agogo (Apr.) Adams 2635! Sunyani to Berekum (Dec.) Adams 2776! Koforidua, Begoro (Nov.) Morton A33! Ejura Scarp GC 9798! **Togo Rep.:** Lomé Warnecke 264!

3. EREMOMASTAX

Lindau in Engl. Bot. Jahrb. 20: 8 (1894).

Paulowilhelmia *Hochst.* in Flora 27, 1, Beil. 4 (after June 1844); F.T.A. 5: 52; F.W.T.A., ed. 1, 2: 246, not *Paulowilhelmia* *Hochst.* in Flora 27: 17 (Jan. 1844).

- 1 Coarse herb up to 2 m. high; leaves irregularly toothed or lobed, ovate, truncate or subcordate at the base, 5-13 cm. long, sparsely pubescent or nearly glabrous; petiole 2.5-6.5 cm. long; flowers blue, in lax divided subscorpioid cymes 2-7 cm. long; corolla-tube 2.5-3 cm. long, linear, lobes elliptic, 12 mm. long; capsule about 15 mm. long, usually 4-8-seeded [polysperma](#)

Eremomastax polysperma (*Benth.*) *Dandy* in F. W. Andr. Fl. Sudan 3: 174 (1956).

APD: *Synonym of Eremomastax speciosa* (*Hochst.*) *Cufod.*

Paulowilhelmia polysperma *Benth.* in Fl. Nigrit. 479 (1849); F.T.A. 5: 52; F.W.T.A., ed. 1, 2: 246; Chev. Bot. 494.

P. sclerochiton (*S. Moore*) *Lindau* (1893)-F.T.A. 5: 53; F.W.T.A., ed. 1, 2: 246.

P. pubescens *Lindau* in Mém. Soc. Bot. Fr. 2, 8: 49 (1907); Chev. Bot. 494.

Ruellia sclerochiton *S. Moore* (1880).

Paulowilhelmia togoensis *Lindau* (1893)-F.T.A. 5: 53.

A stout erect branched herb with long-petioled broad leaves and lilac or bluish-purple flowers 1 1/2-2 in. long with darker spots and streaks on the corolla-lobes.

Widespread in tropical Africa.

4. HETERADELPHIA

Lindau in Engl. Bot. Jahrb. 17: 108 (1893); Exell Cat. S. Tomé 261 (1944).

- 1 Subshrub or coarse herb up to 1 m. (?) high; leaves broadly obovate-acuminate, 10-13 cm. long and 4-5.5 cm. broad, cordate at the base, crenate, sparsely pubescent or nearly glabrous; petiole 3-4 cm. long; flowers in a dense compound inflorescence, composed of very many axillary 5-8-flowered cymes up to 4 cm. long; corolla-tube funnel-shaped, up to 3.5 cm. long, lobes more or less equal, 12 mm. long; capsule about 15 mm. long, 8-12-seeded [paulojaegeria](#)

Heteradelphla paulojaegeria *Heine* in Bull. I.F.A.N. 23: 1028 (1961). *APD acc*

An undershrub or coarse herb up to about 3 ft. high; flowers purplish-red.

Guin.: Forékaria, Faranah (fr. Jan.) Chev. 20521! Beyla (Oct.) Jac.-Fél. 2199! Banian to Bambaya (fl. & fr. Oct.) Jaeger 2103!

5. DISCHISTOCALYX

T. Anders. ex Benth.-F.T.A. 5: 60, as *Distichocalyx*; Bremekamp in Engl. Bot. Jahrb. 73: 134 (1943).

- 1 Leaves with 6-7 pairs of lateral nerves, narrowly obovate, acutely cuneate at base, acuminate, 10-15 cm. long, 3-7 cm. broad, with numerous short rod-like cystoliths on both surfaces; spikes few-flowered; bracts early deciduous; calyx-segments linear-oblongate, acute, 2 cm. long; corolla 6 cm. long; fruit 2 cm. long, narrow, glabrous [1. thunbergiiflorus](#)

Leaves with 10 pairs of lateral nerves, otherwise as above; bracts persistent, 2-5 cm. long; calyx-segments scarcely 1-5 cm. long [2. obanensis](#)

1. ***Dischistocalyx thunbergiiflorus* (T. Anders.) Benth. ex C.B.Cl.** in F.T.A. 5: 62 (1899); Bremekamp l.c. 135. *APD acc*

Ruellia thunbergiaeflora T. Anders. in J. Linn. Soc. 7: 24 (1863).

Dischistocalyx ruellioides S. Moore in Cat. Talb. b. 76 (1913).

A herbaceous undershrub several feet high, woody below, glabrous except on the young parts, with spikes of violet-purple flowers 1 1/2-2 in. long.

S. Nig.: Oban Talbot 1527! (Mar.) Richards 5142! Okarara, Calabar (fl. & fr. May) Ujor FHI 30824! Boshi-Okwangwo F.R., Ogoja (fl. & fr. May) Latilo FHI 30941! [**Br.**] **Cam.:** Mamfe to Bamenda (fl. & fr. Mar.) Richards 5234! **F. Po:** 1,300-2,000 ft. Mann 316! 1446!

2. ***Dischistocalyx obanensis* S. Moore** in Cat. Talb. 77 (1913). *APD acc*

An undershrub like the last with pale violet flowers.

S. Nig.: Oban Talbot 73! 1485!

[Note: *D. staudtii* Bremek. l.c. 141 (1943) (Staudt 875, Johann-Albrechtshöhe) may be conspecific with this species, but the taxonomic position could not be decided without seeing type material-H.H.]

6. ENDOSIPHON

T. Anders. ex Benth.-F.T.A. 5: 49.

- 1 Stems long-pilose; leaves anisophyllous, one sometimes very small, ovate to oblong-elliptic, acuminate, rounded and very unequal-sided at the base, 6-10 cm. long, 2-5-5 cm. broad, marked with linear cystoliths on both surfaces, thinly pilose on the nerves beneath; flowers solitary; pedicels up to 4 cm. long, pilose or pubescent; calyx-lobes slightly unequal, linear, 2-5-3 cm. long, 1-nerved, pilose; corolla-tube up to 5 cm. long, narrow, limb about 4 cm. diam., with rounded lobes; anthers 4, deep in the corolla-tube, linear; fruit linear, 2 cm. long, valves grooved in the middle [primuloides](#)

***Endosiphon primuloides* T. Anders. ex Benth.** in Benth. & Hook. f. Gen. Pl. 2: 1086 (1876); F.T.A. 5: 49; Chev. Bot. 496, incl. var. *hirsuta* Benoist ex A. Chev. (1920), name only.

APD: *Synonym of Ruellia primuloides* (T. Anderson ex Benth.) Heine

Endosiphon obliquus C. B. Cl. in F.T.A. 5: 50 (1899).

Herb or small half-woody undershrub in forest, 1-3 ft. high, clothed with multicellular hairs, with pale blue or lilac slender-tubular flowers with spreading limb.

S. L.: Damawulo, Tunkia (fr. Dec.) Deighton 3825! Gola Forest (Nov.) Deighton 370! **Lib.:** Monrovia Whyte! Gbanga Linder 388! Mt. Bili (fl. & fr. Dec.) Barker 1169! Bangee, Boporo Dist. (Nov.) 8. WHITFIELDIA

Hook.-F.T.A. 5: 65.

- 1 Corolla-tube very slender, about 5 cm. long, elongated, abruptly expanded into the limb, indumentum variable, glabrescent or more or less pubescent; lobes oblong-elliptic, 2 cm. long; calyx-segments broadly linear, 3 cm. long; glandular-pilose; leaves more or less elliptic, long-acuminate, acutely cuneate at base, 6-18 cm. long, 3-6 cm. broad, minutely pustulate on the upper surface; bracts ovate, about 1.5 cm. long [1. elongata](#)
- Corolla-tube gradually expanded from the base, about 2-4 cm. long: [2](#)
- 2 Bracteoles broadly and obliquely obovate, about 0.8-1 cm. long; flowers rather few:..... [3](#)
- Bracteoles lanceolate to narrowly elliptic, 1-1.5 cm. long; flowers rather numerous; corolla 3 cm. long; leaves oblong-lanceolate to ovate-elliptic, acutely acuminate, acute at base, 10-18 cm. long, 3-7 cm. broad, glabrous; fruit 2 cm. long [4. colorata](#)
- 3 Corolla 3-3.5 cm. long; leaves oblong-lanceolate to ovate-elliptic, acutely acuminate, acute at base, 10-18 cm. long, 3-7 cm. broad, pubescent on the midrib beneath; fruit 2 cm. long [2. lateritia](#)
- Corolla 2 cm. long, very broad; inflorescence rather elongated; leaves as above, but midrib glabrous . [3. preussii](#)

1. **Whitfieldia elongata** (*P. Beauv.*) *De Wild. & Th. Dur.* in Bull. Soc. Bot. Belg. 38: 110 (1899); F.T.A. 5: 66. *APD acc*

Ruellia elongata *P. Beauv.* Fl. Oware 1: 45, t. 26 (1806).

Whitfieldia longifolia *T. Anders.* (1863)-F.T.A. 5: 66; F.W.T.A., ed. 1, 2: 248, incl. var. *perglabra* (*C. B. Cl.*) Hutch. & Dalz. (1931).

Whitfieldia perglabra *C. B. Cl.* in F.T.A. 5: 66 (1899).

Whitfieldia subviridis *C. B. Cl.* in F.T.A. 5: 66 (1899).

Nearly glabrous undershrub, erect, several feet high, or straggling and half-scandent, with pith in the stems, constricted nodes, and conspicuous white flowers 2-3 in. long, with petaloid calyx, in terminal panicles.

S. Nig.: Ikorodu, Lagos (Dec.) Onochie FHI 26694! Ilaro F.R., Abeokuta (Dec.) Onochie FHI 31888! Igbessa Millen 141! Ibazoo (Nov.) Thomas 2003! Oban Talbot 992! 2009! [**Br.**] **Cam.:** Kumba (Dec.) Binuyo & Daramola FHI 35074! **F. Po:** (Jan.) Barter 198! 2069! T. Vogel 187! 242! Mann 198!

Extends to **Angola**, **Sudan** and **Tanganyika**.

2. **Whitfieldia lateritia** *Hook.* in Bot. Mag. 71: t. 4155 (1845); F.T.A. 5: 67. *APD acc*

A forest undershrub about 10 ft. high, with red or salmon flowers 1-1 1/2 in. long in terminal pubescent racemes.

Guin.: Sérédou Bouquet! **S. L.:** Whitfield! Sc. Elliot 3976! Jagba Hill (Sept.) Melville & Hooker 631! Lumbaraya (Feb.) Sc. Elliot 4933! Kambui Hills South F.R. (Dec.) Small 860! Batkanu (Jan.) Vogel Peak, 4,000 ft., Adamawa (Nov.) Hepper 1343!

A tropical African highland species; also in Cameroun, Gabon, Congo, and tropical E. Africa.

[An intermediate between this and *P. falcisepala* C. B. Cl. is Adams & Akpabla 4496! (Ghana: Techiman); Jaeger's specimens from Kita Mts. are too young for certainty and may be intermediates too. Generally, the distinction between *P. falcisepala* and *P. barteri* is not always easy and *P. falcisepala* may be an infraspecific taxon of the latter.]

Retz. Phys. Saellsk. Handl. 1: 163 (1776), nom. cons.; F.T.A. 5: 8; Benoist in Notulae Syst. 2: 287 (1912-13), and 11: 144 (1944).

- 1 Petioles winged, 1-2 cm. long; leaves ovate-triangular, sagittate or hastate at base, 3.5-7 cm. long, 2.5-4.5 cm. broad, pubescent, entire or undulate-dentate; flowers axillary, solitary; pedicels up to 6 cm. long; bracteoles ovate, subcordate, about 2 cm. long; corolla-tube 2 cm. long, limb oblique, 1.5 cm. long; fruit 2.5 cm. long [1. *alata*](#)
 Petioles not winged; [2](#)
- 2 Climbing herbs: [3](#)
 Shrubs or woody climbers: [7](#)
- 3 Flowers 2-3 together between two sessile leaves on a peduncle-like branchlet; leaves very broadly ovate, cordate, acutely acuminate, 7-9 cm. long, up to 6 cm. broad, pubescent on the nerves beneath, repand-dentate; petiole up to 6 cm. long; bracteoles ovate-elliptic, mucronate, 2 cm. long; corolla 6 cm. long [2. *fasciculata*](#)
 Flowers solitary or sometimes (in No. 5) in a few-flowered axillary inflorescence up to 15 cm. long: [4](#)
- 4 Leaves entire, or at most undulate: [5](#)
 Leaves lobulate or lobed, widely cordate at base, lobes triangular, setose-pilose above; petiole slender; flowers solitary; pedicel up to 5 cm. long; bracteoles ovate, 2.5 cm. long, slightly setulose outside; calyx obsolete, truncate; corolla 8-10 cm. long, broadly tubular [6. *chrysops*](#)
- 5 Leaves lanceolate, sometimes with a tooth on each side at the base, rounded at the base, 4-10 cm. long, acute, minutely setulose; bracteoles lanceolate, 1.5 cm. long; corolla 2.5 cm. long; fruit 1.5 cm. long, pubescent [3. *laevis*](#)
 Leaves ovate or triangular: [6](#)
- 6 Leaves acutely mucronate, cordate at base, up to 6 cm. long and 4 cm. broad, glabrous; petiole pubescent; flowers solitary; bracteoles ovate-lanceolate, 1 cm. long; corolla 2 cm. long; fruit 1.5 cm. long, softly puberulous [4. *cynanchifolia*](#)
 Leaves gradually acuminate, rounded-subcordate at base, about 17 cm. long and 8 cm. broad, prominently trinerved at base, glabrous; petiole glabrous; bracteoles narrowly ovate, 1.5 cm. long, venose; calyx lobed; corolla-tube 4 cm. long [5. *togoensis*](#)
- 7 Bracteoles densely covered outside with very small stellate hairs, ovate, rounded at apex, 3 cm. long and 2.5 cm. broad; corolla hispid outside near base, about 7 cm. long; leaves broadly elliptic, acuminate, shortly cuneate at base, about 12 cm. long and 7 cm. broad, nearly glabrous [7. *rufescens*](#)
 Bracteoles glabrous: [8](#)
- 8 Calyx about 1 cm. long; leaves oblong to elliptic, acuminate, subacute at base, 10-15 cm. long, up to 8 cm. broad, glabrous, entire; bracteoles 2 cm. long; corolla 6-7 cm. long [8. *vogeliana*](#)
 Calyx at most 3 mm. long; leaves small, ovate to broadly lanceolate, acute, 3-4.5 cm. long, 1.5-2 cm. broad, subentire; bracteoles soon deciduous; corolla 6 cm. long [9. *erecta*](#)

1. **Thunbergia alata** *Boj. ex Sims* in Bot. Mag. 52: t. 2591 (1825); F.T.A. 5: 16; Milne-Redhead in Mem. N.Y. Bot. Gard. 9, 1: 19 (1954); Bremekamp in Verh. K. Nederl. Akad. Wetensch., Afd. Natuurk. sect. 2, 50: 41 (1955); Aké Assi, Contrib. 1: 202. *APD acc*

A softly pubescent herbaceous twiner, with pale to dark yellow flowers (sometimes white) usually red or dark purple in the throat.

S. L.: Reade! Freetown (Feb., Aug.) Johnston 59! Melville & Hooker 349! Regent (Dec.) Sc. Elliot 4141a! Njala (July) Deighton 455! **Lib.:** Sinoe Basin (fr. Jan.) Johnston! Monrovia (Kov.) Linder 1565! **IV. C.:** Abidjan Aké Assi IA 925! **N. Nig.:** (fr. Sept.) Lely P711!

A native of E. and S. Africa; frequently cultivated and often naturalized in all the warmer parts of the world.

This is the oldest name available within this aggregate species.

2. **Thunbergia fasciculata** *Lindau* in Engl. Bot. Jahrb. 17: 97 (1893); F.T.A. 5: 15. *APD acc*

APD: *Synonym of Thunbergia graminifolia De Wild.*

Climber with sparingly pilose stems; flowers completely hidden by two leaf-like sessile bracts until full-out, corolla yellow or purplish with yellowish tube.

S. Nig.: Aponmu, Ondo (Oct.) Keay FHI 16248! Awba Hills F.R. (Oct.) Jones FHI 7081! Etomi to British Obokum, Ogoja Prov. (Dec.) Keay FHI 28276! **[Br.] Cam.:** Bambili, Bamenda (Aug.) Ujor FHI 29983!

Also in **Congo**, **Uganda** and **Sudan**.

3. **Thunbergia laevis** *Nees* in Wallich Pl. As. Rar. 3: 77 (1832); Bremekamp l.c. 51. **APD acc**

Thunbergia fragrans var. *laevis* (*Nees*) *C. B. Cl.* in Hook. f., Fl. Brit. Ind. 4: 391 (1884).

Thunbergia fragrans of F.W.T.A., ed. 1, 2: 250 (1931), not strictly of Roxb. (1795).

A slender twiner, sparingly hairy with whitish flowers 1 1/3 in. long; cultivated and more or less naturalized.

S. L.: Lane-Poole 278! Freetown (May) Deighton 2689! Regent (Oct.) Jordan 948! Sc. Elliot 4141b!

A native of tropical Asia, now widespread in the tropics.

[The specimens cited, above have pubescent ovaries, but one gathering from Ghana (Achimota Morton GC 25399) has glabrous ovaries and therefore appears to be the true *T. fragrans* Roxb., also a tropical Asian plant.]

4. **Thunbergia cynanchifolia** *Benth.* in Fl. Nigrit. 475 (1849); F.T.A. 5: 20; Chev. Bot. 490. **APD acc**

A slender climbing plant, on trees, etc., with pure white flowers 3/4 in. long, the stems either glabrous or spreading-pilose.

Guin.: Mt. Ntigon, 3,100 ft., Chev. 20927. Oua, upper Cavally Chev. 21312! **S. L.:** Njala (Aug.) Deighton 5579! Musaia (Aug.) Jordan 493! (fr. Mar.) Deighton 5392! Segbwema (Dec.) Deighton 3464! 7. **Thunbergia rufescens** *Lindau* in Engl. Bot. Jahrb. 17: 96 (1893); F.T.A. 5: 10; F.W.T.A., ed. 1, 2: 250. **APD acc**

A climbing shrub about 20 ft. high, rusty-stellate-tomentose on the young parts with white flowers 21/2-3 in. long; fruit unknown; **in forest**.

S. Nig.: Akure F.R., Ondo (Oct., Nov.) Latilo & Edwin FHI 15282! Keay FHI 25477! Aiyetoro Owenna, Ondo (Nov.) Onochie FHI 34246! [**Br.**] **Cam.:** Barombi-ba-Mbu to Kake (Sept.) Preuss 432!

[This species has a quite abnormal position within the genus *Thunbergia*: it shows some striking similarities with the genus *Pseudocalyx* (entire leaves; bracteoles which are covered with rusty-brown stellate hairs outside; stellate hairs outside at the base of the corolla-tube). The floral characters, however, do not permit its inclusion in that genus; fruits are required. -H.H.]

8. *Thunbergia vogeliana* **Benth.** in Fl. Nigrit. 476 (1849); H. Ross in Neubert's Garten-Mag. 51: 57, t. 2 (1898); F.T.A 5: 10; Bremekamp l.c. 36 (1955). **APD acc**

Thunbergia kamerunensis **Lindau** in Engl. Bot. Jahrb. 17: 97 (1893).

A branching shrub, up to 15 ft. or more high, with flowers 2-3 in. long, pale or dark violet-purple with white tube. **Sometimes cultivated as an ornamental**.

Ghana: Anyaboui to Jaketi (cult. in Achimota) (Oct.) Morton A35! **S. Nig.:** Ohe, Benin (Dec.) Keay FHI 28303! Benin F.R. (Nov.) Obomanu FHI 26930! Iseneki, Benin (Apr.) Farquhar 199! [**Br.**] **Cam.:** Bamenda, 4,700 ft. (Feb.) Miyedod 499! Gangumi, Adamawa (Dec.) Latilo & Daramola FHI 28912!

Thunbergia grandiflora (**Roxb. ex Rottl.**) **Roxb.**

Is introduced and cultivated as an ornamental (for the taxonomy of this Asiatic species see Bremekamp l.c., pp. 46-49, 1966). *T. grandiflora* was found "in thick bush near Awa" S. Nigeria (Talbot 3394) and described as *T. talbotiae* by S. Moore in J. Bot. 62: 31 (1914). Talbot's plant was unfortunately considered by Hutch. A Dalz. (F.W.T.A., ed. 1, 2: 260) as conspecific with the indigenous *T. chrysops* Hook. and the name *T. talbotiae* S. Moore therefore wrongly added to the synonymy of *T. chrysops* Hook. (see above). *T. grandiflora* (Roxb. ex Rottl.) Roxb. is apparently naturalized in Calabar: "creeping over steep slopes of bluffs; white flower," 8 Feb. 1958, Stubbings 104! It seems probable that this gathering has a connection with Talbot's, which would mean that the species has been established in Calabar Prov. for about 50 years.

Thunbergia laurifolia **Lindl.**

Is introduced and cultivated as an ornamental (for the taxonomy of this Asiatic species see Bremekamp l.c., pp. 46-49, 1966).

11. MENDONCIA

Vell. ex Vand. Fl. Lusit. 43, t. 3, f. 22 (1788); Benoist in Bull. Mus. Hist. Nat. 31: 386 (1925), Notulæ Syst. 11: 139 (1944).

Monachochlamys **Bak.** (1883).

Afromendoncica **Gilg ex Lindau** (1893)-F.T.A. 5: 6; Turrill in Kew Bull. 1919: 407; F.W.T.A., ed. 1, 2: 250.

- 1 Plants entirely glabrous; leaves oblanceolate, acuminate, slightly cordate at base, up to 9 cm. long and 5-5 cm. broad, with about 3-4 pairs of lateral nerves; petioles up to 3 cm. long; flowers unknown; bracts purplish, broadly ovate cordate, up to 1-5 cm. long and broad, acuminate; fruit a pointed drupe about 8 mm. long (when dry), somewhat angled *lb. gilgiana* var. *tisserantii*

Plants hairy; leaves becoming glabrescent:**2**

- 2** Stems 4-angled, villous when young; leaves ovate-oblong, shortly acuminate, 5-8 cm. long, up to 4 cm. broad, pilose beneath, with 5-6 pairs of lateral nerves; petiole up to 3 cm. long; flowers axillary, fasciculate; pedicels about 2 cm. long; calyx short; corolla-tube 2 cm. long; anthers hairy at the base [1a. *gilgiana* var. *gilgiana*](#)

Stems terete, thinly pubescent at the bracts; leaves broadly elliptic, slightly pointed, rounded at base, 10-14 cm. long, 5-8 cm. broad, pilose on the 2-3 pairs of lateral nerves beneath; petiole 2 cm. long; pedicels 2 cm. long, thinly setose; bracteoles broadly ovate-elliptic, 3-nerved from the base, setose-pilose; calyx an undulate rim; corolla-tube 1-3 cm. long:**3**

- 3** Indumentum composed of ordinary hairs up to 3 mm. long and some small branched (but not stellate) hairs ...**2**.
[iodioides](#)

Indumentum composed exclusively of small stellate hairs; corolla white**3. *combretoides***

1. *Mendoncia gilgiana* (Lindau) Benoist in Bull. Soc. Bot. Fr. 85: 679 (1939); Notulae Syst. 11: 143(1943). *APD acc*

Afromendowia gilgiana Lindau (1894)-F.T.A. 5: 7; F.W.T.A., ed. 1, 2: 250.

Monachochlamys gilgiana (Lindau) S. Moore in J. Bot. 67: 227 (1929).

1a. *Mendoncia gilgiana* (Lindau) Benoist var. *gilgiana* *APD acc*

A slender twiner with white flowers 3/4 in. long enclosed in broad bracteoles in axillary clusters of 2-4.

[Br.] Cam.: Barombi Preuss 481!

Also in **Cameroun**.

1b. *Mendoncia gilgiana* (Lindau) Benoist var. *tisserantii* Benoist Bull. Soc. Bot. Fr. 85: 679 (1939); Aké Assi, Contrib. 1: 205.

APD: *Synonym of Mendoncia gilgiana* (Lindau) Benoist

Climber with purplish bracts, vegetative parts similar to *Calycobolus heudelotii* (Convolvulaceae) but with opposite leaves which are slightly cordate at the base.

Lib.: Nekabozu (fr. Oct.) Baldwin 9971! **Iv. C.:** Danane to N'Zo (fr. Aug.) Aké Assi IA 3271; 5424!

Also in **Ubangi-Shari** and **Congo**.

2. *Mendoncia iodioides* (S. Moore) Heine in Kew Bull. 16: 180 (1962).

APD: *Synonym of Mendoncia phytocrenoides* var. *ioides* (S. Moore) Heine

Afromendowia iodioides S. Moore in Cat. Talb. 74, 139 (1913); F.W.T.A., ed. 1, 2: 250.

Monachochlamys iodioides (S. Moore) S. Moore in J. Bot. 67: 227 (1929).

A climbing undershrub, sparsely rusty-hairy, with broad leaves and whitish flowers nearly 1 in. long few in axillary clusters.

S. Nig.: Oban Talbot 388!

3. *Mendoncia combretoides* (A. Chev.) Benoist in Notulae Syst. 11: 143 (1943). *APD acc*

Thunbergia combretoides A. Chev. Bot. 490 (1920); F.W.T.A., ed. 1, 2: 250.

A lofty woody climber with arm-thick stem having adventitious roots at the base, and white flowers in fascicles on the old wood.

Lib.: Gletown, Webo Dist. (July) Baldwin 6764! **Iv. C.:** Grabo (Aug.) Chev. 19745! 60 km. N. of Sassandra (Feb.) Leeuwenberg 2820! Nékaougnié to Grabo (Aug.) Chev. 19600! Banco Hallé 796!

[Note: *Thunbergia combretoides* A. Chev. (1920) is not only a name, as stated by Index Kewensis, by Hutchinson & Dalziel, and Benoist; it is accompanied by a short descriptive note which indicates very clearly the diagnostic characters.]

Schweinf.-F.T.A. 5: 54.

- 1 Stems glabrous; leaves very long-petiolate, ovate-triangular, cordate at base, 8-14 cm. long, 5.5-8.5 cm. broad, doubly and coarsely dentate, lateral nerves 6-7 pairs, sparingly pubescent, with very minute rod-like cystoliths on the upper surface; panicle lax, large, leafy, pubescent; bracteoles linear; calyx densely viscid-pilose; lobes linear; corolla 2-2.5 cm. long, subregular, glabrous, widely funnel-shaped; stamens 4; fruit beaked, pubescent [solmsii](#)

Mimulopsis solmsii *Schweinf.* in Verh. Zool.-Bot. Ges. Wien 18: 677 (1868); F.T.A. 5: 55; Milne-Redhead in Mem. N.Y. Bot. Gard. 9: 21 (1954). *APD acc*

Mimulopsis violacea *Lindau* (1893)-F.T.A. 5: 55; F.W.T.A., ed. 1, 2: 252.

A coarse herb or undershrub up to 12 ft. high, with 4-angled pithy stems and viscid-hairy inflorescence of lilac or pale violet flowers 1 in. long.

[Br.] Cam.: Buea, 3,000-7,800 ft. (fl. & fr. May) Preuss 814! 1056! Maitland 1314! Mann 1260! Mba Kokeka Mt., Bamenda (Jan.) Keay FHI 28403! Bambili, Bemenda (Aug.) Ujor FHI 29971! F. Po.: 7,000 ft. (fl. & fr. Mar.) Mann 2348! Moka 4,000-7,000 ft. (fl. Sept., fr. Dec.) Boughey 87! 158! 172! 194! Wrigley 565!

[A poor specimen from Sierra Leone (Bintumane Peak, 5,800 ft. (Jan.) T. S. Jones 105!) is doubtfully this species.]

13. SATANOCRATER

Schweinf.-F.T.A. 5: 68.

- 1 Young branches densely light-brownish pubescent; mature leaves subsessile, ovate-lanceolate, up to 10 cm. long and 4.5 cm. broad, glabrous, but with small sunken yellowish glands on both sides; flowers solitary, opposite in the leaf-axils; pedicels 5-8 mm. long, with two linear bracteoles up to 12 mm. long; calyx tubular, up to 3.5 cm. long; corolla large, tube about 4.5 cm. long, cylindric at the base for a length of about 2 cm., 4 mm. diam.; throat 10-12 cm. diam., with 5 rounded, subequal lobes; stamens 4, included, filaments sparsely pilose, anther-cells 2, mucous; ovary with 2 ovules in each cell; fruit oblong, up to 22 mm. long, glabrous, but covered with small yellowish scale-like glands; seeds discoid [berhautii](#)

Satanocrater berhautii *Benoist* in Bull. Soc. Bot. Fr. 99: 325 (1953); Berhaut Fl. Sén. 89.

APD: *Synonym of Satanocrater fellatensis Schweinf.*

Herb with axillary mauve foxglove like flowers up to 2 1/2 in. long.

Guin.: Koundara (fl. & fr. Jan.-Dec.) Berhaut 1863; 4157; 4158!

[Very close to *S. fellatensis* Schweinf. (1868) from Galabat and Somaliland, only differing in the much larger bracteoles, calyx-tubes and capsules-H.H.]

14. DYSCHORISTE

Nees-F.T.A. 5: 71.

- 1 Flowers (at least the lower ones) in stalked cymes; calyx glandular-pubescent, 1.5 cm. long, segments united to the middle, subulate-lanceolate; corolla 2.5 cm. long, softly pubescent; leaves oblanceolate, 3-4 cm. long, shortly pubescent on the nerves beneath [1. pedicellata](#)
- Flowers in axillary clusters or subsolitary: **2**
- 2 Flowers 1-2 in each leaf-axil, shortly pedicellate; calyx densely glandular-pubescent, 2 cm. long, segments united to the middle, subulate; corolla 3 cm. long; leaves oblanceolate, subacute, 4-7 cm. long, up to 2 cm. broad, minutely pubescent [2. heudelotiana](#)
- Flowers 3 or more in each leaf-axil, sessile or subsessile; calyx 6-8 mm. long, covered with cystoliths but not pubescent; lobes filiform-subulate; corolla about 8 mm. long; leaves oblanceolate, up to 10 cm. long and 1.5 cm. broad, glabrous; fruit 1 cm. long [3. perrottetii](#)

1. **Dyschoriste pedicellata** *C. B. Cl.* in F.T.A. 5: 75 (1899); Monod in Mém. I.F.A.N. 18: 13 (1952).

*APD: Synonym of Dyschoriste heudelotiana (Nees) Kuntze**Hygrophila chariensis* Lindau in Mém. Soc. Bot. Fr. 2, 8: 48 (1908).*Dyschoriste radicans* of F.W.T.A., ed. 1, 2: 252, partly (Lely 483, 548), not of Nees (1847).

A low shrublet, shortly pubescent, with pinkish or light purplish flowers 1 in. long.

Gam.: (July) Ozanne 8! **Mali:** Koumana (fl. & fr. Feb.) Chev. 367! **N. Nig.:** Naraguta (fl. & fr. Aug.) Lely 483! 548! Kogigiri, 4,100 ft., Jos (fl. & fr. Oct.) Hepper 1058! Zaria (fl. & fr. 16. BRILLANTAISIA

P. Beauv.*-F.T.A. 5: 37; Benoist in Bull. Soc. Bot. Fr. 60: 334 (1913). *APD acc

- 1** Lamina lanceolate, with ascending lateral nerves, gradually acuminate, acute at base, 7-10 cm. long, 1-2.5 cm. broad, with very numerous rod-like cystoliths beneath, serrulate; petiole about 1 cm. long; panicle small, few-flowered, about 10 cm. long; calyx-segments unequal, the longest 6 mm. long, glandular; corolla 2 cm. long [1. lancifolia](#)

Lamina more or less broadly ovate: **2**

- 2** Lamina entire or very obscurely crenulate: **3**

Lamina toothed, mostly cuneate at base into the winged petiole: **4**

- 3** Lamina rounded at base, variable in size, broadly ovate, acuminate, pilose on both surfaces, with conspicuous rod-like cystoliths on the upper surface; petiole not or only slightly winged, pilose; panicle lax; calyx-segments linear, 8-10 mm. long, with a few stipitate glands; corolla about 3 cm. long, the tube about 1/2 as long as the lips; fruit glabrous, linear, 3-3.5 cm. long, many-seeded [2. lamium](#)

Lamina broadly rounded-cuneate into the winged petiole, about 16 cm. long, 7-8 cm. broad, otherwise as above;

- inflorescence spike-like; calyx-segments filiform, plumose [3. madagascariensis](#)
- 4 Petiole very shortly or scarcely winged towards the apex, up to 10 cm. long; leaves broadly ovate, rounded to truncate at base, shortly acuminate, 5-15 cm. long, up to 10 cm. broad, very thin, with numerous rod-like cystoliths prominent on the upper surface, obtusely repand-dentate; panicle many-flowered; calyx-segments 1 cm. long, glandular-pubescent; corolla 2.5 cm. long; fruit 2 cm. long, very shortly pubescent [4. vogeliana](#)
- Petiole more or less winged in the upper half, the lamina cuneate at base: [5](#)
- 5 Lamina gradually narrowed into the petiole: [6](#)
- Lamina abruptly narrowed into the winged petiole, rounded or truncate at the base: [7](#)
- 6 Branches of inflorescence markedly zigzag; petiole winged to the base; calyx-segments linear-spathulate [5. patula](#)
- Branches of inflorescence dichotomous; petiole not winged to the base; calyx-segments subfiliform [6. owariensis](#)
- 7 Petiole broadly winged, long-pilose to nearly glabrous, wings dentate; leaves very broadly ovate, abruptly acuminate, truncate or cordate at base, about 15-18 cm. long and 12 cm. broad, coarsely serrate, pilose on both surfaces; calyx-segments about 1 cm. long; corolla 3-4 cm. long [7. nitens](#)
- Petiole not winged, tomentose, about 2.5 cm. long; leaves broadly ovate, broadly acuminate, rounded at base, obtusely dentate, 8-15 cm. long, 5-10 cm. broad, shortly setulose, especially on the nerves beneath; calyx-segments linear, densely glandular-pilose, up to 1.5 cm. long; corolla 4 cm. long [8. bauchiensis](#)

1. **Brillantaisia lancifolia** *Lindau* in Engl. Bot. Jahrb. 17: 98 (1893); F.T.A. 5: 40; Benoist l.c. 335. *APD acc*

Brillantaisia talbotti *S. Moore* in Cat. Talb. 75 (1913); F.W.T.A., ed. 1, 2: 254.

A rather scrambling or suberect herb, the stems soon glabrous, the inflorescence glandular-pubescent, with blue flowers 3/4 in. or more long.

S. Nig.: Oban Talbot 1270! 2000!

Also in **Gabon**.

2. **Brillantaisia lamium** (*Nees*) *Benth.* in Fl. Nigrit. 477 (1849); F.T.A. 5: 38; Benoist l.c. 334; Chev. Bot. 493; Exell Cat. S. Tomé 260; Monod in Mém. I.F.A.N. 18: 13 (1962). *APD acc*

Leucorhaphis lamium *Nees* in Prod. 11: 97 (1847).

A coarse herb, erect branched 2-4 ft. high, more or less pilose at first, with blue- or violet-purple flowers 1-1 1/4 in. long in a glandular-pubescent panicle; **in damp shady places**.

(?) *B. fulva* Lindau in Engl. Bot. Jahrb. 24: 313 (1897).

Herbaceous perennial up to 6-8 ft. high, densely tomentose and glandular-pubescent, with blue purple flowers nearly 2 in. long.

N. Nig.: Vom (fl. & fr. Feb.) Dent Young 195! McClintock 222! Jos Plateau (fl. & fr. Jan.) Lely P129! Batten-Poole 209! Ropp (Dec.) MacGregor 402! [**Br.**] **Cam.:** Bamenda, 4,000-6,000 ft. (fl. & fr. Jan.) Migeod 359! Keay FHI 28347! Kumbo (Feb.) Hepper 1972! Mandanga, Mambila Plateau (fr. Jan.) Latilo & Daramola FHI 28992!

[A species of doubtful position, but at the present not identifiable with another described taxon. Most likely only a highland form of *B. owariensis*. If it should prove to be specifically distinct and found to be conspecific with *B. fulva* (1897) from Cameroun the latter name would have priority over *B. bauchiensis* (1931). *B. fulva*, an inadequately described species based on fragmentary material, was not accounted for in F.T.A. (1899) and the type was not available for this revision.-H.H.]

17. LANKESTERIA

Lindl.-F.T.A. 5: 69.

- 1 Bracts ovate: 2
- Bracts linear, densely ciliate and glandular: 4
- 2 Calyx 5 mm. long, not visible in the spike; bracts nervose, 2-3 cm. long; leaves obovate-oblongate, acuminate, 10-20 cm. long, 4-7 cm. broad, with small hair-like cystoliths conspicuous on the upper surface: 3
- Calyx over 1 cm. long, conspicuous amongst the bracts; bracts as above, but more obovate; leaves more or less as above; corolla-tube about 2.5 cm. long, shortly pilose [3. *barteri*](#)
- 3 Corolla-tube about 3.5-5 cm. long, slender, shortly pubescent; bracts glabrous except the margin [1. *elegans*](#)
- Corolla-tube 1.5-3 cm. long; bracts pubescent [2. *brevior*](#)
- 4 Inflorescence spicate, longer than broad; branchlets densely pilose; leaves obovate-oblongate, 7-12 cm. long, 3-5 cm. broad, hardly acuminate, narrowed from well above middle to the base, with small hair-like cystoliths on the upper surface; calyx-segments 1.5 cm. long; corolla a little longer than the calyx [4. *thyrsoides*](#)
- Inflorescence depressed-globose; branchlets, leaves, etc., as above, but leaves acuminate; calyx-segments 2 cm. long; corolla considerably longer than the calyx; fruit 1 cm. long, glabrous [5. *hispidula*](#)

1. *Lankesteria elegans* (P. Beauv.) T. Anders. in J. Linn. Soc. 7: 33 (1863), partly (excl. Barter 3381); F.T.A. 5: 70; F.W.T.A., ed. 1, 2: 255, partly (excl. Chev. Bot. 495 and Iv. C. specimens); Mangenot in Ic. Pl. Afr. I.F.A.N. 4: 87 (1957). *APD acc*

Justicia elegans P. Beauv. Fl. Oware. 1: 84, t. 50 (1806).

Undershrub up to 4 ft. high, in [forest undergrowth](#) etc., with spikes 2-7 in. long of orange- or pinkish-tinged slender tubular flowers 1 1/2 in. long enclosed in broad smooth but ciliate bracts.

19. CROSSANDRA

Salisb.-F.T.A. 5: 112.

Stenandriopsis *S. Moore* in J. Bot. 44: 153 (1906); Benoist in Bull. Mus. Hist. Nat., sér. 2, 15: 231 (1943), W. Afr. spp.

- 1 Short herbs; inflorescences terminal:.....2
- Shrubs up to 1 m. high; inflorescences axillary:.....6
- 2 Leaves gradually attenuated into the short petiole, oblanceolate, rounded-triangular at apex, up to 25 cm. long and 6 cm. broad, puberulous beneath; spikes with a hairy peduncle, broadly oblong-cylindric, with densely overlapping very broadly ovate spinose-dentate pubescent bracts; corolla-tube slender, about 3.5 cm. long, softly pubescent[1. flava](#)
- Leaves rounded to subcordate at base:3
- 3 Leaves oblong, rounded at base, 3-6 cm. long, 1.5-2.5 cm. broad, setulose above, pubescent on the nerves beneath; petiole 8 mm. long, pubescent; spikes small and 2-3-flowered[2. buntingii](#)
- Leaves rounded or subcordate at base, obovate-elliptic, rounded at apex, 6-12 cm. long, 3-6 cm. broad, pubescent on the nerves beneath; spikes sessile, very narrowly cylindrical, up to 12 cm. long, with ovate-lanceolate striate shortly toothed bracts:4
- 4 Bracts up to 6 mm. long and 2.5 mm. broad, irregularly toothed; calyx-segments 13-14 mm. long and 1.5 mm. broad[3. thomensis](#)
- Bracts up to 25 mm. long (usually not exceeding 18 mm.); calyx-segments 6-10 mm. long and 1.5-2 mm. broad:5
- 5 Bracts acuminate, sharply pointed, up to 5 mm. broad, teeth almost only in the upper third and rather regular, small[4. guineensis](#)
- Bracts truncate, without a point, up to 7 mm. broad, teeth along the upper two thirds, very irregular and rather large[5. talbotii](#)
- 6 Leaves pseudo-vericillate, usually 4 per node; petioles about 2 cm. long, lamina entire, ovate, acute, up to 7 cm. long and 4 cm. broad, with 6 pairs of lateral nerves; inflorescences on long spreading, shortly pubescent peduncles, flowering portion 5 cm. long; bracts ovate-elliptic, 12 mm. long and 7 mm. broad, puberulous with a thinly ciliate margin, bracteoles linear, 10 mm. long and 1 mm. broad; calyx up to 8 mm. long; corolla about 2 cm. long and 2-4 cm. diam.; capsule oblong-ellipsoid, about 1 cm. long, shortly apiculate, flattened, with four flattened seeds[6. massaica](#)
- Leaves opposite, petioles up to 2 cm. long, lamina lanceolate-elliptic, 15.5-17.5 cm. long and 4.5-5 cm. broad, lateral nerves 11-12 pairs; inflorescences on peduncles up to 4.5 cm. long, inflorescence up to 5.5 cm. long, few-flowered; bracts lanceolate, 15 mm. long and 5.5 mm. broad, puberulous; bracteoles 14 mm. long and 1.5-2 mm. broad; calyx up to 11 mm. long; corolla-tube up to 3.5 cm. long[7. obanensis](#)

1. **Crossandra flava** *Hook.* Bot. Mag. 79: t. 4710 (1863); F.T.A. 6: 113; Aké Assi, Contrib. 1: 210 (1961). *APD acc*

A short-stemmed herb woody at the root, with rather long leaves and slender-tubular yellow flowers 1 1/2 in. long in a very dense bracteate almost spiny spike 1-2 in. long; [wet places in forest](#).

Also in **Cameroun, Gabon, the Congos** and **Uganda.**

5. *Crossandra talbotii* S. Moore in Cat. Talb. 78 (1913); Milne-Redhead l.c. 281.*APD: Synonym of Stenandrium talbotii (S. Moore) Vollesen*

Crossandra guineensis of F.W.T.A., ed. 1, 2: 260, partly (Talbot 1026) not of Nees.

Herb with stout purplish ascending stems; leaves thickly papery, deep green and slightly glossy above, very pale grey-green with prominent venation beneath; bracts pale green, corolla white. Very similar to No. 4, but easily distinguished by the key characters.

S. Nig.: Okomu F.R., Benin (fr. Dec.) Brenan FHI 8463! Afi Biver F.R., Ogoja (Dec.) Keay FHI 28245! Oban Talbot 1026!

6. *Crossandra massaica* Mildbr. in J. Arn. Arb. 11: 54 (1930); J. K. Morton in J. W. Afr. Sci. Assoc. 2: 145 (1956). *APD acc*

A straggling shrub with bright salmon-pink flowers; **undershrub on rocky hills (Morton).**

Ghana: Shai Hills (Dec., Feb.) Morton GC 8088! A3862!

Also in **Congo, Kenya** and **Tanganyika.**

7. *Crossandra obanensis* Heine in Kew Bull. 16: 170 (1962). *APD acc*

A semi-shrubby plant up to 18 in. high with a few-flowered axillary inflorescence up to 2 1/2 in. long, corolla primrose yellow outside, deep yellow inside; [on wet rocks in moist forest](#).

S. Nig.: Oban, near Oban Bock (Mar.) Richards 5190! Coombe 187!

20. BLEPHARIS

Juss.-F.T.A. 5: 94.

- 1 Leaves obovate or broadly oblanceolate, rounded to acutely acuminate, about 4 in a whorl, up to 6 cm. long and 2 cm. broad, scabrid above, sparingly setulose beneath and on the margin; inflorescence 1-1.5 cm. long, often in pairs or clusters; bracts broadly obovate, with long stiff bristles on the margins, bristles with short reflexed hairs; corolla 1-lipped, 1-3 cm. long [1. maderaspatensis](#)
- Leaves linear, up to 12 cm. long and 2 cm. broad; inflorescences solitary, strobilate, often in the forks of branches, 1-5-8 cm. long; **2**
- 2 Inflorescences very reduced (one-flowered branches), up to 2.5 cm. long and 8 mm. broad, in appearance much like certain grass-spikelets; both leaves and bracts entire, sharply pointed but never with teeth or spines along the margins, with no bracteoles; corolla very shortly 3-lipped, 1-7 cm. long [2. glumacea](#)
- Inflorescences few to many-flowered, 3-8 cm. long; bracts broadly ovate, spinous-toothed, ribbed; corolla 1-lipped, about 2 cm. long, striate [3. linariifolia](#)

1. *Blepharis maderaspatensis* (Linn.) Heyne ex Roth Nov. Pl. Sp. Ind. Or. 320 (1821); Berhaut Fl. Sén. **62. APD acc**

Acanthus maderaspatensis Linn. (1763).

Blepharis boerhaviaefolia Pers. (1807)-F.T.A. 6: 96, as *B. boerhaviaefolia*; Chev. Bot. 496.

Blepharis molluginifolia of Chev. Bot. 486, not of Pers. (1807).

Suffrutescent herb, usually procumbent, coarsely pubescent on the young parts, with whorled leaves and white flowers 1/2 in. long in short finely-spiny spikes; [a weed of roadsides, waste places and forest margins in savanna](#).

Sen.: Heudelot 509! Berhaut 528. **Mali:** Koulikoro Chev. 2783. San Chev. 2784! Fakoroba (Sept.) Davey 038! **Port. G.:** Pussubé Esp. Santa 1094. **Guin.:** Kita (Sept.) Jaeger 2644! **S. Extends to [Sudan](#); apparently also in S. Africa and S.W. Asia.

[The closely related *B. persica* (Burm. f.) O. Ktze. has a similar distribution but is apparently not represented in its strict sense in our area. The genus is much in need of critical revision and monographic treatment.]

21. ACANTHUS

Linn.-F.T.A. 5: 105. APD acc

Stout erect plants, glabrescent or hirsute in the upper parts; leaves shortly petiolate, obovate to oblanceolate, often deeply pinnately lobed, rarely only dentate, spinous-toothed, up to 20 cm. long and 10 cm. broad, scabrid or thinly pilose; spikes up to 20 cm. long.

- Bracts broadly elliptic-ovate, 2-2.5 cm. long, mostly glabrescent or very sparsely puberulous, spinously toothed with about 10-12 teeth, the largest always in the middle, bracteoles with up to 5 teeth; upper calyx-segment 2.5-3 cm. long, the lowest one nearly equal; corolla rose or pink (sometimes pinkish-white); style-base hairy *L. montanus*

Bracts broadly ovate, 2-2.5 cm. long, mostly conspicuously puberulous or hairy, spinously toothed, with about 6-8 teeth, the largest pair always just beyond the terminal tooth; bracteoles entire, very rarely with 1(-2) small teeth; upper calyx-segment 2.5-3 cm. long, the lowest one always only about half that size; corolla white or pale yellow with greenish yellow marked veins (very rarely light pinkish); style entirely glabrous 2. *guineensis*

- Acanthus montanus* (Nees) T. Anders.** in J. Linn. Soc. 7: 37 (1863); Bot. Mag. 91: t. 5516 (1865); F.T.A. 5: 107; F.W.T.A., ed. 1, 2: 260, partly (specimens from N.Nig.-F.Po, fig. 268). *APD acc*

Cheilopsis montana Nees in DC. Prod. 11: 272 (1847).

Acanthus barteri T. Anders. l.c. (1863); F.T.A. 5: 108.

Plant up to 6 ft. high, stems woody, sparsely branched; leaves dark glossy green above, paler beneath, papery, scabrid bracts and calyx-lobes whitish with green veins; *in high forest*.

Very similar to the preceding species, and only distinguishable by the key characters.

22. CROSSANDRELLA

C. B. Cl. in Kew Bull. 1906: 251.

- Stems puberulous; leaves oblong-lanceolate, gradually acuminate, acutely cuneate at base, 10-18 cm. long, 4-6 cm. broad, with 12-15 pairs of spreading arcuate nerves, minutely punctate beneath; petiole 2-3 cm. long; spike about 10 cm. long; bracts ovate, acutely acuminate, 8 mm. long, strongly nerved, glabrous; bracteoles obovate-elliptic, 1 cm. long, 5-nerved; calyx deeply 4-lobed; corolla nearly 1.5 cm. long *dusenii*

Crossandrella dusenii (*Lindau*) *S. Moore* in Cat. Talb. 74 (1913). *APD acc**Pseudoblepharis dusenii* *Lindau* in Engl. Bot. Jahrb. 20: 34 (1894).*Acanthus dusenii* (*Lindau*) *C. B. Cl.* in P.T.A. 5: 108 (1899).*Crossandrella laxispica* *C. B. Cl.* in Kew Bull. 1906: 251.

An erect undershrub with rather long thin pale green leaves and bracteate flowers nearly 1/2 in. long in a terminal spike.

S. Nig.: Oban Talbot 1269! **[Br.] Cam.:** Dusen 348a. Korup F.R., Kumba (fl. & fr. June) Olorunfemi FHI 30643! Bamenda (fl. & fr. July) Ujor FHI 29276!

Extends to Rio Muni and **Uganda**.

23. ASYSTASIA

Blume-F.T.A. 5: 130. *APD acc*

- 1 Leaves very large, 20-30 cm. long, 5-12 cm. broad, elongate-obovate, caudate-acuminate, acute at base, with 7-9 pairs of prominent nerves, glabrous; inflorescence spike-like, with rather distant clusters of flowers, up to 30 cm. long; calyx-segments subulate, about 4 mm. long; corolla 3-5 cm. long, blackish when dry; style glabrous, threadlike and persistent [1. *macrophylla*](#)

Leaves much smaller than above, up to 15 cm. long and 6 cm. broad: [2](#)

- 2 Corolla about 5 cm. long: [3](#)

Corolla up to 3 cm. long: [4](#)

- 3 Corolla narrowly cylindric in the lower third, rather suddenly and narrowly bell-shaped in the upper two-thirds; calyx-segments about 1 cm. long; leaves oblong to obovate-elliptic, acuminate, acute at base, 8-16 cm. long, 3.5-5.5 cm. broad, glabrous [2. *scandens*](#)

Corolla gradually widened to near the top; calyx-segments linear, 7 mm. long, glandular-puberulous; leaves narrowly elliptic, gradually acuminate, acute at base, 8-15 cm. long, 3.5-5.5 cm. broad, glabrous [3. *vogeliana*](#)

- 4 Calyx-segments about 1 cm. long; corolla-tube 15-18 mm. long, glabrous outside: [5](#)

Calyx-segments 5 mm. long or less, subulate: [6](#)

- 5 Calyx-segments broadly linear (2 mm. broad), 1 cm. long, hairy to glabrescent, but not glandular; inflorescences elongate, about 5 cm. long; petiole 3-10 cm. long; leaves ovate to oblong-elliptic, broadly acuminate, rounded to cuneate at base, 5-7 cm. long, 2.5-4 cm. broad, glabrous or nearly so [4. *calycina*](#)

Calyx-segments narrowly linear (1-1.5 mm. broad), 9 mm. long, glandular-pilose; inflorescences short, about 2 cm. long, bracts 5 mm. long, 1 mm. broad; petiole 5-30 mm. long; leaves elliptic-ovate, cuspidate, rounded to cuneate at base, 7-12 cm. long, 15-55 mm. broad, slightly hirsute on the veins on both sides [5. *glandulifera*](#)

- 6 Calyx-segments 5 mm. long; leaves ovate or ovate-triangular, broadly pointed, rounded or truncate at base, 4-7 cm. long, 2.5-3.5 cm. broad, pubescent on the nerves; petiole pubescent; corolla-tube 1.5 cm. long or more, shortly pubescent with descending hairs; fruit 2 cm. long, softly puberulous [6. *gangetica*](#)

Calyx-segments 1-2 mm. long; leaves oblong- to obovate-elliptic, obtusely acuminate, bluntly cuneate at base, 6-15 cm. long, 2-6 cm. broad, subglabrous on the nerves beneath; corolla-tube 6-8 mm. long, minutely puberulous; fruit 2 cm. long, minutely puberulous [7. *decipiens*](#)

1. **Asystasia macrophylla** (*T. Anders*) *Lindau* in E. & P. Pflanzenfam. 4, 3B: 326 (1895): F.T.A. 5: 134. *APD acc*

Dicentrancha macrophylla *T. Anders.* in J. Linn. Soc. 7: 62 (1863).

A soft-wooded shrub up to 10 ft. high, with strong spikes of white or purple-tinged flowers 1 1/2 in. long.

This species is in need of further taxonomic study and after such work other taxa may be recognized. In the circumscription of the original authors, *T. laurifolia* also occurs in Cameroun, Gabon and Congo. The plants from Liberia differ slightly in indumentum and density of the inflorescence.

25. LEPIDAGATHIS

Willd.-F.T.A. 5: 120.

- 1 Inflorescences terminal, up to 5 cm. long; bracts broadly lanceolate, long-bristle-pointed, strongly nerved, about 7 mm. long; leaves lanceolate to narrowly oblanceolate, slightly pubescent on the nerves beneath; corolla nearly 1 cm. long; adaxial stamens 2- or 1-celled; fruit shorter than the bracts [1. alopecuroides](#)
Inflorescences axillary or at the base of the plant near the ground, sometimes both types of inflorescence on the same plant: 2
- 2 Inflorescence elongate, oblong-cylindric to finger-like, longer than broad: 3
Inflorescence globose or subglobose, about as broad as long, sometimes (in Nos. 10 and 11) ellipsoid: 6
- 3 Inflorescences (in the specimens known at present) always near the ground, finger-like to elongate-strobilate, up to 5 cm. long and (at the top) 1.5 cm. diam., ciliate on the margins but otherwise entirely glabrous, upper bracts sharply pointed, points erect; leaves acicular, up to 1.5 cm. long [2. felcis](#)
Inflorescences oblong-cylindric, nearly always in the upper parts of the plant, 1.5 cm. long and 1.5-2.5 cm. broad, formed by silvery-silky imbricate bracts with reflexed or curved points: 4
- 4 Leaves glabrous, linear, 4-5 cm. long, 1-nerved; inflorescence 3 cm. long, 1.5 cm. diam.; bracts ovate, long-subulate-acuminate, about 1 cm. long, villous [3. sericea](#)
Leaves pubescent: 5
- 5 Stems softly villous; leaves linear, prominently 3-nerved, appressed-villous-pilose, 6-7 cm. long; inflorescence sessile, 3 cm. long; bracts lanceolate, with very long bristly tips; juvenile forms [4. heudelotiana](#)
Stems thinly pubescent, otherwise plants as above; leaves linear, 3-nerved, appressed-pubescent; inflorescences about 4 cm. long; bracts long-pilose, with curved slender tips; mature and fruiting forms [4. heudelotiana](#)
- 6 Leaves long-acicular to filiform, up to 5 cm. long and 2 mm. broad: 7
Leaves not acicular or filiform; bracts acute or with spine-like tips: 9
- 7 Inflorescences strobilate to capituliform, 4-4.5 cm. diam. at the top of creeping stems up to 5 cm. long [5. capituliformis](#)
Inflorescences sessile, never strobilate, occurring at the base of the plants as well as on the stems; leaves glabrous: 8
- 8 Inner bracts with a terete subulate acumen, outer ovate-lanceolate, thin, pubescent; inflorescences densely crowded [6. fimbriata](#)
Inner bracts with a flat acumen, outer ovate-lanceolate, glabrous outside, up to 1.3 cm. long; inflorescences in a sessile cluster [7. chariensis](#)
- 9 Leaves with lateral nerves or 3-nerved, very variable, up to 10 cm. long and 1.5 cm. broad; plants never ericaceous in habit: 10
Leaves small, subulate, with no (or very inconspicuous parallel) lateral nerves, up to 2 cm. long and 1-2 mm. broad (in the vegetative parts), plants therefore often ericaceous in habit: 11
- 10 Bracts villous-plumose, with subulate points; leaves linear to elliptic-lanceolate, with lateral nerves, sometimes 3-nerved, with anastomosing lateral nerves; extremely variable plants; inflorescences often confined to the base of the plant, those sometimes occurring in the upper parts with longer and deflexed bracts, indumentum often yellowish [8. collina](#)
Bracts glabrous, usually ciliate on the margins (never villous-plumose), with long subulate points, up to 1.5 cm.

long; leaves linear, very acute, up to 17 cm. long, strongly 3-nerved, with prominent linear cystoliths spreading from the midrib at right angles [9. anobrya](#)

- 11** Inflorescences 1-3 together, 1.5-3 cm. long, about 2 cm. diam., truncate at the apex; the outer bracts 1/2-1 cm. broad, truncate with a rigid point; bracteoles and sepals oblong, truncate and tomentose at the tip; leaves of the erect stems ericoid, 4-10 mm. long, glabrous [10. pobeguini](#)

Inflorescences often proliferous, forming a globose cluster; bracteoles and sepals with a long linear ciliate tip; leaves of the erect stems 1 cm. long [11. chevalieri](#)

- 1. *Lepidagathis alopecuroides* (Vahl) R. Br. ex Griseb.** Fl. Brit. W. Ind. 453 (1861), excl. syn.
Adenosma chenopodifolia (Poir.) Sprengel (1825); Benoist in Notulae Syst. 2: 18 (1911); Chev. Bot. 497. *APD acc*

Ruellia alopecuroides Vahl Eclog. Am. 2: 49 (1796).

Teloistachya alopecuroides (Vahl) Nees in DC. Prod. 11: 262 (1847).

Lepidagathis laguroidea (Nees) T. Anders. (1863)—F.T.A. 5: 128; Chev. Bot. 498; F.W.T.A., ed. 1, 2: 256; Berhaut Fl. Sén. 88.

Teliostachya laguroidea Nees (1847).

Lepidagathis hyssopifolia (Benth.) T. Anders. (1863)—F.T.A. 5: 128.

Teliostachya hyssopifolia Benth. (1849).

Decumbent slender branching herb, woody below, rooting at the lower nodes, with small pink or purplish flowers 1/3 in. long in rather dense almost bristly pseudo-spikes; inflorescences very variable in length and density.

Sen.: Niokolo-Koba Berhaut 1541. **Mali:** Kita Chev. 99. **Guin.:** Faranna Chev. 20443. Forékaria Chev. 20528. Macenta, 2,000-2,500 ft. (fr. Oct.) Baldwin 9756! **S. L.:** Afzelius! Don! 10. *Lepidagathis pobeguinii* *Hua* in Bull. Soc. Bot. Fr. 60: 578, t. 18 (1904), and in Pobéguin Ess. Fl. Guin. Fl. 125, t. 27bis (1906); Chev. Bot. 499. *APD acc*

Un-named plant of A. L. Smith in J. Linn. Soc. 30: 155-157, t. 8 (1894).

A very variable, heath-like plant, 12-18 in. high with a woody rootstock; flowers yellowish.

Mali: Scaëtta 3172! Dougoura Chev. 335! 356. **Guin.:** Fouta Djallon, Kouroussa Pobéguin 209! Sc. Elliot 5386! Beyla Chev. 20879!

11. *Lepidagathis chevalieri* *Benoist* l.c. 20 (1911); Chev. Bot. 498. *APD acc*

Habit of the last, with inflorescence-heads more confluent and often in dense clusters.

Mali: Diaragouéla Chev. 481! **Guin.:** Coniaguin to Boussoura Pobégum 2145!

Note: The species Nos. 2, 5, 10, 11 are very closely allied and probably (ecological?) forms of one polymorphic aggregate species. The accepted distinctions are artificial and based upon herbarium material only.

- Lepidagathis dahomeyensis* *Benoist* in Mém. Soc. Bot. Fr. 2, 8: 190 (1910); Chev. Bot. 498, as *dahomensis*; F.W.T.A., ed. 1, 2: 256.

Dah.: Farfa to Toukountouna, Mts. Atacora, 1,500 ft. Chev. 24072!

The species is only known from the type-collection and the holotype consists of a poor specimen with partly burned inflorescences, which may well represent an occasional form of *L. collina* occurring after burning. See also note under No. 7.

- Lepidagathis scabra* *C. B. Cl.* in F.T.A. 5: 129 (1899),

Ghana: Damongo Scarp, (fl. & fr. Dec.) Morton A120!

In savanna woodland.

An **Angolan** and E. African species, was found by Dr. J. K. Morton in Ghana on the top of Damongo Scarp

26. FILETIA

Miq.-F.T.A. 5: 136.

- 1 Shrub, about 1 m. high, glabrous, with simple round stem; leaves ovate, up to 18 cm. long and 7 cm. broad, with truncate or often slightly cordate base; petioles 0.5-2 cm. long; inflorescences terminal, racemose, up to 8 cm. long; bracts filiform, 2-4 mm. long, bracteoles similar, up to 2 mm. long; flowers in 1-3-flowered dichasial partial inflorescences, peduncles and pedicels short, up to 4 mm. long; calyx about 4 mm. long, glandular, with 5 equal, filiform lobes; corolla about 9 mm. long, 1.5 mm. diam., with minute glandular hairs outside; upper lip 5 mm. long, 2 mm. broad, with two lobes, lower lip 4 mm. diam.; stamens 4, of different length, the outer ones 3 mm., the inner ones 2 mm. long, filaments of the two different stamens close together and apparently united, anther-cells muticous; ovules 2 in each cell; fruit unknown [africana](#)

- Filetia africana* *Lindau* in Engl. Bot. Jahrb. 20: 41 (1894); F.T.A. 5: 136 (not of S. Moore in Cat. Talb. 140, nor syn. *F. africana* of F.W.T.A., ed. 1, 2: 257, excl. distrib.).

APD: *Synonym of Asystasia lindauiana Hutch. & Dalziel*

Asystasia lindauiana Hutch. & Dalz. F.W.T.A., ed. 1, 2: 257 (1931), excl. cited specimens (Tatbot 380, 985).

A shrub about 3 ft. high with a simple slender green stem; flowers pale purplish pink; [in deep shade in forest](#).

[Br.] Cam.: S. Bakundu F.R., Kumba (Mar.) Brenan, 9412!

Also in [Cameroun](#) and [Gabon](#).

[A very rare plant, confused in Cat. Talb. and F.W.T.A., ed. 1, with an at that time undescribed *Asystasia* sp. (*A. deeipiens*, see p. 413 above).]

27. NEURACANTHUS

Nees-F.T.A. 5: 137.

- 1 Plants about 2 ft. high, from a short woody rootstock, stems and leaves beneath white stellate-tomentose; leaves broadly elliptic, acute, up to 10 cm. long and 6.5 cm. broad, with about 10 pairs of lateral nerves, entire, subsessile or with a petiole up to 5 mm. long; flowers in dense axillary heads up to 5 cm. in diam., made up of few-flowered condensed unilateral spikes with 3 mm. long hyaline hairs; bracts 9-12 mm. long, ovate, acute, soft, mucronate with almost deflexed tips, dark brown, parallel-nerved; calyx 9 mm. long, with long-acuminate lobes; corolla about 1 cm. long, pilose; capsule glabrous, flattened, spindle-like, quadrangular and with sharp tips on both ends, about 14 mm. long, 4 mm. broad and 2 mm. diam., with 2-4 lentil-like seeds about 3 mm. diam. with fine white-silky hygroscopic hairs [niveus](#)

Neuracanthus niveus S. Moore in J. Bot. 18: 37 (1880); F.T.A. 5: 139; Benoist in Notulae Syst. 2: 145 (1911); A. Chev. in Etud. Fl. Afr. Centr. Fr. 1: 235 (1913); F. W. Andr. Fl. Pl. Sud. 3: 184. *APD acc*

General appearance like *Lepidagathis heudelotiana*, but very different from all W. African *Lepidagathis* by its broad leaves with pinnate venation of many lateral nerves and white tomentum beneath; flowers violet.

Guin.: Dinguiraye, Bocaria (fr. Dec.) Jac.-Fél. 1447!

Also in [Cameroun](#), [Ubangi-Shari](#), [Sudan](#) and [E. Africa](#).

28. AFROFITTONIA

Lindau in Engl. Bot. Jahrb. 49: 406 (Mar. 1913); Rendle in Cat. Talb. IX (Apr. 1913). *APD acc*

Talbotia S. Moore in Cat. Talb. 80, t. 11, fig. 1-6 (Apr. 1913).

- 1 Herb with procumbent stems rooting at the nodes; branches pubescent; leaves ovate-elliptic, rounded at both ends, 3-5 cm. long, 2.5-3.5 cm. broad, densely pubescent beneath; petioles pubescent; spikes axillary, pedunculate, 2-4 cm. long; bracts obovate, 1 cm. long; bracteoles spatulate-oblongate, 8-10 mm. long; corolla-tube 1 cm. long, 2-lipped, the posterior lip bidentate, the anterior lip 3-lobed; stamens 4, the anthers of the 2 shorter ones 1-celled [silvestris](#)

Afrofittonia silvestris Lindau l.c. 407, fig. 2 (1913); F.W.T.A., ed. 1, 2: 608. *APD acc*

Talbotia radicans S. Moore l.c. (1913); F.W.T.A., ed. 1, 2: 257.

A procumbent herb trailing on [moist ground on the forest floor](#); flowers whitish with mauve markings.

S. Nig.: Oban Talbot 971! Calabar to Mamfe (Jan., Nov.) Onochie FHI 36025! Baldwin 13761! Cross B. North F.R. (Dec.) Keay FHI 28149! F. Po: Monte Bolea (Dec.) Guinea 362! Bokoko (Oct.) Mildbr. 6830.

Also in Cameroun (Ndoungué Ledermann 6369.)

The related *Fittonia argyroneura* Coem., a native of tropical America, is cultivated as an ornamental, e.g. in Ghana (Legon (Nov.) Morton A2819!) and in S. Nigeria (Ibadan (Oct.) Keay FHI 37677!)

29. STAUROGYNE

Wall. Pl. As. Rar. 2: 80, t. 186 (1831); Bremekamp in *Reinwardtia* 3: 163 (1955); Heine in *Kew Bull.* 16: 181 (1962)

Ebermaiera Nees (1832).

Zenkerina Engler (1897)-F.T.A. 4, 2: 262.

(?)*Neozenkerina* Mildbr. (1921).

Staurogynopsis Mangenot & Aké Assi in *Bull. Jard. Bot. Brux.* 29: 27 (1959).

- 1 Erect plants, little-branched; inflorescence spicate, many-flowered, up to 10 cm. long; leaves elliptic, up to 15 cm. long and 6 cm. broad, cuneate at base, acute at apex [1. kamerunensis](#)
- Small creeping herbs, much-branched; inflorescence capitate, few-flowered, up to 1.5 cm. diam.; leaves ovate to ovate-lanceolate, up to 6 cm. long and 3.5 cm. broad, truncate at base, very obtuse at apex: **2**
- 2 Leaves up to 6 cm. long and 3.5 cm. broad, hairs distributed over the whole surface as well as on the nerves; calyx-lobes free from near the base [2. paludosa](#)
- Leaves up to 2 cm. long and 1.5 cm. broad, hairs on the surface nearly confined to the nerves, with very few also in the lower margins; calyx-lobes united in the lower half [3. capitata](#)

1. *Staurogyne kamerunensis* (Engl.) Benoist in *Notulae Syst.* 2: 290 (1913); Mangenot & Aké Assi l.c. 29: 36 (1959). *APD acc*

[A local race of *E. marginata*, described in specific rank.-H.H.]

31. NELSONIA

R. Br.-F.T.A. 5: 28; Bremekamp in Reinwardtia 3: 247 (1955). *APD acc*

- 1 A small herb with decumbent villous branches; lower leaves long-petiolate, upper becoming subsessile, elliptic to ovate, entire, up to 4 cm. long, pubescent or often woolly; flowers in cylindric villous spikes up to 10 cm. long; bracts imbricate, broadly ovate, about 6 mm. long; calyx-lobes 4, lanceolate, unequal, the largest often shortly bilobed; fruits a little longer than the bracts [canescens](#)

Nelsonia canescens (Lam.) Spreng. Syst. Veg. 1: 42 (1825); F.W.T.A., ed. 1, 2: 608; Milne-Redhead in Mem. N.Y. Bot. Gard. 9, 1: 19 (1954); Bremekamp l.c. 248. *APD acc*

Justicia canescens Lam. Tab. Encycl. Méth. Bot. 1: 41 (1791).

Nelsonia campestris R. Br. (1810)-F.T.A. 5: 28; Chev. Bot. 491; F.W.T.A., ed. 1, 2: 261.

Softly pubescent prostrate branching herb with erect spikes of small pink or purple flowers.

Widespread in the tropics.

32. BARLERIA

Linn.-F.T.A. 5: 140. APD acc

- 1 Plants, especially young leaves and inflorescences, covered with both simple and stellate hairs; stellate hairs mostly composed of one very long hair with a dense tuft of much smaller hairs at its base:2
Plants only covered with simple hairs:3
- 2 Flowers in a terminal spike-like inflorescence up to 15 cm. long; leaves linear-lanceolate, acute, up to 17 cm. long and 23 mm. broad, with about 5 pairs of lateral nerves which are, like the midrib, covered with stellate hairs beneath; outer sepals lanceolate, up to 15 mm. long and 4.5 mm. broad, adaxial ones usually slightly emarginate, like all other parts of the inflorescence hairy-glandulose, of the same texture as the leaves (i.e. not becoming dry and papery in flowering and fruiting state) [1. macclaudii](#)
Flowers axillary and terminal; leaves elliptic-lanceolate, acuminate, cuneate at base, up to 10 cm. long and 3.5 cm. broad (but usually only about 5 cm. long and 2 cm. broad); stellate hairs particularly conspicuous on the younger parts of the inflorescences; outer calyx-segments subequal, broadly ovate, up to 1.5 cm. long and 1 cm. broad, sharply acuminate, becoming dry and papery in flowering and fruiting state, finely and irregularly spinulose-dentate, covered along the margins and nerves on the outer surface with stellate hairs but glabrous along the nerves within, and on the inner surface only covered with sparsely distributed minute simple hairs between the veins [2. asterotricha](#)
- 3 Branches without interpetiolar spines:4
Branches with interpetiolar spines:9
- 4 Bracts with spiny teeth on the margin, strongly venose, broadly ovate, about 2.5 cm. long and 2 cm. broad; corolla 5 cm. long; leaves narrowly obovate, acutely acuminate, about 15 cm. long and 5 cm. broad, with rod-like cystoliths on the upper surface, appressed-pilose on the nerves beneath; corolla yellow .. [3. oenotheroides](#)
Bracts entire; corolla white, blue, purplish, or (particularly on drying) greyish-violet:5
- 5 Leaves glabrous beneath, ovate-elliptic, shortly and acutely acuminate, rounded or subcordate at base, 6-9 cm. long, 3-4.5 cm. broad; petioles (of the lower leaves) 1.5-2.5 cm. long, upper leaves sessile; inflorescence substrobrate; adaxial calyx-segment broadly obovate-orbicular, shortly ciliate, up to 2 cm. long and 15 mm. broad; corolla 5 cm. long, pubescent; stamens long-exserted [4. brownii](#)
Leaves pilose, pubescent or villose beneath; leaf-base always cuneate:6
- 6 Flowers very few not forming a strobilus; corolla 3-4 cm. long:7
Flowers in substrobrate, inflorescence-like clusters; the two outer sepals lanceolate to ovate-lanceolate, 13-17 mm. long, not becoming transparent nor papery nor denticulate nor purplish-tinged in fruiting specimens; corolla 4 cm. long:8
- 7 Stems covered with minute grey appressed indumentum; leaves narrow-lanceolate, 1-3.5 cm. long, 0.5-1 cm. broad, finely grey-pubescent in young leaves (older leaves may be glabrescent and larger); the 2 outer sepals ovate about 1.5 cm. long and 7 mm. broad; fruits 1-seeded, beaked [5. bonifacii](#)
Stems more or less setose with brown hairs; leaves elliptic, 3.5-15 cm. long, 2-5 cm. broad, setose mainly on the nerves beneath; the 2 outer sepals broadly ovate up to 1.8 cm. long and 1.3 cm. broad, setose, becoming

slightly transparent or papery and minutely and sparsely dentate in fruit, often purplish-tinged; fruits 2-seeded, not beaked [6. ruellioides](#)

- 8 Indumentum pilose, not densely villose, hairs spreading; adaxial sepal narrowly lanceolate, up to 15 mm. long and 4 mm. broad, abaxial sepal of about the same size, at its apex narrowly 2-cleft for about 1/4 (or sometimes more) of its length; corolla white, sometimes with a few purple markings [7. opaca](#)

Indumentum densely villose, sometimes slightly silky-shiny, hairs straight; adaxial sepal broadly ovate-lanceolate, up to 17 mm. long and 8 mm. broad, abaxial sepal of about the same size (sometimes even larger), at its apex broadly 2-cleft for about 1/3 of its length; corolla blue-purple [8. villosa](#)

- 9 Spines spinulose-dentate, slightly winged (but often nearly simple and with no, or very small, teeth); plants softly pubescent; leaves oblanceolate, up to 4 cm. long and 1.5 cm. broad, loosely pilose, drying blackish, with a sharp tip; flowers solitary in the upper axils, blue; corolla 2.5 cm. long, glabrous outside; fruit oblanceolate, 2 cm. long [9. bornuensis](#)

Spines rigid, acicular, simple; plants nearly glabrous; leaves more or less elliptic, narrowed at both ends, usually slightly larger than in No. 8, glabrous, drying light greenish or greenish-grey, with a sharp tip; flowers solitary and axillary, yellow-orange, more or less crowded at the tips of branches and forming an inflorescence, the upper leaves and bracts often becoming spine-like; corolla up to 3 cm. long, glabrous or with very few hairs outside; fruit oblanceolate, 1.5 cm. long [10. eranthemoides](#)

1. *Barleria maclaudii* Benoist in Notulae Syst. 2: 156 (1911). *APD acc*

A stout erect annual (?) herb, unbranched, up to 5 ft. high with very long willow-like leaves; flowers pale mauve, about 1 in. long, funnel-shaped, about 1 1/2 in. across.

Guin.: Saman valley (Oct.) Maclaud 209! Fouta Djallon Unknown collector (H.b Paris)! Dinguiraye (fl. & fr. Dec.) Jac.-Fél. 1430!

2. *Barleria asterotricha* Benoist l.c. 155 (1911). *APD acc*

Subshrub, up to 3 ft. high, very similar to *B. ruellioides* (No. 6), but easily distinguishable by its indumentum; flowers handsome violet with a narrow corolla-tube up to 3/4 in. long, corolla if fully opened, saucer-shaped, 3/4 in. across; [preferably in shady places](#) (Jac.-Fél.).

Guin.: Dinguiraye (fl. & fr. Dec.) Maclaud 24! Jac.-Fél. 1484!

3. *Barleria oenotheroides* Dum. Cours. Botan. Cultiv., ed. 2, 2: 561 (1811). *APD acc*

Barleria flava Jacq. f. Eclog. Pl. rar. 1: 67, t. 46 (1813), excl. syn.; l.c. 153; Bot. Mag. 70: t. 4113 (1844), excl. syn. *B. mitis* Ker; F.T.A. 5: 155; Chev. Bot. 497; F.W.T.A., ed. 1, 2: 262; Benoist in Bot. Soc. Brot., sér. 2, 24: 39.

Eranthemum flavum Willd. (1813), name only.

Barleria senegalensis Nees (1847).

A woody undershrub erect at first then often straggling, the stems covered with stiff yellowish hairs; the flowers nearly 2 in. long, yellow turning mauve in drying, in dense bracteate spikes; [sometimes cultivated as an ornamental](#).

Mali: Moussaia Chev. 397. Guienguénia Chev. 437. **Port. G.:** Tébé Esp. Santo 566. Bissalanca, Bissau (Jan.) Esp. Santo 2240! **Guin.:** Heudelot 644! Farfar 60! Kindia Chev. 13011. 4. *Barleria brownii* S. Moore in J. Bot. 46: 73 (1908). *APD acc*

Barleria talbotii S. Moore in Cat. Talb. 86 (1913).

A straggling shrub with smooth branches and blue flowers about 2 in. long.

Ghana: Sunyani to Chira, N. Ashanti (Dec.) Morton A2826! Dormaa to Berekum (Dec.) Morton A2647! **S. Nig.:** Owo (Jan.) Burton FHI 30798! Akure F.R., Ondo (Dec.) Keay & Trochain FHI 25603! Onipanu, Ondo (Dec.) Onochie FHI 5235! Oban Talbot 1396!

Also in **Ubangi-Shari**, **Gabon**, **Congo**, **Uganda** and **Angola**.

5. *Barleria bonifacei* Benoist in Bull. Soc. Bot. Fr. 99: 325 (1953).

APD: Synonym of Barleria lancifolia subsp. charlesii (Benoist) J.-P. Lebrun & Monod

Barleria hereroensis var. **charlesii** Benoist in Mem. Soc. Bot. Fr. 8: 279 (1917); Chev. Bot. 497.

Herb 1-2 ft. high; flowers bluish or mauve; in dry savanna.

Maur.: Oumoulsouitigat (Oct.) Charles in Hb. Chev. 28813! Assaba (fl. & fr. Jan.) Boniface 107!

[This is very near the aggregate species *B. lancifolia* T. Anders. (in J. Linn. Soc. 7: 28 (1863); Obermeijer in Ann. Transvaal Mus. 16: 147 (1933), for synonymy and taxonomic discussion. *B. alata* S. Moore (1880)-F.T.A. 5: 158), which is widespread in S. Africa and Angola; but the incomplete knowledge of the taxonomy of the representatives of this group outside the area covered by Miss Obermeijer's revision does not permit the inclusion of *B. bonifacei* in its synonymy-H.H.]

6. **Barleria ruellioides** T. Anders. in J. Linn. Soc. 7: 30 (1863); F.T.A. 6: 165. *APD acc*

Woody herbaceous straggling plant with pale blue sub-campanulate flowers 1-1 1/2 in. long; in riverine forest in savanna country.

Mali: Bamako (Sept.) Jaeger 3/1943! Siriguibougou (Nov.) Raynal 5193! Sikasso (fl. & fr. Dec., Apr.) Vuillet 504! Chev. 761! **Guin.:** Kouroussa (Dec.) Pobéguin 606! Siguiri (Jan.) Also in **Cameroun**.

8. **Barleria villosa** S. Moore in J. Bot. 18: 267 (1880); F.T.A. 5: 164. *APD acc*

A woody climbing shrub with villous stems and foliage, and blue-purple flowers 1 1/2 in. long.

N. Nig.: Jos Plateau (fl. & fr. Jan.) Lely P114! Batten-Pools 206! Vom (Jan.) Dent Younff 193! Ropp (Dec.) W. D. MacGregor 406! Pankshin, 4,000 ft. (Dec.) Coombe 61! **[Br.] Cam.:** Vogel Peak, 4,900 ft., Adamawa (Dec.) Hepper 1578!

Also in **Cameroun** and **Angola**.

[*B. opaca* and *B. villosa* are very similar and, particularly in herbarium specimens, sometimes difficult to distinguish (see note in F.T.A. 1.c.). The differentiation based on the size and shape of the adaxial calyx-segments as indicated by Clarke in F.T.A. 5: 144, key; 163, 164, is very unreliable because these organs are rapidly accrescent after the corollas have fully opened; the measurements-taken from a full series of dissections of herbarium material of our region-are therefore very different from those given in F.T.A. The isotype-specimens of *B. villosa* (Welw. 5070, 5071) which were apparently used by Clarke for his description in F.T.A. are very young and have therefore much smaller calyx-segments than usual; in fact, *B. villosa* has, in all fully flowering specimens seen from W. Africa for this revision, larger outer calyx-segments than *B. opaca*-H.H.]

9. **Barleria bornuensis** S. Moore in Macleod, Chiefs & Cities Centr. Afr. 304 (1912); Cat. Talb. 85. *APD acc*

Low, branched, woody undershrub of savanna, with spines 1/2-3/4 in. long, and blue flowers 1 in. long.

N. Nig.: Kontagora & Sokoto Prov. (fl. & fr. Dec.) Dalz. 359! Keana (Aug.) Hepburn 53! Dutsin Makurdi (fr. June) Elderry FHI 16352! 16372! L. Chad Dist. Talbot 1009!

Also in **Cameroun**.

10. *Barleria eranthemoides* R. Br. ex C. B. Cl. in F.T.A. 5: 147 (1899). *APD acc*

Barleria eranthemoides R. Br. in Salt, Voy. Abyss. Append. IV: LXIV (1813), name only.

Low prickly semi-shrub up to 75 cm. high with spines up to 1 in. long, leaves bright green, smooth; flowers pale orange, corolla-tube about 1 in. long.

N. Nig.: Wusasa, Zaria (Aug.) Keay FHI 28030! [**Br.**] **Cam.:** Gwoza, 3,500 ft., Dikwa Div. (Jan.) McClintock 149!

Also in **Sudan**, **Ethiopia**, **Somaliland**, **E. Africa** and **Mozambique**.

B. cristata Linn. and *B. prionitis* Linn., both natives of tropical Asia, are cultivated as ornamentals.

***Barleria schmittii* Benoist in Notulae Syst. 3: 218 (1916); Chev. Bot. 497.**

A prickly undershrub up to 1 ft. high; flowers white.

Maur.: Bir Moghreïn Schmitt in Hb. Chev. 28571! Chareb El Ba'ir (fl. & fr. Feb.) Chudeau!

Recorded apparently just outside our area and included here to draw attention to the fact that it may occur within it. The two gatherings cited (the only specimens hitherto known) belong to a complex group which is mainly represented in S. Africa and for which the following name seems today the most reliable: *B. rigida* Nees in DC. Prod. 11: 242 (1847); P. G. Meyer in Mitt. Bot. Staatssammlg. München 2: 384 (1957), for synonymy and taxonomic discussion. *B. irritans* var. *ilicina* T. Anders. in J. Linn. Soc. 7: 28 (1863). The taxonomy of these plants is still in need of further study.

33. PSEUDERANTHEMUM

***Radlk.* in Sitzb. math. phys. Cl. k. bayer. Akad. Wiss. 13: 282 (1883); Milne-Redhead in Kew Bull. 1936: 255.**

Eranthemum of F.T.A. 5: 169, partly, and of F.W.T.A., ed. 1, 2: 262, partly, not of Linn.

- 1** Capsule normally 2-seeded, slightly pubescent outside; flowers brick to red-scarlet, with a darker centre; inflorescence finely glandular; seeds finely muricate, especially on the inner face [1. *dispermum*](#)
Capsule normally 4-seeded: **2**
- 2** Corolla distinctly bilabiate, stamens exserted; corolla-tube scarcely inflated above; capsule often more than 3 cm. long; nodes of the inflorescence many-flowered; shrubs up to 4 m. high [2. *ludovicianum*](#)
Corolla not distinctly bilabiate, stamens included; inflorescence rather slender with few flowers at each node; corolla somewhat inflated above; capsule less than 3 cm. long; herbs, sometimes woody at the base, up to 20 cm. high [3. *tunicatum*](#)

1. *Pseuderanthemum dispernum* Milne-Redhead in Kew Bull. 1936: 267, fig. 6, 4. *APD acc*

Eranthemum hypocrateriforme of Cat. Talb. 140 (1913); F.W.T.A., ed. 1, 2: 262; not of Roem. & Schult.

Erect perennial herb or shrubby, up to 2 ft. high; corolla brick-red outside, bright coral-red inside, about 1 1/2 in. long.

S. Nig.: Oban Talbot 1552! Okuni, Cross B. (Jan.) Holland 172! Agoi Efut-Ukwop Eyere Rosevear 30/31! [**Br.**] **Cam.:** Meandja Schlechter 12681! Babenga to Owe, Victoria (fl. & fr. Nov.) Keay FHI 37544!

Also in **Cameroun**.

2. *Pseuderanthemum ludovicianum* (Büttner) Lindau in E. & P. Pflanzenfam. 4, 3b: 330 (1895) and in Schlechter, Westafr. Kautschuk.-Exped. 316; F.W.T.A., ed. 1, 2: 608; Milne-Redhead l.c. 263, fig. 6, 1. *APD acc*

Eranthemum ludovicianum Büttner (1890)-F.T.A. 5: 172; F.W.T.A., ed. 1, 2: 262.

A forest undershrub up to 12 ft. high, with narrow tubular flowers white or purplish-tinged, 1 1/2 in. or more long forming a spike-like panicle 4-10 in. long.

Lib.: (fl. & fr. Jan.) Harley 1063! **Ghana:** Pusa Pusa Ravine, Kibbi Hills (Jan.) Morton GC 6383! Kibbi, 2,370 ft. (Dec.) Morton GC 8129! Mampong Scarp (fl. & fr. Jan.) Morton A1537! Kwahu Tafo to Mankrong (fr. Apr.) Morton A673! **S.**

34. ADHATODA

Medik.-F.T.A. 5:221 . APD acc

- 1 Plants persistently brownish-tomentose and hairy, particularly stem, petioles, inflorescences and leaves beneath; leaves broadly elliptic-lanceolate, up to 35 cm. long and 11 cm. broad, with up to 17 pairs of lateral nerves; inflorescences axillary and subterminal, very short (up to 3.5 cm. long) and compact, strobiliform in appearance, densely hairy; corolla about 2 cm. long [1. camerunensis](#)
- Plants not persistently hairy or tomentose (sometimes the younger parts pubescent or even brownish-tomentose, but always becoming more or less glabrous); inflorescences terminal (but sometimes with some additional axillary branches in the upper leaf-axils), elongate, never strobiliform in appearance, paniculate or spiciform; always (in normal specimens) much longer: **2**
- 2 Lateral nerves about 15 pairs, puberulous beneath; leaves broadly elliptic, acuminate, shortly decurrent on the petiole, 17-25 cm. long, 8-10 cm. broad; petiole up to 4 cm. long; panicle large, with stiff ascending branches; bracts leafy; bracteoles obovate-oblongate, pubescent; calyx-segments oblong-lanceolate, 1 cm. long, shortly pubescent; ovary pubescent; corolla 2 cm. long [2. robusta](#)
- Lateral nerves up to 10 pairs: **3**
- 3 Inflorescences lax, almost branched, paniculate or compound-racemose: **4**
- Inflorescence a dense spike: **6**
- 4 Bracts narrowly lanceolate, about 5 mm. long; leaves broadly elliptic or obovate-elliptic, acuminate, up to 20 cm. long and 10 cm. broad, glabrous, lateral nerves in 6-8 pairs; calyx 7 mm. long, lobes about 5 mm. long and 1.5 mm. broad at base [4. maculata](#)
- Bracts ovate to orbicular, sometimes leafy: **5**
- 5 Partial inflorescence elongate, sometimes with zigzag branches, flowers in rather remote clusters with large orbicular leafy bracts of 15 cm. diam.; leaves elliptic, rather abruptly acuminate, about 15 cm. long and 8 cm. broad, glabrous; lateral nerves about 6 pairs; calyx-segments lanceolate, about 8 mm. long [3. buchholzii](#)
- Partial inflorescences straight, often branched, flowers more or less racemosely arranged at the terminal branchlets in the axils of ovate, shortly apiculate bracts 9-14 mm. long and 6-8 mm. broad; leaves narrowly obovate-lanceolate, up to 30 cm. long and 8 cm. broad, glabrous, lateral nerves about 8 pairs; calyx-segments lanceolate, about 7 mm. long and 3 mm. broad at base [5. guineensis](#)
- 6 Bracts linear-lanceolate; spikes slender, about 15 cm. long; leaves obovate, auriculate at the broadly cuneate

base, 14-18 cm. long, 5-8 cm. broad, minutely pubescent beneath, with 9-10 pairs of lateral nerves; corolla 1 cm. long [6. tristis](#)

Bracts suborbicular, overlapping, strongly nervose, about 1.3 cm. long, softly puberulous; spikes strobiliform, elongated, up to 25 cm. long, pedunculate; leaves elliptic-obovate, shortly acuminate, broadly cuneate at base, up to 25 cm. long and 12 cm. broad, shortly pubescent on nerves and veins beneath [7. orbicularis](#)

1. **Adhatoda camerunensis** *Heine* in Kew Bull. 16: 165, fig. 2 (1962). *APD acc*

Duvernoia robusta *Lindau* in Schlechter, Westafr. Kautschuk-Exp. 317 (1900), as to Schlechter 12928, not *Adhatoda robusta* C. B. Cl.

Erect, little-branched shrub up to 6 ft. high with brown-pilose stem and petioles; leaves glabrescent above, softly hairy beneath; corolla pure white or white with crimson markings; [in lowland rain forest](#).

[Br.] **Cam.**: Bova to Kuke Bova, Kumba (fl. & fr. Jan.) Keay FHI 37391!

Also in **Cameroun**.

2. **Adhatoda robusta** C. B. Cl. in F.T.A. 5: 223 (June 1900); Aké Assi Contrib. 1: 214.

APD: *Synonym of Justicia baronii* V.A. W. Graham

Duvernoia robusta (C. B. Cl.) *Lindau* in Schlechter, Westafr. Kautschuk-Exp. 317 (not before Dec. 1900) excl. Schlechter 12928.

A shrub or small tree up to 16 ft. high, brownish-velvety tomentose on the young parts, with large shining leaves and white flowers 3/4 in. long in a large erect panicle; [in rain forest](#).

Iv. C.: 30 km. E. of Gagnoa (fr. Dec.) Leeuwenberg 2154! Oumé (Nov.) Aké Aké Assi 5505! **Ghana**: Begoro, Akim (Jan.) Irvine 1158! Darko 956! Akwapim Hills (Oct.) Johnson 793! Akparafe (Nov.) 6. *Adhatoda tristis* Nees in DC. Prod. 11: 404 (1847); F.T.A. 5: 223; Cat. Talb. 140. *APD acc*

Adhatoda auriculata S. Moore in Cat. Talb. 87, 140 (1913), not of Nees (1847).

Herbaceous undershrub 2-4 ft. high, with 4-angled branches brownish-pubescent when young, with purple flowers 3/4 in. long in spikes interrupted at the base.

S. Nig.: Oban Talbot 50! 996! 2011! Calabar to Mamfe (Jan.) Onochie & Okafor FHI 36052x! **F. Po:** (Jan.) Mann 165! (Nov.) T. Vogel 161! S. Isabel to S. Carlos (fr. Dec.) Guinea 766!

Also in [Cameroun](#).

7. *Adhatoda orbicularis* (Lindau) C. B. Cl. in F.T.A. 5:222 (1900); Cat. Talb. 140.

APD: *Synonym of Justicia orbicularis* (Lindau) V.A. W. Graham

Duvernoia orbicularis Lindau in Engl. Bot. Jahrb. 22: 123 (1895).

A shrub about 12 ft. high, tawny-pubescent on the young parts, with rather large leaves and flowers 1/2 in. long in long close spikes with strongly-nerved bracts.

S. Nig.: Oban Talbot 975! **F. Po:** Mann. 1435!

Also in [Cameroun](#).

35. GRAPTOPHYLLUM

Nees-F.T.A. 5: 241.

- 1 Leaves oblong-elliptic, usually variegated, sometimes copper-coloured, very shortly and broadly acuminate, acute at base, 9-15 cm. long, 5-7 cm. broad, with 7-8 pairs of lateral nerves, glabrous; petiole about 5 mm. long; racemes several-flowered; pedicels with 3-4 small bracts at the base, about 5 mm. long; calyx-lobes lanceolate, 3-5 mm. long; corolla glabrous, 3-5 cm. long, limb very oblique; stamens 2, exserted, anther-cells equal [1. pictum](#)

Leaves more or less as above but normally green with longer acumen and long petioles; calyx and corolla minutely glandular [2. glandulosum](#)

1. *Graptophyllum pictum* (Linn.) Griffith Notulae 4: 139 (1854). *APD acc*

APD: *Synonym of Graptophyllum glandulosum* Turrill

Justicia picta Linn. Sp. Pl. ed. 2, 1: 21 (1763); Bot. Reg. 15: t. 1227 (1829).

Graptophyllum hortense Nees (1832)-C. B. Cl. in Fl. Brit. Ind. 4: 545; F.T.A. 5: 241, partly (excl. Staudt "4551").

A glabrous shrub with variegated leaves, often copper-coloured (see note below) and red-purple tubular flowers 1-1 1/2 in. long in narrow panicles; [planted in gardens as an ornamental](#).

Guin.: Boa Entrada (cult., Aug.) Chev. 13492! **S. L.:** (cult., May) Barter! Kitchom (Dec.) Sc. Elliot 4326! Freetown (cult., Feb.) Dalz. 1015! Magbile (Dec.) Thomas 6379! **Ghana:** Kokorantumi (cult., June) Deighton 3391!

Planted in gardens as an ornamental; native country uncertain, but certainly Indo-Pacific, sometimes known as "Joseph's Coat" or "Caricature Plant".

Plants with normal green leaves have been described from Java under the name *G. hortense* var. *viride* Hasskarl (in Cat. Hort. Bogor. alt. 150, 1844), but they are apparently not known from Africa; they may be very near the next species. Plants with copper-coloured leaves are known as *G. pictum* var. *lurido-sanguineum* (Sims) Bremek. & Backer in Bkn. Fl. Java 9B: 71 (1940) (syn. *Justicia picta* β *lurido-sanguinea* Sims Bot. Mag. 44: t. 1870 (816[7?]); Blume Bijdr. 14: 784 (1826), as var.; *Graptophyllum hortense* var. *rubrum* Hassk. l.c. (1844). *G. hortense* var. *lurido-sanguineum* Chittenden, R.H.S. Dict. Gard. 2: 921 (1951); and in Bot. Mag. Index 114 (1956)).

2. *Graptophyllum glandulosum* Turrill in Kew Bull. 1912: 331; Cat. Talb. 140. *APD acc*

Graptophyllum pictum Lindau (sic.) in Schlechter Westafr. Kautschuk-Exp. 316 (1900), not of (Linn.) Griffith.

Graptophyllum hortense of F.T.A. 5: 241, partly (Staudt "4551"), not of Nees.

A shrub with 4-angled, nearly glabrous branches, normal green leaves, and red-purple flowers 1 in. or more long.

S. Nig.: Oban Talbot 377! Oban F.R. (Jan.) Onochie FHI 36142! Ifunkpa-Atakom, Calabar (Dec.) Holland 216! Obutong, Calabar (Mar.) Onochie FHI 7708! [**Br.**] **Cam.:** Bangwe Conrau 52! Johann-Albrechtshöhe (= Kumba) (June) Staudt 455! Nyasoso, 2,600 ft. Schlechter 12894!

Also in **Cameroun**.

***Odontonema cuspidatum* (Nees) O. Ktze.**

Thysacanthus cuspidatus Nees

Cultivated as an ornamental.

S. Nig.: Ibadan (cult., Jan.) Keay PHI 37330!

A relative of these plants, from Mexico, is cultivated as an ornamental.

It is sometimes wrongly named "*Jacobinia coccinea*". This species is regarded by some botanists as conspecific with the C. American *O. strictum* (Nees) O. Etze.

36. SCHAUERIA

Nees Ind. Sem. Hort. Ratisb. 1838, nom. cons.; F.T.A. 5: 242.

- 1** Branchlets glabrous; leaves ovate, rather abruptly acuminate, cordate at base, 8-10 cm. long, 3.5-6.5 cm. broad, covered with numerous minute rod-like cystoliths; petiole up to 7 cm. long, pubescent; inflorescence spike-like, cylindric, up to 9 cm. long; bracts filiform, 1-1.5 cm. long, with stipitate glands towards the apex; calyx-lobes subulate, 6 mm. long; corolla 1.5 cm. long; stamens 2; anther-cells 2, rounded at the base, pubescent at the tip [populifolia](#)

***Schaueria populifolia* C. B. Cl.** in F.T.A. 5: 242 (1900); Cat. Talb. 140. *APD acc*

Herbaceous undershrub 4-5 ft. high, with red-purple flowers 1/2-2/3 in. long in a dense cylindrical panicle.

S. Nig.: Cross River North F.R. (Dec.) Keay FHI 28157! Afi Diver F.R. (Dec.) Keay FHI 28238! Oban Talbot 993! **F. Po:** Mann 1426! Clarence Peak (Nov.) T. Vogel!

Also in **Cameroun**.

37. CHLAMYDOCARDIA

Lindau-F.T.A. 5: 234.

- 1** Branches with a line of hairs up the side; leaves narrowly ovate-elliptic, gradually acuminate, cuneate at base, 6-8 cm. long, 2.5-3.5 cm. broad, with numerous rod-like cystoliths more conspicuous beneath; spikes terminal, up to 15 cm. long; bracts very variable, from long-apiculate subulate and emarginate-cordate at the apex to broadly spatulate to subrhomboid, leafy, up to 1 cm. long and 5 mm. broad; calyx about 5 mm. long; corolla up to 12 mm. long; stamens 2, anther-cells mucous; fruit 1 cm. long; seeds tuberculate [buettneri](#)

***Chlamydocardia buettneri* Lindau** in Engl. Bot. Jahrb. 20: 139 (1894); F.T.A. 6: 234; Aké Assi, Contrib. 1: 214. *APD acc*

Chlamydocardia subrhomboidea Lindau l.c. 22: 119 (1895); F.T.A. 5: 235.

Slender, branched, woody herb, 12-18 in. high, creeping at the base, with narrow-cylindric 2-lipped whitish flowers 1/2 in. long in narrow spike-like panicles; **wet places in high forest**.

iv. C.: Baba to Jumbley, San Pedro (Feb.) Aké Assi 2858! **S. Nig.:** Okomu F.R., Benin (fl. & fr. Dec.) Brenan 8455! Shasha F.R., Ijebu Prov. (Mar.) Richards 3224! Oban Talbot 1374! Oban F.R. (fr. Feb.) Onochie FHI 36297! British Obokum, Ikom

(fl. & fr. Dec.) Keay FHI 28278! [**Br.**] **Cam.:** Victoria Preuss 1383. Victoria to Bimbina Preuss 1309. S. Bakundu F.R., Kumba (Mar.) Brenan 9317!

Extends to Gabon.

38. ANISOTES

Nees in DC. Prod. 11: 424 (1847), nom. cons.; F.T.A. 5: 226. *APD acc*

- 1 Stems puberulous; leaves oblong-ob lanceolate, obtuse at apex, 5-8 cm. long, 2-4 cm. broad, entire, shortly pubescent on the midrib; flowers solitary, axillary; bracteoles 2 cm. long, oblong; corolla 4 cm. long, 2-lipped nearly to the base, tube 1 cm. long, glabrous [guineensis](#)

Anisotes guineensis *Lindau* in Mém. Soc. Bot. Fr. 2, 8: 53 (1908); Chev. Bot. 501. *APD acc*

Erect shrub or small tree up to 13 ft. high, with laurel-like leaves dark green and glossy above; flowers dark red; [in wet ground by streams](#).

Guin.: Diaguissa to Timbo, 3,300-4,000 ft. (Apr.) Chev. 13444! Téli-mélé (fr. Jan.) Roberty 16454! Kindia to Forécariah, Benna Massif (June) Jac.-Fél. 1758! Pita (July) Pobéguin 2136! Kinkou Falls, Pita (fl. & fr. Oct.) Jac.-Fél. 1962!

39. PERISTROPHE

Nees-F.T.A. 5: 242.

- 1 Stems sparingly setose-pilose; leaves subequal ovate-lanceolate, acute, abruptly narrowed into the winged petiole, up to 10 cm. long and 4 cm. broad, with conspicuous rod-like cystoliths on both sides; flowers very numerous in a lax leafy panicle; pedicels angular and scabrid; calyx-segments linear-lanceolate, very acute, 8 mm. long; corolla 1.5 cm. long; stamens 2, anthers 2-celled; fruit 1 cm. long, pubescent [bicalyculata](#)

Peristrophe bicalyculata (*Retz.*) *Nees* in Wall. Pl. As. Rar. 3: 113 (1832); F.T.A. 5: 242, 514; Chev. Bot. 501; Schnell in Icones Pl. Afr. (I.F.A.N.) 1: t. 20 (1953), for full syn.; Berhaut Fl. Sén. 83, 85; Milne-Redhead in Mem. N.Y. Bot. Gard. 9: 28 (1954).

APD: *Synonym of Dicliptera paniculata* (*Forssk.*) *I. Darbysh.*

Dianthera bicalyculata *Retz.* in Sv. Vetensk. Handl. 36:297, t. 9 (1775).

Justicia bicalyculata (*Retz.*) *Vahl* (1791).

Peristrophe pilosa *Turrill* in Kew Bull. 1921: 394.

Erect branched herb, 2-4 ft. high, with stems several-angled, and narrow pink or pale purple flowers 1/3-1/2 in. long.

Sen.: Perrottet 633! Roger! Farmar 18! Thiès (fl. & fr. Dec.) Chev. 2785! 2786. Dakar (fr. Feb.) Caille! Richard Tol (fl. & fr. Feb.) Roberty 16855! Kaolak (Nov.) 41. RHINACANTHUS

Nees-F.T.A. 5: 224.

- 1 Branches pubescent, leaves equal to very unequal-sized in each pair, ovate-lanceolate to lanceolate, with numerous small root-like cystoliths on both surfaces, panicles axillary and terminal; pedicels and linear calyx-segments glandular-puberulous; corolla-tube slender, tubular, 1.5 cm. long; stamens 2; anthers shortly exerted; fruit 1.5 cm. long, softly pubescent; seeds finely warted: [2](#)
 - 2 Leaves elliptic-lanceolate to ovate, gradually acuminate-cuspidate, cuneate at the base, up to 16 cm. long and 5.5 cm. broad; petiole up to 1 cm. long (but upper leaves sometimes subsessile); corolla-tube 1.5-2.5 cm. long, white to whitish-yellow, sometimes pale mauve [1a. virens var. virens](#)
- Leaves elliptic, strongly obtuse or rounded at apex, rounded to subcordate at base, up to 10 cm. long and 4.5 cm. broad, subsessile (petiole never exceeding 3 mm.); corolla-tube 10-15 mm. long, white, lower lip with purple dots [1b. virens var. obtusifolius](#)

1. *Rhinacanthus virens* (*Nees*) *Milne-Redhead* in Exell Suppl. Cat. S. Tomé 37 (1956), (q.v. for synonymy etc.). *APD acc*

Leptostachya virens *Nees* in DC. Prod. 9: 378 (1847).

Rhinacanthus subcaudatus *C. B. Cl.* in F.T.A. 5: 225 (1900).

Rhinacanthus communis of F.T.A. 5: 224, 514, partly (W. Afr. specimens), of F.W.T.A., ed. 1, 2: 266, of Aké Assi, Contrib. 1: 220, not of *Nees* (1832).

1a. *Rhinacanthus virens* (*Nees*) *Milne-Redhead* var. *virens*-Heine in Kew Bull. 16: 180. *APD acc*

Herb 1-3 ft. high or weak undershrub woody below, with slender white or purplish flowers about 1 in. long; variable in habit.

Guin.: Paroisse 1! Bafing Adam 12653! **S. L.:** Makump (Jan.) Glanville 138! Kasawe F.R. (Dec.) King 40b! Njala (Mar.) Deighton 4715! Bafi R. (Feb.) Macdonald 2! Kangahun, Gandima Deighton 6024! 42. DICLIPTERA

Juss. in Ann. Mus. Hist. Nat. Paris 9: 267 (1807), nom. cons.; F.T.A. 5: 256.

- 1 Bracteoles with sharp spiny tips, acuminate, narrowly oblanceolate to elliptic, villous-ciliate, sometimes glabrescent, up to 1 cm. long; leaves long-petiolate, ovate, broadly acuminate, up to 6 cm. long and 3 cm. broad, with prominent rod-like cystoliths on the lower surface [1. *verticillata*](#)
Bracteoles not spiny at the tips (but often sharply acuminate): **2**
- 2 The bracteoles suborbicular to broadly obovate, sometimes nearly as broad as long: **3**
The bracteoles oblong-elliptic to oblanceolate: **4**
- 3 Bracteoles densely fringed with long soft white hairs, suborbicular, 6-8 mm. long; leaves narrowly obovate, broadly acuminate, cuneate at base, 3-8 cm. long and 1.5-3 cm. broad, with rod-like cystoliths; corolla up to 2.5 cm. long [2. *elliottii*](#)
Bracteoles fringed with hairs, broadly obovate, 1-2 cm. long, strongly nerved; leaves on long slender petioles, narrowly obovate, broadly acuminate, 8-12 cm. long, 2-4 cm. broad, with about 6 pairs of lateral nerves; corolla not exceeding 1.5 cm. [3. *obanensis*](#)
- 4 Bracteoles oblong-elliptic, not narrowed to base, 5-6 mm. long, with prominent green veins; spikes lax; leaves ovate-elliptic, abruptly acuminate, 4-6 cm. long, 2-3.5 cm. broad, with minute hair-like cystoliths; petiole about 2 cm. long [4. *alternans*](#)
Bracteoles oblanceolate, narrowed to base: **5**
- 5 Bracteoles villous; leaves lanceolate, 5-6 cm. long, 1-2 cm. broad; flowers crowded [5. *adusta*](#)
Bracteoles glabrescent: **6**
- 6 Small decumbent herb; leaves oblanceolate, up to 2 cm. long and 8 mm. broad; flowers in terminal, spike-like inflorescences; bracteoles lanceolate, up to 5 mm. long and 1 mm. broad [6. *laxispica*](#)
Stout upright herb; leaves elliptic, up to 8 cm. long and 3-5 cm. broad; cymes axillary, spikelets nearly all pedicelled; bracts up to 15 mm. long and 5 mm. broad [7. *laxata*](#)

1. *Dicliptera verticillata* (Forsk.) C. Christens. in Dansk Bot. Ark. 4, 3: 11 (1922); Aké Assi, Contrib. 1: 215. *APD acc*

*APD: Synonym of *Dicliptera hyalina* Nees*

***Dianthera verticillata* Forsk.** Fl. Aeg. Arab. Descr. pl. 9 (1775).
***Justicia cuspidata* Vahl** (1791).

J. umbellata Vahl (1804).

Dicliptera umbellata (Vahl) Juss. (1807)-F.T.A. 5: 259; F.W.T.A., ed. 1, 2: 264.

Dicliptera micranthes Nees (1832)-F.T.A. 5: 258; F.W.T.A., ed. 1, 2: 264.

Dicliptera ocimoides (Lam.) Juss. l.c. (1807); Berhaut Fl. Sén. 92.

Justicia ocymoides Lam. (1784).

Dicliptera maculata var. *senegambica* Nees in DC. Prod. 11: 485 (1847).

Dicliptera senegambica (Nees) Benoist ex Tisserant in Mém. Inst. Et. Centrafic. 2: 15 (1950).

Stems several-angled almost woody below, decumbent, 1-2 ft. long, with red flowers in whorls running into terminal spikes.

Widespread tropical African weed.

A very variable and widespread tropical African weed described under many names; owing to the imperfect taxonomic knowledge of the genus its true distribution is not properly known. [Plants here called *D. elliotii* C. B. 01. are only doubtfully distinct (mainly by the usually smaller flowers) from those which have been described as *D. heterostegia* Presl ex Nees in DC. Prod. 11: 478 (1847); Fl. Cap. 5: 90; Chev. Bot. 501. (*D. heterostegia* (E. Mey.) Presl in Abh. k. böhm. Ges. Wiss. V. Folge, 3: 525 (1845), name only. *Justicia heterostegia* E. Mey. in Drège, Zwei Pflanzengeogr. Docum. 152, 159, 195 (1843), name only.)-Described from S. Africa. Chev. 502 was named by Lindau as "*D. heterostegia* Nees"].

3. *Dicliptera obanensis* S. Moore in Cat. Talb. 90 (1913). *APD acc*

A slender herb 1-2 ft. high, rooting at the lower nodes, with green foliaceous bracts and small white flowers.

S. L.: Lalakum to Gbwema, Gaura (ft. Dec.) King 103b! **Ghana:** Accra (fl. & fr. Jan.) Morton GC 25346! Kibi (ft. Dec.) Marton GC 8213! E. Akim (ft. Mar.) Johnson 717! Obomeng, Kwahu (Dec.) Adams 6170! **S. Nig.:** Oban (fr. Feb.) Talbot 1363! Onochie FHI 36314!

[This seems to be doubtfully distinct from *D. chinensis* (Linn.) Juss. (syn. *Justicia sexangularis* Forsk. (1775), not of Linn. (1753); C. Christens, in Dansk Bot. Ark. 4, 3: 10 (1912); *J. chinensis* Linn. (1753)).]

4. *Dicliptera alternans* Lindau in Engl. Bot. Jahrb. 20: 47 (1894); F.T.A. 5: 258. *APD acc*

A slender herb up to 1 ft. high, slightly pubescent, with white flowers and green-veined pointed bracts.

[**Br. Cam.:** Buea (ft. Jan.) Preuss 604!]

Also in **Cameroun**.

5. *Dicliptera adusta* Lindau in Mém. Soc. Bot. Fr. 2, 8: 51 (1908). *APD acc*

Dicliptera lelyi Hutch. & Dalz. F.W.T.A., ed. 1, 2: 265 (1931).

Erect, branched herb, woody below, with several-angled stems nearly glabrous, and many flowers 1/2-2/3 in. long, pinkish purple with spots and darker lower lip; [in savanna, flowering after fires](#).

N. Nig.: Naraguta (Nov.) Lely 712! Birnin Gwari (fl. & fr. Mar.) Meikle 1349! Utachu to Madengyen, Niger Prov. (Jan.) Meikle 1071! Jos Plateau (Jan.) Lely P91! Sanga River F.R., Jemaa (Apr.) Keay & Jones FHI 37623! **S. Nig.:** Oyo F.R. (fl. & fr. Feb.) Keay FHI 22613!

Also in [Ubangi-Shari](#).

[This is only slightly different from *D. pumila* (Lindau) Dandy in Mem. N.Y. Bot. Gard. 9, 1: 27 (1954), see discussion there.]

6. *Dicliptera laxispica* Lindau in Engl. Bot. Jahrb. 30: 113 (1901), and in Schlechter Westafr. Kautschuk-Exp. 316 (1900), name only. *APD acc*

A decumbent herb rooting at the lower nodes, with small leaves and small white flowers 1/4 in. long.

iv. C.: Sassandra Aké Assi 4869! Tai (fr. Jan.) Mangenot & Aké Assi 3090! **Ghana:** Mpameso F.R., W. Ashanti (Dec.) Adams 2970! **S. Nig.:** Oban Talbot!

Also in Cameroun. [This may be only a form of No. 4, but with the material at present available it is inadvisable to add it to the synonymy of that species.]

7. *Dicliptera laxata* C. B. Cl. in F.T.A. 5: 258 (1900); Mildbraed in Notizbl. Bot. Gart. Berl. 9: 507 (1926). *APD acc*

Scrambling shrub with dark green stems and pale green leaf undersurfaces; bracts usually dark tinged; flowers white; [a typical highland species](#).

[Br.] Cam.: Buea (Jan.) Deistel 489. Bamenda, 5,000 ft. (fl. Jan., fr. Apr.) Maitland! Keay & Lightbody FHI 28476! Bafut-Ngemba F.R. (fr. Feb.) Hepper 2193! Tiku FHI 22163! Bali (fr. Feb.) Conrau 18. Rudin in Hb. Hepper 2864! **F. Po:** Balachá to Ureka (fr. Feb.) Guinea 2298!

Also in [Congo](#) and [E. Africa](#).

Dicliptera hyalina of Berhaut Fl. Sén. 92, not of Nees (1847).

"**Sp.**" of Chev. Sudania 1: 44.

Sen.: Tanma Berhaut 1304. N'diaye bop Chev. 2809! Ntiaye (fl. & fr. May) Raynal 7053!

Villous-hairy plants resembling vegetatively *D. verticillata*, but they do not seem to be a form of it and they are certainly not conspecific with *D. hyalina* Nees (in DC. Prod. 11: 484 (1847)) described from Comoro Islands. Further collections and monographic study are necessary to elucidate their taxonomic position.

43. JUSTICIA

Linn.-F.T.A. 5: 179.

- 1 Bracts white, transparent, reticulate with greenish margins and veins, ovate-acute, up to 12 mm. long and 7 mm. broad; inflorescences terminal, strobilate; leaves ovate, up to 7 cm. long and 4 cm. broad [1. *betonica*](#)
Bracts never white and reticulate with greenish margins and veins: **2**
- 2 Flowers axillary; stems pubescent to glabrous; leaves very variable, from linear to ovate, subsessile to long-petiolate, acute or acuminate, up to 12 cm. long and 4 cm. broad, setulose to nearly glabrous; calyx-lobes lanceolate, acuminate, more or less ciliate; corolla up to 2.5 cm. long; pubescent outside; fruit 1.5 cm. long, slightly pubescent or glabrous [2. *insularis*](#)
Flowers spicate racemose or paniculate: **3**
- 3 Flowers all to one side of the short slender spikes; leaves linear to lanceolate, acute, 3.5-6 cm. long, up to 1 cm. broad, glabrous or nearly so, thin; calyx-segments subulate-lanceolate, 3.5 mm. long, with narrow hyaline margins; fruit 1 cm. long, glabrous [3. *anselliana*](#)
Flowers not all to one side of the inflorescence: **4**
- 4 Inflorescence spicate: **5**
Inflorescence paniculate: **9**

- 5 Spikes interrupted, the lower internodes 1 cm. long; flowers in small dense cymes; leaves broadly obovate, acuminate, cuneate at base, 10-18 cm. long, 5-8 cm. broad, glabrous, with about 5 pairs of lateral nerves; petiole 2-5 cm. long; corolla 1 cm. long; stamens exserted [4. nigerica](#)
- Spikes more or less continuous: **6**
- 6 Spikes terminal, with lanceolate, linear to spatulate bracts, stout undershrubs (No. 7 sometimes herbaceous): **7**
- Spikes lateral, 1-2 cm. long, on slender peduncles, with broadly obovate nervose bracts about 5 mm. long; leaves ovate, long-petiolate, rounded at apex, up to 5 cm. long and 3 cm. broad, very thin and glabrescent; fruits 3 mm. long; a creeping slender herb [8. tenella](#)
- 7 Flowers 2-5 cm. long, very deeply 2-lipped, opening about 5 cm. wide, blue, inflorescence sometimes bearing small lateral cymes; up to 3 m. high, with sparsely pubescent ovate leaves up to 12 cm. long and 6 cm. broad [5. preussii](#)
- Flowers much smaller, 9-22 mm. long, not deeply lipped, opening about 1 cm. wide, inflorescence never with lateral cymes: **8**
- 8 Bracts spatulate, about 1 cm. long, at the top about 2 mm. broad and in the upper half densely covered with glandular hairs 2 mm. long; corolla about 2-2 cm. long, bluish; petioles up to 2-5 cm. long; leaves elliptic-oblong, 5-15 cm. long and 2-5-7-5 cm. broad, velvety, with about 7-9 pairs of lateral nerves [6. hepperi](#)
- Bracts oblanceolate, narrowed to the base, about 1 cm. long, ciliate with eglandular hairs; corolla about 2 cm. long, yellow; petioles up to 1-7 cm. long; leaves like the last, hairy (not velvety), up to 12 cm. long and 5 cm. broad [7. flava](#)
- 9 Panicles axillary, few-flowered, terminal and very loose, compound with capillary branches: **10**
- Panicles terminal, usually 15-25 cm. long, subpyramidal (in some forms small and compact), rich-flowered; herbs about 1-5 m. high; seeds with blunt tubercles; bracts linear, subulate or sometimes leafy; leaves long-petiolate: **11**
- 10 Plants pubescent or nearly glabrous; sepals up to 4 mm. long; corolla up to 12 mm. long; seeds covered with long scabrous tubercles [9. glabra](#)
- Plants pubescent; sepals about 8 mm. long; corolla up to 10 mm. long; seeds minutely warted [10. tenuipes](#)
- 11 Ovary and capsule glabrous [11. laxa](#)
- Ovary and capsule hairy [12. extensa](#)

1. *Justicia betonica* Linn. Sp. Pl. 15 (1753); Sp. Pl. ed. 2, 1: 21 (1762); F.T.A. 5: 184. **APD acc**

A rather variable herb, sometimes becoming shrubby, with white flowers, the tube slightly violet in the throat.

Mali: Kita (Dec.) Jaeger 3788!

Throughout the Old World tropics.

[This species is cited by C. B. Clarke in F.T.A. from Sierra Leone, but there is no reference in the corresponding literature nor a specimen at Kew. Clarke attributes his indication to Lindau; I was unable to find out where Lindau published the note to which Clarke referred.-H.H.]

2. *Justicia insularis* T. Anders. in J. Linn. Soc. 7: 40 (1863); F.T.A. 5: 195; Mildbraed in Notizbl. Bot. Gart. Berl. 9: 501 (1926); Aké Assi, Contrib 1: 217. **APD acc**

APD: *Synonym of Justicia lazarus S. Moore*

Adhatoda diffusa Benth. in Fl. Nigrit. 483 (1849), not *Justicia diffusa* Willd. (1797).

Justicia galeopsis T. Anders. ex C. B. Cl. in F.T.A. 5: 196 (1900); Lindau in Mildbr. Wiss. Egebn. 1907-08: 309 (1914); Chev. Bot. 500; Benoist in Bol. Soc. Brot., sér. 2a, 24: 9.

Siphonoglossa macleodiae S. Moore in Macleod, Chiefs & Cities Centr. Afr. 304 (1912); Cat. Talb. 84.

A straggling extremely variable and widespread herb 1-3 ft. high, rooting below, with bright pink, red-purple or sometimes yellowish flowers with purple markings 3/4 in. long, 1-3 in the axils.

Throughout tropical Africa.

A very complex species and, like the whole genus, much in need of a monographic revision.. [This is, as accepted here, a complex group of plants which often appear heterogenous and rather different in habit, morphological characters and other features. The oldest name for it seems to be *J. lithospermifolia* Jacq. (1797), but without monographic revision of the whole group it is undesirable to change in this Revised Edition the traditional taxonomic concept for only a small part of the area inhabited by this very widespread Old World species-H.H.]

3. **Justicia anselliana** (Nees) T. Anders. in J. Linn. Soc. 7: 44 (1883); F.T.A. 5:208. *APD acc*

Adhatoda anselliana Nees in DC. Prod. 11: 403 (1847).

A nearly glabrous herb, erect or decumbent, 1-2 ft., with small white and purple-streaked flowers 1/4 in. long, few in short axillary one-sided inflorescences.

Mali: "Fleuve blanc" Peney! **Guin.:** Agoué Ménager! **Lib.:** Cape Palmas Ansell! **Ghana:** Kpong-Akuse (fl. & fr. June) Irvine 1772! Accra Unknown Coll. (Hb. Paris)! Throughout tropical Africa.

4. **Justicia nigerica** S. Moore Cat. Talb. 81 (1913). *APD acc*

A woody undershrub with fairly stout puberulous branches flowers 1/3 in. long in spikes up to 9 in. or more long, simple or slightly compound below.

S. Nig.: Oban Talbot 995! 1308! 2008! "Central Prov." Rosevear C19!

5. **Justicia preussii** (Lindau) C. B. Cl. in F.T.A. 5: 204 (1900). *APD acc*

Salviacanthus preusii Lindau in Engl. Bot. Jahrb. 20: 75 (1894).

Brillantaisia majestica Wernham in J. Bot. 54: 229 (1916).

A puberulous shrub up to 10 ft. high; the large clear blue flowers in shape much resemble those of *Brillantaisia* or Mexican *Salvias*, capsule up to 3/4 in. long.

[Br.] Cam.: Cam. Mt., 2,000 ft. Mann 1298! Buea, 3,000-5,500 ft. (fl. & fr. Jan., Dec.) Preuss 675! Bates 817! Migeod 124! Savory FHI 36598! Mimbria, 4,000 ft. (Mar.) Brenan & E. W. Jones 9336!

Also in **Cameroun**.

6. **Justicia hepperi** Heine in Kew Bull. 16: 178, fig. 4 (1962). *APD acc*

An erect perennial herb about 5 ft. high in large clumps; flowers pale blue with darker blue veins; in hilly savanna.

[Br.] Cam.: Dakemi, Vogel Peak, 3,200 ft., Adamawa (fl. & fr. Nov.) Hepper 1393!

7. **Justicia flava** (Forsk.) Vahl Symb. Bot. 2: 15 (1791); F.T.A. 5: 190; Chev. Bot. 500. *APD acc*

Dianthera americana *a flava* Forsk. Fl. Aeg.-Arab. Desc. Pl. 9 (1775).

D. flava (Forsk.) Vahl (1790).

Justicia palustris of Oliv. in Trans. Linn. Soc., ser. 2, 2: 345; Lindau in E. & P. Pflanzenf. 4, 3B: 349 (Baumann 164), not of (Hochst.) T. Anders.

Herb, erect or straggling 1-4 ft., with pubescent sulcate stems and yellow dark-streaked flowers 1/3-1/2 in. long in pubescent spikes 2-6 in. or more long.

Sen.: Niayes Chev. 2799. **Guin.:** Iles de Los (ft. Nov.) Schnell 2073! Kouria Caille in Hb. Chev. 14720! 14908; 14910bis. Nzo (fr. Oct.) Schnell 3859! Nzérékoré (fl. & fr. Oct.) Baldwin 9737! **S. 45. RUNGIA

Nees-F.T.A. 5: 252.

- 1 Bracts dimorphic (sterile bracts elliptic-lanceolate, fertile bracts cordate, with emarginate apex and a sharp acumen in the sinus), but dimorphism sometimes not very conspicuous:2
- Bracts uniform, with a green middle portion and broad pale hyaline margins:3
- 2 Bracts small, up to 9 mm. long and in the broadest part 8 mm. broad (at the base 2 mm. broad), with a well-marked hyaline, sometimes pinkish margin up to 1.5 mm. broad, ciliate with multicellular hairs *1. paucinervia*
- Bracts 10-15 mm. long and 6-8 mm. broad, with obscure, or sometimes lacking, hyaline margins, ciliate with few-cellular hairs *2. dimorpha*
- 3 Bracts rounded or emarginate at apex:4

- Bracts more or less pointed:5
- 4 Bracts woolly-tomentose outside, about 8 mm. long; inflorescence strobilate, 5-6 cm. long, about 1.5 cm. diam.; leaves lanceolate, 2 cm. long, shortly pubescent [3. *eristachya*](#)
- Bracts thinly setose outside and long-ciliate, 8-10 mm. long; inflorescence up to 4 cm. long; leaves broadly oblanceolate, acuminate, acute at base, 8-14 cm. long, thinly pubescent [4. *paxiana*](#)
- 5 Bracts about 5 mm. long, minutely setulose outside; inflorescence 2-3 cm. long; leaves narrowly obovate, obtusely pointed, 3-6 cm. long, 10-2.5 cm. broad, glabrous, with 3-4 pairs of lateral nerves [5. *congoensis*](#)
- Bracts 1.5 cm. long, ovate or ovate-lanceolate, slightly pubescent outside; inflorescence up to 12 cm. long; leaves obovate or elliptic and pointed at both ends, up to 18 cm. long and 7 cm. broad, with 8-10 pairs of lateral nerves; petiole long [6. *grandis*](#)

1. **Rungia paucinervia** (*T. Anders. ex C. B. Cl.*) Heine in Kew Bull. 16: 181 (1962).

APD: Synonym of Ascotheca paucinervia (T. Anderson ex C.B. Clarke) Heine

Justicia paucinervia *T. Anders. ex C. B. Cl.* in F.T.A. 5: 186 (1899).

Rungia obcordata *Lindau* in Engl. Bot. Jahrb. 38: 71 (1905).

Slender herb up to 12 in. high, rooting at lower nodes; stems dark red; bracts pale green with purple edges.

S. Nig.: Oban F.R. (Jan.) Onochie & Olorunfemi FHI 36124x!

Also in **Cameroun** and **Gabon**.

2. **Rungia dimorpha** *S. Moore* in Cat. Talb. 89 (1913). *APD acc*

Erect branched herb or undershrub, stems pubescent at first, soon glabrous, drying blackish, with greenish flowers about 1/2 in. long in spikes with half-imbricate bracts

S. Nig.: Oban Talbot 1528!

[Only known from the type collection and perhaps conspecific with the preceding species-H.H.]

3. **Rungia eriostachya** *Hua* in Bull. Mus. Hist. Nat. 11: 62 (1905).

Rungia pobeguinii *Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 267 (1931)

Undershrub with pubescent woody stems and leaves, and woolly spikes of small flowers hidden in closely imbricate membranous-edged bracts.

Port. G.: Boé, Madina (Jan.) Esp. Santo 2366! **Guin.:** Kouroussa (Sept.) Pobéguin 447! Friguiaghé to Bambaya (fl. & fr. Dec.) Pobéguin 36! Fouta Djallon (Sept.) Chev. 18443! Schnell 7021!

4. **Rungia paxiana** (*Lindau*) *C. B. Cl.* in F.T.A. 5: 253 (1900).

APD: Synonym of Justicia paxiana Lindau

Justicia paxiana *Lindau* in Engl. Bot. Jahrb. 20: 63 (1894).

Herbaceous, branched, 4-6 ft. high in **forest undergrowth**; more or less pilose, woody below, with light-purple flowers less than 1/2 in. long in spikes with thin papery bracts.

Guin.: Macenta, 2,000-2,500 ft. (Sept., Oct.) Baldwin 9783! Jac.-Fél. 1178! Nimba Mts. (Sept.) Schnell 3566! **Iv. C.:** Port Bouet to Grand Bassam (fr. Dec.) de Wilde 990! Mt. Tonkui (Sept., Oct.) 46. HYPOËSTES

Soland. ex R. Br. -F.T.A. 5: 244; Benoist in Notulae Syst. 10: 24! (1942).

- 1 Flowers in slender more or less unilateral spikes or substrobiliform:.....2
Flowers in whorls or clusters:.....5
- 2 Bracts densely long yellow setose-ciliate; inflorescence strobiliform, terminal:.....3
Bracts not yellow setose-ciliate; inflorescence more or less spicate:.....4
- 3 Bracts linear-lanceolate with a linear tail 2-5 mm. long; inflorescences up to 4 cm. long and 2 cm. broad; leaves linear-lanceolate, acute, 3-6 cm. long, 0.5-1 cm. broad; corolla about 1.3 cm. long; fruit 6 mm. long, glabrous [1. cancellata](#)
Bracts broadly ovate, acuminate, but without tail, closely imbricate; inflorescences up to 3 cm. long and 1.5 cm. broad; leaves linear-oblong, base often rounded, up to 14 cm. long and 1.5 cm. broad; corolla about 1.7 mm. long; fruit up to 7 mm. long [2. strobilifera](#) var. [tisserantii](#)
- 4 Upper lip of the corolla rhomboid, sometimes marked with purple, corolla white, often cream-coloured; external bracts of the involucre united up to the middle, sometimes marked with purple; an extremely variable and polymorphic plant [3. verticillaris](#)
Upper lip of the corolla regularly ovate, oblong to linear, corolla almost rose or purplish; external bracts of the involucre only united at the base [4. rosea](#)
- 5 Bracts with long slender tails at the apex, slightly pubescent, up to 1.5 cm. long; corolla-tube 1.5 cm. long; stamens long-exserted; leaves ovate-elliptic, gradually acuminate, broadly cuneate at base, up to 15 cm. long and 5 cm. broad, thinly pilose on the midrib beneath [5. aristata](#)
Bracts without tails at the apex:.....6
- 6 Inflorescences more or less sessile; floral leaves small, lanceolate, acuminate, up to 8 mm. long, often with long slender hairs in the upper part [3. verticillaris](#)
Inflorescences often apparently terminal on lateral branches, 1.2-5 cm. long; floral leaves obovate to oblanceolate, up to 1 cm. long and 4 mm. broad, shortly setose-pilose; leaves broadly ovate, acuminate, 3-5 cm. long and 1.5-3 cm. broad, setose-pilose on both surfaces; petiole slender, up to 3 cm. long:7
- 7 Floral leaves rounded at apex, about 10 mm. long and 4 mm. broad; flowers almost whitish, upper lip sometimes spotted with purple [6. triflora](#)
Floral leaves markedly acuminate, usually 12 nun. long and 3 mm. broad; flowers pinkish, magenta or mauve [7. consanguinea](#)

1. **Hypoëstes cancellata** *Nees* in DC. Prod. 11: 505 (1847); F.T.A. 5: 246; Chev. Bot. 501; Benoist l.c. 242, Bol. Soc. Brot., sér. 2, 24: 39; Berhaut Fl. Sén. 85. *APD acc APD acc*

Herb 1-3 ft. high, with slightly pubescent sulcate stems and flowers 2/3 in. long, bright red, red- or blue-purple.

Sen.: Niokolo-Koba Berhaut 1441. **Port. G.:** Cacine Esp. Santo 722. **Guin.:** Boulivel to Dalaba Chev. 18673bis. Timbo (fr. Nov.) Maclaud 26! Kouroussa Pobéguin 1837! **S. Also in Cameroun.

VERBENACEAE

Herbaceous or woody, often with quadrangular branchlets. Leaves usually opposite or whorled, simple or compound; stipules absent. Flowers hermaphrodite, zygomorphic. Calyx 4-5-lobed or toothed, persistent. Corolla gamopetalous, tubular, 4-5-lobed, lobes imbricate. Stamens on the corolla, 4 or rarely 2 or 5; anthers 2-celled, cells often divergent, opening lengthwise. Ovary superior, 2-8-celled, often 4-celled. Style terminal, simple. Fruit a drupe or berry. Seeds with straight embryo and scanty or no endosperm.

- 1 Perfect stamens 2, staminodes 2; flowers in slender spikes, more or less immersed in the soft swollen rhachis; herbs or undershrubs [1. Stachytarpheta](#)
- Perfect stamens 4, often didynamous: [2](#)
- 2 Flowers spicate or racemose; leaves always simple; herbs or undershrubs: [3](#)
- Flowers cymose; shrubs or trees: [8](#)
- 3 Ovary 4-celled: [4](#)
- Ovary 2-celled; fruit of! or 2, 1-seeded pyrenes: [5](#)
- 4 Calyx in fruit open, not inflated; pyrenes 4 [2. Verbena](#)
- Calyx closed over the fruit as a small bladder; pyrenes 2 [3. Priva](#)
- 5 Epicarp fleshy; corolla-tube usually much exceeding calyx [4. Lantana](#)
- Epicarp dry; [6](#)
- 6 Trailing herbs rooting at the nodes; corolla-tube only a little longer than the calyx [5. Phyla](#)
- Erect herbs or undershrubs: [7](#)
- 7 Lower stems not corky; corolla-tube only a little longer than the calyx; savanna herbs or subshrubs [6. Lippia](#)
- Lower stems with soft corky bark; corolla-tube twice as long as calyx; undershrub in semi-desert [7. Chascanum](#)
- 8 Fruit dry; leaves always simple: [9](#)
- Fruit a fleshy drupe; leaves usually digitately compound; mostly trees [10. Vitex](#)
- 9 Pyrenes 4, 1-celled; shrubs [8. Premna](#)
- Pyrene 1, 4-celled; mostly climbing shrubs [9. Clerodendrum](#)

1. STACHYTARPHETA

Vahl-F.T.A. 5: 283; Brenan in Kew Bull. 5: 223 (1950) .4

- 1 Calyx, when seen from the anticus [out-]side, showing 4 prominent teeth at apex, the two central ones equalling in length or rather shorter than the laterals; leaves broad, ovate to elliptic or oblong-elliptic, teeth on the well-developed stem leaves rather close and numerous (10-)11-18 on each margin:.....2

Calyx, when seen from the anticus [out-]side, appearing bifid at apex, the 2 central teeth reduced to small inconspicuous denticles on the side of much larger lateral teeth; inflorescences up to 25 cm. long in fruit; leaves usually narrow, oblanceolate to linear-oblanceolate, 3-8(-13) cm. long, 0.5-2(-6) cm. broad, with 4-9(-10) large distinct teeth on each margin; plant herbaceous, rather fleshy3. *angustifolia*

- 2 Plant shrubby, with woody stems at least below; inflorescences up to 20 cm. long in fruit, almost always sparsely but distinctly pubescent; calyx 5 mm. long; corolla-tube 4-5 mm. long, lobes 1.5 mm. long; leaves 2-8 cm. long, 1-3.5 cm. broad, marginal teeth rather small1. *cayennensis*

Plant herbaceous; inflorescences up to 40 cm. long in fruit, glabrous; calyx 6.5 cm. long; corolla-tube about 10 mm. long, lobes about 3 mm. long; leaves 4-11 cm. long, 2-4.5 cm. broad, marginal teeth rather large 2. *indica*

1. *Stachytarpheta cayennensis* (L. C. Rich.) Schau. in DC. Prod. 11: 562 (1847) (as *Stachytarpha*); Danser in Ann. Jard. Bot. Bultenz. 40: 2 (1929), Brenan in Kew Bull. 5: 223 (for other refs. and synonymy). *APD acc*

Verbena cayennensis L. C. Rich. (1792).

Stachytarpheta indica of F.T.A. 5: 284, partly (Sc. Elliot 4162), not of (Linn.) Vahl.

Stachytarpheta jamaicensis of F.W.T.A., ed. 1, 2: 277, partly (Sc. Elliot 4162, Dawodu 364, Dennett 502), not of (Linn.) Vahl.

A slender-branched undershrub 3-6 ft. high, with narrow spreading spikes; flowers white or pale blue with white centre; *roadsides and waste places*.

S. L.: Sc. Elliot 4162! Freetown (June) Deighton 2716! Leicester (Mar.) Hepper 2484! Regent (Oct.) Jordan 947! Kenema (Apr.) Deighton 4291! Dambye, Nongowa (Feb.) Bakshi 21! **Lib.:** Monrovia (June) Barker 1341! **Ghana:** Benso, Tarkwa Dist. (June) Andoh FHI 5526! **S. Nig.:** Lagos (June) Dennett 502! Dawodu 364! Idanre, Ondo Prov. (Jan.) Brenan 8709! Ibadan Meikle 516! Olokemeji F.R. (Aug.) Keay FHI 37152! Eket Dist. Talbot!

A native of tropical America now widely introduced into other parts of the tropics.

2. *Stachytarpheta indica* (Linn.) Vahl Enum. Pl. 1: 206 (1805); F.T.A. 5: 284, mostly; Danser l.c. 5; Chev. Bot. 503; Brenan l.c. 225. *APD acc*

APD: Synonym of Stachytarpheta jamaicensis (L.) Vahl

Verbena indica Linn. (1762).

Stachytarpheta jamaicensis of F.W.T.A., ed. 1, 2: 277, partly (T. Vogel 30, Mann 89, Sc. Elliot 3833, Johnston).

A well-branched herb 2-3 ft. high with very long narrow spikes; flowers deep blue with white centre; *a weed*.

S. L.: Sc. Elliot 3833! No. 2 River F.R. (Apr.) Hepper 2525! Makumri (June) Thomas 532! Njala (Oct.) Deighton 2545! Rokupr (Feb.) Deighton 4173! **Lib.:** Johnston! Monrovia (May, Nov.) Barker 1315! Scattered in other parts of tropical Africa; also in tropical America.

2. VERBENA

Linn.-F.T.A. 5: 286.

- 1 A densely pubescent annual with several stems arising from near the base and branched above; leaves deltoid in outline, bipinnatifid, 1-4 cm. long, 5-15 mm. broad; inflorescences terminal and axillary, dense at first, elongating considerably in fruit; calyx 2 mm. long, pilose; corolla-tube 3-4 mm. long, lobes 1 mm. long; fruits 4-celled, oblong, 2 mm. long [supina](#)

Verbena supina *Linn. Sp. Pl. 21 (1753); F.T.A. 5: 286; Berhaut Fl. Sén. 65. APD acc*

A small annual herb 2-12 ins. high, appearing grey-green; flowers very small, lilac; **in seasonally flooded ground.**

Maur.: Aftout es Sahéli Region (fl. & fr. Apr.) Popov 15! **Sen.:** Richard Toll Berhaut 554. **Mali:** Koubita (fl. & fr. Feb.) Davey 440!

Also in **Sudan**, **Ethiopia**, and around the Mediterranean.

Verbena tenera *Spreng.*

A creeping herb with very dissected leaves and white or violet flowers.

Nigeria: Obubra Dist., FHI 43964.

A native of S. America, has been introduced.

Verbena officinalis *Linn.*

Is reported by De Miré & Gillet (in J. Agric. Trop. 3: 721 (1956)) from Air, **Niger Republic**, on the northern limit of our area.

3. PRIVA

Adans.-F.T.A. 5: 285; Moldenke in Fedde Rep. 41: 1-76 (1936).

- 1 A perennial herb 15 (-100) cm. high; stems acutely 4-angled, slightly pubescent especially at the nodes; leaves ovate, acute or acuminate at apex, truncate at base, 1-4 (-14.5) cm. long, 1-2 (-8.5) cm. broad, margins coarsely serrate, with scattered white bulbous-based hairs above, more or less pubescent beneath; petioles 0.5-3 cm. long; inflorescences terminating the stems and branchlets, racemose with rather widely spaced flowers; calyx tubular-campanulate, about 2 mm. long, inflating in fruit and about 6 mm. long, densely pubescent; corolla 2-lipped, 5-lobed, 2-3 mm. diam., fruits with 2 pyrenes, each with 2 seeds [lappulacea](#)

Priva lappulacea (*Linn.*) *Pers. Syn. Pl. 2: 139 (1806); Moldenke l.c. 24. APD acc*

A perennial **weed** with spreading and decumbent or erect stems, markedly 4-angled; flowers small, the corolla violet with paler stripes.

Ghana: Asebu, near Cape Coast (fl. & fr. Apr.) Hall 1891!

A native of the warmer parts of America and the West Indies; introduced into Java and possibly elsewhere, but not previously recorded from Africa.

4. LANTANA

Linn.-F.T.A. 5: 275.

- 1 Bracts narrow, linear; flowers showy, white, yellow, red, orange or pink; corolla much longer than subtending bract; foliage turning blackish on drying:.....**2**
- Bracts broader, ovate or ovate-lanceolate; flowers not showy; foliage not turning black on drying:**3**
- 2 Leaves, petioles and peduncles pilose or strigose, not or very sparsely glandular; stems usually armed with short recurved prickles[1. camara](#)
- Leaves, petioles and peduncles densely glandular; stems unarmed[2. glandulosissima](#)
- 3 Corolla distinctly longer than the subtending bract, 3-5 mm. wide at apex; peduncle usually long and slender, longer than the fruiting spike:**4**
- Corolla scarcely longer than subtending bract, 1-2 mm. wide at apex; peduncle usually shorter than fruiting spike; bracts of fruiting spike broadly ovate; flowers usually magenta or purple[5. rhodesiensis](#)
- 4 Leaves (except on the weakest growths) in threes; lower floral bracts ovate-lanceolate, gradually narrowing to a slender acumen; flowers pink or mauve[3. trifolia](#)
- Leaves opposite; lower floral bracts broadly ovate with a short cuspidate apex; flowers white[4. viburnoides](#)

1. *Lantana camara* *Linn. Sp. Pl. 2: 627 (1753); F.T.A. 5: 275; Chev. Bot. 502. APD acc*

Lantana antidotalis *Thonning (1827)-F.T.A. 5: 276.*

Erect or spreading much-branched, square-stemmed shrub, usually with short prickles (var. *aculeata* (Linn.) Moldenke) and showy flowers in convex heads 1-2 in. across.

Sen.: Lelièvre. **Port. G.:** Balama (fl. & fr. Apr.) Esp. Santo 1917! **S. L.:** Barter! Kirk 44! Freetown (Jan.) Johnston 1! Magbile (Dec.) Thomas 6420! Nyanyahun (Apr.) Deighton 1613! Nig.:** Lagos Barter 3318! Moloney! Ogwashi (fl. Nov.) Thomas 2033! Ezi (Feb.) Thomas 2334! Ibadan (fl. & fr. Jan.) Meikle 1125! Port Harcourt (Oct.) Stubbings 62! Calabar (Jan.) Holland 18! **[Br.] Cam.:** Gwoza, Dikwa Div. (Jan.) McClintock 152!

Cultivated throughout the tropics and commonly found as an escape, or a relic of cultivation.

2. *Lantana glandulosissima* *Hayek in Fedde Rep. 2: 161 (1906); Moldenke, Resumé of Verbenac. 138 (1958). APD acc*

Very similar to the last but with densely glandular stems, leaves etc. and without prickles; flowers yellow or orange.

Mali: near Djimal, Douentza (fr. Oct.) Jaeger 5522! **N. Nig.:** Naraguta, Jos Plateau (fl. & fr. July) Lely 540! 547!

A native of Mexico.

3. *Lantana trifolia* *Linn. Sp. Pl. 2: 626 (1753); F.T.A. 5: 277. APD acc*

Lantana mearnsii *Moldenke in Phytologia 1: 421 (1940).*

A woody herb or subshrub, to about 6 ft. high, sparsely branched, with hairy stems and rugose scabrid leaves in threes; flowers pink or mauve; fruits purple.

S. Nig.: Lagos Rowland!

A native of tropical America now widely naturalized in the Old World and a pest in some areas, but apparently rare in our area.

4. *Lantana viburnoides* (*Forsk.*) *Vahl Symb. Bot. 1: 45 (1790); F.T.A. 5: 276, partly. APD acc*

APD: Synonym of Lantana camara L.

Lantana salvifolia of F.T.A. 5: 276, partly; F.W.T.A., ed. 1, 2: 269, partly, not of Jacq.

Aromatic straggling subshrub or woody herb to about 3 ft. high; peduncles long, usually exceeding the leaves; flowers relatively large, white.

N. Nig.: Yola (fl. & fr. July) Dalz. 114!

Widely distributed in the drier areas of tropical and subtropical Africa, also in **Arabia** and eastwards to India.

5. *Lantana rhodesiensis* Moldenke in Phytologia 3: 269 (1960).

APD: Synonym of Lantana ukambensis (Vatke) Verdc.

Lantana viburnoides of F.T.A. 5: 276, partly, not of (Forsk.) Yahl.

Lantana salvifolia of F.T.A. 5: 276, partly; F.W.T.A., ed. 1, 2: 269, partly, not of Jacq.

Lantana mearnsii var. *latibracteolata* Moldenke in Phytologia 2: 313 (1947).

A woody herb of **open grassland**, 1-6 ft. high with leaves in threes or occasionally opposite; peduncles short; flowers minute usually magenta or purple; fruits crimson or purple.

Port. G.: Pirada (June) Esp. Santo 3023! Piche to Paiama (fl. & fr. Oct.) Esp. Santo 3472! **Guin.:** Timbo (fl. & fr. Oct.) Jac.-Fél. 1876! **S. L.:** Yetaya (Sept.) Thomas 2438! Kanya (fl. Oct.) Damongo (fl. & fr. July) Andoh 5205! Prang (fl. & fr. Sept.) Darko WACRI 989! Salaga Krause! Dalz. 56! **N. Nig.:** Nupe Barter 1286! Lokoja (Oct.) Parsons 11! 122! Jos Plateau Batten-Poole 177! 318! Anara F.R., Zaria (May) Keay FHI 22938! Abinsi (Mar.) Dalz. 695! Biu, Bornu (fl. & fr. Aug.) Noble 14! **S. Nig.:** Lagos Dawodu in Hb. MacGregor 182! Olokemeji (Apr.) Savory UCI 87!

Widely distributed in the savanna regions of tropical Africa.

[The following specimens should probably be assigned to this species though differing somewhat in their rather larger, paler (pink or mauve) flowers and in their smaller floral bracts: Ghana: Assuantsi Road (fl. & fr. Jan.) Fishlock 27! Adaiso (fl. & fr. Nov.) Morton 6147! Amedzofe (fl. Nov.) Morton GC 9383! **N. Nig.:** Jos Plateau (July) Lely P358! Pankshin (fl. & fr. July) Lely 431! **S. Nig.:** Shaki, Oyo (fl. & fr. Nov.) Olorunfemi FHI 40306! [Br.] Cam.: Vogel Peak, Adamawa (fl. & fr. Dec.) Hepper 1536! Hybrids occur in the genus, and it is just possible that some of these aberrant specimens may be of hybrid origin, a possibility which should be borne in mind by collectors-R.D.M.]

5. PHYLA

Lour. Fl. Cochinch. 66 (1790); Greene in Pittonia 4: 48 (1899).

- 1 Rootstock woody; stems slender herbaceous, rooting at the nodes; leaves opposite, oblanceolate or obovate, 1-5-4 cm. long, 0.5-3 cm. broad, with an entire cuneate base and an acute serrate apex, glabrous or thinly clothed with appressed medifixed hairs; inflorescence a long-stalked, dense, bracteate cylindrical spike; calyx dorsiventrally flattened, cleft almost to base abaxially and to about the middle adaxially; corolla small, unequally 4-lobed; stamens 4, didynamous; stigma obliquely capitate; pyrenes 2 [nodiflora](#)

Phyla nodiflora (Linn.) Greene in Pittonia 4: 46 (1899). *APD acc*

Verbena nodiflora Linn. (1753).

Lippia nodiflora (Linn.) Michx. (1803)-F.T.A. 5: 279; F.W.T.A., ed. 1, 2: 270.

A prostrate creeping herb of **moist places**; leaves and bracts often tinged purple; flowers mauve or pink.

Sen.: Heudelot! Dakar (May) Baldwin 5738! L. Retbo, near Cape Verde (Apr.) Giovanetti! **Mali:** Grand Daouna (fl. Aug.) Chev. 2752! Modou to Berivem (Sept.) Chev. 10155! Timbuktu (Aug.) 7. CHASCANUM

E. Mey. Comm. Pl.Afr. Austr. 275 (1837); Moldenke in Fedde Rep. 45: 114 (1938).

Bouchea of F.T.A. 5: 281, not of Cham.

- 1 Small shrub or perennial herb; lower stems with soft corky bark, branchlets densely puberulous, hairs about 1 mm. long; leaves ovate, broadly elliptic or suborbicular, obtuse at apex, truncate or broadly cuneate at base, 0.5-4.5 cm. long, 0.5-3 cm. broad, coarsely dentate, puberulous on both sides, venation prominent beneath; petioles usually about 1 cm. long; inflorescences terminal-spikes 3-35 cm. long; calyx about 6 mm. long, less than twice as long as bract; corolla-tube about 12 mm. long, lobes 5, subequal, 2 mm. diam.; fruits dry, included in calyx-tube, linear, dividing into two pyrenes[marrubiifolium](#)

Chascanum marrubiifolium Fenzl ex Walp. Repert. 4: 38 (1845); Moldenke l.c. 135; Gillett in Kew Bull. 10: 133 (1955). *APD acc*

Bouchea marrubiifolia (Fenzl ex Walp.) Schau. in DC. Prod. 11: 558 (1847); F.T.A. 5: 282; De Miré & Gillet in J. Agric. Trop. 3: 720.

A branched herb or small shrub up to 3 ft. high, with white-pubescent foliage; flowers white in narrow spikes; *in semi-desert*.

Maur.: Oualata to Néma Jumelle. **Guin. (?)**: Upper Senegal & Niger Buchanan. **Mali:** Gao (fl. & fr. Sept.) Hagerup 345! **Niger:** Agadez, Air Mta. Petit- Lagrange 60; 66. Taraouadji massif, Air Gillet 1057; 1066. Elmiki, Air De Mire N2-96.

Distributed across N. tropical Africa to *Arabia* and Pakistan.

8. PREMNA

Linn.-F.T.A. 5: 287.

- 1 Leaves narrowed to the base:2
Leaves rounded to cordate at base:4
- 2 Lamina pilose-pubescent beneath:3
Lamina glabrous beneath, oblong, acutely acuminate, 7-8 cm. long, 2.5-3 cm. broad, with about 4 pairs of lateral nerves; petiole 1.5-2 cm. long; corymbs small, few-flowered[3. milnei](#)
- 3 Leaves broadly obovate, acutely acuminate, up to 20 cm. long and 10 cm. broad, with 8-10 pairs of lateral nerves; corymbs terminal, many-flowered; calyx pubescent, enlarging and nervose in fruit; fruit obovoid, 1 cm. long.[1. hispida](#)
Leaves elongate-obovate-oblongate, long and acutely acuminate, 25-30 cm. long, 6-9 cm. broad, thin, denticulate in the upper half, pilose especially on the midrib beneath, with 10-14 pairs of lateral nerves; petiole 1 cm. long, hirsute; cyme small and subsessile, rusty-pilose except the pedicels; calyx very small, glabrous[2. grandifolia](#)
- 4 Lamina ovate, usually in whorls of 4; calyx truncate or slightly bilobed:5
Lamina broadly oblong to oblong-elliptic, rounded (or sometimes slightly cordate) at base, 5-9 cm. long, 2-6 cm. broad, glabrous to softly pubescent beneath; frequently with reflexed arrested axillary branches terminating in a pair of leaves and a small inflorescence about 1 cm. diam.; principal inflorescence terminal, a rather dense corymb about 5 cm. diam.; calyx with small teeth[6. lucens](#)
- 5 Leaves entire, 9-14 cm. long, 6-12 cm. broad, glabrous or finely pubescent mainly on the nerves beneath; petioles 3-6 cm. long, glabrous or pubescent; inflorescence glabrous or finely and densely pubescent, terminal, becoming lax and expansive, about 20 cm. diam., with numerous small flowers[4. angolensis](#)

Leaves coarsely crenate, 7-11 cm. long, 4-7-5 cm. broad, softly pubescent beneath; petioles 2-3 cm. long, pubescent; inflorescence finely and densely pubescent, terminal, pyramidal, about 12 cm. long and 10 cm. across the base, with numerous small flowers [5. quadrifolia](#)

1. **Premna hispida** *Benth.* in Fl. Nigrit. 485 (1849); F.T.A. 5: 290; Chev. Bot. 504; Berhaut Fl. Sén. 109, 119; Aubrév. Fl. For. C. Iv., ed. 2, 3: 236, t. 339. *APD acc*

A straggling shrub or small tree up to 20 ft. high; flowers greenish-white, fruits orange; **often in secondary forest.**

Sen.: Leprieur! Heudelot 61. Koulaye, Casamance Chev. 2770. **Port. G.:** Bissau (fl. & fr. Mar.) Esp. Santo 1157! 1843! 1870! **Guin.:** Heudelot 761! Conakry Chev. 15408. Kindia Chev. 12791; 13383. 2. **Premna grandifolia** *A. Meeuse* in Blumea 5: 72 (1942). *APD acc*

Premna macrophylla *A. Chev. ex Hutch. & Dalz.* F.W.T.A., ed. 1, 2: 272 (1931); Chev. Bot. 505, name only; not of Wall. ex Schau. (1847), nor of H. J. Lam (1919).

A shrub 2-3 ft. high, densely rusty-pilose on the branchlets and midribs, with long leaves and small white flowers.

Iv. C.: Kéeta, Mid. Cavally (July) Chev. 19366. Grabo, Cavally Basin Chev. 19654.

3. **Premna milnei** *Bak.* in F.T.A. 5: 291 (1900). *APD acc*

A shrub with glabrous branchlets and small white flowers in a pubescent slender-branched corymbose panicle.

S. Nig.: Calabar Robb! **F. Po:** Milne!

4. **Premna angolensis** *Gürke* in Engl. Bot. Jahrb. 18: 165 (1893). *APD acc*

Premna zenkeri *Gürke* l.c. 33: 292 (1903); F.W.T.A., ed. 1, 2: 272; Berhaut Fl. Sén. 100, 119.

A small tree up to 40 ft. high or (?) climbing shrub, flowers white, very small in copious panicles.

Sen.: " gallery forest " Berhaut 596. **Guin.:** Timbo Pobéguin 741! **S. L.:** Bumbuna (fr. Oct.) Thomas 3171! Pujehun (July) Deighton 5802! Sumbuya, near Mattru (June) Deighton 4774! **Ghana:** Komenda, Cape Coast (July) Andoh 5737! **Togo Rep.:** Basari (July) Kersting 11121! **N. Nig.:** summit of Gwalor Hill, Niger Prov. (June) Onochie, Latilo & Okeke FHI 40176! **S. Nig.:** Ibadan South F.R. (Apr.) Keay FHI 22818! Iyamoyong, Obubra Dist. (fr. Aug.) Adebuseyi FHI 43976! **[Br.] Cam.:** Buea, 3,200 ft. (fr. May) Mailland 661! Ainsley 283! Su, 3,000-4,000 ft., Bamenda (May) Maitland!

Widespread in tropical Africa.

[The Sierra Leone specimens and Keay FHI 22818 are cited with caution since they are described as climbing shrubs, and their inflorescences are usually smaller than typical *P. angolensis*. The diagnostic character of bilobed calyx attributed to *P. zenkeri* is only visible in young buds and it cannot be maintained as a distinct species; amounts of indumentum are very variable-F.N.H.]

5. **Premna quadrifolia** *Schum. & Thonn.* Beskr. Guin. Pl. 275 (1827); F.T.A. 5: 289; Chev. Bot. 505. *APD acc*

Gaertnera ferruginea *A. Chev.* Bot. 444, name only.

A shrub up to 10 ft. high, aromatic; flowers white; **in thickets.**

9. CLERODENDRUM

Linn.—F.T.A. 5: 292; B. Thomas in Engl. Bot. Jahrb. 68: 1 (1936).

- 1 Calyx-lobes obtuse and semi-orbulate to semi-elliptic; corolla-tube zygomorphic, lobes longer than the tube; fruit 4-lobed, not breaking into pieces at maturity; inflorescences always terminal:2
- Calyx-lobes acute or acuminate; corolla-tube actinomorphic or slightly zygomorphic, the lobes shorter than the tube; fruit breaking into 2 or 4 pieces at maturity:5
- 2 Leaves sessile, entire or serrate, mostly verticillate, obovate-elliptic to obovate-lanceolate, 7-14 cm. long, 2.5-6 cm. broad, glabrescent or shortly puberulous; stems erect, subherbaceous*1. alatum*
- Leaves distinctly petiolate, mostly entire:3
- 3 Leaves quite glabrous on both sides except for a minute pubescence on the nerves beneath; leaves thinly membranaceous, ovate, elliptic or oblong, 5-12 cm. long, 3-10 cm. broad; straggling or climbing shrub*2. violaceum*
- Leaves pubescent or tomentose, at least all over the undersurface; leaves almost coriaceous and very fragile when dry (probably slightly fleshy when alive):4
- 4 Leaves sparsely puberulous and when dry blackish-green on their upper side, puberulous but not tomentose beneath; leaves opposite, broadly ovate to ovate-lanceolate, 3-12 cm. long, 1-10 cm. broad; calyx lobed to about 1/2 or more of its length*3. carnosulum*
- Leaves thinly tomentellous and when dry grey to dull brown above, densely tomentellous beneath; opposite or in whorls of 3, broadly ovate to elliptic, 3-6 cm. long and 2-4 cm. broad; calyx lobed to about 1/3 of its length*4. tomentellum*
- 5 Fruit breaking into 2 halves at maturity; inflorescences axillary, pedunculate, few-flowered, becoming spinescent; corolla-tube about 1.5 mm. long; introduced erect spiny shrub with rather small ovate, elliptic or oblong leaves, cuneate at base, entire, 1.5-5 cm. long, 5-20 mm. broad, glabrous or almost so; young branches and peduncles puberulous; branches solid*5. aculeatum*
- Fruit breaking into 4 quarters at maturity; inflorescences axillary or terminal, never spinescent:6
- 6 Corolla-tube 1.4-12 cm. long; branches hollow or solid (to p. 440):7
- Corolla-tube up to 1 cm. long; calyx-teeth not more than 3 mm. long; branches solid (except No. 28 with hollow internodes):26
- 7 Calyx-teeth 5-30 mm. long:8
- Calyx-teeth up to 4 mm. long:19
- 8 Branches deeply sulcate, hollow in the internodes; calyx 1-1.5 cm. long, lobed almost to the base, segments linear, less than 2 mm. broad; corolla-tube about 3 cm. long; leaves deltoid-ovate, acuminate, 6-9 cm. long, 4-6 cm. broad, crenate, long-petiolate, puberulous beneath*6. eupatorioides*
- Branches not sulcate:9
- 9 Flowers in branched, ample, corymbose, terminal inflorescences, never clustered; corolla-tube 1.4-5 cm. long (to p. 440):10
- Flowers in head-like clusters, peduncled or sessile, terminal or axillary:14
- 10 Leaf-margin entire, leaves ovate or elliptic; African species:11
- Leaf-margin crenate, dentate or undulate-sinuate, leaves broadly ovate or deltoid, branches solid; introduced species:13
- 11 Calyx-teeth 5 mm. long or longer, deltoid; leaves herbaceous, ovate, 6-20 cm. long, 3.5-11 cm. broad, rounded or very often slightly cordate at base, glabrous or frequently minutely puberulous; lower leaves long-petiolate, petiole 2-8 cm. long; corolla-tube puberulous*7. umbellatum*

- Calyx 12 mm. or more long, lobed to 2/3 or more of its length; corolla-tube up to 1.5 times longer than calyx; calyx glabrous or hairy: **12**
- 12** Leaves, branches and calyx glabrous; leaves thinly membranaceous, ovate, 6-18 cm. long, 3.5-8 cm. broad; calyx white, 14-30 mm. long; corolla crimson [8. thomsonae](#)
- Leaves, branches and calyx long-hirsute (hairs 2-5 mm. long); leaves ovate, 6-10 cm. long and 2.5-6 cm. broad; calyx 12-15 mm. long; white or yellowish with a red centre [9. buettneri](#)
- 13** Inflorescence a divaricate panicle; calyx (3-)6 mm. long; corolla deep red, its tube 5-7 times longer than calyx; leaves broadly ovate-cordate, 5-25 cm. long, almost as broad, tomentose beneath; climbing shrub, [10. speciosissimum](#)
- Inflorescence a dense head; calyx 1.1-5 cm. long (including teeth); corolla-tube a little longer than the calyx; leaves deltoid, 7-20 cm. long and almost as broad, shortly pilose, especially beneath; erect undershrub; flowers usually double [11. japonicum](#)
- 14** Branches hollow in the internodes; calyx lobed to 3/4 of its length or deeper, 12-20 mm. long, the segments lanceolate, 4-8 mm. broad; corolla-tube 4-12 cm. long: **15**
- Branches solid; calyx lobed to about 1/2 its length, 6-14 mm. long; corolla-tube 1.5-5 cm. long: **18**
- 15** Bracts linear-filiform; inflorescences only lateral on old leafless branches; flowering branches mostly about 1 cm. diam.; leaves glabrous on both sides, large, elliptic, 15-25 cm. long, 6-12 cm. broad, with 5-9 pairs of lateral nerves, entire or indistinctly and obtusely dentate; inflorescences more or less sessile, many-flowered [12. globuliflorum](#)
- Bracts ovate-acuminate or ovate-lanceolate; inflorescences terminal or terminal and lateral on young branches; not cauliflorous: **16**
- 16** Leaves with 3-6 pairs of lateral nerves; corolla-tube 4-8 cm. long; leaves ovate or elliptic, 7-20 cm. long, 4-10 cm. broad, short- to long-petiolate; **17**
- Leaves with 7-10 pairs of lateral nerves; corolla-tube 8-10 cm. long; leaves elliptic-oblong, 15-17 cm. long, 5-6 cm. broad, margin entire, glabrous except the sparsely pubescent midrib beneath; petioles up to 1 cm. long; young branches densely and shortly pubescent; calyx segments ciliate [14. whitfieldii](#)
